The Star Spangled Banner

THE old flag that inspired "The Star Spangled Banner." Below is Ft. McHenry today, to the extreme right is a monument of Key at Ft. McHenry and below is Francis Scott Key, the author. Read the story on page 5.

Songs that Mother Used to Sing

HERE'S A JOB for the BEST FUEL, the BEST LUBRICANT

This tractor pulls three plows and three harrows all day long.

THE ENGINE stays cool, and there are no repair bills due to faulty lubrication or unbalanced gasoline. For the fuel used is Socony Special *plus* Ethyl, the lubricant Socony Aircraft Oil.

New York and New England farmers have come to recognize the efficiency and economy of these products. They know, also, that—

Ruddy Harvester Oil is especially adapted for use where a heavy oil is necessary. It contains no injurious acids, is not affected by temperature changes, and reduces friction to a minimum.

Socony Household Oil is useful on the farm wherever a light lubricant is required.

Especially adapted to light machinery it will not gum or become rancid.

Socony Turex Oil is made to lubricate Diesel and other internal combustion engines, and for special lubrication of all machinery where a truly high-grade, long-life lubricating oil is essential.

Other Socony products that are helping the farmer include: Eureka Harness Oil . . . Standard Hand Separator Oil . . . Mica Axle Grease . . . Socony Disinfectant . . . Socony Motor Oil . . . Socony 990A-Motor Oil for Model A Fords . . . Dendrol Dormant Spray Oil . . . Socony Gasoline and Socony Special Gasoline *plus* Ethyl.

Seeds and Transplants

Vegetable Plants—Ready Now.

Cabbage plants—Copenhagen Market, Enkhinzen Glory, Succession, Danish Ballhead, Red Dutch, Red Danish, Long Island Savoy \$2.00 per 1000; 5000, \$9.00. Rerooted cabbage \$2.25 per 1000. Tomato plants—Field grown, Marglobe, Bonny Best, John Baer, Jewel, Stone and Matchless \$3.00 per 1000, 500, \$13.00. Cauliflower plants—Early and Late Snowball and Erfurter \$4.50 per 1000; 5000, \$20.00. Brussels Sprouts—Long Island Improved \$2.50 per 1000. Celery Plants—Field Grown, Golden Plume, Easy Blanching, White Plume, Winter Queen and Giant Pascal, \$3.50 per 1000 Rerooted (Send for free list of all plants). PAUL F. ROCHELLE, MORRISTOWN, NEW JERSEY

FINE HARDY FIELD GROWN HAND SELECT CABBAGE PLANTS

for late crop, Danish ballhead, \$1.50-1000—Wakefields, flat varieties, \$1.00-1000; 10,000-\$7.50—express charges collect, well packed good order delivery guaranteed. J. T. COUNCILL & SONS, FRANKLIN, VIRGINIA

HARDY Cabbage Plants 1,000-\$1.25, 5,000-\$5.00. Good delivery guaranteed. Experienced growers and shippers. Buckeye Farms, Dept. O, Box 541, Youngstown, O.

CAULIFLOWER Plants Ready

Field grown, Highest quality, Catskill Mountain, Long Island and Super Snowball \$4.50 per 1000; 5000, \$20.00; 500, \$2.50; 300, \$2.00; 200, \$1.50. Celery, Tomato and Sprout plants \$3.00 per 1000; 5000, \$14.00; 500, \$1.75; 300, \$1.50. Cabbage plants, Danish, Ballhead, Glory and all varieties \$2.00 per 1000; 5000, \$9.00; Send for list. No business done on Sunday.

F. W. ROCHELLE & SONS, CHESTER, NEW JERSEY

25 MILLION VEGETABLE PLANTS

Extra fine field grown stocks. Cabbage: Enkhinzen Glory, Copenhagen Market, Danish Ballhead, Flatdutch and Wakefields, \$1.25 thousand; 10,000, \$10.00. Tomato, Bermuda Onion, and Lettuce plants same prices. Prompt shipments, well packed and first class plants or money back. Shipping capacity ½ million daily.

J. P. COUNCILL COMPANY, FRANKLIN, VIRGINIA

Cauliflower Plants Sulers Snowball \$3.50-1000, Pepper Plants all kinds \$3.00-1000; Tomato all kinds \$2.00-1000; cabbage leading var. \$1.25-1000. J.C. SCHMIDT, Bristol, Pa.

Says Upstate Is Wet—Other Readers Take Pen in Hand

I MUST take exception to your editorial regarding the article printed in the New York World about booze in upstate New York.

First let me state I am *wet*, but never drink. I am past sixty years and have seen much of the United States from East to the coast. Three years ago I took my dog car and myself, spent six months through the West, drove nearly 5,000 miles. I found one could get a drink any place, even in Kansas where it is supposed to be so dry one needed to dust off the kids before going to bed.

To get back to my subject, I am a farmer. I worked on a power job in Lewis County (Beaver River), and out of three or four hundred men, 85 per cent of them drank white mule. All farmers sold it. Gallon after gallon of it came into camp every night. Right here eight out of ten farmers have cider in the cellar so hard it would kick an elephant over, and white mule and moonshine are to be had everywhere.

I never knew the taste of whiskey until I was twenty-eight; then took it for a cold in Colorado. I don't think I have had half a dozen drinks in my life, neither do I drink coffee, tea or milk. At the same time it is not my business to tell anyone what they should or should not drink. That is the reason I am *wet*. You surely have another think coming if you think upstate New York is dry.—F. D. J., New York.

EDITOR'S NOTE—We know that upstate New York is not entirely dry, but we do object to the inference in the New York World editorial that all farmers drink and that most of them are bootleggers.

* * *

Crows Are a Nuisance

I SAY if there is a way of getting rid of crows, let's all start.

If you could hear some of the oaths let out on this farm in the direction of all living crows, you would believe they were our enemies. We have had to date about ten or twelve young turkeys taken by crows. They were so bold as to come right by the doorstep for them, and no amount of scarecrows or shooting can scare them away. They also have taken turkey and duck eggs from nests from my neighbor, not to mention the pulling of corn from fields and gardens.

For one farmer, I say let's have war on the crow family.—N. L. C., New York.

EDITOR'S NOTE—This farmer's opinion is emphatic enough, and probably he is right. What are your opinion and experience?

* * *

Hard to Cut Acreage

I T is a pretty stiff problem to ask the farmers to cut acreage with all kinds of taxes and overhead staring them in the face. I spent all last winter in the Southwest, California, Arizona and New Mexico. The policy of the government in these states in my judgment is beyond all reason. If they would stop making new farmers, put a tariff on sugar so the southwestern farmer could raise cane and sugar beets at a profit, and other things along this line, crop adjustment would take care of itself. Board of Trade speculation in farm products should be stopped.

It is the injustice of politics, in my judgment, that is at the bottom of the farm problems.—H. L. B., New York.

EDITOR'S NOTE—There is a lot of common sense in these conclusions. Yet we feel that some way must be found in the future to "cut the suit according to the cloth"; in other words, fit production to market demands.

What Is Doing in YOUR Business

Latest Reports Direct from Field and Market

THE spring season in the East has been dry and early, in contrast with last year when it was very rainy and backward. The earlier vegetables and fruits such as strawberries and cherries have matured ten days to two weeks ahead of the usual dates. Incidentally, the first car of new wheat was received in Kansas City on June 10, the earliest date in twenty-nine years.

Peaches Nearly a Failure

The dry weather, however, has left its mark on the crops. Strawberries have been only about half a crop and of poor quality. The peach crop is practically a failure from Virginia to Oklahoma and seems likely to be the smallest crop in nine years. Apples are light also through that same territory and the Northern Central States. Heavy frosts, of course, played a part in this outcome as well as the local drought conditions.

In California, however, the fruit crops are better than last year. That State has begun shipping grapes and apples. Its citrus fruits also promise to be very abundant.

Northern Potatoes Best

As the potato harvest moves northward the crop seems to grow better. The second-early group of potato States expects a crop about 15 per cent larger than last year. Potatoes are coming freely now from the latitude of North Carolina and westward. The Virginia crop, however, is not up to last year.

Who Eats It All?

It is interesting to follow the map of fruit and vegetable shipments as they begin down around the Gulf and gradually work northward. It seems also incredible that this country can consume such volumes of fresh produce. I have before me the record of rail shipments during the second week of June: Averaging 325 cars of tomatoes every

By A. B. GENUNG
Bureau of Economics, U. S. Dept. of Agriculture

day, for example, rolling northward out of Mississippi and Texas. Also more than 300 cars of watermelons a day moving from Florida, Texas, and California. Who eats all these watermelons? All told, some 19,000 cars of fruits and vegetables moved over the railroads that week. Practically all of it is high quality, carefully graded produce. This represents one phase of the competition that the northeastern farmer is up against.

Twice As Much Butter

In respect to the main eastern livestock enterprises, conditions are rather mixed. Dairymen are bringing in more fresh heifers than last year (estimated 6 per cent increase) and there are still more yearlings coming along. Milk prices have held up fairly well, notwithstanding that butter has been off all spring. Stocks of over 50,000,000 pounds of butter in cold storage on June 1 were twice those of a year ago. A few farsighted dairymen got rid of their cull cows on the high winter cattle market but analysis of cattle and calf receipts at the central markets indicates that there has been no general liquidation within the dairy industry as yet. If feed prices should happen to turn upward some day, a good many cows will probably be for sale at the same time.

Poultry Business Slow

The egg market has been none too good this spring, as poultrymen well know. The estimates showed about 5 per cent more chickens on farms this spring than last. This is in line with the periodic tendency since the war. Following 1920, poultry numbers increased for three years, then fell in 1924. They increased three more years and dropped off in 1928. They increased last year and, if history repeats itself, will go on increasing next year, following which low prices might force a

reduction. Present storage stocks of eggs are very heavy. The evidence indicates that the bulk of this year's chicks were hatched unusually early, which would mean an early run of eggs next fall.

In general, it is difficult to pick out any one farming enterprise to make a fortune out of, in these times. Any one who travels about through the East is bound to be impressed with the fact that this region is under increasing competition with the South and West, by reason of improving transportation, refrigeration, and the spread of specialized areas of production. The writer is convinced that air transportation is going to increase this competition in fresh and perishable products within the next ten years. On the other hand, the development of motor truck conveyance helps the near-by producer.

Some Hope Ahead

The 1930 season has not started off with very encouraging symptoms. The slump in industry with more or less unemployment and reduced buying power has weakened the markets and injected uncertainty and uneasiness through the whole community. Back of our own domestic situation lies a world-wide condition of falling prices and depressed trade. It is possible, however, for things to improve greatly, before fall harvest time. In fact, well-informed observers suggest that the beginnings of a more profitable adjustment between production and consumption are already in sight in certain key lines.

Can Bovine Tuberculosis Be Given to Humans ?

Read What Health Authorities in East Have to Say

IT should not be necessary longer to have to try to convince people that bovine tuberculosis may be transmitted to the human, particularly to a child. But there are still some who believe that cattle tuberculosis is not dangerous, owing perhaps to the fact that there has been considerable propaganda circulated in the rural districts in the East against the whole campaign of eradicating TB.

Because there are sincere people who have read this propaganda and still believe that bovine TB is not dangerous, Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST, recently wrote to the state health officers in all of the New England and Middle Atlantic states, asking them the definite question as to whether or not bovine tuberculosis is communicable to human beings.

Every one of these great physicians in charge of state health work answered in the affirmative.

These answers are so emphatic and interesting that we are giving them here in the physicians' own words.

NEW YORK

PAUL B. BROOKS,
State Deputy Commissioner of Health

"Dr. Parran has referred to me your letter of April 30 with reference to the communicability of bovine tuberculosis to human beings. There is no longer any question on this point, it having been well established that about one-quarter of the cases of tuberculosis in young children are the result of infection of bovine origin.

"As to the policy in this State with reference to eradication of bovine tuberculosis, I can of course only speak for the State Department of Health. The State sanitary code requires that milk

sold without pasteurization must be from herds which have been tuberculin tested or the owners of which have made formal application to the State Department of Agriculture and Markets for tests. The latter alternative is regarded as temporary and designed to give producers a reasonable opportunity to secure the tests. Of course the ultimate aim is to have no raw milk sold except from tested herds."

MASSACHUSETTS

GEORGE H. BIGELOW,
State Commissioner of Public Health

"I had not believed that there was anyone at all sophisticated in things medical or agricultural who could seriously ask today whether bovine tuberculosis is communicable to humans. Most assuredly it is. The mistaken statement by the admirable Dr. Koch in Washington about 1900 has been disproved beyond question of doubt. At one of our institutions devoted to bone and joint tuberculosis we have proved in the laboratory that 30 per cent of the children there are infected with the bovine bacillus. I have in the drawer of my desk shocking pictures

of these maimed and tortured children. Do let us have an end to this futile question."

DELAWARE

A. C. JOST,
Executive Secretary, State Board of Health

"I have your letter of April 30th in which you ask whether in my opinion bovine tuberculosis is communicable to human beings.

"I am not, myself, engaged in research and am disposed to accept in this matter the considered opinions of individuals whose work entitles them to respect. According to my views and the best information which I can procure, or have procured, the facts that bovine tuberculosis can be communicated to human beings and that the earth at least is moderately round have been about equally and adequately proven. The policy in this State is to remove animals reacting to the tuberculin test, compensating the owners in accordance with a statutory provision which has been made."

PENNSYLVANIA

THEODORE B. APPEL, *State Secretary of Health*

"In answer to your letter of April 30th the opinion is held by this Department that bovine tuberculosis is communicable to human beings."

CONNECTICUT

MILLARD KNOWLTON,
Director, State Department of Health

"That bovine tuberculosis may be conveyed to humans through milk is no longer questioned. Enclosed find two reprints bearing upon this subject."

MARYLAND

R. H. RILEY,
Director, State Department of Health

"I wish to acknowledge your letter of April 30th. It is my opinion, based upon records in medical literature, that cases of abdominal tuberculosis and tuberculosis of the skin in children have been

(Continued on Page 7)

What Health Authorities Say

THE following tabulation gives the answers of the health authorities of the leading states in the East to the question: "Is bovine tuberculosis communicable to humans?" These physicians are the directors of the health departments in their states. For more detailed and interesting statements from them, read the short article on this page.

State	Name	Answer
Connecticut	Millard Knowlton, M.D.	Yes
Delaware	A. C. Jost, M.D.	Yes
Maine	C. F. Kendall, M.D.	Yes
Massachusetts	E. F. Richardson, M.D.	Yes
New Hampshire	Charles Duncan, M.D.	Yes
New Jersey	D. C. Bowen, M.D.	Yes
New York	Paul B. Brooks, M.D.	Yes
Pennsylvania	T. B. Appel, M.D.	Yes
Vermont	Charles F. Dalton, M.D.	Yes

Can Eastern Fruit Growers Stay in Business?

A MEMBER of the Editorial staff has been having some most interesting interviews with buyers who purchase hundreds of thousands of dollars' worth of food products. Our representative is just back from a long talk with a buyer for one of America's largest chain stores, and the most interesting statement out of this interview, which we will print later in detail, is the fact that this chain system of stores buys on an average one hundred cars of apples a week, and practically none of these apples come from New York State growers.

When the buyer was asked why this was, he did not hesitate to say that he bought western apples because he knew what he was getting as to variety and size.

We believe it is time for plain speaking. It is time for New York State fruit growers to wake up to what is happening in the markets. There have been two or three experiments in organizing fruit growers of this State which have failed largely because of lack of support. The larger and better growers have never been very enthusiastic about cooperative sales organizations because they claim that they can sell their stuff better as individuals. No doubt they can temporarily, but while every man has been trying to go it on his own and working against his neighbor instead of with him, organized growers from other sections have been gradually getting control of the markets.

No individual grower can afford to grade and pack as can an efficiently managed organization. No individual grower has the volume that will interest large buyers like those for chain restaurants or chain stores. No individual grower can afford a sales organization with trained salesmen who visit regularly the big fruit buyers and sell the products of the farmers' organization in the same way that the products of any other business are sold.

No, instead of an efficient marketing system, eastern fruit growers are drifting along, while each year organized outsiders are getting a larger and larger share of their markets.

The Federal Farm Board has been making some effort to get fruit growers together. In

spite of the failures of the past, is it not time to make use of this new assistance and new knowledge and try again?

To Advertise Apples

AN organization especially worthy of support and commendation is "Apples for Health, Inc.", the purpose of which is to conduct a nationwide campaign to educate the public to the wonderful health values of the apple. The president of the organization is Paul Stark of Louisiana, Missouri, and the board of governors is composed of leaders in the apple business in the great producing centers. These officers have worked out a plan for financing a national advertising campaign. This plan calls for all producers and buyers of apples to pay a small fee, which no one will feel, to be contributed toward the national advertising fund.

We hope that every grower and every buyer will respond, and you can all count on the support of this publication to help in every way we can.

The New School Transportation Law

WE have received a good many inquiries about the new high school transportation law in New York State. This law requires that transportation be provided for pupils of high school grade who live in districts which do not provide high school facilities when such transportation is necessary.

The State Department of Education states that some common sense must be used in enforcing this law. On one side is the great necessity of helping boys and girls to get to high school, and on the other is the necessity of not putting too much of an added financial responsibility on the districts to furnish the transportation.

It is not expected, therefore, that all pupils will be entitled to transportation. Those whose parents have been getting them to high school and who have been able to do so will be expected to continue. The Department has ruled that it will not be considered necessary to transport pupils unless the distance is more than three miles, and then only when it can be shown that the parents of the children are unable to provide the transportation.

On the other hand, the voters of the district may vote to provide transportation for all pupils who live in the district.

According to law, it is also possible for several districts to join in providing transportation. This is a good plan because it is comparatively inexpensive for each of the districts, and the district's share will be more than made up by the extra State aid that was provided by the Legislature in 1929, giving rural districts so much more State aid. The State provides one-half of the costs of transportation of such pupils, in addition to all other State aid.

Every contract on transportation must be in writing. It must be submitted to the superintendent of schools for approval. The superintendent will investigate the type of conveyance, the character and ability of the driver, the routes, the time schedule, and all other matters necessary for the comfort and protection of the children while being transported to and from school.

Inventor of Babcock Test Awarded

SOME time ago Senator Arthur Capper offered through his publications, the Capper Farm Press, an annual prize of \$5,000 and a gold medal each year to the person who has rendered distinguished service to American agriculture.

We are glad to know that the first award has just been made to Stephen Moulton Babcock, professor of agricultural chemistry of the University of Wisconsin, known the world over as the inventor of the Babcock test. Most dairymen will agree that no single invention has done more

to put dairying on a scientific and successful basis than the Babcock test.

New Yorkers will be glad to know that Dr. Babcock is a native New Yorker, born at Bridge-water in 1843. He was a student at Cornell in the early 70's, and later an instructor at Cornell and at the Geneva Experiment Station. We are glad that Dr. Babcock has lived to see his great service recognized.

Something Moth nor Rust Cannot Corrupt

ALL over the land high schools and colleges have just graduated thousands of young people, many of whom, we are glad to say, are farmer sons and daughters. Those who are now ready to go to work will face some temporary difficulty, owing to the hard times. Many will not be able to get just the kind of a job they want, and some will have to wait a while probably before they get any position. But if these young men and women have the right stuff in them, they have no cause to worry. They should not be discouraged.

We would rather have our children have the right kind of an education than several thousand dollars in gold. The money is easily spent, but if a young person has character and ambition, his education will be a help to him financially and in every other way during his entire life.

Why the Covered Bridges?

TOM MILLIMAN, genial and efficient head of the Fertilizer Department of the G. L. F., sends us an editorial clipped from the New York World which wants to know why bridges were covered.

One writer suggests the nonsensical idea that maybe it was to keep horses from looking over the side and getting scared by the water. How the old-time teamsters used to swear when they had to carry snow under the bridge in order to keep from being stuck!

Well, why *were* bridges covered? Come on, you old-timers, you ought to know.

Eastman's Chestnut

ONE of the most interesting and amusing letters I have had in some time came from L. J. Taber, master of the National Grange, answering my request for his favorite joke or most embarrassing situation he had ever been in.

Let me stop to remark that, in my opinion, Master Taber is one of the most able, effective and sincere farm leaders in America today. He is a fine public officer, but more than this he is a real doer and the Grange is certainly to be congratulated in being headed up with this type of leadership.

Brother Taber sent us a joke and an amusing incident. The embarrassing situation we will hold until some other time, but here goes with the joke. We quote right from the letter:

"I agree with you that people like to laugh. In spite of the amount of gray matter I put in a speech I find people forget the meat and remember the stories. We cannot change human nature and should work with it, so I am attaching a story and an incident or two.

"Now when conditions are bad and they complain about failure of farm conditions to improve, I often say when a farmer asks me how I know conditions will get better, 'The proof is easy; no man ever fell out of bed when he was sleeping on the floor.' Another story I use sometimes is as follows:

"Dad: 'You must go to Sunday School this morning, son.'

"Hopeful: 'Did you always go when you were a boy like me?'

"Dad: 'Yes, son, it was never too hot, too cold, too rainy, or too far for me to go to Sunday School and go on time. I went every Sunday.'

"Hopeful: (after a moment's thought): 'Say, Dad, 'tain't going to do me any good neither.'"

Says Old Times on Farm Were Best

THE following friendly letter interested me so much that I am sure it will tell you. It comes from my old friend Daniel Dean, a large potato grower of Nickols, N. Y., but also a man who has many other interests in life besides spuds. In answering Dan I pointed out that memory has a very nice habit of painting out the black spots of the past and of emphasizing the pleasant things. Thus when we look back either into our own lives or into history, the unpleasant facts and the tragedy are submerged and we remember and recall only that which was good.

Now there is no doubt that Dan is right when he says that people used to be more sociable than they are now and that they had such good times. But I wonder if they were any happier than we are now? They certainly had their troubles too. For example, take the pioneer father who awoke in the morning to find that the last spark in the fireplace had gone out so that he must travel maybe several miles to the nearest neighbor to borrow fire before the family could have any heat or any breakfast.

The lives of the old-timers were full of hardship and the records show that they died young, especially the women. You know the old saying that it took two New England mothers to raise one New England family. But maybe I am wrong. Read Dan's letter and see what you think. Here it is:

Friend Ed:

Your article on Re-Creation is just what the millions of American farmers need. In these days of farm depression the auto is the only thing which drives most farmers away from farm work. Contrast the city. City prosperity manifests itself in vacations as much as in autos, radios, apartment houses and movies.

Back in my boyhood days I lived with aged grandparents. I have loved to talk of old times, the early days of this section going back very nearly to its first settlement about 1790. I know from talking to old people that even though times were hard, all work done by hand instead of machinery, there was an amount of joy and recreation in life which we seldom see now. It was not till farm depression began in the seventies after the Civil war that the stern necessity of earning a living drove the farmer to continuous toil, unrelieved by recreation.

From 1800 to the Civil war and to the panic of 1873 farm life and particularly farm labor were different from now. There was one intensely high pressure period in the farmer's year. "Haying and harvest" meant the hardest kind of hard work, not seven, eight or ten hours a day, but from daylight till dark. When grain was cut with the cradle or sickle and hay with the scythe a long day of hard labor did not account for many bushels of wheat or pounds of hay. Wheat was the largest source of cash income. Hay was the main feed through winter for the animals, which included sheep for their wool as well as the horses and cattle. Women and children worked in the hayfield and in the grain, just as when Ruth gleaned in the field of Boaz so long ago.

But when the annual rush of haying and harvest was over, the farmer and his family were not so driven the rest of the year. Corn and potatoes helped to spread out the labor load to some extent. Threshing the grain took much of the time in fall, either with the flail or by treading out with the feet of animals. I have heard my father tell of the long hours he used to ride a horse to tread out grain. With the clearing of the forests still going on there was always work in the woods, either for clearing or to provide lumber for houses, barns, churches and covered bridges. Any one who has examined many of these structures built back towards 1800 is amazed at the quantity and the quality of the timbers used for building in those days.

Through all the year outside of the rush of haying and harvest our ancestors well knew how to enjoy themselves. It is hard for us now in these

days of gasoline power, or electric power and of horse powered machinery to even imagine how much our ancestors got together. Those big churches and barns required big crowds of strong men at the "raising" of each and every "raising" was a time of fun and frolic. Something we seldom hear of now, but which was a great factor in country life fifty to one hundred years ago was the "bee". Let a farmer have the misfortune to break his leg or be laid up by sickness, and dozens of his neighbors assembled in a "bee" and the work which would have taken him four weeks was done in a day.

Another vanished type of entertainment, particularly through the long winter months was the "school" to which the whole neighborhood went. It might be a "singing-school", a "spelling-school" or a "writing-school". Did you ever see the work of the old

time penman. Pounding this out with the typewriter it is hard to even dream of the olden time when so many men were proud of their skill in making artistic designs with the pen and ink. I would hate to compare the spelling of the average high school graduate with that of most old time farmers.

On the religious side of life was the "quarterly meeting" to which came hundreds for many miles. I had a great-great-uncle whose office and duty was to sit by the church door with scissors and if a lady had a ribbon on her dress, that ribbon had to be removed before she could be allowed to enter the church. The "camp meetings" at longer intervals attracted even larger crowds and from longer distances.

On the lighter side of entertainment there was an amount of visiting among relatives and friends which we hardly

see now. With the car in 1930 we can quickly get to the house of a friend one hundred miles away, and as quickly return, but I doubt very much if we get the real joy in a visit that was earned by a ride of ten, twenty or thirty miles in a wagon or sleigh in the old times. And certainly there is no comparison between the delicatessen store food we now get and the feast which the housewives of a hundred years ago spread for their visitors.

Ed, we have seen fifty years of farm depression, in which the joy of life has very largely vanished from the farm. Back in the days of farm prosperity before 1873 there was real re-creation on the farm, because the farmer could and easily did spare time for it. Let us hope in the future the economic conditions of the farm permit the time and money for re-creation which the city family has today and which our ancestors once enjoyed.

Your friend,

Daniel Dean.

Songs that Mother Used to Sing

The Star-Spangled Banner

By DAVE THOMPSON

FRANCIS SCOTT KEY started out to help a friend who found himself in a tight situation, and finished up by writing a poem which has made his name immortal.

His great day and night came on the 13th of September, 1814. This was shortly after the British had burned Washington, D. C. in the second year of the War of 1812. Baltimore was an important city of some 45,000 population. Flushed with the success in the capture and sack of Washington, the British were sure of taking Baltimore without much trouble, for it was known that the defense garrison at Fort McHenry was not strong. Major George Armistead, in command, had instructions not to attempt a vigorous defense in view of the fact that the British could and doubtless would attack both by land and by sea. Early in September the British fleet under command of Admiral Cockburn anchored at the mouth of the Patuxent River for the attack.

On a big plantation along the shore, a doctor of Marlboro had his home. He was a genial soul, whose native hospitality outweighed any spleen he might have had against the enemies of his country. The British seamen were not slow to take advantage of the good

dinners which they soon found were forthcoming at this home. After one of these dinners, at which the wine had flowed freely and they had talked a good deal, being not sure just what important information they might have spilled about the plans for the attack upon Baltimore, they concluded that the safe thing was to take their host, Dr. Beanes, along with them aboard ship, until after the plans had been carried out. In spite of his protests, Dr. Beanes was taken with them.

Of course, among the friends and relatives of Dr. Beanes, this was cause for worry. They feared that the good old doctor, who had ushered many of them into the world, and had kept most of them well throughout their lives, would be harmed or taken away for good. After they had figured it all over, they decided that the best thing to do was to have Frank Key get in touch with the man in charge of parole of British prisoners, and if necessary, go out to the British fleet under a flag of truce and argue for the release of Doctor Beanes.

The smart young lawyer arranged to go to the British Admiral Cockburn with Commissioner of Parole of Prisoners, John Skinner, under a flag of truce

on the small boat used for this purpose.

They arrived at a time when the British forces were starting to get into shape for the attack upon Baltimore. Key was courteously received, and put up such a convincing argument that Admiral Cockburn authorized the release of Dr. Beanes.

"But," said he, "you three men know too much to be allowed to return to Baltimore now. You will have to stand by with your boat and under our guard until we have reduced Fort McHenry and are in Baltimore. Then you will be free to go."

There was nothing else for it, and during the next three days they watched the landing of troops and the maneuvers of the British ships preparatory to the attack which came September 13.

I can think of men with souls so dead that under like circumstances they would have spent the time playing seven-up or even becoming spifficated with liquor.

But Francis Scott Key was a serious-minded young man, and devoted to his country. To be confined as a prisoner in view of the preparations for the attack of his home city; to know all about what danger was threatening, and not to be able to do a thing about it; to be in sight of the attack and see shells dropping over into and around Fort McHenry with its meagre garrison; to see night close down with the lights of the shells dropping over; to listen in vain for answering guns from the fort, silent became of too short range to reach the British ships, and used only in the early morning in their successful repulse of the land attack; to wait through the hours of dark quiet following the bombardment, without knowing which way the tide of battle had turned, only knowing that one or the other side had been beaten and the firing had stopped; to watch through the fog of the dawn for the first glimpse of Fort McHenry; to see, waving in the first gleam of the sun to pierce the morning mists of the river, the same old flag flying, torn and rent, but still high above Fort McHenry; to live all this vividly was epic to the serious, religious patriot, with the training of a lawyer and the soul of a poet, and he then and there wrote on such paper as was at hand, the rough lines of his first draft of the poem. The Star-Spangled Banner. Its first lines are the words set to measure which he and John Skinner and Dr. Beanes had been asking throughout the night,

"Oh, say, can you see, by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming,
Whose broad stripes and bold stars
through the clouds of the night,
O'er the ramparts we watched, were so gallantly streaming?"

With his soul transported with joy, he wrote on until he had described the

(Continued on Page 10)

The Song of the Lazy Farmer

MY JANE MIRANDY had to Mgo and join up with the home bureau, and now she hardly dares to sneeze, her head's so full of new ideas. Each time they meet they have some plan for some new stunt that their old man will have to pay for, from his crops, it's time that this here nonsense stops. Just yesterday them women met and all decided they would get a water system so the pump no more would keep them on the jump. Mirandy says no woman should lug in the water or the wood, she says them women all assail the good old-fashioned water pail. They want a lot of pipes and sinks, you turn a tap and git your drinks; with lots of water right on tap a woman's life is sure a snap.

Them women fail to understand there ain't no profit farmin' land, the little money that we make must go to buy a new hay rake and tools to cultivate our beans, we're allus needing new machines. We need these modern implements along with woven wire fence to keep our farm right up to date, we must improve our real estate. When I have purchased what I need to make this farm of mine succeed, I ain't got money left, by jinks, to pay for any kitchen sinks. I tell my wife it's no avail to rave about the water pail, she'll have to keep on for a spell, a-luggin' water from the well, I ain't got money to begin a-puttin' water systems in!

How Can We Meet Outside Competition?

By PAUL WORK

VEGETABLE growers of New York are fast awakening to the necessity of modifying practices in the interest of competing more effectively with distant shipping points. Without a doubt, New York possesses weighty advantages in being near

Paul Work

The activity of New York growers along marketing lines is expressing itself in the holding of meetings and formation of committees for the solution of various problems.

Lettuce Growers Organizing

The lettuce growers of western New York, some weeks ago, held a conference with C. S. Wilson of the Federal Farm Board. It was fairly well agreed that the Farm Board cannot do much until the industry is more thoroughly organized. A committee of growers was formed to establish a clearing house for information on lettuce movements and also to promote organization in the unorganized lettuce territory of the state. This committee is actively at work and it would appear that results will be realized during the current season.

Huge and delicious peas come from the State of Washington into New York during the summer. These are well graded, shipped with ice in the package and with excellent refrigeration, and they come through in fine shape. New Yorkers are inclined to pick and pack anything that grows. Madison County growers are now giving careful study to the problem of central packing and special equipment for grading.

Wayne Celery Growers

The Wayne County Celery Growers' Association was organized three years ago to establish the Frostland brand, making sure that only celery of proper quality should go forward under this mark. During the past two seasons the Frostland Association was not able to use its label very extensively on account of poor growth and disease. The association has held together, however, and a comparatively small nucleus of membership is at present working out a plan for the handling of the 1930 crop. The selling is to be entrusted to an agent who will have a representative to look over the fields, and to see that the label is used only on crates which measure up to the required U. S. No. 1 standards. The agent will also look after the disposal of the crop.

New Mimeographed Bulletins

The Department of Vegetable Gardening at Cornell University has recently issued mimeographed bulletins V-20 on Side Dressing Vegetable Crops by F. O. Underwood, and V-21, Pumpkins and Squashes by E. V. Hardenburg. These bulletins are available on request to the College.

Standard Package Adapted

The increased volume of shipped produce in attractive packages, well graded and packed, is forcing consideration of containers and methods for local sales. Markets are no longer local and a package needs to be suitable not only for nearby use, but for truck transportation to considerable distances. Many markets are using for various crops packages that are highly un-

suitable. The Southern Tier Vegetable Growers' Association has undertaken to solve the problem for tomatoes. A number of different containers have been used on this market. The Association has now agreed to make use of the square woven splint basket in the 12-quart size. This is an attractive package, its cost is low, it displays the goods in excellent shape and it can be covered and stacked in trucks or cars. It would appear that a wise choice has been made.

A committee of the New York State Vegetable Growers' Association headed by Mr. L. H. Gasper of Geneva is considering the matter of a state-wide standard package for tomatoes. The square woven splint basket will be one of those considered along with the lug box, which is so widely used for western and southern shipments, and the Climax basket which is extensively used in Ohio and, to some extent, in western New York. The diamond market basket which is the usual package at Rochester is objectionable because it is too flexible, resulting in softening and bruising of the fruits and it cannot be stacked. Half a truck load of lumber must be carried to permit handling a full load.

Greenhouse Development

A class of Cornell students spent a day not long ago visiting greenhouses at Rochester. One grower spoke very interestingly about the race between flowers and vegetables as profitable hothouse crops. A good many had supposed that flowers offer considerably larger profits. They have found, however, that the costs of flower growing are also proportionately heavy, and there seems to be general agreement that there is not much choice between the two as to net returns.

One Irondequoit grower, Alonzo Parr, has erected a half acre of the finest modern greenhouse construction in the form of two houses each 70x150 feet. These houses thus far have not been provided with heat. They are not used in mid-winter, but as soon as possible in the spring a crop of lettuce and radishes is planted. This is followed by a crop of tomatoes and results thus far have been highly satisfactory.

Minor crops such as watercress, mint and parsley, seem to be cutting an increasing figure in winter operations at Irondequoit. These crops are easily grown and yield fairly good returns. Markets, however, do not require very heavy amounts and it is not hard to overdo the proposition.

Summer Tour

The New York State Vegetable Growers' Association plans to hold a market and farm tour beginning the evening of August 21st and continuing through Saturday, the 23rd. This will cover New York markets and gardens of Nassau and Suffolk Counties. Watch for announcement of details.

"Y" can come out now, Mister, the rain's all over."—JUDGE.

The Abortion Test in Buying Cows

By PROFESSOR E. S. SAVAGE
N. Y. State College of Agriculture

EDITOR'S NOTE—Last week we told of the important conferences on contagious abortion, held recently at the New York State College of Agriculture by leading animal husbandry men from all over the East. We printed a report of C. J. Fawcett, telling how the State of Massachusetts is working on this great problem of controlling abortion in dairy cattle.

This week Professor Savage tells some of the experiences of the New York State College in applying the abortion test to new purchases.

In 1928 it was necessary to buy 40 cows for the University experimental herd used in the experiment to determine the optimum amount of protein for dairy cows in milk. The tuberculin test records on these cows were carefully checked and their udders examined for mastitis.

From each prospective purchase a blood sample was taken and examined at the New York State Veterinary College. If found negative to the Bang abortion disease test the cow was accepted. One hundred fifty-five cows were tested to select forty. Not all rejected were positive, but nearly all. No farmer objected to the check on his cows by means of the blood test.

In the fall of 1929 ten more cows were purchased for this experimental herd and five for the regular University breeding herd. These cows were not isolated on bringing them into the herds, but have been tested with the

Bang abortion blood test regularly each month since.

We have had only one cow change to positive. She was immediately sold for beef. We have had four premature births in the University experimental herd. One cow shipped by train aborted the day after she arrived. She was isolated and kept for some time, but always remained negative. A second cow aborted a four months' fetus, but remained negative. Her previous history showed that she had aborted twice before, but always remained negative. A third cow aborted a seven months' fetus, but remained negative to the blood test. A fourth cow gave birth to twin calves from one horn of the uterus about one week before her calculated due date. She has remained negative and has been retained in the experimental herd.

All cows have been safely bred except one rather old cow. These experiences indicate that the blood test is an effective aid in purchasing cows.

Can Bovine Tuberculosis Be Given to Humans?

(Continued from Page 3)

traced to the bovine type of the tubercular organism. I personally believe that every effort should be made to eliminate tuberculosis in cattle, and that it is unwise to drink raw milk from tubercular cattle."

NEW JERSEY

D. C. BOWEN,
State Director of Health

"In answer to your question, 'Is bovine tuberculosis communicable to humans?' my answer is 'yes.'"

NEW HAMPSHIRE

CHARLES DUNCAN,
Secretary, State Board of Health
"In my opinion bovine tuberculosis is communicable to humans."

MAINE

C. F. KENDALL,
State Commissioner of Health
"In reply to your communication, asking us whether in our opinion bovine tuberculosis is communicable to humans, will say that not only do we think so, but know that it is an established fact."

WHAT DR. MOORE SAYS

The following is a statement by Dr. V. A. Moore, dean for many years of the New York State College of Veterinary Medicine, and now superintendent of the Ithaca Memorial Hospital:

"Many studies have been made by the research laboratory of the New York City Board of Health, the Royal Tuberculosis Commission of England and the German Tuberculosis Commission, to determine to what extent the bovine tubercle bacillus is found in the tubercles of tuberculous people. Hundreds of cases have been examined and the type of bacilli that caused them determined. They found that children under 16 are more or less susceptible to bovine tubercle bacilli. In abdominal tuberculosis in adults over 16 years, both human and bovine bacilli were found in two cases, and the human only in eight. In children under 16, the human bacilli were found in 19 cases and the bovine in 28."

"If the milk from tuberculous cattle is unfit for use, why is the meat passed for food?" many ask. When the cow is slaughtered the veterinarians can tell if the disease is localized. The remaining part of the animal may not be infected and is therefore good for food. But with the milk it is impossible to tell whether or not the udder is tuberculous and if it is, the milk is sure to contain the bacilli."

These Astounding Results

Astounding results! Yes! Cold, hard facts! Facts that answer once and for all, the old question "Does grain with pasture during the summer pay dividends fall and winter as well as in summer?"

These facts settle it!

Group 1. Cows started on pasture only June 1, 1929 dropped from 45.6 lbs. of milk to an average of 14.5 lbs. in September! Then back in the barn on full regular winter feeding, they showed a loss of \$15.78 per cow from October 1 to February 1! Over the entire test period, from June 1 to February 1, all the profit they could show was \$51.43 per cow!

Group 2. Cows started on Larro and pasture June 1 with a production of 49.1 lbs. daily, dropped to 32.2 lbs. average in September. Then back in the barn on full regular winter feeding, they showed a profit of \$17.05 per cow from October 1 to February 1. Over the entire test period, they showed a profit of \$85.89 per cow!

Group 3. Cows started on pasture, Larro, hay and silage June 1, with a production of 46.8 lbs. of milk, dropped to 40.9 average in September. Then back in the barn on full regular winter feeding, they showed a profit of \$38.47 per cow from October 1 to February 1. Over the entire test period, they showed a profit of \$113.85 per cow—more than twice the profit of group 1!

At the start of this Larro Research Farm test, all cows were producing at the same level—all had freshened at the same time. From October 1 to February 1 all were fed hay, silage and Larro. Check their records point by point! Their records tell this truth—that not only summer, but fall and winter profits depend on the right summer feeding schedule. A copy of the complete report of this test will be sent upon request.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
Soft Cheese	2.21	
3 Evap. Cond.		
Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for July 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Slight Variations in Butter

CREAMERY SALTED	June 28, 1930	June 20, 1930	July 29, 1929
Higher than extra	33 1/2-34	33 1/2-34	43 1/2-44
Extra (92 cc.)	33	33	43
84-91 score	28	32 1/2-28	32 1/2-39
Lower Grades	26	27 1/2-26	38

The butter market experienced slight variations during the week ending June 28. The market opened very firm on Monday, following a rather unsatisfactory close on the 21st. However, by Wednesday reports showed that street stocks were abnormally high and in accordance, prices eased off. However, Thursday and Friday found the market back to 33c for extras. These fractional changes that take place from day to day indicate the very sensitive condition of the New York but-

ter market. Speculative buying has been dominating the market. When reports come from the West showing radical changes, the speculators are the first to react and when they discontinue their buying the market immediately responds. Receipts of butter are still running ahead of last year and of course, the cold storage situation is still very unsatisfactory. Of late, consumer-buying has been lighter than usual but this has been offset by heavier out of town buying. School is over and folks are headed for the mountains and seashore.

Cheese Prices Gain

STATE FLATS	June 28, 1930	June 20, 1930	July 29, 1929
Fresh Fancy	13 1/2-19 1/2	18	-18 1/2
Fresh Average		24	-25 1/2
Held Fancy	25	-26	24
Held Average	23	-23	27 1/2-29 1/2

New York State whole milk cheese gained half cent since our last report. Slowly but surely trade appears to strengthen. For sometime, upstate New York markets have been above par with New York City. The Metropolitan district refused to meet the higher rates but finally had to come to it. The fact that the situation is stronger in the West had much to do with the improvement in price. Following the advance the market held steady though trade is not particularly active. Receipts of New York State flats have been comparatively light and naturally under the higher rates, top quotations are received for only the finest pet marks.

The storage situation is still on the wrong side of the ledger. We are millions of pounds over last year and the into-storage movement has been running much heavier than last year.

Egg Market Easier

NEARBY WHITE	June 28, 1930	June 20, 1930	July 29, 1929
Hennery

Undergrades	22	23	22
BROWNS			
NEARBY BROWNS			
Hennery	28	-34	28
Gathered	24 1/2-26	23	-26 1/2

*Include premiums.

The New York egg market suffered a "chill" during the week ending June 28 due to a combination of hot weather, poor retail buying, etc. Receipts have been running lighter than last year in the four leading markets, but accumulations in the warehouses have been running heavier, indicating unsatisfactory trade output and distribution. The West reports country prices are above par with New York City and a good many cars are going into cold storage rather than sell at the low figure prevailing and at a loss.

Nearby eggs of the finest quality have not been clearing well and many lots have been repacked for storage purposes. Indications are that receipts are falling off which will materially help the situation.

Live Poultry Market Better

FOWLS	June 28, 1930	June 20, 1930	June 29, 1929
Colored	-22	-25	-32
Leghorn	-19	-22	-30
CHICKENS			
Colored			
Leghorn			
BROILERS			
Colored	20-33	20-42	32-40
Leghorn	16-25	16-25	25-33
OLD ROOSTERS	16-17	-17	-21
CAPONS			
TURKEYS	20-25	20-25	25-35
DUCKS, Nearby	18-22	15-23	20-25
GESE	-12	12-14	16-17

The live poultry market is a lot better during the week ending June 28. Killing has been better in the slaughter houses and the market for fowls has been in a much better condition. Leghorns have not been doing as well as fancy colored stock. Comparatively few fowls have been arriving by express and those that have been sent forward have cleared promptly.

The broiler market has turned in the seller's favor, following a lighter supply of these birds. Fancy Rocks have been scarce and sales are reported up to 35c. Fancy Reds have also been scarce and sales are reported up to 35c. Fancy Reds have also been scant and bring better returns.

Hay Market Quiet

Buying has been slightly restricted lately. A good many stablemen are against stocking up with hay before the

Fourth of July due to the increased fire hazard. We look for better buying next week. Top quality hay has been scarce and naturally has been selling very readily. The bulk of the offerings have been of medium and low grade as well as in small bales. These have been selling at \$1 to \$3 less than the large bales. Alfalfa has also run into a little opposition. Second cutting State alfalfa is now bringing from \$27 to \$30. Rye straw has been very slow barely outdoing oat straw which brings from \$14 to \$15. The following are the usual schedule prices; timothy No. 1, \$29; No. 2, \$27 to \$28; No. 3, \$24 to \$26; sample, \$21 to \$23; timothy containing mixtures of grass or clover No. 1, \$27 to \$28; No. 2, \$25 to \$27; No. 3, \$23 to \$24. Small bales range from \$1 to \$3 below the above quotations.

Pea Beans Easier; Red Kidneys Steady

Pea beans have turned easier of late now selling at \$6.50 to \$7. Red Kidneys on the other hand appear a little stronger. They are still selling at \$10.50 to \$11.25 while White Kidneys bring from \$9.25 to \$10. Marrows bring from \$7.75 to \$8.75 with Jumbos at \$9.25 to \$10. Yellow Eyes generally bring \$10.75 for the best. They appear to be holding steady.

Wool

The wool market is steady. New York better fleece wool, unwashed, fine, per pound, 21-30c; 1/2 blood 23-29c; 3/8 blood 24-29c; 1/4 blood 24-29c; low quarter blood 25-27c; common and braid 23-25c.

Meats and Livestock

CATTLE—Eight loads of steers on sale, very slow, few loads early sold steady. Bidding lower on others. Three loads medium \$10.00-10.50. Load Common grassers \$6.85. No cows nor bulls on sale.

VEALERS AND CALVES—Small lot good to choice vealers steady at \$12.50. Fed Mediums \$9.00 to \$10.50.

HOGS—\$10.00 to \$11.00.

LAMBS AND SHEEP—Lambs very slow, weak to \$50 lower. Good to choice \$11.75-12.50. Mediums \$10.00-11.50. Common \$8.00-9.00. Ewes \$1.00-\$3.00.

COUNTRY DRESSED CALVES—Fresh receipts were light all the week, mostly heavy coarse calves, which sold at irregular prices. Trading was slow all through. Prices were irregular on all but lightweights. A number of receipts were received in bad order. Market closed steady. Fresh receipts per pound: Choice 14-15c; fair to good 12-14c; small to medium 10-12c, stale stock lower.

LIVE RABBITS—Supply light all the week. Demand slow. Market weak. Per pound, by the coop: 15-20c.

Massachusetts Crops and Markets

(Continued from Page 3)

Baldwins heavy set—McIntosh well set, other varieties above normal.

Potato Situation

Acreage normal. Too early to note crop conditions.

Hay Crop

Due to comparatively light snow during late winter, small rainfall for

spring with heavy drying winds in May and June the hay crop in Massachusetts appears light. First cutting of alfalfa shows fairly well, while permanent mowings have failed to bottom out well and not over a 90 per cent normal crop is anticipated.

Onions

The reported acreage of all onions in Massachusetts this spring is 2530 acres against 2730 of last year, and the condition of the crop rated as 90 per cent. Set onions acreage is slightly more than twice seed plantings.

Dairy Situation

Important changes are taking place in the system of milk distribution which will be of material benefit to both consumer and producer. It is encouraging to note that the dairy situation in Massachusetts continues to look most promising.

Poultry

The Bay State has always been noted for its advanced work in poultry breeding and increasing interest is evident in this line of husbandry from all sections of the commonwealth. The season of 1930 promises to excel all others in the quality and amount of certified breeding stock, graded products and general improvement in poultry matters.

Cranberries

The cranberry industry of the commonwealth which is more than 60 per cent of the crop of the United States, never appeared more promising. The growers marketing program, including the utilization of all berries not suitable for standard grades, and the extension of the consumer demand to all parts of the world offer an opportunity to growers which is well appreciated and of which they are taking good advantage.

In general Agriculture of the Commonwealth never appeared to be in better condition than at the present time. The introduction of the New England Label as a guarantee of quality products has been an incentive for improved methods of grading with resultant higher prices.

DOGS AND PET STOCK

REGISTERED NEWFOUNDLAND PUPS and dogs. MAPLE GROVE KENNELS, Heuvelton, New York.

PEDIGREED COLLIE PUPS—Beauties. Males \$15-\$20; Females \$10. P. McCULLOUGH, Mercer, Pa.

PEDIGREED ST. BERNARD PUPS. Large, rough coated, noted for size, quality and breeding. Priced reasonable. J. C. LEE, Norwiche, N. Y.

PEDIGREED GERMAN POLICE PUPS shipped on 5 days approval. Males \$20; females \$12. GAYLORD BARTON, Vosburg, Pa.

COCKER SPANIEL PUPPIES. Both Black and Brown; also one female 5 yrs. old. CLIFFORD SOPER, Elizabethtown, N. Y.

POULTRY

Baby Chicks, Breeding Stock, Eggs

WHITE LEGHORN HENS and males now half price. Thousands of eight-week-old pullets. Also baby chicks and eggs. Trapped, pedigreed foundation stock, egg bred 30 years. Winners at 20 egg contests. Records to 320 eggs. Catalog and special price bulletin free. I ship C.O.D. GEORGE B. FERRIS, 923 Union, Grand Rapids, Michigan.

9 1/2-7 1/2 CHICKS; Big Husky Pure Barron English White Leghorn chicks from 2 year old trapped hens 9 1/2c. Pen Two 7 1/2c. Satisfaction Guaranteed. PULLETS NOW FOR SALE. Catalog free. WIL-LACKER LEGHORN FARM, New Washington, Ohio.

CHICKS C. O. D.—100 Rocks or Reds \$10; Leghorns \$8; heavy mixed \$8; light \$7. Delivery guaranteed. Feeding System, raising 95% to maturity free. C. M. LAUVER, Box 26, McAllisterville, Pa.

WHITE LEGHORN PULLETS—Early hatched vigorous free range stock. Steady layers, large white eggs. F. L. MORTON, Groton, N. Y.

POULTRY

Turkeys—Ducks—Geese

WHITE MUSCOVY DUCKS \$2.00. Eggs 10c each. Ducklings 30c. M. J. VROMAN, Schoharie, N. Y.

SWINE

SPRING PIGS READY TO SHIP

When starting to raise a hog, why not have the best to start with? Do you want pigs that will live and grow fast? If so, try pigs from our quality stock. These prices are for feeders or breeders.

Chester & Yorkshire cross or Chester & Berkshire cross 7 to 8 WEEKS OLD, \$4.75 EACH
8 to 9 WEEKS OLD, \$5.00 EACH

Keep them 10 days, and if in any way dissatisfied, return pigs at my expense. Crating free.
Chester White Barrows 8 to 10 weeks old, \$6.00 each.
WALTER LUX, 388 Salem St., Woburn, Mass. Tel. 0086
P. S.—Will ship any number C.O.D.

Farm News from New York

New Apple Grades?--Picnics--Cattle Sales--County Notes

THE New York State Department of Agriculture and Markets has called a hearing at Albany on Tuesday, July 15, at 1:30 p. m. daylight saving time, to consider the advisability of the adoption of new and official standards and designations of the various grades of apples.

The hearing is being held so that interested growers, dealers and packers in the Hudson River and other fruit sections of the eastern part of the state, may have the opportunity to express their views on the question of the adoption of the federal apple grades.

These federal apple grades have been revised recently and under the apple grading law Commissioner Pyrk is empowered, if it seems advisable, to adopt these grades as official New York State grades.

Dairy Business Second Only to Automobile

MORE than 100 people enjoyed a recent banquet of the Franklin County Holstein Friesian Club, held at Malone. Mr. C. Plumb a director of the State Association, acted as toastmaster. Dr. J. White, president of the Malone Chamber of Commerce, showed that the future of Franklin County points to dairying as the most important industry.

Mr. W. D. Barney of the Extension Department of the National Holstein Association, stated that the dairy industry stands second only to the automobile business in revenue and production. He strongly advises more advertising and pointedly said, "There should be more cows and less camels on the billboards."

Charles Baldwin, president of the State Association, also emphasized the need of advertising and gave several reasons why there is now a surplus of dairy products. W. D. Robens, Master Farmer, and secretary of the New York State Holstein Club, showed how herd testing was a means of eliminating poor cows.

Ayrshires Average \$642. At Sale

PUREBRED cows are evidently in demand. The second annual Strathglass Farm Sale at Port Chester, New York, sold forty-nine Ayrshires at an average of \$642. Byreholm Grace, a four year old, topped the sale at \$2400. She was bought by Mrs. E. R. Fritsche of Douglasville, Pa.

One of the reasons why the sale was a

success is that every animal was guaranteed as to health and soundness. Here is a lesson for cattle men at every sale.

Otsego Dairymen Foregather

THE second annual field day of the Dairy Improvement Council of Otsego County, held at Cooperstown on June 25, was an interesting and enjoyable affair. The chief speaker was Henry Morgenthau, Jr., publisher of American Agriculturist and chairman of Governor Roosevelt's Agricultural Advisory Commission. Mr. Morgenthau reviewed the new laws which have been secured for agriculture during the last two years and explained how these laws operated to the direct benefit of farmers.

Congressman J. D. Clark of Delaware County and Assemblyman Frank M. Smith of Otsego, were scheduled for a milking contest for the legislative championship of the United States. Mr. Clark

had business in Washington and was unable to be present, much to the disappointment of the crowd.

Congressman Clark's Otsego County friends are wondering just how important that Washington business was and are saying that he has got to return to Otsego County and prove that he knows which side of a cow to sit down at!

Farm Bank Reduces Discount Rate

E. H. THOMSON, president of the Federal Intermediate Credit Bank of Springfield, Mass., announces that the new rate of discount on all new loans and discounts is now 4 per cent. Successive reductions in the discount rate have been made recently from 5 per cent.

It is expected that it will be generally possible for banks, trust companies and agricultural credit corporations rediscounting notes of farmers with this bank,

to pass the savings on to farmers by decreasing money rates.

The facilities of the Federal Intermediate Credit Bank at Springfield, are available to the agricultural producers of New England, New York and New Jersey, through their local banks, agricultural credit corporations, incorporated livestock loan companies and similar financing institutions, as provided in the Agricultural Credits Act of 1923.

Off for South America

D. R. U. P. HEDRICK, well known, popular and efficient director of the New York State Experiment Station at Geneva, New York, sailed with a party of twenty American scientists and agricultural leaders on June 28, for Chile, to participate in the celebration of the 100th anniversary of the nitrate of soda industry.

The party will spend about two weeks in Chile. Among other functions planned for the visitors is a reception by the President of Chile, visits to the principal cities of the country and to typical farms. While in Chile, the American party will participate in several official functions in honor of the part nitrate of soda has played in the agriculture of the world.

League Reelects Old Officers

THE new board of directors of the Dairymen's League, following the annual meeting of that organization on June 19, reelected all of the old officers.

Fred H. Sexauer of Auburn, New York, was reelected president; J. D. Miller of Susquehanna, Pa., and J. D. Beardslee of New Berlin, New York, were reelected vice presidents; J. A. Coulter of Watertown, New York, was reelected secretary and Chester Young of Napanoch, New York, was reelected treasurer. L. A. Chapin of North Bangor, New York and H. H. Rathbun, New Hartford, New York will succeed themselves on the Executive Committee.

Pennsylvania County Notes

Potter County—The agricultural students of our local high school have organized an association which they named "The Future Farmers of America." Its aim to promote confidence and leadership in farm boys and to encourage thrift.

Many men are engaged in building roads and bridges. Lower price for Pa. crude oil makes dull times here.

Grass and grain crops growing wonderfully but fruit orchards hard hit by frost. Wild fruits abundant, some pears and apples but on many farms there will not be enough for home use.

Cattle are being again tested for T. B. but have as yet heard of no reactors.

Prices: Butter, 42c and 45c; Cheese 17c; Butterfat 37c; Eggs 24c and 25c.—M.C.S.

Western New York News

Cattaraugus County's Farmers' Hold Great Picnic

ONE of the outstanding events in Cattaraugus County, is the county picnic and field day which was held in the county fair grounds in Little Valley, Saturday, June 28. This is the fourteenth annual affair and plans have been under way since early spring.

The principal speaker of the day was Fred J. Freestone, Master of the New York State Grange.

A wide variety of amusements were furnished for the entertainment of those in attendance. There were two ball games consisting of teams from Leon and Conewango as well as Salamanca and Cattaraugus. Mr. R. C. Witter, principal of Little Valley high school, staged a series of athletic events for high and rural school boys and girls. A horseshoe pitching tournament was held to decide the championship of the county. Dr. E. C. Cleveland of Cattaraugus, managed some fine racing events in the afternoon. A parachute jump from a moving airplane was announced from the grandstand.

—M. M. SAALFIELD.

Latest from Ontario County

THE wet weather has bunched the farm work. Grain and hay harvest is close at hand and much cultivating is yet to be done. In the eastern part of county

fruit promises a big crop. Harvest of early cherries began the last of June and sour cherries are ripe. Early peaches promise a big crop and many trees need thinning but late varieties are not so full.

Grape vines around Naples and South Bristol and Canandaigua Lake region are blossomed more than ten days earlier than for many years before. The second tying of grapes has well begun and the outlook for grapes is favorable.

Farm help is a bit more plentiful than usual and wages seem to be a little lower than for the past few years. Wholesale prices in local markets of the county quote eggs 22c per dozen and butter dairy 30c to 35c and creamery at around 37c per pound.

4-H work in the county is progressing. Two outstanding club members are: Miss Virginia Phillips of Holcomb, who represented New York State at a 4-H exhibition at Springfield, Mass., where she won state championship and Frederick Klinbell of Victor who won state championship in Forestry in 1928 and was a state representative in 1929. Keith Bennet of Ionia a 4-H boy has the distinction of being the only boy east of Wisconsin to own a Karakul sheep.

The New York State Jersey Cattle Club held a field day at the Geneva Experiment Station in June and many 4-H members had exhibits there.—C. HATCH.

* * *

Steuben County—We have had a very heavy rain for several nights. Some potatoes were not planted and ground is too wet. Much buckwheat is expected to be sown.—D. C. F.

Hudson Valley Farm Notes

Columbia County—Fine weather for all crops, just enough rain each week to grow crops in fine condition. Farmers have commenced their haying, corn is cultivated and looking fine. Potatoes have been "bugged" or sprayed and are in blossom. Buckwheat ground ready for sowing by the 4th of July, "wet" or "dry". Gardens are looking the best in years. Oats and rye will be fine crops. Abundance of strawberries and cherries. Peas are being picked and are a bountiful crop. Chickens, ducks, geese, turkeys, and guineas are plentiful and growing fast. Not much loss reported. Old potatoes 45c a peck, eggs 32c, butter 34c, honey 20c a comb.—MRS. C. V. H.

Sullivan County—Potatoes, corn, oats and garden products look very good. Hay is a fair crop, most all farmers have commenced haying. The weather has been very good. Butter, eggs and milk are very low in price, feed doesn't seem to decline any. There are a few city folks coming out. Court is being held at Monticello with Judge Cooke on the bench. Stanley Sprague was 100% in a spelling contest held at Liberty, June 18. He will now try to enter the Syracuse spelling contest.—MRS. P. E. R.

Saratoga County—On June 14 Saratoga County Pomona Grange met at Gansevoort, where there was a fine ad-

dress by Mr. Gardner. Some farmers are pooling wool. It is being loaded at Saratoga Springs today. Have had plenty of rain lately, too wet for cultivating in many fields. Gansevoort Grange will hold its annual picnic at Lake Sunnyside, on June 26. Not a very heavy crop in prospect from all reports. A very bad hail storm in some parts of county last week, doing much damage to crops and gardens.—MRS. L. W. P.

NOTICE OF HEARING

Notice is hereby given that a public hearing will be held preparatory to fixing and promulgating official standards for grading and classifying apples packed or repacked within the State of New York, under the authority given by Article 13 of the Agriculture and Markets Law, on Tuesday, July 15, 1930, at 1:30 P. M. Daylight Saving Time, at the Office of the Department of Agriculture and Markets, 20th Floor, State Office Building, Albany, N. Y.

The purpose of this hearing is to give all parties interested an opportunity to learn the provisions of the proposed standards and to make suggestions for changes. Dated at Albany, N. Y., June 20, 1930.

Department of Agriculture & Markets,
(Signed) B. A. Pyrk, Commissioner

CAULIFLOWER Plants Ready

Field grown, Highest quality. Catskill Mountain, Long Island and Super Snowball \$4.50 per 1000; 5000, \$20.00; 500, \$2.50; 300, \$2.00; 200, \$1.50. No business done on Sunday.

F. W. ROCHELLE & SONS, CHESTER, NEW JERSEY

June Insect and Disease Conditions

EDITOR'S NOTE—The following is a detailed summary of insect and disease conditions in the east in general and particularly New York State, ending June 14, furnished through courtesy of the New York State College of Agriculture. Compare this report with conditions in your section.

ROSY APHIS—have caused practically no commercial injury. In a few orchards throughout the state they are still present in fair numbers together with the green apple aphid.

Foliage and fruit injury by the overwintered caterpillars of the **BUD MOTH** is about over. Many of the caterpillars are now changing to the adult or moth stage.

FRUIT TREE LEAF ROLLER larvae are beginning to change to the moth stage.

RED BUGS have caused considerable injury in orchards where control measures were not applied.

PLUM CURCULIO has caused serious injury in a considerable number of orchards in the Hudson Valley and occasional orchards throughout the state.

CODLING MOTH "side worm" entrances are beginning to appear in apples in the Hudson Valley. Codling moth eggs are abundant in Western New York.

PEAR PSYLLA nymphs of the 2nd brood are abundant in orchards in the Hudson Valley. In Western New York eggs of the 2nd brood are abundant and beginning to hatch.

Twig injury by the **ORIENTAL PEACH MOTH** is beginning to be evident in

western New York and is already common in the Hudson Valley.

CABBAGE MAGGOTS have been rather abundant and cause serious damage in untreated seed beds and to early cabbage in the field. Many growers used the corrosive sublimate treatment. Cabbage worms are beginning to appear.

APPLE SCAB is abundant on the leaves in poorly sprayed orchards throughout the state and some fruit infection has appeared in these orchards.

FIRE BLIGHT is serious in a number of apple orchards particularly in the central lakes region with some reports from the Hudson Valley. All infections entered through the blossoms.

CEDAR RUSTS are abundant on the leaves of many apple orchards in the Hudson Valley and are beginning to appear on the fruit.

FROG-EYE LEAF SPOT is prevalent in a number of apple orchards.

FIRE BLIGHT in pears does not yet appear serious except in scattered individual orchards.

BROWN ROT is present but not yet serious in cherries.

CHERRY LEAF SPOT is beginning to appear in the Hudson Valley in unsprayed or poorly sprayed orchards.

PEACH LEAF CURL is not of economic importance this season.

BROWN ROT BLOSSOM blight was very light in peaches.

LEAF SCORCH is reported serious in gooseberries in the lower Hudson Valley.

—W. E. BLAUVELT, Assistant Extension Entomologist, New York State College of Agriculture.

Farm Women Meet In Albany

One Thousand Members of Home Department of Dairymen's League Gather in Annual Meeting

ON June 18th more than 1,000 farm women of the state met in the Capitol Theatre of Albany, representing 43,000 Dairymen's League farm homes. The occasion was the annual meeting of the Home Department of the League which had its own special session one day prior to the general meeting of the League.

Miss Vera McCrea, director and founder of the Home Department, presided. The morning meeting was devoted to business, committee reports, appointments, reading and adoption of resolutions.

At the afternoon meeting Commissioner Berne A. Pyrk was the chief speaker. He said that within the next 30 or 40 years agriculture must adjust itself to a stabilized level, not to an

within the organization and compiled by Harry M. Epps, League entertainment director.

Home Economics Scholarships

TO the following organizations and individuals goes the credit for furnishing scholarships which have enabled worthy young women to pursue their studies at the New York State College of Home Economics.

The New York State Federation of Women's Clubs gave a scholarship in 1911-12 then again in 1924-25, 1927-28 and in 1928-29. The New York State Federation of Home Bureaus has founded the permanent scholarship fund known as the Carrie E. Brigden Scholarship awarded each year to a senior in the College of Home Economics. The Student Home Economics Club of the college awards \$100 each year to a student of their own choice on the basis of financial need and outstanding ability in scholarship and leadership. The Morgenthau Fellowship of \$1000 a year has been given for three years by Mrs. Henry Morgenthau, Sr., for a graduate student to study economic opportunities open to women of rural communities and types of vocational training needed in relation thereto.

The New York State Conference, Daughters of American Revolution has created a 4-year scholarship in Home Economics for an Indian student. It is hoped that by January 1st enough will be raised to make this a permanent scholarship, named in memory of Olive Whitman, late wife of ex-Governor Charles S. Whitman.

The New Rochelle chapter, Daughters of American Revolution, has also created a scholarship in the College of Home Economics. The recipient this year is Miss Inez Blackchief, a Seneca of the Tonawanda Reservation who is a former winter course student and founder of a very large and active group of the Genesee County Home Bureau.

Records of the students who have been helped by these scholarships show that it was money well invested. There

are still many special studies which ought to be made in various phases of home economics and no greater contribution can be made to research than just such scholarships.

Songs That Mother Used To Sing

(Continued from Page 5)

scene of the battle in the heroic measures of the first two verses which most of us know by heart, and in the third had paid his bitter respects to the enemy, closing with the fourth which is a prayer for the eternal safety of his country.

There was plenty to talk about upon their return to Baltimore, but before getting to his home, Key found time to re-write his poem of the attack upon Fort McHenry, and the evening of September 14, showed it to a friend.

Together they went to a newspaper office, and finding young Samuel Sands about the place, cleaning up after all the regulars had left they had him set it up in type, and it was struck off on some handbills.

These were handed around on the streets—the newspaper printed it the next day—it was the best dramatization of the attack and its repulse. People of Baltimore talked about it as they read and re-read it. A group of soldiers got a copy of it. In their bunch were two brothers, Durang by name, whose regular business was on the vaudeville stage, but who, like many other young fellows were in the war against Great Britain. When Ferdinand Durang heard this poem read, he at once saw that it would be great on the stage, coming at a time when the people of the United States were once more aroused to hope for victory. Going through the flute music in the camp, whistling the tune as he tried to fit to it the words of the Star-Spangled Banner, he finally came upon a popular tune of the day. "To Anacreon in Heaven," which fit. With his brother he went through the words to this tune a few times and then the whole group of soldiers joined in singing it.

The next day he and his brother were

granted a furlough and they sang The Star-Spangled Banner in the old Holliday Street Theatre in Baltimore to tremendous applause. Soon everyone was singing it. It expressed the prayer in the heart of everyone hoping that the United States would win the war.

Today, it expresses the greatest hope of every true American. Perhaps you haven't read through all the verses lately. Let us do it together:

"Oh, say can you see, by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming,
Whose broad stripes and bright stars through the clouds of the fight,
O'er the ramparts we watched, were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there,
Oh, say, does that star spangled banner yet wave,
O'er the land of the free and the home of the brave?"

On the shore dimly seen thro' the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected now shines on the stream:
'Tis the star-spangled banner: oh, long may it wave,
O'er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
Mid the havoc of war and the battle's confusion
A home and a country should leave us no more?
Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of fight or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave.

Oh thus be it ever when freemen shall stand
Between their loved home and wild war's desolation;
Blest with vict'ry and peace may the heav'n rescued land
Praise the pow'r that hath made and preserved us a nation!
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust!"
And the star-spangled banner in triumph shall wave
O'er the land of the free and the home of the brave.

It is a long poem, set to a tune which is hard to sing, but it has become generally accepted as our national song. A lawyer, moved by the stress of a tremendous experience, wrote the words. Because of this, his name is honored today. And because of him, you and I, in our school day learn to sing The Star-Spangled Banner as a tribute to our flag; to stand at attention when it is played on Memorial day, Fourth of July, and Armistice Day.

The old flag which Francis Scott Key first called The Star-Spangled Banner has stopped its waving, for it has become fragile with age. It is kept in the National Museum in Washington, D. C. One of its fifteen stars missing, carried away by a fragment of shell during the battle of Fort McHenry; and a piece missing from one corner, wrapped about a soldier who took part in the battle and whose dying request was that a piece of the old flag be buried with him. Pause a moment before this old relic of the heroic days of our forefathers when you visit the National Museum on your trip to our capital. It is the original national emblem to be called The Star-Spangled Banner. It is well that a nation treasures its old relics and that a people cherishes the songs which tell of heroic moments of gallant days that are past.

Three Ducky Bibs

THESE three ducky bibs for breakfast, lunch, and dinner need only a few inches of embroidery in black and orange to complete them into something useful yet welcome. They are stamped on heavy, cream colored muslin, made and bound all around with yellow. The binding makes yellow ties at back of neck. The bibs measure approximately eight inches wide, and from front of the neck, nine inches deep.

M239—Includes the set of three ready-made, stamped bibs, floss and instructions to complete at 50 cents.

Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

increasing population or market. Miss McCrea gave a review of the accomplishments of the League and of the Home Department during the past year. She said that concrete evidence of the value of cooperative effort came when last year the League urged members to increase milk production. Then the market changed and an appeal went out to convert milk into cheese. A further appeal asked members to use more cheese and help relieve the crowded market. Immediate responses to all these appeals showed the value of organized effort.

Mrs. Beatrice Crawford Newcombe, associate editor of the Dairymen's League News, in her address said "Farming has gone big business. No longer are mergers limited to Wall Street and big corporations. All over the country the farmers, the sheep growers, hog growers, dairymen and ranchers have organized co-operative associations that insure a wide market for produce. The farmers' interests are protected." She further declared that the cultural ideal of rural people is as real as that embodied by George Washington—the country gentleman. The leisure which modern improvements afford, the ease of reaching cultural centers in the cities, the talent carried everywhere by the radio and the companionships brought by the telephone make this ideal more possible than ever.

The chief feature of the evening program was a 3-act play entirely original

No. C2575 as shown herewith presents a combination that will meet with the approval of every woman in the home. The articles as illustrated are stamped on fine quality genuine cream linen, a material that will give years of most satisfactory service. The scarf is 18x45 inches; the centerpiece, 36x36 inches and there is a full size three-piece buffet set and also a full size three-piece vanity set. All are hemstitched ready for crocheted edge. The design is most attractive and very easy to complete. Price of this material is as follows: Scarf 95c; buffet set 90c; vanity set 50c; 36x36 inch centerpiece \$1.25. Sufficient embroidery floss for completely finishing anyone of the items in this set is 35c additional. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., N. Y. C.

Aunt Janet's Corner

A Hero's Wife Is Often Heroic in Sacrifices

THE spectacle of a great city let loose to do honor to a national hero is a sight worth seeing. When Rear-Admiral Byrd and his Antarctic expeditionary crew came home, New York put on its company clothes and manners and went forth to greet them. And the eager public took first place, fairly squeezing into the background his mother, his wife and the children. Not until the political "big bugs" and the insistent reporters had been met was the Admiral able to excuse himself and go to the room where waited those nearest and dearest to him.

Thus it ever happens, it seems, when one is famous. It is one of the sacrifices which the great are called upon to make, that of putting the public ahead of their own personal wishes and inclinations. Furthermore, it takes a good, stout spirit on the part of the hero's wife to submit gracefully to such circumstances. More than once Mrs. Richard Byrd has shown herself the modest, retiring gentlewoman, holding herself in check and quietly waiting until such time as her famous husband can devote himself to family matters. When I think of her I am always reminded "They also serve who only stand and wait." Hers is the inconspicuous, less dramatic part, but none the less important in the Admiral's successes.

Another modest figure, conspicuous by his absence on this day of welcoming heroes, was that of Colonel Lindbergh. Not for a moment would he allow the interest which always follows his own public appearance to detract from the honors he considered were due to Admiral Byrd. He quietly telephoned his congratulations and made an appointment for a private meeting—the very acme of tact and good taste under the circumstances.

Thus the public is treated to the demonstration of the popular love of great deeds nobly done—by a magnetic

personality—and that of a fellow-venturer's quiet way of acknowledging a great accomplishment.—Aunt Janet.

Tested Salads

Mint Salad

DISSOLVE one package of mint gelatine in one pint of boiling water, add one-half cupful sugar and let cool. Dice a small bunch of celery, combine with small can diced pineapple and one cupful nut meats. Add to the gelatine as it begins to set. Serve on lettuce leaf, or on plate as a garnish for roast lamb.—T., N. Y.

Fish Salad

Remove the bones from six or eight sardines and arrange fish on a bed of lettuce leaves. Shred two small red peppers very fine and scatter over the fish. Sprinkle with a few drops of lemon juice, dress with mayonnaise and serve.—T., N. Y.

Grape Fruit Salad

Cut medium-sized grape fruit in thirds, lengthwise. Remove the pulp, being careful not to press out the juice, divide in small pieces, add an equal amount of chopped celery and mix. Refill the grape fruit shell, dress with either mayonnaise or a French dressing and serve.—T., N. Y.

Raisin Salad

Put one cupful seeded raisins in sieve over boiling water until plump. Chill, add one cupful cottage cheese and one half cupful broken nut meats. Serve on lettuce leaves with a dressing of mayonnaise.—T., N. Y.

Glass supports under the legs of the stove or kitchen cabinet will keep them from cutting the linoleum.

Frocks Both Cool and Becoming

FROCK PATTERN NO. 2562 is a lovely little design for girls of 1, 2, 4 and 6 years with its cap-sleeve effect, side pleats, and scallop finish at neck, sleeves and hem. Dotted swiss, organdie, voile, handkerchief linen or tub silk would make up charmingly. Size 4 requires 1½ yards of 32 or 39-inch material. PRICE 15c.

FROCK PATTERN NO. 2552 is chic, youthful and slimly flattering. Its princess styling and lengthened silhouette make it very becoming to the slender figure. The knotted trimming softens the neckline while the flared sleeves are distinctly smart. The pattern cuts in sizes 16, 18 years 36, 38, 40 and 42 inches bust measure. Size 36 requires 3¼ yards of 39-inch material with 6 yds. of binding, PRICE 15c.

DRESS PATTERN NO. 2560 wraps its bodice in tuxedo coat styling, a very becoming style for full figures. The flaring skirt adds both style and comfort in walking while the cap sleeve effect is particularly good for those who like to be cool but not entirely sleeveless. Linen, cotton broadcloth, pique, shantung, tub silk and cotton shirting lend themselves particularly well to such a style. Besides that, the beautiful color combinations this season make it possible for anyone to find her best and most becoming shades. The pattern cuts in sizes 16, 18 years, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 3¼ yards of 39-inch material with ¾ yard of 27-inch contrasting. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA GIVES YOU SUCH SWEET-SMELLING WASHES

YOU'LL never know how sweetly fresh and fragrant your clothes really can be—until you try Fels-Naptha.

For Fels-Naptha brings you *extra* help to get clothes clean clear through. The *extra* help of two safe, active cleaners combined in one bar. Plenty of dirt-loosening naphtha (smell it!) and good golden soap, the dirt-remover. Working together, they dissolve grease and grime. They loosen every tiny particle of dirt and wash it away—thoroughly. And when your clothes come off the line, they're sure to smell fresh and airy—sweetly clean through and through.

Fels-Naptha's *extra* help does away with hard rubbing. It saves your clothes. It saves you! And because it works so quickly and keeps your hands in water less time, Fels-Naptha saves your hands, too.

Try it and see! Use Fels-Naptha in

tub or machine. For soaking or boiling. In hot, lukewarm or even cool water. For housecleaning, and for *all* your soap-and-water tasks—use Fels-Naptha and get *extra* help! Ask your grocer for a few bars—or the handy 10-bar carton—today!

SPECIAL OFFER—We'll be glad to send every user of Fels-Naptha Soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naphtha!) just as you need them. Send only a two-cent stamp to cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-7-5. Fels & Company, Philadelphia, Pa.

NAME

ADDRESS STATE

The Indian Drum—By William McHarg and Edwin Balmer

A party of nearly a dozen men and girls, with an older woman chaperoning them, lounged under the shade of an awning over the after deck. They greeted her gaily and looked curiously at Alan as she introduced him.

As he returned their rather formal acknowledgments and afterward fell into general conversation with them, she became for the first time fully aware of how greatly he had changed from what he had been when he had come to them six months before in Chicago. These gay, wealthy loungers would have dismayed him then, and he would have been equally dismayed by the luxury of the carefully appointed yacht; now he was not thinking at all about what these people might think of him. In return, they granted him consideration. It was not, she saw that they accepted him as one of their own sort, or as some ordinary acquaintance of hers; if they accounted for him to themselves at all, they must believe him to be some officer employed upon her father's ships. He looked like that—with his face darkened and reddened by summer sun and in his clothing like that of a ship's officer ashore. He had not weakened under the disgrace which Benjamin Corvet had left to him, whatever that might be; he had grown stronger facing it. A lump rose in her throat as she realized that the lakes had been setting their seal upon him, as upon the man whose strength and resourcefulness she loved.

"Have you worked on any of our boats?" she asked him, after luncheon had been finished, and the anchor of the ship had been raised.

A queer expression came upon his face. "I've thought it best not to do that, Miss Sherrill," he replied.

She did not know why the next moment she should think of Henry.

"Henry was going to bring us over in his yacht—the *Chippewa*," she said. "But he was called away suddenly yesterday on business to St. Ignace and used his boat to go over there."

"He's at Harbor Point, then."

"He got there a couple of nights ago and will be back again to-night or to-morrow morning."

The yacht was pushing swiftly, smoothly, with hardly a hum from its motors, north along the shore. He watched intently the rolling, wooded hills and the ragged little bays and inlets. His work and his investigations had not brought him into the neighborhood before, but she found that she did not have to name the places to him; he knew them from the charts.

"Grand Traverse Light," he said to her as a white tower showed upon their left. Then, leaving the shore, they pushed out across the wide mouth of the larger bay toward Little Traverse. He grew more silent as they approached it.

"It is up there, isn't it," he asked, pointing, "that they hear the Drum?"

"Yes; how did you know the place?"

"I don't know it exactly; I want you to show me."

She pointed out to him the copse, dark, primeval, blue in its contrast with the lighter green of the trees about it and the glistening white of the shingle and of the more distant sand bluffs. He leaned forward, staring at it, until the changed course of the yacht, as it swung about toward the entrance to the bay, obscured it. They were meeting other power boats now of their yacht's own size and many smaller; they passed white-sailed sloops and cat-boats, almost becalmed, with girls and boys diving from their sides and swimming about. As they neared the Point, a panorama of play such as, she knew, he scarcely could have seen before, was spread in front of them. The sun gleamed back from

the white sides and varnished decks and shining brasswork of a score or more of cruising yachts and many smaller vessels lying in the anchorage.

"The Chicago to Mackinac yacht race starts this week, and the cruiser fleet is working north to be in at the finish," she offered. Then she saw he was not looking at these things; he was studying with a strange expression the dark, uneven hills which shut in the two towns and the bay.

"You remember how the ship rhymes you told me and that about Michabou and seeing the ships made me feel that I belonged here on the lakes," he reminded her. "I have felt something—

and down there, pressing her hands together. He must be looking at the things now, unrolling the muffler. . . . What would he be feeling as he saw them? Would he be glad, with that same gladness which had mingled with her own sorrow over Uncle Benny, that his father was gone—gone from his guilt and his fear and his disgrace? Or would he resent that death which thus left everything unexplained to him? He would be looking at the ring. That, at least, must bring more joy than grief to him. He would recognize that it must be his mother's wedding ring; if it told him that his mother must be dead, it would tell him that she had

send them that he didn't have? Or, if he had the instructions, was he waiting to receive word when they were to be sent?"

"To receive word?" she echoed.

"Word from my father! You thought these things proved my father was dead. I think they prove he is alive! Oh, we must think this out!"

He paced up and down the room; she sank into a chair, watching him. "The first thing that we must do," he said suddenly, "is to find out about the watch. What is the 'phone number of the telegraph office?"

She told him, and he went out to the telephone; she sprang up to follow him, but checked herself and merely waited until he came back.

"I've wired to Buffalo," he announced. "The Merchants' Exchange, if it is still in existence, must have a record of the presentation of the watch. At any rate, the wreck of the *Winnebago* and the name of the skipper of the other boat must be in the files of the newspapers of that time."

"Then you'll stay here with us until an answer comes."

"If we get a reply by to-morrow morning; I'll wait till then. If not, I'll ask you to forward it to me. I must see about the trains and get back to Frankfort. I can cross by boat from there to Manitowoc—that will be quickest. We must begin there, by trying to find out who sent the package."

"Henry Spearman's already sent to have that investigated."

Alan made no reply; but she saw his lips draw tighter quickly. "I must go myself as soon as I can," he said, after a moment.

She helped him put the muffler and the other articles back into the box; she noticed that the wedding ring was no longer with them. He had taken that, then; it had meant to him all that she had known it must mean. . . .

In the morning she was up very early; but Alan, the servants told her, had risen before she had and had gone out. The morning after the cool northern night, was chill. She slipped a sweater on and went out on the veranda, looking about for him. An iridescent haze shrouded the hills and the bay; in it she heard a ship's bell strike twice; then another struck twice—then another—and another—and another. The haze thinned as the sun grew warmer, showing the placid water of the bay on which the ships stood double—a real ship and a mirrored one. She saw Alan returning, and knowing from the direction which he came that he must have been to the telegraph office, she ran to meet him.

"Was there an answer?" she inquired eagerly.

He took a yellow telegraph sheet from his pocket and held it for her to read.

"Watch presented Captain Caleb Stafford, master of propeller freighter *Marvin Halch* for rescue of crew and passengers of sinking steamer *Winnebago* off Long Point, Lake Erie."

She was breathing quickly in her excitement. "Caleb Stafford!" she exclaimed. "Why, that was Captain Stafford of Stafford and Ramsdell! They owned the *Miwaka*!"

"Yes," Alan said.

"You asked me about that ship—the *Miwaka*—that first morning at breakfast!"

"Yes."

A great change had come over him since last night; he was under emotion so strong that he seemed scarcely to dare to speak lest it master him—a leaping, exultant impulse it was, which he fought to keep down.

"What is it, Alan?" she asked.

(Continued on Page 14.)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance, living at the Sherrill summer home, receives a package containing a wedding ring and a watch that appear to come from Benjamin Corvet. Shortly after Spearman calls at the Sherrill home.

not recognition exactly, but something that was like the beginning of recognition—many times this summer when I saw certain places. It's like one of those dreams, you know, in which you are conscious of having had the same dream before. I feel that I ought to know this place."

They landed only a few hundred yards from the cottage. After bidding good-by to her friends, they went up to it together through the trees. There was a small sun room, rather shut off from the rest of the house, to which she led him. Leaving him there, she ran upstairs to get the things.

She halted an instant beside the door, with the box in her hands, before she went back to him, thinking how to prepare him against the significance of these relics of his father. She need not prepare him against the mere fact of his father's death; he had been beginning to believe that already; but these things must have far more meaning for him than merely that. They must frustrate one course of inquiry for him at the same time they opened another; they would close for him forever the possibility of ever learning anything about himself from his father; they would introduce into his problem some new, some unknown person—the sender of these things.

She went in and put the box down upon the card table.

"The muffler in the box was your father's," she told him. "He had it on the day he disappeared. The other things," her voice choked a little, "are the things he must have had in his pockets. They've been lying in water and sand—"

He gazed at her. "I understand," he said after an instant. "You mean that they prove his death."

She assented gently, without speaking. As he approached the box, she drew back from it and slipped away into the next room. She walked up

been married, or had believed that she was married!

Suddenly she heard him calling her. "Miss Sherrill!" His voice had a sharp thrill of excitement.

She hurried toward the sun room. She could see him through the doorway, bending over the card table with the things spread out upon its top in front of him.

"Miss Sherrill!" he called again.

"Yes."

He straightened; he was very pale. "Would coins that my father had in his pocket all have been more than twenty years old?"

She ran and bent beside him over the coins. "Twenty years!" she repeated. She was making out the dates of the coins now herself; the markings were eroded, nearly gone in some instances, but in every case enough remained to make plain the date. "Eighteen-ninety—1893—1889," she made them out. Her voice hushed queerly. "What does it mean?" she whispered.

He turned over and reexamined the articles with hands suddenly steadying. "There are two sets of things here," he concluded. "The muffler and paper of directions—they belonged to my father. The other things—it isn't six months or less than six months that they've lain in sand and water to become worn like this; it's twenty years. My father can't have had these things; they were somewhere else, or some one else had them. He wrote his directions to that person—after June twelfth, he said, so it was before June twelfth he wrote it; but we can't tell how long before. It might have been in February, when he disappeared; it might have been any time after that. But if the directions were written so long ago, why weren't the things sent to you before this? Didn't the person have the things then? Did we have to wait to get them? Or—was it the instructions to

HANDY ANDY Says "Here's How"

To Keep Flies Out of the House

By Ray Inm

To keep flies out of the house, do not allow food to stand around uncovered.

"BUT WHY SHOULD FLIES BE KEPT OUT OF THE HOUSE?" (SEZ YOU), A FAIR QUESTION (SEZ WE) AND THE DIAGRAM BELOW GIVES THE EIGHT MOST IMPORTANT REASONS WHY:

- 1 ANYONE WHO WEARS A PLUG HAT FOR NO GOOD REASON, THROWS HIMSELF OPEN TO IMMEDIATE AND UNCONDITIONAL SUSPICION
- 2 NEVER ADMIT ANYONE WHO SMOKES A CORNCOB PIPE, ESPECIALLY IF HE IS
- 3 TO 8 INCL: TWO FEET ARE BAD ENOUGH TO CLEAN UP AFTER, BUT WHEN A GUY COMES BARGING IN WITH SIX—WELL, ITS JUST TOO MUCH!

Never leave remnants of food exposed that is to be fed to cat or hens.

Let nothing decay near the house—pull window shades down almost to sill.

Flies will be attracted to the light where they may be caught or killed.

With the A. A. Poultry Farmer

How to Build an Outdoor Brooder

THE perfect outdoor mash feeder for pullets on range has never been built. Perhaps it never will be. However, some are more satisfactory than others, and I am going to describe one that seems to combine as many desirable features as any that I have seen. It is one that has been used by Professor Rice on his own farm for quite a number of years. The features which appeal particularly to Professor Rice are that it is light enough to be easily

spring. The ones Professor Rice built are slightly different in dimensions and quite different in roof material. He used matched boards covered by a sheet of galvanized iron. This is undoubtedly more durable and probably more satisfactory, also considerably more expensive and harder to construct. We find that the Prestwood even though it is painted warps more or less in the rain, but that does not seem to be a serious matter.

Galvanized iron comes in standard-

Here is the practical outdoor mash feeder described in the article on this page. Note that the top is tilted up in order to give a better view of the feeder.

moved, and that the low flat construction permits of loading a lot of them on a truck by piling one above the other, and of nesting them back snugly together with little waste space when they are stored away under cover in the fall.

In addition to those advantages the feeder allows the chicks to feed from all four sides without getting into the mash with their feet. It is also low in cost, and easy to build. Because they are close to the ground the wind does not tip them over. The one described will hold about 50 pounds of feed.

How to Build It

Go to your lumber dealer and get these materials: One 8 inch board 6 feet long—dressed on all sides. One 6 inch board 6 feet long—dressed on all sides. One 2 in. x 2 in. stick 8 feet long. One sheet of Masonite Prestwood 4 feet by 2 1/2 feet. One strip of woven wire 8 inches wide and 9 feet long, with ob-long meshes about 2 in. x 4 in. and preferably electric welded. One pair 3 in. T hinges.

Since some dealers object to bothering with short lengths, perhaps you may as well double the bill of material and make two feeders, one for mash and one for scratch grain.

Cut the 8 in. board into 3-foot lengths. Lay two of these side by side for the floor and fasten them together by two 18 in. pieces cut from the 2x2 stick. Allow an inch to project at each side for the side boards to rest on. There will be a crack between the floor boards and this should be stripped on the under side. Now cut two 3-foot lengths from the 6 in. board for the side pieces and two 18 inch lengths for the end pieces. This leaves a three-foot length of the 6 in. board. Rip that to make two 3 in. pieces to nail to the underside of the Prestwood cover for reinforcing it, and to fasten the hinges to. Now cut 2 pieces 15 inches long from the 2x2 and 2 pieces 16 inches long. Put these in the corners of the feeder for roof supports being sure that two of the same length come at each side thus giving a slight but sufficient slope to the roof. Hinge the roof to the supports so as to give a six inch overhang on all four sides, then the rain won't keep the chicks from eating. The woven wire is wrapped around the feeder and stapled to the supports. Perhaps I should mention that the feeder is described as we have built them this

sized sheets and if planning to use it one will save money by getting the sheets and then altering the dimensions of the feeder to suit.

The Indian Drum

(Continued from Page 12)

"What is it about the *Miwaka*? You said you'd found some reference to it in Uncle Benny's house. What was it? What did you find there?"

"The man—"Alan swallowed and steadied himself and repeated—"the man I met in the house that night mentioned it."

"The man who thought you were a ghost?"

"Yes."

"How—how did he mention it?"

"He seemed to think I was a ghost that had haunted Mr. Corvet—the ghost from the *Miwaka*; at least he shouted out to me that I couldn't save the *Miwaka*!"

"Save the *Miwaka*! What do you mean, Alan? The *Miwaka* was lost with all her people—officers and crew—no one knows how or where!"

"All except the one for whom the Drum didn't beat!"

"What's that?" Blood pricked in her cheeks. "What do you mean, Alan?"

"I don't know yet; but I think I'll soon find out!"

Education by Mail

WE continue to get many inquiries about correspondence courses. We hesitate to discourage anyone who wishes to add to their education, but the figures show that less than 10 per cent of all persons who enroll for such courses ever complete it.

We make the following suggestions for your consideration before you sign on the dotted line.

1. A correspondence course is an excellent way of getting more information about the work which you are doing. If you are farming take a correspondence course in farming. (Your State College will furnish you one free of cost). We feel however, that a correspondence course is a rather doubtful way of getting information about a new type of work. An engineer might have difficulty in learning to farm by mail and a farmer to be an engineer by mail.

2. Some correspondence schools are thoroughly reliable, others are not. Investigate before you sign an agreement.

3. Once you sign an agreement you are legally liable for the entire amount of the course, whether or not you finish it. Some schools guarantee satisfaction, but here the student must finish the course before he can even hope to get a refund.

4. Before you sign be sure that you have the time and ability to complete the course, that you have the interest which will enable you to finish the course and that you have money sufficient to pay for it.

The City Has Its Easy Marks

THERE is a misapprehension rather common in some quarters that all the easy marks live out in the open country. We are glad to present some evidence that such is not the case.

A few days ago as the writer was going across town a man standing near a doorway said, "Hey, Buddy, do you want to pick up a bargain?" Inasmuch as I had just time to catch the train and particularly as I had grave doubts about the bargain I did not stop to investigate.

The point I am making is that this gentleman must have been successful in interesting some people in his bargain or he would not have continued to stay in business. I have heard various stories from others about similar experiences some of whom, unfortunately, fell for the bait.

The bargain usually consists of furs, clothing or jewelry although any article may be used, the impression being given that the stuff is either stolen or smuggled and that it is being sold at a remarkable sacrifice. A good salesman sometimes puts over the sales but the buyer is likely to find that he has simply been duped and that his purchase is worth nothing or a small part of what he has paid for it.

The bad thing about such a deal is that it is not possible to return the purchase and get your money back as you could do had you bought it at a reliable store. In the first place, you are not likely to find the gentleman in the same location long and but if you did he would think it a huge joke if you tried to persuade him to return your money.

Again we repeat not all the easy marks live in the country.

Nothing to Collect From

"I was wondering if you could help us collect a bill for \$265.50 from Mr. Ellis Kretchmer. I cannot give you his address because he lived for quite a while at Alloway, N. J. and the last I heard of him he was staying at Woodstown, N. Y. He has been doing cow trading and the bill I have against him is for three cows which he bought from me."

WE wrote to the Trenton, New Jersey Police to ask their help in locating this man and in reply they sent us their record showing that Mr.

Kretchmer was arrested in 1927 for driving a car without a license and fined \$10. On March 4th, 1930 he was arrested by a state trooper on a charge of passing worthless checks and was released after paying complainant and court costs. On May 23rd, 1930, he was again arrested on a charge of passing worthless checks. He was arraigned, pleaded guilty, held under \$3000 bail and committed in default of bail.

For Your Information

"About the middle of December we ordered some acetylene light fixtures from Charles A. Brown of Mansville, N. Y. and enclosed a Post Office money order in payment. We have written him several times asking him why our order has not been received and that he has promised several times to fill it but has failed to do so.

"Recently we demanded a refund of our money and he sent a check which was returned to us with a protest charge amounting to \$1.35."

"About the middle of January I sent Charles A. Brown of Mannsville, N. Y. an order for goods amounting to \$7.80. In about two weeks I wrote him again but received no reply so again wrote him and received an answer that he was in Watertown but that he would send the goods soon. I waited two or three weeks and wrote him again but did not receive the goods or a reply.

"The check has come back from the bank showing that he cashed it but he has not yet returned my money nor filled the order."

THE two letters we have printed above are samples of a number of complaints we have received recently. We had occasion nearly a year ago to comment on the business methods of Charles A. Brown and inasmuch as we still get complaints we are giving you the facts for your information.

Is It Worth the Cost?

"A short time ago an agent was here in this community trying to sell farmers the Morris Detective Agency. The contract agreed for free towing up to 15 miles, free emergency road service to the amount of \$5., discounts on tires, tubes, batteries, etc., at any of their authorized stations, detective service, legal representation for the prosecution or defense of a violation or criminal action either for or against the holder of the contract arising from the operation of a motor car. They also furnish a \$5000 bail bond. The agent stated that there was a large office in Philadelphia and that there were also offices in Syracuse and Scranton. I have just been to Philadelphia and Scranton and have not seen any of their signs on cars either place. I should very much like to know if this company is O. K. or not."

WE can only repeat what we have so frequently stated in the past; namely, that hundreds of subscribers who have written to us about similar concerns do not feel that they have secured full value for the money they spent on similar associations.

Pay No Fees in Advance

"Will you kindly advise me as to the standing of the C. F. Mayer, Inc. Chicago, Illinois who agree to place my name every week with a certain number of firms who are hiring employees? For this service they want \$5.00 a year."

AGAIN we advise subscribers to give no fees in advance. Upon investigation we learned that this concern is not licensed as an employment agency under the Illinois Law and we understand that even licensed employment agencies are not permitted to operate in the manner proposed by this company.

Even though the company operated in this manner may do as they agree and circularize a large number of concerns there is absolutely no guarantee or assurance that positions will result from it.

EASY GOING

IN THE wide, roomy, comfortable seat of an easy-steering "Caterpillar" Tractor you take the fatigue out of even the hardest jobs on the farm. The eager, powerful purr of "Caterpillar's" cool-running engine and the reassuring feel of positive traction give you confidence in your work. You aren't afraid of weather — or the repairman. You know that you have plentiful power for tough jobs—and traction to keep power effective. Plowing and planting and harvesting are no longer nightmares—they're just easy jobs that you know will be done on time. You've more time for yourself—zest to enjoy it—for the hard jobs are gone forever —while you farm in comfort with a "Caterpillar" Tractor.

TRACTOR

*Whatever
you have to haul* **The Ford Truck serves you well**

A FORD TRUCK will help get your grain to the elevator at the time that suits you best. It will speed milk to an early train, or trudge beside a combine. And do *all* your hauling — reliably.

The Ford truck is strong, powerful, speedy. It is always ready to work, to shoulder a paying load . . . and to hurry, if need be. It will serve you long, and travel every mile at exceedingly low cost.

Many new features have been incorporated in the chassis of the truck which increase its strength and improve its performance. Important among them is the new rear axle, which has a spiral bevel gear of special design, with straddle-mounted pinion. The axle shafts are heavier than formerly, and because of the three-quarter floating construction, they serve only to turn the wheels, without carrying any of the weight of truck or load.

Two rear-axle gear-ratios are optional. The low gear-ratio provides abundant power for moving heavy loads, and for

operation under difficult road conditions. For lighter work, and for use where greater speeds are frequently needed, the high gear-ratio is offered.

The 4-speed transmission gives a flexible range of speed and power. A large-sized opening in the transmission permits installation of a power take-off mounting.

Other features are the new larger brakes; the heavier front axle and spring; more than twenty ball and roller bearings; forty different kinds of steel; the extensive use of fine steel forgings; the Triplex shatter-proof windshield; and the dual rear wheels available at small additional cost.

All of these add value to the Ford truck, increase its ability to do your work when and how it will profit you most, and help keep operating costs at a minimum. Go to your Ford dealer and see how well this truck is adapted to your requirements.

RIVERSIDE TIRES "Vitalized!"

Scientific discovery
doubles life of rubber

Prices lowest in the history of RIVERSIDES

THE rubber in RIVERSIDE Tires and tubes is "vitalized." That fact is worth many dollars to every car owner of America. It represents one of the great advancements in tire making.

What "Vitalizing" Rubber is

Rubber deteriorates with age, just as steel rusts. Both of these effects are caused by *oxidation*.

Chemists found a way to prevent oxidation in steel—the result is *stainless steel*. Now they have found a way to retard oxidation of rubber by adding a new chemical agent, "anti-oxidant"—the result is "vitalized rubber."

"Anti-oxidant" keeps tires young and more elastic. Cracking and premature ageing are virtually overcome. Mileage is remarkably increased.

These facts have been proved by over 30,000,000 tire miles of road tests on a fleet of 18 cars and trucks.

There are no finer tires

As the result of "vitalizing" RIVERSIDES offer you greater value than before...and prices are reduced to the lowest in our history. Today, RIVERSIDES cost you as little as 26c per thousand miles of service.

We claim there are no better tires than RIVERSIDES—in appearance, in materials, in workmanship, in service. The price is less because our profit and selling expenses are less—and these are the only reasons.

You may obtain these new vitalized RIVERSIDES in sizes for all cars at our retail stores, or by mail postage prepaid.

FREE! PACKARD • BUICK FORD AUTOMOBILES

Songs that Mother Used to Sing

Dixie (See Cover)

By DAVE THOMPSON

DANIEL DECATUR EMMET, earning a living for himself and family in New York City in the year 1859 working in Dan Bryant's Minstrel Show at 472 Broadway, was told on a Saturday night in September, 1859 to have a new piece for the walk-a-round the following Monday.

Making catchy words and tunes was a big part of the business of this black-face artist, but to turn off the most important piece of the show between Saturday and Monday nights was something of an order at that. Of course no one really knows how it came about, but the best story of how he happened to strike upon the idea of Dixie runs something like this:

Sunday was a dark, uninspiring day, and he couldn't think of a thing. Neither he nor his wife could get hold the tail end of an idea. Monday dawned, with still nothing shaped up for the night's performance. And the day was just as drear and dark.

Standing at the window looking out upon the dark prospects of an autumn day in New York City of the days before the Civil War, and thinking of how tough it was coming with his song and tune, he involuntarily muttered a phrase common with his companions of earlier days on the circus lots when winter was coming on—"I wish I was in Dixie."

For Dixie even then was the name of the land of sunshine and warmth when snowdrifts were covering the New England lanes, and the circus folks—and many of the minstrel troupes headed south for the winter. Dixie lar!—right here it may be well to give what seems to be the best explanation of how the Southland came to be known as Dixie.

Origin of "Dixie"

In 1833, there was established in New Orleans the Citizen's Bank which continued in business until 1911. In the early days it had the right to issue bank notes or certificates. The population about there was largely French, and so the denomination of these notes was printed in French. Some of the notes were for \$20, others for \$50, but most of them were \$10 bills. Upon them was printed in large letters the French word for ten. It is DIX. The French people called them properly—dees notes. But the English speaking people who knew not how to pronounce French, called them just as they were spelled—dix notes—and then, easily—dixies.

From that it was but a step to calling the Southern Mississippi region the land of the dixies—then Dixie land—and finally Dixie.

And so, when winter came on—troupers on the circus lots and in tent shows sighed—"I wish I was in Dixie."

On this Monday morning September 19, 1859 with a new walk-a-round demanded for the evening minstrel show, Old Dan Decate, as he was called by his intimates, looked out of the window of his home, and sighed, "I wish I was in Dixie."

It was his cue.

With his fiddle under his chin, he

set to work upon it, and soon had the words and melody worked out well enough so that with the orchestra director's help they went on with it that night.

The original words, as sung that night in Bryant's Minstrel Show, mean little, if anything. Carefree gayety of the slaves as pictured by a New York minstrel man is about all of sense that can be made of them. After all, a good, lively, spritely tune was more important than words. And so, fitting words and tune together as he worked, Daniel Emmet wrote:

I wish I was in the land of cotton,
Old times dar am not forgotten,
Look away, look away, look away, Dixie land

In Dixie land where I was born in,
Early on one frosty mornin',
Look away, look away, look away, Dixie land.

Den I wish I was in Dixie,
Hooray! Hooray!
In Dixie land I'll take my stand,
To lib and die in Dixie.
Away, away, away down south in Dixie!
Away, away, away down south in Dixie!

The chorus was a repeat, of course, all the way through, but there were many variations of the main lines. Those used at the first performance were:

Ole missus marry Will-de-Weaber.
William was a gay deceaber;
But when he put his arms around 'er,
He smiled as fierce as a forty-pounder;
His face was sharp as a butcher's cleaber,
But dat did not seem to greab 'er;
Ole missus acted de foolish part,
An' died for a man dat broke her heart;
Now here's a health to de next ole missus,
And all de gals that want to kiss us;
But if you want to drive away sorrow,
Come and hear dis song tomorrow;
Look away, etc.

As you read it over, it does not make much sense, does it. Well, it wasn't meant for sense. It was meant simply as something with which to close the show with a wow—plenty of pep and spirit and every one stepping fancy.

There were plenty of other verses added from time to time as other minstrel shows took Dixie and used it at the close of their shows. Some started it out with these two lines—

I wish I was in de land ob cotton,
Cimmon seed and sandy bottom—

Another two lines which became popular were—

Sugar in de gourd and stoney batter,
De white's grow fat and de niggers fatter!

No question about it—Dixie was a popular tune. The folks who went to the minstrel shows whistled it as they came out. It was on the streets, everywhere. Other minstrels—those troupes which traveled as well as those who, like Bryant's had their permanent show houses in New York, used Dan Decate's Dixie. It must be remembered that just before the Civil War was the time when black face minstrel shows were in their hey day. These troupes traveled much

How a Chain Store Gets Its Supplies

What a Buyer Considers in Ordering Food in Hundred Car Lots

By GRACE WATKINS HUCKETT

IN the June 21 issue of AMERICAN AGRICULTURIST, I told of a very interesting visit I had with a buyer for a large chain of famous restaurants, and set forth some of the facts he told me about the conditions under which he buys food for the hundreds of thousands of men and women who eat in his restaurants.

Mrs. G. W. Hockett

Now I would like to tell you of another visit, this time with a food buyer, or rather the manager of buyers, for one of the largest chain groceries in this country. These stores extend throughout the East and Middle West, and have an interesting history. Every one of my readers has no doubt traded in these stores time and again. The business was started years ago in traveling wagons, and was limited chiefly to the sale of tea and coffee, with credit offered to the customers. Today, it is a great "cash and carry" business with practically no deliveries, handling all kinds of food products.

One of the fundamental ideas of this grocery chain is to sell at the lowest possible prices. To do this, both volume and variety of stuffs have been constantly increased, and sales include not only the staples but fresh fruits, vegetables and meats, and even milk and other dairy products.

All chain stores are often criticized because it is claimed

that they beat down the prices which are paid to farmers for products, and also because their lower prices to consumers have driven many independent merchants out of business. Whether these criticisms are justified or not, it is not my purpose to discuss, except to point out that the great volume of products sold by these chain groceries at lower prices tends to increase consumption and thereby get rid of more surplus.

Well, to get back to my visit with Mr. W., the buyer manager, I went to his office on a very hot afternoon, where the orders are made representing not just tons but carloads of foodstuffs. In the outer office I found a room full of busy people, buyers and office workers, and in the private office was Mr. W., who directed it all. He is a young looking man for such a great responsibility, and like nearly all men in important and responsible positions, he had time enough to be kind and courteous and to give the information I asked for.

I told him that farmers wanted to know what guided him in the purchase of his supplies.

"That's easy," he said. "Demand, of course." One of my next questions was about the purchase of products at long distance.

"Nowadays," answered Mr. W., "the railroads guarantee delivery of perishable foods within a certain specified time. If the railroad does not come up to the guarantee, then the railroad and not the buyer must stand the loss. The buyer takes no risks. This makes it possible to get foods from long distances such as carloads of berries from Florida within a five-day limit. These berries are packed when they are green, shipped in refrigerator cars, and hurried to our stores. Thus, while out-of-season locally, many fresh vegetables and fruits can be counted on for rapid delivery from long distances. When vegetables and fruits are in season locally, buyers of this chain store get them from the farmers' markets as long as they are open.

"In some cases," said Mr. W., "the farmers deliver their orders straight to the corporation warehouses."

However, Mr. W. was quite positive against the policy of buying from individual producers.

"We find," he said, "that it is easier to deal with wholesalers for several reasons. The main reason is the stricter grading and financial responsibility of the company as compared with the individual. Besides, it is more convenient to buy that way in large quantities than to pick things up in several different places."

What better argument could one have for a good cooperative organization than this? In fact, Mr. W. stressed this point. He said that a large,

(Continued on Page 20)

What the Consumer Wants When He Wants It

IN line with our policy of giving our readers the latest and best information about their markets, Mrs. Hockett of the A.A. staff has been interviewing some of the largest buyers of food products in the world. In our June 21 issue, she described a visit with a buyer for a great chain of restaurants. On this page, she gives the suggestions and point of view of another buyer for what is probably the greatest chain store system in the world.

No one knows more about what the market wants when it wants it than these men. We have been greatly impressed and worried by their attitude about products from other sections. They claim that most sections beat out the East on uniform grading and packing and therefore other sections get the business, even though the products have to be hauled longer distances.

There is much criticism of the chain stores because farmers feel that they beat down the prices of farm products. The only answer from our eastern standpoint to all of these problems, as we see it, is effective organization.—The Editors.

Is the Tuberculin Test Reliable?

An Authority Says "Yes" and Gives Some Evidence

By JOHN R. MOHLER

Chief, Bureau of Animal Industry,
U. S. Department of Agriculture

EDITOR'S NOTE—As the campaign for the eradication of bovine tuberculosis has progressed, many rumors have been circulated about the tuberculin test and many questions have been raised in the minds of dairymen. AMERICAN AGRICULTURIST had constantly striven to give our readers the facts from the most reliable sources. Doctor Mohler, of the U. S. Department of Agriculture, is recognized as an authority. He was asked to discuss the reliability of the tuberculin test at a recent meeting of representatives from several states to discuss tuberculosis eradication. Dr. Mohler makes no statement without giving evidence to support it. Do not fail to read what he says.

A REVIEW of the literature, and a careful study of the developments in connection with the control and eradication of tuberculosis among livestock, can not help but convince any fair-minded person that the tuberculin test as used in the tuberculosis campaign has been a most reliable and helpful agency.

Tuberculin, which is prepared by sterilizing, filtering, and concentrating the liquid upon which the tubercle bacilli have been allowed to vegetate, contains no tubercle bacilli, either living or dead. The very nature of the process of the manufacture of tuberculin precludes any possibility of contamination with living or dead tubercle bacilli. The product contains no substance that has any detrimental effect upon a non-tuberculous animal. It

does, however, cause what is known as a reaction in tuberculosis animals, making it of great value in the detection of tuberculosis in the living animal. Quantities of tuberculin, much larger than those ordinarily used in connection with the diagnosis of tuberculosis, have been injected into cattle by numerous investigators, who have found that it has no detrimental effect whatsoever on healthy animals.

Efficiency as a Diagnostic Agent

You are all familiar with the remarkable progress that has been made in the eradication of animal tuberculosis in this country during the last twelve years in which the cooperative campaign has been in progress. Almost 2,000,000 tuberculous cattle have been removed from the herds

in this country as a result of their detection by tuberculin. More than 180,000 herds containing 2,500,000 cattle in the United States are now on the fully accredited herd list, and there are more than 2,000,000 additional herds containing 20,000,000 cattle that have passed one successful tuberculin test. Herds heavily infected with tuberculosis have been freed from the disease in a few years by continued tuberculin testing and the enforcement of proper sanitary measures.

Today there are more than 900 counties, including two entire States, in what is known as the modified accredited area, meaning that the degree of infection of bovine tuberculosis does not exceed one-half of one per cent of all the cattle contained within such areas. Within a very short time all the counties in a third State will be placed in the modified accredited area.

Other evidence of the effectiveness of tuberculosis eradication, based upon the tuberculin test, can be obtained from the records of the

Federal Meat Inspection Service. There has been a very marked reduction in the amount of tuberculosis found among cattle and swine slaughtered under inspection in the last few years.

Concerning Some of the Criticisms

One of the frequently used statements of the critics and opponents of the tuberculin test is that it does not detect the badly diseased cow. This is not so except in a small

"—And They Lived Happily Ever After"

A.A.'s Golden Wedding Folk---Our Finest Contest

IS marriage a success? It depends upon whom you ask. If you read the newspapers, it would seem that society's finest and best institution, that of marriage, is failing. But if you read the nearly 200 letters that came in from the fine old folk who have been

married for more than fifty years, you would agree that there is some hope for the institution of marriage still. The trouble is, we always hear of the failures, but little is said about the successes.

Mr. and Mrs. William Morton,
Port Ontario, New York

married for more than fifty years, you would agree that there is some hope for the institution of marriage still. The trouble is, we always hear of the failures, but little is said about the successes.

American Agriculturist's golden wedding contest reverses this, and on these pages you may get a little of the evidence that marriage most certainly may be a success, if both man and wife do their part.

There were one hundred and seventy-eight couples who have lived together for more than fifty years from whom we had a letter and a picture. These were the most interesting set of letters that members of the A. A. staff have ever read, and the pictures of the fine and kindly old folk were an inspiration to live better lives to all who had the privilege of seeing them. We are sorry that we cannot print all of the letters. All we can do is to give you a few of the high spots and some of the pictures—enough we hope, to serve as an inspiration to every married couple and to prove that marriage is a success if you really want to make it so.

The first eight pictures are chosen according to the longest time married. The rest were taken at random from all those submitted in order to get pictures that would print clearly or because of some especially interesting comment in the letter.

We must take this opportunity to thank everyone who took part in this contest and to wish each and every golden wedding couple many more years of happiness together.

* * *

Mr. and Mrs. William Morton

Port Ontario, New York

Married November 28, 1856-1930,
74 years.

Meet American Agriculturist's oldest Golden Wedding couple, and probably the longest married couple in New York State. Mr. and Mrs. Morton will be married seventy-four years this Thanksgiving, and win the first prize in the American Agriculturist contest.

Mr. Morton was born in 1837, and Mrs. Morton, whose maiden name was Arvilla Wright, was born in 1841. They were married on Thanksgiving Day, 1856.

Pause for a moment, and consider the changes in our history that have taken place in the lifetime of this old couple. No similar period in all history has seen such tremendous and such far-reaching changes. What a privilege to have lived happily together during all of this time.

During many years of Mr. Morton's

life, he was a sailor on the Great Lakes, and if you want to get his interest, just ask him about some of the changes that have taken place in water transportation in his time. Take the harbor of Oswego, for instance, where once there were over 300 schooners owned, and not one today.

Mr. and Mrs. Morton

come from that old Vermont stock which pushed onward into the wilderness in pioneer days and took such a large part in the settlement of the West.

* * *

Mr. and Mrs. James Ottman

Carlisle, New York
Married Jan. 1859-1930,
71 years.

Here is A. A.'s second longest married couple, Mr. Ottman was born in 1835, and Mrs. Ottman nine years later. In the fall following their marriage, they took up farming on their own account, and remained on the farm until 1919. Who has a record of longer service on

the soil? Two sons were born to them, one of whom is now farming. They have five grandchildren and eight great grandchildren.

Mr. Ottman says if they were back

Mr. and Mrs. James Ottman,
Carlisle, New York

again fifty years they would start in farming again—that is what he thinks of farming as an occupation.

* * *

Mr. and Mrs. Alfred C. Signor

Granby, New York

Married February 17, 1859-1930,
71 years.

Mr. Signor was born in 1833, and Mrs. Signor in 1843. Mr. and Mrs. Signor gave Mr. and Mrs. Ottman a close

Mr. and Mrs. Alfred C. Signor,
Granby, New York

run for second place in the A. A. contest. They were only about a month behind. If this had been an old age contest instead of a golden wedding one, Mr. Signor would probably have won the prize. You will note that he is close to the hundred mark. They still live with one of their children on the place where they have lived for sixty years.

* * *

Mr. and Mrs. Alonzo Ames

Bronx, New York

Married February 1860-1930, 70 years.

Mr. Ames was born in 1841, and Mrs. Ames in 1843. One of the outstanding impressions of Mr. Ames is shaking hands with President Lincoln. Mr. Ames is especially proud of the fact that his family has been closely tied with

Mr. and Mrs. Alonzo Ames,
Bronx, New York

the historical events of the nation for several generations. John Fargo Ames was an officer in the Revolutionary War. His son was an officer in the War of 1812. This man was the father of Alonzo H. Ames, the subject of this sketch, who was a private soldier in the Union army during the Civil War. Mr. Ames does not remember his grandfather, the Revolutionary War officer, but he does remember his grandmother, wife of that officer. Therefore, Alonzo H. Ames is said to embrace in his own memory the whole history of America. He also had a brother a soldier in the Mexican War, a son who was a soldier in the Spanish American War, and a great grandson in the World War. This list includes members of six generations of the Ames family. Ames himself participated in 23 battles of the Civil War.

In 1861 he shook hands with President Lincoln. He had heard that a reception was going on and that the President was receiving guests. So he strayed off and walked right into the President's home, just a twenty-year old boy from New York, wearing the blue uniform. "The guards called after me and told me to come back, but I did not. I walked right in. The President saw me and smiled, so I approached him. He offered me his hand, and asked me where I came from."

* * *

Mr. and Mrs. Daniel H. Heller

Feura Bush, New York

Married November 28, 1860-1930,
70 years.

Mr. Heller was born in 1839, and Mrs. Heller in 1842. Here is another couple whose lives go back to pioneer days. Mr. and Mrs. Heller say that during all their long married life they have never quarrelled, one of the reasons being that they both had a sense of humor.

In that long ago day when they were married, there were about thirty guests, and only one person besides themselves is still living.

We like especially what Mrs. Heller

said about old times. She said: "They were good, but we enjoy the present times also. We take auto rides and are

Mr. and Mrs. Daniel H. Heller,
Feura Bush, New York

able to visit our children, grandchildren and great grandchildren."

* * *

Mr. and Mrs. George G. Howell

Belvidere, New Jersey

Married January 9, 1862-1930, 68 years.

Mr. Howell was born in 1840, and Mrs. Howell in 1841. Mr. Howell says: "I have never been sick in bed under a doctor's hands in all of my life."

Mrs. Howell still does all of her own housework.

"I have seen," said Mr. Howell, "seven generations; five are living. I

Mr. and Mrs. George G. Howell,
Belvidere, New Jersey

have two great, great grandchildren. I can still do quite a bit of work."

* * *

Mr. and Mrs. Frank Dumas

Springfield, Massachusetts

Married 68 years.

Mr. Dumas is eighty-six years old, and Mrs. Dumas eighty-four. Mr. and Mrs. Dumas started their married life together in a small place called Pike-

Mr. and Mrs. Frank Dumas,
Springfield, Mass.

ville, near the town of Burke. At that time, where they settled was nearly a wilderness. The land had to be cleared before they were able to build their first home, which was a log cabin—real pioneers, you see.

They were blessed with eleven children, all of whom are living except one.

* * *

Mr. and Mrs. Philo A. Markham

Orchard Park, New York

Married April 17, 1862-1930, 68 years.

Mr. Markham was born in 1837, and Mrs. Markham in 1842. The July following their marriage, Mr. Markham enlisted in the 154th New York State Volunteers. He was taken prisoner at Gettysburg and went to Libby Prison.

Mr. and Mrs. Philo A. Markham,
Orchard Park, New York

He was exchanged, took up active service again, and finally had to have his arm amputated as a result of a battle wound.

The friend who writes us about this fine old couple concludes her letter with these words: "They have since celebrated their sixty-eighth anniversary, and are still living in harmony, peace and happiness. Can you beat it?"

* * *

Mr. and Mrs. John Thurston

Salisbury Mills, New York.

We like to make you acquainted with this golden wedding couple because they have found time in all of their busy life to take part in community affairs. We found in our Master Farmer work that a well-rounded life on the farm includes being a successful farmer, a good husband and father and a conscientious citizen.

Mr. and Mrs. Thurston are outstanding Grange workers, being charter

Mr. and Mrs. John Thurston,
Salisbury Mills, New York

members of Mountainville Grange 946 and also of Orange County Pomona Grange. Mr. Thurston was the first Master of Mountainville Grange and held office for eight years. Mrs. Thurston was secretary for nineteen years.

The picture shows them holding a loving cup which was presented by the Salisbury Mills Fire Company, of which Mr. Thurston is president, on their fiftieth anniversary.

* * *

Mr. and Mrs. Andrew LaPolt

Napanoch, New York.

We were especially interested in the fine letter which came from this golden wedding couple. We quote in part:

"The success of our marriage lies with us, who really have done our best to make it so. We consider marriage our job, not our graft. So far, we have weathered the storms and have passed the springtimes, summers and falls of life. We have stood the tests and the

road has never become a weary place, nor married life an empty promise, and we find this old world still a good place to live in.

"There never were any romantic or economic reasons to justify either one

Mr. and Mrs. Andrew LaPolt,
Napanoch, New York

of us in trying to cheat the other. We have always played the game fair, and met each other half way, and our happiness still depends upon each other."

* * *

Mr. and Mrs. Willis E. Hover

Newark Valley, New York

Although not among the oldest of our golden wedding couples, I take some pride in including Mr. and Mrs.

Mr. and Mrs. Willis E. Hover,
Newark Valley, New York

Hover because they live in my home town and because years ago when I was first starting out in life I lived in their family for a time and worked for Mr. Hover on his farm—E. R. E.

* * *

Mr. and Mrs. D. Halsey Hallock

Mattituck, Long Island.

Mr. Hallock is the fourth member of his family, including his parents, a sister and a brother, to celebrate a golden wedding. Mrs. Hallock is one of three in her family, including a brother and a sister, so to celebrate.

A granddaughter, Miss Bessie L. Hal-

Mr. and Mrs. D. Halsey Hallock,
Mattituck, Long Island

lock, states with some pride that none of these couples, and none of any of the rest of the family were ever users of tobacco or alcohol in any form. Miss Hallock also says:

"They are just ordinary farm folk, trying by precept and example through the home and church to inculcate ideals of sobriety and integrity in their fellow men, including their children and grandchildren."

* * *

Mr. and Mrs. John E. Wilson

Moscow, Pennsylvania.

This fine old golden wedding couple writes: "We started our married life in England, but came to America when our family numbered six. Here, through hard work and careful living, we raised our family and are now watching those children of ours raise children of their

Mr. and Mrs. John E. Wilson,
Moscow, Pennsylvania

own. Already the grandchildren number twenty-nine and the great-grandchildren, twenty-one."

* * *

Mr. and Mrs. Nathan W. Taylor

Turtle Point, Pa.

"We began housekeeping in the little town of Turtle Point on a farm of thirty acres which was once owned by Mr. Taylor's grandmother. The house was a small one consisting of one quite large room, a small pantry and a very small bedroom as well as an attic which was used as an extra bed room. For furniture we had one bed besides a home-made bed which Mr. Taylor built for our spare room; a lounge, six chairs, a rocker, a table and stand, a few dishes such as we could get along with and of course, a stove. We had no carpet nor rug.

"We lived in this house for the first six years where two of our four children were born and then we had a new home built, in which we are still living."

* * *

Mr. and Mrs. Delos Distin

Fulton, New York

"We were glad to see that you have money to burn and so we decided to enter your contest and see if we could not get some of it. Even if we live as many years as we have already lived, we expect to cling together. We have a small family of seven children and they are all good to us in our old age for which we are very thankful. Our family, children and grandchildren, furnished thirty-six votes at the last election.

"I can remember sixty years ago when the snow went right over the top of the fences on the first of May and we had sleighing almost to

the first of June. We do not have near as much snow in Oswego County as we did then."

* * *

Mr. and Mrs. John A. Dick

Mineral Township, Pennsylvania

This golden wedding couple started their housekeeping on the farm on which they still live more than sixty-two years ago. This farm was covered

Mr. and Mrs. John A. Dick
Mineral Township, Pennsylvania

with brush and stones and the buildings were in poor repair. Now they have a prosperous farmstead. Hard work did it.

* * *

Mr. and Mrs. Dan Woodward

Thomaston, Connecticut.

One look at this golden wedding couple is all we need to do to know that their life has been a successful and happy one. They have always lived on a farm and worked hard. They have an

Mr. and Mrs. Dan Woodward,
Thomaston, Conn.

interesting family history. There were three Woodwards in his father's family who married three Newtons and each couple lived together over sixty years.

He Sells his Vegetables... by Telephone

A Bell System Advertisement

A FARMER who lives near Nashville, Tenn., finds his telephone a highly profitable aid in selling the produce from his eight-acre truck farm. Before every trip to town, he calls up his customers and receives orders for definite kinds and quantities of vegetables, to be delivered at specified times. He also finds out just what produce to hold in reserve for Saturday morning, his best market day. In this way he is able to avoid losses from spoiled vegetables, dispose of all his products and get the highest return that his truck farm has ever yielded.

The telephone also makes possible many profitable sales of livestock, grain, fruit and vegetables through co-operative marketing associations. It is always ready to run errands, make social engagements and summon help in cases of sickness or accident.

The modern farm home has a telephone that serves well, rain or shine.

A.A.'s Western New York Farm and Home Talk

Cabbage and Bean Acreage Heavy

By M. C. BURRITT

WESTERN New York farms look the best this spring that they have in years. And speaking generally the farm prospects in the fruit belt are considerably better than they have been in several years. This is partly due to

M. C. Burritt

a favorable season so far and may be changed by unfavorable conditions subsequently. But in all probability it is also due to a realization of facts and improved practices especially orchard practices, for our apple trees generally have a much better appearance—a heavier green foliage

and larger growth—than has been the case for some time.

June has been a beautiful month this year, fully up to its reputation—warm growing weather, plenty of sunshine and good rains. My, how things have grown under these conditions! The absence of too much rain of the heavy, soaking kind, is I believe, in large part responsible for the improved crop and tree growth in this area where many of the soils are heavy and poorly drained. It is excessive moisture with its accompanying root injury in winter that has caused much of the damage to our apple orchards in late years. And yet there has been enough rain to supply plenty of moisture. Indeed in the last few days for almost the first time this season the rainfall has been excessive in some sections.

Baldwin Crop Will Be Light

The fruit crop prospect continues to be fairly good. Cherry picking will soon start with much better yields in prospect than for two or three years back. The early apple yield will be very good and so far the fruit is apparently quite clean. Baldwins are scattered and the crop will be light. The apple crop as a whole will average around half. The prospective pear crop is excellent.

While crop production conditions continue good, we may be in for trouble in price due both to over-production and to unemployment and other unfavorable urban conditions. This is especially likely to be the case with beans and cabbage. There is certainly the biggest bean acreage in New York in many years and reports indicate that the same is true of other bean growing states. Here the crop is an excellent stand and off to an exceptionally fine start. Rush of work and heavy rains during the last few days have prevented cultivation and weeds may get an equally good start.

Cabbage setting began in this section earlier than usual and is still going on. There is certainly a big increase in

acres hereabouts and due to good rains the stands are generally good. The first reports show a probable increase of 17 per cent in the total cabbage acreage in the late cabbage states as compared with the last five year average. The domestic acreage shows a 32 per cent increase and the Danish only 6 per cent. The increases in Wisconsin are even larger proportionally than in New York. The moderate crop last year was not due to small acreage, but rather to low yields after a dry summer. As usual the size of the crop depends now on the rainfall in July and August.

Haying got started last week but rains have checked it. A few—including ourselves—got some alfalfa in ahead of the rain but much hay got wet and is still out. Alfalfa is in full bloom and should have been in the barn before this, but the rush of planting and cultivation has prevented. This crop is good but other hay is not so promising.

It is a very busy time. We are just finishing cabbage planting. All crops need cultivating. Hay is more than ready. And the second codling moth spray must be put on this week. But we have good help. No use worrying. That won't do work. One thing at a time and keeping at it will bring us out on top finally if anything will.—Hilton, N. Y., June 29, 1930.

Will Improve Buffalo's Elk Street Market

SEVERAL times we have mentioned the plan for constructing a new Buffalo produce market on what is known as the Clinton-Bailey site. While we understand that members of the Vegetable Growers in Erie County have agreed to come to the new site which will be backed by the Nickle Plate and Erie Railroads, we learn that the New York Central Railroad, following a conference with the Elk Street Market Association and the Wholesale Fruit and Boosters Club, plan to go ahead and improve the Elk Street Market.

The first unit to be constructed will cost \$1,000,000. Under an agreement just reached the property now controlled by the New York Central will be turned over to the Elk Street Market Corporation under a twenty-five year payment agreement. Rentals will be applied to the purchase of the site which is valued at \$300,000.

After apples are picked the questions of storing, marking, and loading come in order. Cornell extension bulletin 126, "Harvesting, Grading, Packing and Loading of Apples", will be useful.

When raspberries and blackberries have been harvested, cut out and burn the old fruiting canes. This will help hold disease and insect injury in check.

"Scuse me! I got the wrong guy! I was lookin' for a fella that put sand in my engine!"
"He did? The dirty pup! Hit me again!"—LIFE.

Dairyman****Is the Tuberculin Test Reliable ?**

(Continued from Page 3)

proportion of cases. Retests in herds
occasionally disclose advanced cases
that did not respond to a previous test.
However, physical examination and re-
testing locates these advanced cases
that are occasionally missed.On the other hand, it is a fact that
approximately 10 per cent of all cattle
that react to a tuberculin test in con-
nection with the cooperative campaign
have been found to be well marked and
advanced cases of bovine tuberculosis.
This distinctly shows that tuberculin
does detect the badly infected tuber-
culous animal. Of course, as the cam-
paign progresses the old chronic, ad-
vanced cases are being eliminated and
the percentage of carcasses going to
the fertilizer tank is being greatly
reduced.Again, it is stated at times by critics
that tuberculin causes the condemna-
tion of the best cows in the herd. It is
probably true that many of you have
seen some outstanding animals react
to a tuberculin test, but in gathering
statistics on this subject the bureau
found that about 33 per cent of a
group of reactors numbering approxi-
mately 17,000 head were considered to
be below the average in quality. It was
also found that about 25 per cent were
above the average in quality. These
records were obtained chiefly on cattle
of the dairy type. Of course, you hear
a great deal about these 25 per cent
but never a word from our critics about
the 33 per cent of reactors below av-
erage.**Tuberculin Cannot Get into Milk**One absolutely erroneous criticism
totally unsupported by the facts and
manifestly a figment of the imagination
that lacks also the background of good
horse sense, refers to the appearance
of the injected tuberculin in milk fol-
lowing the testing of cows for tuber-
culosis. As a result of consuming milk
from tested cows it is alleged that
babies are made seriously ill and men
suffer from rheumatism, heart disease,
and even sterility. Such a suggestion
to anyone who is informed on this sub-
ject, is so fantastic as hardly to require
discussion. Consider for a moment the
amount of tuberculin injected into a
cow when she is tested. The dose cer-
tainly does not ordinarily exceed 2 or
3 drops (1/10 of a cubic centimeter).
Careful laboratory experiments have
shown that this amount of tuberculin
does not contain more than 1/500 of
a grain of total material which may
arise from the growth of the tubercle
bacillus. So far as I am aware, even
the most toxic substances known to us
are without any effect in a dose of
1/500 of a grain, so that even if this
entire amount of tuberculin were placed
in one glass of milk, yet we could not
conceive of any effect upon the person
who drinks it. But we have no such
condition in tuberculin testing. This
minute amount of material is injected
into the skin. It is certainly absorbed
very slowly requiring as a rule more
than 48 hours to produce a reaction and
there is nothing whatever to indicate
that any of it ever reaches the milk
supply. If it did, you can readily un-
derstand that the amount would be so
extremely minute that the health of
the consumer could not possibly be af-
fected, even though tuberculin were a
virulent poison. I have already stated,
however, that tuberculin is not poison-
ous, but when given to normal guinea
pigs by injection or otherwise, in doses
28,000 times greater in proportion to
weight than those used for testing cat-
tle, it is without any observable effect
whatever.However, in order to obtain definite
experimental evidence relative to the
possible appearance of tuberculin in
milk from tested cows we conducted
the following investigations:A highly distinctive aniline dye
(methylene blue) was injected into the
tissues of a series of cows. A blue so-lution 40 times the intradermic dose
of tuberculin was used. None of the
milk samples examined over a 2-day
period showed any evidences of abnor-
mal color. Additional tests were made
with samples of milk from cows which
were injected with 30 times the average
dose of tuberculin. Milk was drawn
from their udders at the two regular
milking periods after their injection
and five cubic centimeters inserted into
the abdominal cavities of each of a
number of tuberculous guinea pigs
known as Group A. Other tuberculous
guinea pigs of Group B were injected
intra-abdominally as controls with the
same quantity of untested cows milk
and a series of tuberculous guinea pigs
of Group C with the usual dose of
tuberculin only. The results were clean
cut and decisive. All guinea pigs of
Group C injected with straight tuber-
culin either died within 48 hours or
developed marked depression with high
temperatures. Those of Group B re-
ceiving the milk from untested cows
remained normal and likewise the
guinea pigs of Group A which received
milk from recently tuberculin tested
cows never missed a meal nor developed
any visible abnormal conditions what-
ever.**Tuberculin Cannot Cause
Abortion**Still another frequently heard criti-
cism of some no doubt well-intentioned
but misinformed individuals is that the
tuberculin test is the cause of con-
tagious abortion among cattle. This
statement can not be substantiated by
any line of reasoning or by unbiased
observation. Unfortunately, contagious
abortion among cattle is a rather wide-
spread disease in the United States at
this time. Naturally, any disturbance
in the health of a herd of cattle that
may follow the tuberculin testing will
be attributed to the test by those not
in favor of it.At one of the hearings a few years

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
Soft Cheese	2.21	
3 Evap. Cond.		
Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for July 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%. The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter a Shade Higher

CREAMERY SALTED	July 3, 1930	June 28, 1930	July 3, 1929
Higher than extra	34 -34½	33½-34	42½-43
Extra (92 sc.)	33½-	33 -	42 -
34-91 score	28½-33	28 -32½	39¾-41½
Lower Grades	26½-28	26 -27½	38 -38½

The butter market is a shade higher than it was a week ago. Just how long it is going to stay there is any man's guess. It is a speculators' market and when you have that situation you cannot depend a great deal upon its stability. It is here today and gone tomorrow. On the other hand, it may be with us a week. It was speculative interest that pushed the market up a half cent on July 3. Among the speculators there are a great many who are decidedly bullish in their sentiments, due chiefly to a less unfavorable statistical condition that has developed of late. On the other hand, there are just as many who are bearish in their sentiments, fearing consequences from the unfavorable industrial situation. At the moment the market is very unsettled as to its future development. There is nothing to indicate what will take place. The market is guided a great deal by the statistical situation, but local circumstances are creating powerful influences. The weather, retail distribution, the stock market and any number of factors are creating very definite swing, which to be expected at a time like this.

Cheese Prices Hold

STATE FLATS	July 3, 1930	June 28, 1930	July 3, 1929
Fresh Fancy	18½-19½	18½-19½	23½-25
Fresh Average			
Held Fancy	25 -26	25 -26	27½-29½
Held Average	23 -	23 -	

The cheese market is the same as it was last week. Upstate markets hold steady on fresh New York State flats. Locally prices are holding steady under moderate trading. Last week, our quotations on fresh fancies carried an error that your reporter did not notice until after the presses started rolling. The quotation last week should have been 18½c to 19½c. In the haste of reading we mistook the 3 for an 8.

Whether or not the market will be able to hold this price remains to be seen. As the first week of July draws to a close a little irregularity in prices is cropping out. This is particularly true of some Wisconsin makes, especially Daisies. Here and there concessions are being made, although some of the finest light colored Daisies are holding at full prices.

Outlook for Eggs Slightly Better

*Include premiums.

Although prices as yet do not reveal any improvement in the near future egg market, nevertheless there appears an undertone that makes us believe that prices are going to go higher very soon. There has been a marked falling off in receipts and at the same time current demand just before the holiday was much better than was anticipated. There is more speculative interest and all lines of fancy eggs have cleared quite closely. In fact, in some lines, especially in fancy nearby whites, the available fresh stock is barely sufficient to meet the trade

needs. If this keeps up for another day or so, you can expect better prices.

Poultry Market Quiet

	July 3, 1930	June 28, 1930	July 3, 1929
FOWLS			
Colored	-22	-22	-32
Leghorn	16-19	-19	28-30
CHICKENS

CAPONS			
TURKEYS	20-25	20-25	25-35
DUCKS, Nearby	15-22	18-22	20-25
GESE	-12	-12	16-17

The live poultry market is a comparatively mild and quiet affair. Fowls were not in over supply but the demand was such that there were plenty to go around without disturbing values. Broilers were also in limited demand and although the supply was light, receivers were satisfied to let prices alone. Occasionally premiums were obtained for unusually fine stock. Although as a whole Reds and Rocks sold at the top quotation.

No Change in Hay

There has been no change in the hay market since our last report. Up to the Fourth buyers were not inclined to take on any stocks and with the holiday coming late in the week all lines of commodities got very little attention on Saturday with no expectation of a serious resumption of trade until the 8th. In the hay market the supply is limited and there is nothing to indicate any heavy increase in the supply. We look for the hay market to open next week very firm. Buyers have not been active for the past week and it seems as though they have got to get busy very soon. Prices on timothy and timothy plus mixtures of grass or clover range from \$21 to \$29 per ton but we look for higher prices next week.

Meats and Livestock

VEALERS steady, good and choice \$11.00-13.00, medium \$8.50-10.50, cull and common \$7.00-8.00.

LAMBS in moderate supply, moderately active, steady. Deck good to choice 73 pounds Kentucky lambs \$11.00. Top good \$10.00-10.25. Medium \$8.50-9.50.

COUNTRY DRESSED CALVES—Fresh receipts light. Demand fair at higher prices, heavy coarse calves proving hard sellers. Market steady. Fresh receipts per pound: Choice 16-17c; fair to good 14-16c; small to medium 12-14c.

LIVE RABBITS—Fresh receipts light. Demand very slow. Market weak. By the coop, 15-20c per pound.

Wool

Market has been steady. New York better fleece wool, unwashed, fine, per pound 21-30c; ½ blood 23-29c; ¾ blood 24-29c; ¼ blood 24-29c; low quarter blood 25-27c; common and braid 23-25c.

Trend of the Farm Markets

(Special to American Agriculturist from Market News Service, Bureau of Agricultural Economics, U. S. Department of Agriculture.)

Hopeful features around the first of July were the generally good crop conditions and various slight and partial recoveries in the long downward course of the farm markets. The price upturns were confined mostly to grain, cotton, cattle and hogs. Butter, cheese and egg markets have dragged along without much change although eggs showed stronger market action. Lambs are selling low. Wool values were well sustained. Lower prices of millfeeds were of interest to feeders. Foreign commodity markets which have shared in the general depression showed some gains late in June. Potatoes are in liberal supply and showing what may be termed the usual summer decline in price.

The trend of potato prices was distinctly downward around the first of July. Last report on Cobblers from North Carolina showed an f.o.b. level of \$3 per barrel and Eastern Shore points declined to \$3.25. City market sales of eastern potatoes were mostly at \$3 to \$4.50 per barrel. Very heavy movement from Virginia brought the daily average of potato shipments to about 1,000 cars. Movement of old stock potatoes from Maine continued

to the end of June and some cities still quoted Maine Green Mountains.

Combined with the more satisfying rate of consumption in steadying the egg market, has been the falling off of weekly receipts, which are not only showing the normal seasonal declines from those of the preceding weeks, but are also running substantially under those of a year ago. This situation is in part due to the fact that the peak of production for this year was reached earlier than the peak for 1929, but as the level of production for the season as a whole so far has been above that of last year, it is partly a reflection of the attempt of farmers to increase their profits per bird through elimination of unprofitable layers. This is substantiated by the large receipts of fowls at the principal markets for the past month.

The June poultry market was well stocked with broilers, particularly of the smaller sizes. The heavy early winter and spring hatches this year has resulted in an unusually large supply of broilers at this time of the season. The tendency of many producers to rush their stuff to market as early as possible this summer has created somewhat of an unusual situation, in that while the supply of small broilers has been more than sufficient to meet the demand, in some cases almost causing a glut, the large size broilers have been in limited supply, and hardly ever sufficient to satisfy the requirements. Dealers reported no difficulty in handling broilers over two pounds at attractive prices.

The easier trend at country cheese markets was reflected in the barely steady tone which dominated distributing markets around the first of July. While many dealers were holding goods close to quoted prices, others were willing to make concessions in order to effect a turnover of stocks. Cured cheese continues in fairly good demand with prices steady. Process cheese movement is just fair with tone irregular. New York State board remained unchanged at 16¼c.

No definite trends appear in the butter markets and price variations have been small. With decidedly unfavorable industrial conditions it appears that considerable good news is required to effect any marked upward price trends. The make of butter as reported by the large manufacturers organizations shows a shortage as compared with last year. Eastern cream markets are well supplied and prices obtainable for western cream are not attractive. Condensories are not as aggressive as last year and this leaves more butter fat to go into the manufacture of butter.

Demand for wheat improved at the lower levels reached in late June and offerings were only of moderate volume. A relatively large percentage of the new wheat is being placed in storage and not offered for sale. Marketings of oats were small but generally equal to trade requirements.

Feeds were lower at the end of June. Bran led the recent downward trend in feedstuff prices. This unusual weakness is largely a result of the sharp reduction in other feeds and feed grain prices. Some readjustment in linseed meal prices is generally expected by the trade. Cottonseed meal was quoted lower and appeared weaker than linseed meal. Prices were \$2 to \$2.75 lower at eastern markets. In general, the situation is dull with buyers holding off because of the generally unsettled market conditions, yet very little is for sale. Hominy feed prices declined with the only moderate demand but were also influenced by lower corn prices. Timothy hay markets were generally unchanged with supplies light, particularly of the better grades. Demand was generally good for this class of hay. The outlet at most of the principal markets was considerably restricted by continued poor credit conditions, low prices for dairy products and extensive use of pastures, green feed and cheap feed grains.

Most wool concerns reported a slackening demand for 56's, 60's and 64's and finer fleece wools in eastern markets, although prices were firmly maintained. Sales were closed on most grades of western wools, but the volume showed some decrease from the previous week. A feature of the week, however, was the sale by a few houses of large quantities of 56's, strictly combing Territory wools.

LOOK TO THE BODY!

Is your car a FISHER BODY CAR?

Check these points for extra body value in the car you are considering

WE trust that you are not depriving yourself of Fisher Body quality. ¶ Quality of advanced design, quality of wood-and-steel construction, quality of finest craftsmanship and material—quality is the one and absolute rule in every Fisher process and particular. ¶ The result is that every Fisher Body car, in any field of price, unquestionably represents extra value and more for your money. ¶ The emblem, “Body by Fisher,” and the emblems of General Motors cars also shown here, are the well-known symbols of a quality obtainable only in General Motors cars—the *only* cars equipped with Body by Fisher.

✓ **Wood-and-Steel Construction**—Fisher Bodies are constructed of selected seasoned hardwood, reinforced with powerful braces of malleable iron, drop-forged steel and pressed steel. This type of construction provides utmost strength and resilience, and is freer from rumbles, rattles, and other body noises.

✓ **Roof Construction**—Fisher Body roofs are of strongest type construction; namely, the Fisher bow-and-slat type. The bows are cut to form—not steam bent—consequently retain their shape permanently. Specially notable is the steel roof-rail panel, which strengthens the roof materially and adds to the beauty of the car.

✓ **Clear Vision and Safety**—Every Fisher Body is equipped throughout with the highest quality genuine plate glass, affording clear and undistorted vision. The non-glare feature of the Fisher Vision and Ventilating Windshield is the latest important Fisher contribution to driving safety and car beauty.

✓ **Durable, Rich Upholstery**—All upholstery fabrics in Body by Fisher are much costlier than that accepted for ordinary body construction. They are extra fine in quality, and thoroughly tested to resist fading and wear. Fisher cushions and backs are designed with special care for riding and driving ease and for long-lasting durability. Form-fitting cushions over deep, resilient springs fit the contours of the human body providing maximum passenger comfort.

These are only a few of the many extra value features of Body by Fisher. All told, the special and exclusive advantages of Fisher Body assure much more value from every standpoint in the Fisher Body car.

"Let's play a round of golf" says MR.HACKETT

"Let's stay home and rest" says MR.HACKETT

More vigor per spoonful... **GRAPE-NUTS**

IN every one of us, two sides of our nature are struggling for supremacy. "Let's lick the world," says one side. "Sit down," says the other, "you can lick the world tomorrow."

To play hard and work hard—to greet each hour with zest and draw from it the utmost pleasure and profit—that's living! And that's what we want most. Vigor, energy to make life every day a glorious adventure.

Why don't we always have this vigor, and energy? What happens to us when we can't "get up steam"—when we haven't even enough initiative and enthusiasm to grasp the pleasures we long to enjoy? Look

for an answer in the food you eat. For food, day by day, must rebuild the body and recharge it with vital energy. And only the right kind of food can do the right kind of job!

If you want all-around health, exuberant energy and vitality, see to it that your food, every day, gives you all the building, energizing elements your body needs.

There is one food long known for the contribution it makes to building and fueling the body—a food which gives us a tremendous amount of energy in proportion to the amount eaten. This food is Grape-Nuts—purposely designed to give you the nourishment that produces healthful vigor, buoyant energy—and to give it to you in a form that is temptingly delicious.

Grape-Nuts is made of choice wheat and malted barley. It is abundant in dextrins, maltose and other carbohydrates, which are the chief producers of energy.

In addition Grape-Nuts provides vital elements often lacking in the modern diet—iron for the blood; phosphorus for teeth and bones; proteins for muscle and body-building; and the essential vitamin-B, a builder of appetite.

And Grape-Nuts *invites* eating. Its golden-brown kernels, tinged with purest malt sugar, are crisp and crunchy. Not only does this crispness add to deliciousness—it also encourages thorough chewing to help better digestion. And also gives to teeth and gums the brisk exercise they need to remain sound and healthy.

Start *now* to make breakfast build vital health and energy for you. Buy Grape-Nuts today for breakfast tomorrow! Your grocer sells Grape-Nuts—a Product of General Foods Corporation. Or send coupon below for free trial offer.

IT'S WISE TO CHOOSE A SIX

... and the Chevrolet Six

provides unusual ruggedness dependability and economy

Ability to keep on running dependably . . . day after day, month after month . . . at a minimum cost per mile—that is one outstanding quality of Chevrolet performance. That is one reason why more and more buyers of low-priced cars are finding it wise to choose a Chevrolet Six.

The very fact that Chevrolet is a Six means greater reliability. For the six-cylinder engine is, above all things, smooth! And six-cylinder smoothness not only assures greater comfort . . . but protects every part and unit of the car from the destructive effects of vibration. Engine, body and chassis all last longer as a result—and need fewer adjustments or repairs.

But six-cylinder design is only one factor of Chevrolet dependability. The banjo-type rear axle, for instance, is exceptionally large and rugged. The heavy channel steel frame provides support for the body throughout its entire length. The

The Coach, \$565, f. o. b. Flint factory

four-wheel brakes are big, powerful and durable. The beautiful Fisher bodies are built of selected hardwood-and-steel—the strongest, safest, most durable construction known.

And equally impressive, the new Chevrolet is just as economical as any automobile on the road today. It costs no more for gas—for oil—for upkeep. And on many service operations, Chevrolet's flat-rate charges are the lowest in the industry.

Near at hand—probably only a short drive away—is one of the 10,000 authorized Chevrolet dealers. Why not visit him today and see the new Chevrolet Six? Check over such features as the great 50-horsepower valve-in-head six-cylinder engine—the four long semi-elliptic springs and Lovejoy hydraulic shock absorbers—the many other modern features of extra value. Find out about the small down payment and easy terms on which you can own a Chevrolet Six.

**THE TIRE
IS RIGHT
THE PRICE
IS RIGHT**

Here's a truck tire that can do a great job of hauling on your farm. Full ten ply—generous in size—marked with a name that instantly gives you its pedigree—GOODYEAR PATHFINDER.

Thousands of farmers can tell you its record of big mileage at low cost. They can tell you its husky strength and its road-gripping, rut-bucking traction. It has proved itself on the farm and on rural highways and byways.

It has proved itself, too, on thousands of other trucks, where tires must do a tough job of hauling at a low first cost.

You'll have no real idea what an outstanding value these Goodyear Pathfinders give you until you try them. Goodyear dealers know this—they know the strongest advertisement they can put out is the tire itself. That's why alert Goodyear dealers are now making a special drive for more farm users of Goodyear Pathfinder Truck Tires—by featuring them at prices so low that you'll have a mighty hard time finding any kind of truck tires for less. See them, price them, and you'll want them.

MORE TONS ARE HAULED ON
GOODYEAR TIRES THAN ON
ANY OTHER KIND

Farm News from New York

Professor Bucknam to Head State Electrification Work

THE appointment of Dr. R. F. Bucknam of the Department of Agricultural Economics of the State College of Agriculture at Cornell University, to head the new Rural Electrification work in the Public Service Commission, was announced today. The appointment is a recognition both of the importance to farmers of the work to be done and of the need of having a man with agricultural training who understands the farmer's situation and problems.

Dr. Bucknam got his economic training under Dr. G. F. Warren at Cornell. For four years, under Dr. Warren's direction, he has been making studies of rural line extension plans and rates for the College, and working with electrical companies to promote better extension plans and rates for farms. He is well and favorably known for his researches in this field, both among farmers and electrical utility companies. The appointment will be effective at once.

Rural Electrification work, by the Public Service Commission was especially authorized by the Legislature in a bill introduced by Senator Thayer, and approved by Governor Roosevelt, last winter. The new law provides that

"the Public Service Commission shall appoint a qualified person whose duty it shall be to formulate and encourage the carrying out of plans of rural electrification, to make research on area developments, line problems, methods of financing, increased use of farm appliances, and similar matters."

This legislation was recommended by the Commission on the Revision of the Public Service Commission Law. It was favored by Governor Roosevelt's Agricultural Advisory Commission which last winter called attention to the need for special work on rural electrification.

League News

IN an interview with Mr. George Fitts of the Dairymen's League, just as we go to press, he points out that the Fourth of July coming this year as it does on Friday, means practically a three-day holiday for a large percentage of the metropolitan area and as a result, an abnormally low consumption of milk and milk products for these three days.

The consumption of ice cream so far this summer has been below normal, possibly due to the slight business depression coupled with some unemployment. The cream market is not in the best shape right now, prices varying from \$15.

Among the Fruit Growers

EDITOR'S NOTE—The following information on fruit conditions is furnished by the New York State College of Agriculture.

Wayne Co.—Fairly cool weather prevailed all the week with heavy showers June 26 and intermittent showers Friday. The cherry drop is not expected to materially reduce the tonnage as trees are carrying heavy loads. McIntosh have dropped heavily, but a good crop still remains in most well fed orchards. Fall on Wed. June 18th caused considerable damage to apples and cherries as well as some field crops. Only a narrow strip across the western end of the county was hit.

Monroe Co.—Fruit has advanced very rapidly this week with warm weather, turning showery the last four days.

Niagara Co.—Warm weather with several showery periods prevailed this past week. Fruit has increased in size rapidly and the June drop has been in progress this week. A heavy drop on Greenings and McIntosh is evident although there is a good crop left in most cases.

Oswego Co.—Strawberry shipments have continued heavy during the week. Growers are receiving excellent prices. Rains have helped keep up yield and quality. Sour cherries are nearing ma-

turity and are turning red. There has been a heavy drop of apples to date. Poor weather along the lake at blossoming time is responsible for this abnormally heavy drop, it being the effect of poor pollination.

In the Hudson Valley

Orange Co.—The June drop which was rather heavy on most varieties is about over. Sour cherries are being picked. Peaches have been dropping heavily for the past week.

Dutchess Co.—The June drop is about over on early varieties but still going on with Baldwin, Greenings and Spies. Although the drop has been rather heavy most growers feel that the McIntosh and Greening crop will be larger than last year. Many growers are starting to thin apples and peaches. The set of grapes seems poor this year. Sweet cherry harvest is about over with the picking of early sour varieties under way.

Ulster Co.—With the exception of one hard thunder shower, it has been a very dark week.

Clinton Co.—We have had a heavy June drop, as a result of which Snows and Wealthys will require less thinning than usual; McIntosh are light.—W. E. BLAUVELD, Assistant Extension Entomologist, N. Y. S. College of Agriculture.

Sheffield Producers Notes

By C. W. HALLIDAY

THE Sheffield Producers cash price for May milk in the 201-210 mile zone was \$1.94½ per hundred pounds for three per cent Grade B milk or \$2.14½ per hundred pounds for the same grade of milk testing 3.5%. While it looks as if our June volume would exceed the amount of milk received in May because of the enormous production in the early part of June, yet the production is now dropping quite rapidly and the hot weather is at the same time increasing consumption. This is almost certain to result in a better blended price in the near future.

At the regular monthly meeting of the directors of the Association held June 25th for the purpose of negotiating the sale of July milk no change was made in the prices of any of the classifications. The prices for the several classifications

for three per cent Grade B milk are as follows:

Class 1, \$2.80; Class 2, \$1.80; Class 3, \$1.70; Class 3a and 4, Governed by market conditions.

Since there is such a large surplus of milk it is fortunate that it is being produced when production costs are at the lowest point.

There are members in all dairymen's organizations of which we have any knowledge who occasionally get the idea that a return to the flat price system of selling milk is preferable to the classified price plan now in operation. It is a hard matter to demonstrate just what the result would be if we were on a flat price plan at present but it ought to be apparent to all dairymen whose milk is combined with milk that goes into the preferential markets that the blended price they receive is better than any flat price that necessarily would be determined largely by buyers and sellers who have little or no Class 1 trade.

Wanted—An Old Fashioned Wooden Overshot Water Wheel

PROBABLY most A. A. readers are familiar with the fact that the New York State Agricultural Society has in very definite fashion taken up the question of the revival of early home and

farm handicrafts. We might even suggest a substitute title—The S. P. N. Y. S. A. A. Society for the Prevention of New York State Agricultural Antiquities.

The Museum on the Fair Grounds at Syracuse already houses a rare collection of early implements and products. We now wish to find an old time wooden overshot water wheel such as were once found in literally thousands of grist mills in our state. If such a wheel can be found in condition such that it will be possible to take it down, it will be taken to Syracuse and reerected on the Fair Grounds. Later we plan to find a mill to go with the wheel—and an old time miller to "dress" the stone. Can any reader tell me of such a wheel still available within our state.

Then how many men are left in our state who can still skillfully thresh rye with a flail, clean up their grain and rebind the threshed straw according to the ancient custom. We want to find these men. We are arranging a flailing contest at the State Fair—along the same lines as the spinning and singing contests of other years. Several very substantial cash prizes will be given the winners and all who compete will be given at least a certificate signed by the Commissioner of Agriculture.

If you know of a water wheel or you yourself can thresh with a flail—or know anyone who would be interested in this contest—please write me.—JARED VAN WAGENEN, JR., Lawyersville, N. Y.

Hudson Falls Uses Only Grade A Milk

ON June 1, the village of Hudson Falls in Washington County, put an ordinance into effect, requiring that no milk other than grade A pasteurized could be sold in Hudson Falls. This is the first community in upstate New York to adopt such a rigid standard. This noteworthy achievement was made possible very largely through the efforts of Health Officer, Dr. William C. Cuthbert.

My Children Dress Themselves

Even the Tiny Tots Can Do Much to Help Themselves if Certain Aids Are Provided

I HAVE four children under ten years of age to be dressed each morning, and they have had to learn early to hop into their garments without help. I have worked out a system by which even my four-year-old can dress herself.

I dress the children, winter and summer, in two-piece suits, dress and panties of the same material. As the most trouble came from getting the

going to let me attach the corks to the heads of these dolls, (underneath of course) and then these dolls will completely hide the bottles, and be far more cheerful to look at." I've tried that myself, since. If the dolls ready-made cannot be purchased, it's an easy matter to get one of the doll-heads used for boudoir pillows and other purposes, and complete the doll with wide skirts of

each has some fact at its foundation.

The meaningless minstrel words were soon replaced with the words written for the tune by General Albert Pike. He was born in Boston, Massachusetts in 1809, but lived in the South most of his years. He enlisted in the Confederate army, and became a valued general. Pike's words, which the Southern soldiers sang to Dan Emmet's minstrel tune, are:

Southrons! hear your country call you.
UP! lest worse than death befall you!

To arms! To arms! To arms in Dixie!
Lo! All the beacon fires are lighted,
Let all hearts be now united.

To arms! To arms! To arms in Dixie!
Advance the flag of Dixie!

Hurrah! Hurrah!

For Dixie's land we'll take our stand,
To live or die for Dixie!

To arms! To arms!

And conquer peace for Dixie!

To arms! To arms!

And conquer peace for Dixie!

In the rest of the verses the chorus is the same, with changes in the main lines.

Hear the Northern thunders mutter!
Northern flags in south winds flutter!

Send them back their fierce defiance!
Stamp upon the cursed alliance!

Fear no danger! Shun no labor!
Lift up rifle, pike, and sabre!

Shoulder pressing close to shoulder!
Let the odds make each heart bolder!

How the South's great heart rejoices,
At your cannon's ringing voices!

For faith betrayed and pledges broken,
Wrongs inflicted, insults spoken;

To arms! To arms!

Advance the flag of Dixie!

Hurrah! Hurrah!

For Dixie's land we'll take our stand,
To live or die for Dixie!

Significant Changes

Tremendous what the change of a few words in two lines of the chorus makes in the significance of the song.

Thinking of the one-night stands of the minstrels, Dan Emmet wrote:

In Dixie land I'll take my stand,
To lib and die in Dixie!

Thinking of words to strengthen and inspire the southern soldiers, Albert Pike wrote:

In Dixie's land we'll take our stand,
To live or die for Dixie.

Outside of the fact that he wrote the song "Dixie" when about 44 years of age, and that he wrote "Old Dan Tucker" when he was about 15 years old, the world has little remembrance of Daniel Decatur Emmet. He was a good minstrel of his time.

One day there came back to Mt.

Vernon, Ohio, an elderly man who bought a little house with a garden plot about it at the edge of the village. He lived there alone, tending his chickens and garden, and reading much in his well-worn Bible. Emmet was his name, the townsfolk found out, but thought little about it, that the poor boy who had left to follow the circus should come back a poor man. And Emmet was content. The Actor's Benefit pension, small as it was, helped supply his needs.

One day a reporter with a nose for news inquired of the city officials the way to the home of Daniel Decatur Emmet, the author of "Dixie." The city official was sure that the reporter had got off the train at the wrong station, for they had no author of Dixie living in their city. An investigation showed Mt. Vernon, that the man, a son of their city, who had written what was probably the most popular song in America, lived in a very modest home at the edge of town.

Some stir was made of this; but Dan Emmet was an old man. Well toward 80 years of age. He could not get excited with the rest of the folks of the city. A show troupe signed him up to go with them for a year, which he did when he was 80 years of age. Although he was supposed to be there simply as scenery, when "Dixie" was played, he rose and with wavering legs and voice gave the song and dance as it had been done in the days when minstrelsy was at its flower in America. But at the end of a year, he gave it up. "Too much all the same thing," he remarked when closing the contract and refusing to renew.

And so he went back to his little home, with his chickens, and his garden, and his bible; ending an occasional autographed copy of the song, or a picture of himself, when some admirer who had found that he was still living, sent an order or request. He died in the city of his birth, June 27, 1904, at the age of 89 years.

"Old Dan Decate's" song "Dixie," written by a Northern man who had little knowledge of the South, and adopted by the South as its rallying song during the war, has lived through the strife of battle, outlived the bitterness of reconstruction days, and today, wherever bands play, wherever folks sing in unison, North and South together, music and voices swell the refrain—

"Away, away, away down South in Dixie!"

The
Honeymoon
Cottage

The Honeymoon Cottage has a quaint old-fashioned charm that will appeal to all lovers of a squat, broad-eaved, little home with wide, hospitable doorway and fireplace. It is delightfully made in two color combinations using a harmonizing print for the lawn. The materials used are white muslin, the colored materials are a fine grade of fade proof gingham. The print is of very good quality also. A block is simple to piece and when finished, measures about 12 by 15 inches. Twenty of the blocks set together with four-inch strips and six-inch border, make a quilt about 84 by 90 inches.

One block makes a clever pillow or stool top. A stool can be made at home by smoothly padding a board or shal-

low box and using wooden door stops, brass hooks, or large knobs, for legs. The edge finish for such a stool is a headed ruffle of green or any other color used in the pieced top.

M230—Cutting pattern and instructions for Honeymoon Cottage, at .20c

Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

panties on "hind side before" or "wrong side out" I put patch pockets on the front of each pair. This decoration serves a threefold purpose. It helps even the smallest child to know which side is the front of the garment, the pocket is put to daily use and when the dress needs a patch, the pocket, after many washings, furnishes material in the same shade. The pocket is sacrificed to supply material for patching.

As another aid, I always fasten the tape firmly in place at the back of the neck of their little undershirts as soon as they come from the store. To remove the trouble little children have in pulling their stockings up over their long underwear, I fasten a three-inch length of tape across the bottom of each leg opening, like the strap across the bottom of leggings. These tapes hold the underwear down, and the result is a smooth stocking and a well protected leg.

Each closet in the house has a row of hooks three feet below the usual height. It is so much easier to teach children to hang up their clothes when they can reach the hooks easily. What grownup would want to stretch arms and toes to their utmost every time he took off or put on a garment?

Lastly, I always inspect the manner in which they have arranged their clothing just before they retire for the night. Undergarments and stockings must be hung over the backs of chairs to air and little shoes must go to sleep with their noses to the wall.—MRS. J. P. N., Md.

For the Sick Child

"GOING to give a party?" I asked a friend who was buying a couple of ten-cent dolls with bisque heads and wide-spreading paper skirts.

"No," she answered, "but my little niece is sick and these are to cover up the medicine bottles. I was there the other day and saw a bottle of black medicine and another of yellow on the table by her bed, and they didn't look particularly cheerful. So her mother is

crepe paper. The colorful dolls are very attractive on the bedside table.—A.B.S.

Songs That Mother Used to Sing

(Continued from Page 2)

like the circus people, following warm weather.

There are two stories of how the popular tune, Dixie, came to be adopted as the war song of the Confederacy. Either one is good, and both seem to be equally well verified. Probably both have a measure of truth.

The first of these stories is to the effect that Rumsey & Newcombe Minstrels were playing Charleston, South Carolina, in December, 1860, at the time the city was alive with troops and wild with the scenes immediately preceding the withdrawal of that state from the Union. The local military bands had repudiated all the national airs—refused to play them. But they needed something with plenty of zip to it—stirring, martial—good band music for troops on the march. Even the children on the streets were whistling the tune which had been brought to the city by the minstrels. Dixie. The name was of the Southland. The tune made good band music.

When the bands at the head of the South Carolina troops entered Virginia, they set the spirits of the people on fire with the stirring notes of Dixie. The Southern bands adopted it—it became the battle march of the Confederate army.

The second story is that during the first year of the Civil War. Dixie was sung to tremendous applause on the stage of the New Orleans Variety Theatre. In the last scene there was a Zouave March, for which Dixie was used. It set the audience on fire, calling for seven encores. The army band in New Orleans took up the tune, and it rapidly spread to all parts of the South.

So there are the two tales—as I said—either one may be true; probably

LUNCHEON SET NO. C2813 comes stamped in attractive basket design for simple embroidery on heavy bleached embroidery cloth. Running, lazy daisy and French knot stitches are to be used in making it. Price of set, a 36x36 inch cloth and four 12-inch napkins, 75c postpaid. Floss for working, 45c extra.

BOUDOIR PILLOW NO. C84 is stamped for simple embroidery on corn shade, crisp organdie with applique patches and 3-inch strip box in contrasting colors. Price, top and back included, 50 cents. Floss or working, 50 cents extra. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

Women Visit City Markets

Home Bureau Managers and Farm Women See How Farm Produce Is Handled in New York

FOR the last two or three years R. W. Quackenbush, Agricultural Agent of the New York Central Railroad, has arranged marketing tours for farm women and those working in the interests of the farm home. For a great many years he has organized such trips for farmers and farm agents, but he has concluded that oftentimes the women are as much interested as the men because they do a lot of the packing and other work connected with getting farm products on the market in an acceptable form.

If they can actually see the conditions under which farm products are handled after they arrive at the markets, the packs and containers which stand up best under handling, then he believes that real educational work is being done. Representatives of the railway express agency always co-operate with Mr. Quackenbush on these trips, giving talks on shipping and taking the visitors through their great express terminal to see arrivals of country products from New York State, veal, lambs and eggs in this case.

The hours kept on these marketing tours are strenuous, the first day beginning at 3:30 A. M. But if one visits markets, she has to go when the buying and selling are in progress and that is before the crack o' dawn in New York City.

Those present on the trip held June 23, 24 and 25 were: Home Demonstration Agents: Carrie Williams, Orange County; Ann Phillips Duncan, Broome County; Gladys Adams, Chenango County; Olive Deal, Lewis County; Eloise Irish, Franklin County; Grace Smith, Herkimer County; Florence Elrey, Nassau County; Catherine Buckelew, Madison County. Farm women: Miss Mabel Knapp, Goshen; Mrs. John Cruser, Conklin; Mrs. E. P. Blackwell, Endicott; Mrs. Henry Stratton, Oxford; Mrs. C. A. Onsrud, R. D. 1, Whitesboro; Mrs. George Meade, Oxford. Guides, R. W. Quackenbush, New York Central

Railroad, George Dallas, Railway Express Company.

The itinerary was as follows:

Monday, June 23—3:30 A. M.—Leave hotel. 3:45 A. M.—Arrive Pennsylvania Produce Terminal, Piers 27-28-29, North River, at foot of Laight St., to note unloading, handling and distribution of fruits and vegetables from the south and west, which are handled on this pier having a capacity of 700 cars daily. 4:45 A. M.—Leave Pennsylvania Produce Terminal and walk through Washington and adjoining streets noting the method of handling, selling and distributing products

PICTURE B3392, size 6x8 inches, is a ship design stamped on fine quality oyster linen for simple cross stitch embroidery. Frame with glass, colored mat, instruction chart and blue floss in various shades for embroidery included. Price 85c. Order from Embroidery Department, American Agriculturist, 461 Fourth Avenue, New York City.

from the commission houses in this territory. 5:10 A. M.—Visit Erie R. R. Piers 20-21 to note handling of various perishable commodities arriving at this pier. 5:50—Breakfast. 7:00 A. M. Visit Fulton Fish Market. 8:00 A. M.—Visit New York Central pier 17, foot of Barclay St., North River, where during the season a large quantity of New York State produce is handled. 8:30 A. M.—Attend auction Pennsylvania Produce Terminal. 9:20 A. M.—Visit R. Brenner and Son, to note handling and selling of nearby eggs. 10:00 A. M.—Visit Pacific Egg Producers. At this point, a representative of this organiza-

tion will give an outline of their activities. 10:45 A. M.—A trip through the Holland Tunnels. 11:30 A. M.—Sightseeing trip around the Harbor as guests of the New York Central Railroad. Luncheon on boat. 2:30 P. M.—Disembark. 3:15 P. M.—Arrive at Dairymen's League Cooperative Association, Inc., for inspection of offices of the organization.

Tuesday, June 24.—7:45 A. M.—Leave hotel. 8:00 A. M.—Arrive Railway Express Agency Terminal, New York Central Railroad, 10th Ave. and 33rd St., to see arrivals of country dressed veal, lamb and eggs from New York State. Arrivals of fish and other perishable traffic may be seen, as well as general merchandise handling in express service. 10:00 A. M.—Arrive 60th St. Poultry Yards, New York Central. This is the only yard on Manhattan Island where freight shipments of poultry are unloaded. As many as 70 cars have been unloaded in one day. 10:30 A. M.—Leave above for visit to West Washington Market and several houses handling express shipments of live poultry, eggs, dressed veal, etc. 12:30 P. M.—Arrive John Wanamaker's for luncheon, followed by a tour through the store under the direction of Personal Service Department after which an opportunity will be given for personal shopping. 10:30 P. M.—Leave hotel for visit to the new plant of the New York Herald-Tribune.

Wednesday, June 25—8:45 A. M.—Leave hotel. 9:15—Arrive U. S. Appraisers Public Stores, 201 Varick St., to note methods of examining, passing and appraising imports by the Customs House authorities. 11:15 A. M.—Arrive J. C. Penney Co., 330 West 34th St., for inspection of their eighteen-story building. Guests of Penney Company for luncheon. 2:00 P. M.—Arrive Pier 59, North River to inspect the White Star liner "Majestic"—courtesy of International Mercantile Marine Company. 12:00 P. M.—Leave hotel for New York Central milk platforms, 130th St. to note arrival and handling of milk in cans and also in tank cars, followed by a visit to the Sheffield-Farms plant, 1066 Webster Avenue.

Tested Recipes

Peanut Cookies

2 cups of sifted flour, 1 cup roasted peanut meats blanched and crushed, $\frac{3}{4}$ teaspoon soda, 2 teaspoons baking powder, $\frac{1}{4}$ teaspoon salt, $\frac{1}{2}$ cup of shortening, $\frac{1}{2}$ cup syrup, $\frac{1}{2}$ cup sugar, 1 egg, milk sufficient to mix. Cream sugar, shortening and syrup, add beaten egg, nuts and flour which has been mixed with salt, baking powder and soda. Add needed amount of milk. Roll thin and bake in a moderately hot oven until delicately browned. It is very easy to convert a plain cookie into a very fancy concoction. Raisin or dried fruit may be pressed into dough before baking and dusted with sugar or the red sand sugar. Ground nuts may be spread over the top or the whole meats put on in form of stars, wreaths or other designs. Plain icing may be used. Either white, chocolate or maple. Into this may be stirred chopped or whole nuts, coconut, dried fruit or spices, or they may be put on frosting in designs. —Mrs. G. G., New York.

Although peanuts are among our cheaper nuts that does not seem to hinder their popularity any.

Biscuits That Melt in Your Mouth

"A stone jug and a pewter mug,
And a table set for three
A jug and a mug at every place
And a biscuit or two with Brie * * *"

Southern Beaten Biscuits

1 qt. flour
 $\frac{1}{2}$ cup milk and water (equal parts)
 $\frac{1}{2}$ cup shortening
1 saltspoon baking powder
2 teaspoons sugar
1 teaspoon salt

Sift dry ingredients together and work in shortening with finger tips. Add liquid gradually, mixing with knife to rather a soft dough. Knead well, turn out on biscuit board and beat with wooden rolling pin until dough blisters. Then continue beating a few minutes longer. Roll out $\frac{1}{4}$ to $\frac{1}{2}$ inch thick, cut into small rounds, prick with

fork tines, and bake in ungreased pan in hot oven until a very delicate light brown.—R. S.

The lightness of this mixture is obtained almost entirely by the beating which the doughy mass receives after it is mixed. In the old South a heavy wooden block was kept for this purpose and you will find a good solid surface

A Heart That Sings

I will be glad
For little things:—
The notes a vesper
Sparrow sings,

The way
That cowslips grow,
The light and shadows
Over snow,

For winter's stalwart,
Quiet trees,
But glad again
For new-born leaves;

And for a tiny,
Silver moon,
A deep blue sky;
A whistled tune;

A friendly room,
Or fragrant bread,
A merry voice,
And words that kindness said.

A mind that laughs,
A heart that sings—
God give me joy
In little things!

—DOROTHY ROSE RICH

is necessary in order to get the best results. Do not expect to spare the elbow grease if you want really light beaten biscuits.

Potato Biscuits

1½ cups riced Sweet (or Irish) potatoes
2 cups sifted flour
 $\frac{1}{2}$ cup shortening
 $\frac{1}{2}$ cup milk (about)
 $\frac{1}{2}$ teaspoons salt
4 teaspoons baking powder

Boil potatoes in jackets, drain and peel—Put through ricer—measure the required amount. Sift flour, salt, baking powder together and rub in shortening with finger tips. Add potatoes, mixing thoroughly. Just enough milk to make rather soft dough, and roll out on lightly floured board 1 inch thick. Cut out rather large rounds, bake in moderate oven and butter and serve at once.—R. S.

These are something of a novelty and are especially nice for tea or special occasions.

Bedrooms for Tourists

IMPORTANT points to remember in arranging rooms for tourists are, according to Miss Grace Morin of the State College of Home Economics:

1. Cool, comfortable, well-ventilated rooms with windows screened.
2. Simple, inexpensive furnishings which are comfortable and kept spotlessly clean.
3. Plain walls in a restful neutral color rather than patterned wall papers.
4. Simple, painted furniture, plain iron or wooden beds with comfortable springs and mattresses.
5. Good mirrors placed for clear reflection.
6. Light, easily laundered curtains such as theatrical gauze, inexpensive voile, or dyed cheese cloth which has been rough dried.
7. Lamps at bedside and near the mirror rather than overhead in the center of the room.
8. Do not use family photographs for decoration: they are of interest only to one's family and friends but not to the chance tourist.

Don't forget to Shampoo
your hair to-night with

Cuticura Soap

You will be delighted with its fragrance and efficiency. Send for samples and directions for using. Address, "Cuticura," Dept. E, Malden, Mass.

Attractive Mid-Season Styles

LITTLE GIRL'S DRESS
PATTERN NO. 2572 is sweet and dainty, especially if made up in the delicate summer colors so well suited to childhood. The little cape collar and the perky bows on the front closing give this design real distinction. The pattern cuts in sizes 2, 4 and 6 years. Size 4 requires 2½ yards of 35 or 39-inch material with $\frac{1}{2}$ yard of 32-inch contrasting. PRICE 15c.

DRESS PATTERN NO. 2556 with its flared sleeves and semi-sports styling is particularly useful just now. The sprightly colored prints of mid-summer and the plain pastel shades offer variety for any type to choose from. The pattern cuts in sizes 16, 18 years, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 3½ yards of 39-inch material with 4¾ yards of binding. PRICE 15c.

FROCK PATTERN NO. 2550 with its feminine shoulder bow and bow-tied sleeves is very smart and effective. The tricky cross-over vestee adds an interesting note while the softly flaring skirt is both comfortable and attractive. Shantung, crepe silk, linen, pique or chiffon voile would make up becomingly in this design which cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3½ yards of 39-inch material with $\frac{3}{4}$ yard of 39-inch contrasting. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin, although coin is sent at own risk. Add 12c for one of the new Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

The Indian Drum—By William McHarg and Edwin Balmer

"No; you can tell me more now, Alan. Surely you can. I must know. I have the right to know. Yesterday, even before you found out about this, you knew things you weren't telling me—things about the people you'd been seeing. They'd all lost people on the lakes, you said; but you found out more than that."

"They'd all lost people on the *Miwaka*!" he said.

"All who could tell me where their people were lost; a few were like Jo Papo we saw yesterday, who knew only the year his father was lost; but the time always was the time that the *Miwaka* disappeared!"

"Disappeared!" she repeated. Her veins were pricking cold. What did he know, what could any one know of the *Miwaka*, the ship of which nothing ever was heard except the beating of the Indian Drum? She tried to make him say more; but he looked away now down to the lake.

"The *Chippewa* must have come in early this morning," he said. "She's lying in the harbor; I saw her on my way to the telegraph office. If Mr. Spearman has come back with her, tell him I'm sorry I can't wait to see him."

"When are you going?"

"Now."

She offered to drive him to Petoskey, but he already had arranged for a man to take him to the train.

She went to her room after he was gone and spread out again on her bed the watch—now the watch of Captain Stafford of the *Miwaka*—with the knife and coins of more than twenty years ago which came with it. The meaning of them now was all changed; she felt that; but what the new meaning might be could not yet come to her. Something of it had come to Alan; that, undoubtedly, was what had so greatly stirred him; but she could not yet re-assemble her ideas. Yet a few facts had become plain.

A maid came to say that Mr. Spearman had come up from his boat for breakfast with her and was downstairs. She went down to find Henry lounging in one of the great wicker chairs in the living room. He arose and came toward her quickly; but she halted before he could seize her.

"I got back, Connie—"

"Yes; I heard you did."

"What's wrong, dear?"

"Alan Conrad has been here, Henry."

"He has? How was that?"

She told him while he watched her intently. "He wired to Buffalo about the watch. He got a reply which he brought to me half an hour ago."

"Yes?"

"The watch belonged to Captain Stafford who was lost with the *Miwaka*, Henry."

He made no reply; but waited.

"You may not have known that it was his; I mean, you may not have known that it was he who rescued the people of the *Winnebago*, but you must have known that Uncle Benny didn't."

"Yes; I knew that, Connie," he answered evenly.

"Then why did you let me think the watch was his and that he must be—dead?"

"That's all's the matter? You had thought he was dead. I believed it was better for you—for every one—to believe that."

She drew a little away from him, with hands clasped behind her back, gazing intently at him. "There was some writing found in Uncle Benny's house in Astor Street—a list of names of relatives of people who had lost their lives upon the lake. Wassaquam knew where those things were. Alan says they were given to him in your presence."

She saw the blood rise darkly under his skin. "That is true, Connie."

"Why didn't you tell me about that?"

He straightened as if with anger. "Why should I? Because he thought that I should? What did he tell you about those lists?"

"I asked you, after you went back, if anything else had happened, Henry, and you said, 'nothing.' I should not have considered the finding of those lists 'nothing.'"

"Why not? What were they but names? What has he told you they were, Connie? What has he said to you?"

"Nothing—except that his father had

It's a terrible thing, whatever happened. He knows that, and I know; but he wants—and I want him for his sake, even for Uncle Benny's sake—to see it through."

"Then it's a queer concern you've got for Ben! Let it alone, I tell you."

She stood flushed and perplexed, gazing at him. She never had seen him under stronger emotion.

"You misunderstood me once, Connie!" he appealed. "You'll understand me now!"

She had been thinking about that injustice she had done him in her thought—about his chivalry to his partner and former benefactor, when

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance, living at the Sherrill summer home, receives a package containing a wedding ring and a watch that appear to come from Benjamin Corvet. Allan returns and tells Constance of his findings.

kept them very secretly; but he's found out they were names of people who had relatives on the *Miwaka*!"

"What?"

Recalling how her blood had run when Alan had told her that, Henry's whiteness and the following suffusion of his face did not surprise her.

He turned away a moment and considered. "Where's Conrad now, Connie?"

"He's gone to Frankfort to cross to Manitowoc."

"To get deeper into that mess, I suppose. He'll only be sorry."

"Sorry?"

"I told that fellow long ago not to start stirring these matters up about Ben Corvet, and particularly I told him that he was not to bring any of it to you. It's not—a thing that a man like Ben covered up for twenty years till it drove him crazy is sure not to be a thing for a girl to know. Conrad seems to have paid no attention to me. But I should think by this time he ought to begin to suspect what sort of thing he's going to turn up. I don't know; but I certainly suspect—Ben leaving everything to that boy, whom no one had heard of, and the sort of thing which has come up since. It's certainly not going to be anything pleasant for any of us, Connie—for you, or your father, or for me, or for anybody who'd cared for Ben, or had been associated with him. Least of all, I should say, would it prove anything pleasant for Conrad. Ben ran away from it, because he knew what it was; why doesn't this fellow let him stay away from it?"

"He—I mean Alan, Henry," she said, "isn't thinking about himself in this; he isn't thinking about his father. He believes—he is certain now—that, whatever his father did, he injured some one; and his idea in going ahead—he hasn't told it to me that way, but I know—is to find out the whole matter in order that he may make recompense.

Uncle Benny was still keeping his place among men. Was Henry now moved, in a way which she could not understand, by some other obligation to the man who long ago had aided him? Had Henry hazarded more than he had told her of the nature of the thing hidden which, if she could guess it, would justify what he said?

In the confusion of her thought, one thing came clearly which troubled her and of which she could not speak. The watch of Captain Stafford's and the ring and the coins, which had made her believe that Uncle Benny was dead, had not been proof of that to Henry. Yet he had taken advantage of her belief, without undeceiving her, to urge her to marry him at once.

She knew of the ruthlessness of Henry's business life; he had forced down, overcome all who opposed him, and he had made full use for his own advantage of other men's mistakes and erroneous beliefs and opinions. If he had used her belief in Uncle Benny's death to hasten their marriage, it was something which others—particularly she—could pardon and accept.

If she was drawn to him for his strength and dominance, which sometimes ran into ruthlessness, she had no right to complain if he turned it thus upon her.

She had made Alan promise to write her, if he was not to return, regarding what he learned; and a letter came to her on the fourth day from him in Manitowoc. The postoffice employees had no recollection, he said, of the person who had mailed the package; it simply had been dropped by some one into the receptacle for mailing packages of that sort. They did not know the handwriting upon the wrapper, which he had taken with him; nor was it known at the bank or in any of the stores where he had shown it. The shoe dealer had no recollection of that par-

ticular box. Alan, however, was continuing his inquiries.

In September he reported in a brief, totally impersonal note, that he was continuing with the investigations he had been making previous to his visit to Harbor Point; this came from Sarnia, Ontario. In October he sent a different address where he could be found in case anything more came, such as the box which had come to Constance in August.

She wrote to him in reply each time; in lack of anything more important to tell him, she related some of her activities and inquired about his. After she had written him thus twice, he replied, describing his life on the boats pleasantly and humorously; then, though she immediately replied, she did not hear from him again.

She had returned to Chicago late in September and soon was very busy with social affairs, benefits, and bazaars which were given that fall for the Red Cross and the different Allied causes; a little later came a series of the more personal and absorbing luncheons and dances and dinners for her and for Henry, since their engagement, which long had been taken for granted by every one who knew them, was announced now. So the days drifted into December and winter again.

The lake, beating against the esplanade across the Drive before Constance's windows, had changed its color; it had no longer its autumn blue and silver; it was gray, sluggish with floating needle-points of ice held in solution. The floe had not yet begun to form, but the piers and breakwaters had white ice caps frozen from spray—harbingers of the closing of navigation. The summer boats, those of Corvet, Sherrill, and Spearman with the rest, were being tied up. The birds were gone; only the gulls remained—gray, clamorous shapes circling and calling to one another across the water. Early in December the newspapers announced the closing of the locks at the "Soo" by the ice.

That she had not heard from Alan was beginning to recur to Constance with strange insistence. He must have left the boats by now, unless he had found work on one of those few which ran through the winter.

He and his occupation, instead of slipping from her thoughts with time, absorbed her more and more. Soon after he had gone to Manitowoc and he had written that he had discovered nothing, she had gone to the office of the Petoskey paper and, looking back over the twenty-year-old files, she had read the account of the loss of the *Miwaka*, with all on board. That fate was modified only by the Indian Drum beating short. So one man from the *Miwaka* had been saved somehow, many believed. If that could have been, there was, or there had been, some one alive after the ship "disappeared"—Alan's word went through her with a chill—who knew what had happened to the ship and who knew of the fate of his shipmates.

She had gone over the names again; if there was meaning in the Drum, who was the man who had been saved and visited that fate on Benjamin Corvet? Was it Luke? There was no Luke named among the crew; but such men often went by many names. If Luke had been among the crew of the *Miwaka* and had brought from that lost ship something which threatened Uncle Benny that, at least, explained Luke.

Then another idea had seized her. Captain Caleb Stafford was named among the lost, of course; with him had perished his son, a boy of three. That was all that was said, and all that was to be learned of him, the boy.

Alan had been three then. This was

FREE LABOR EXCHANGE

In order to bring employers and employees together, we will, until further notice, print short classified advertisements for either help wanted or positions wanted on this page.

To use this service you must be a paid-in-advance subscriber to American Agriculturist and the advertisement must be stated in a few words.

In sending in your notice, enclose address label from the front page of your last copy.

WANTED TO BUY

WANTED—HAY, GRAIN, Potatoes, Apples, Cabbage, Carloads. Pay highest market prices. For sale: Alfalfa, Hay, Clover Hay, reasonable prices. THE HAMILTON CO., New Castle, Pa.

WOOL WANTED—I specialize in Wool and Pelts. Write for prices. ALVAH A. CONOVER, Lebanon, N. J.

WANTED USED FEED Bags, fair quality. HOFFMAN BROS. BAG CO., 39 Gorham St., Rochester, N.Y.

COD LIVER OIL

PURE GOLDEN COD Liver oil for poultry animal feeding. Richest known anti-rachitic and growth-promoting food. Five gallons \$6.75; 10 gallons \$13, at New York. Special prices in barrels. CONE IMPORT COMPANY, 624 Kent Avenue, Brooklyn, N. Y.

AGENTS WANTED

BRISKO POLISHING CLOTH shines Silverware like magic. No "mussy" liquids, powders needed. Amazing profits! Whirlwind seller, 25c. Sample Free. BRISKO COMPANY, South Shaftsbury, Vt.

OUR HELP COLUMN

Find Work or Find a Good Worker

DO YOU NEED FARM HELP. We have Jewish young men, able-bodied, some with, but mostly without experience, who want farm work. If you need a good, steady man, write for an order blank. Ours is not a commercial agency. We make no charge. THE JEWISH AGRICULTURAL SOCIETY, Inc., Box A, 301 E. 14th St., New York City.

WANTED—Single farm hands \$55 to \$60 month, and all other kinds of help required. Write BREWSTER'S EMPLOYMENT OFFICE, Brewster, N.Y.

WANTED—Reliable farm hand. Must be able to milk. \$40 month with board. J. SCHWARTZ, E. Nassau, N. Y.

SINGLE FARM HAND wanted. Must be good all round worker. Good teamster and milker. Write ELMER E. NORTON, Elba, N. Y.

SINGLE MAN WANTED for farm must be good milker and all round good willing worker \$50 per mo. and board. No boys or old men answer. CHESTER SMITH, Cold Spring, N. Y.

WANTED—Experienced farm hand to help for 1 month harvest. Must be able to pitch hay and use scythe. References. RICHARD H. HAYNER, R.F.D. 1, Troy, N. Y.

Classified Advertising Rates

CLASSIFIED ADS ARE INSERTED at the rate of 8 cents a word. The minimum charge per insertion is \$1. Count as one word each initial, abbreviation and house number, including name and address. Thus "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

The More You Tell, The Quicker You Sell

ADVERTISING ORDERS must reach our office at 461 Fourth Avenue, New York City, not later than 12 days before the Saturday of publication date desired. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

Orders for these columns must be accompanied by bank references

HELP WANTED

WANTED—Middle age, single man to work on general farm by month or year. FRED WEST, Rt. 1, Sloansville, N. Y.

WANTED—Single man for all around farm work, good with stock. By month at good wages. Good home for good man. HARRY SANFORD, Margaretville, N. Y.

WANTED MAN to help cut wood. Make potato crates and other work. DONALD C. FOX, Prattsburg, N. Y. R. D. 2.

MAN WANTED to work on farm by month. Must be good all around worker, especially with milking and operating power milker. HOWARD B. WARRINER, Greenwood, N. Y. Steuben County, R. D. 1.

HOUSEKEEPER WANTED on farm, age 50 or 60, for myself and son. House has most all modern improvements. Good home for a neat and plain cook. For further information and reference Address C. R. SWAYER, R 2, Edmeston, N. Y.

WANTED—Respectable middle-aged woman, in need of home, willing to help with housework in family of two on farm, sufficient to pay for board, etc. MRS. J. B. KELSEY, R. D. No. 1, Box 59, Winthrop, N. Y.

WANTED—Experienced man for haying on a Schoharie County dairy farm. 4 to 6 weeks work with board and room, good reasonable wages. Must be able and willing to pitch hay, swing a grass scythe, and mow away in barn. GROVER C. GUERNSEY, R. D. No. 3, Schoharie, N. Y.

SITUATIONS WANTED

YOUNG MAN DESIRES Position on poultry or dairy farm. Some experience. Can furnish good reference. Write stating wages offered and full particulars to DeWITT CLOW, Knox, N. Y., Box 4.

HANDY ANDY Says "Here's How"

To Lengthen Life of Carpets

By Ray Inman

You can lengthen the life of your carpets with a little care.

LAY sheets of brown paper under them. It makes a softer surface.

THE paper also acts as an insulator which keeps cold air from coming up thru the floor.

DON'T let dirt and grit become ground into the fibres. It wears the carpet rapidly.

Poultry Farmer

When a Cull Is Not a Cull

By L. E. WEAVER

EVERY summer for the past ten years I have been in dozens of poultry houses where we were holding culling demonstrations or doing certification work. My experience has convinced me that hundreds of innocent hens are sent to market as culls.

I don't mean that it was a mistake to cull them out. It was probably the best thing to do under the circumstances. The hens were not laying and probably wouldn't lay again for a long time and they were eating—at least when there was any thing for them to eat. So they were a source of loss to the owner, and to sell them, even though it was on a low market, was better than to keep them.

Give Them a Chance

The big mistake that the owner made was in letting the hens get in that condition. It is something like the man whose potatoes were just ready for cultivation when a long rainy season set in. Before he could get in to work again the weeds were as high as his waist. It would not be exactly fair to call him a failure as a potato grower because that one crop failed. Give him the right conditions and then if he failed you could judge him fairly. In the same way if the hens have had nothing but oats or buckwheat, or perhaps a little dry mash once in a while, but an empty hopper most of the time you cannot fairly call them culls even if they are not laying and their legs are yellow and they start molting in

July. You don't know what they might have done if they had had a chance.

I have been in many poultry houses where the whole flock was still laying 50% or better in November and even in December, and every hen still wearing her old coat of feathers. There is real money in those big high-priced fall eggs. Such a flock is better than a flock of early pullets at that time. Now if the commercial poultryman can keep his hens laying all summer and late in to the fall like that I can see no reason why the small-flock man or woman can't do the same.

Poor Hens Never Pay

Like many other problems there may be several answers. The trouble here is almost sure to be either in poor stock (in which case the birds probably *would* be culls), or in poor management. And I think that in these recent years of selection and certification and more careful breeding with better chicks as a natural result, it is more often poor management than poor stock. By management I mean, feeding, watering, fighting lice and mites, ventilation, breaking up broody hens and anything else that has its influence in

promoting or checking egg production. Never let the dry mash hopper become empty. Feed a moist mash once a day, what they will clean up in an hour starting about July 1st. Feed very sparingly of scratch grain in the morning, or none at all. Feed all the grain they will clean up about 5 or 6 o'clock in the afternoon. If they eat the wheat and leave the corn, or vice-versa, increase the proportion of wheat to where they clean everything up. That is an important point. Never let the water dishes get dry. Keep the hen house as cool as you possibly can, especially at night, but be careful about drafts if a damp or cold night comes along. Shut up all broody hens as soon as they go broody and feed and water them well. Fight lice with Black Leaf 40, Blue Ointment, or Sodium Fluoride, and keep out the mites by spraying or painting the perches and surroundings with a penetrating destroyer that will not evaporate or lose its strength in a few weeks.

In every flock, after every chance has been given there will still be some hens that cannot respond. They do not lay. Their beaks and legs turn yellow, their combs grow dull and shriveled, they start molting but take their time about it. Those are the non-producers, the unprofitable boarders, the culls. They are the ones the paid-culler from the Farm Bureau will take out for you. He will get them all right, but if you have not done your part in so managing your flock that they have had a fair chance he will take some that might have been kept in production. L. E. Weaver.

Is the Tuberculin Test Reliable?

(Continued from Page 7)

ago Congressman L. J. Dickinson requested me to answer the question "Does the tuberculin testing of cattle cause the spread of contagious abortion among the tested cattle?"

I was very glad to be able to answer Congressman Dickinson with a statement to the effect that there was absolutely no evidence to indicate that such was the case. In fact, I referred him to two large and valuable herds of cattle not far from the United States Capital which have been tuberculin tested semi-annually for years, and in which neither tuberculosis nor contagious abortion exists. This can be truthfully stated in regard to many other valuable herds of cattle located in all parts of the United States.

What About Visible Lesions?

It is only natural that some animals responding to this delicate test do not contain lesions of tuberculosis that can be seen under normal conditions. Tuberculosis does not develop spontaneously upon exposure, but the disease develops slowly up to a certain stage, depending, of course, upon the amount of infection introduced into the animal, as well as the virulence of the organisms, and the susceptibility of the individual. During the time when the disease is in the process of development in cattle a reaction will result upon the application of a tuberculin test. An animal that reacts to the test under these conditions is very likely to show no visible lesions upon autopsy, even though the most careful technic is followed.

Further, it may be stated in this connection that in a great majority of the cases of cattle that react to the tuberculin test the lesions are slight, often times being confined to one location. Tuberculosis is found in very many different parts of the animal body, including many remote places that may be overlooked upon ordinary post-mortem examination. Microscopic examination of numerous specimens examined in laboratories throughout the country have indicated the presence of tuberculosis invisible to the naked eye.

Retesting Reactors

The fact that an animal may react only once in a long period of time was definitely decided many years ago. Some years ago the bureau caused to be retested 343 reactors, with the result that 129, or 38 per cent, did not react, 21 of which were generalized cases, and had they been returned to

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Iowa Cattle Dealers Indicted

FOR the past year or two we have been hearing stories indicating that all was not well with the cattle business in Jefferson County, Iowa. In fact, the confidential information we were able to get caused us to turn down practically all advertisers in that section who had cattle to sell. If the charges made are true, our readers have been saved heavy loss by our action.

Recent developments show that the stories we heard were not all idle tales. On June 13th a Jefferson County, Iowa Grand Jury returned three indictments

against them. However, I feel that the state has a very good case at this time, and every effort will be made to convict."

Avoid "Cures" By Mail

"Could you kindly inform me if W. Thompson Bobo of Battle Creek, Michigan, is reliable. He claims to be able to cure goitre. I wrote him for information and his terms are \$10. per month or three months for \$25.

AS most of our readers know we never recommend mail order medical treatments but in order to get more definite information we asked the American Medical Association for a report on Mr. Bobo. The reply states that Mr. Bobo has been connected for a good many years with various quack outfits.

Some years ago some tests were made on a sample of the goitre remedy. Neither thyroid extract or iodine was detected although these are two common goitre remedies. The specimen did contain large amounts of common baking soda and some laxative drug.

We understand that Mr. Bobo has previously been connected with a mail order epilepsy cure and with an alleged rheumatism cure. More recently we believe he has gone into the diabetes cure field under the trade name of "Sanborn Laboratories".

Wants Money Back

"I ordered some flowers from an advertiser I saw in a recent issue of the American Agriculturist and have not heard from them yet. I noticed that the advertisement was not in the last issue and I wish you would see that I get my money back."

THE fact that an advertiser may not appear in every issue is no indication that he has been dropped. In answering this complaint our advertiser replied:

"We always fill orders as they are received and have never failed to ship in time for planting in the location from which the order was received.

"We have slowed up shipments for the last few days because the weather has

Accident Insurance Worth While

I WANT to express my appreciation for the way I was treated by the North American Insurance Co. and also for the attitude taken by your paper against all fraud. It is a pleasant feeling that when buying from your advertisers one is sure of being protected. May the American Agriculturist grow and prosper.

been so cold. We expect to fill all orders by Monday. If this is not satisfactory to your subscriber we will be glad to return her money."

Surely no one could wish for fairer treatment than this. We are publishing this incident as an indication of the way American Agriculturist advertisers do business.

Good Price Used for Bait

"I have an account against Mr. Abe Binbisky of Trenton, N. J. for some chicks he bought from me on May 15th. Would it be possible for you to settle this claim for me?"

WE wrote a letter calling Mr. Binbisky's attention to this claim. The letter has been returned from the Post Office marked 'unknown'. We then took the matter up with the State Department of Agriculture and Markets who wrote us as follows:

"We are very sorry to advise that we have been unable to locate any man by this name on Union Street, Trenton.

"There is a regular small buyer in that

NAME

ADDRESS

against 35 cattle dealers in Jefferson County and surrounding counties. The principal indictment charged these cattle dealers with misrepresentation as to quality, size and breed in selling feeder cattle which were alleged to have been brought to Iowa from the southwestern range sections.

In the past it is claimed that the men indicted advertised principally in the smaller papers having rural circulation, frequently at considerable distance from their homes. When those who had read the advertisements called to buy cattle they were taken out and shown some good looking stock. Buyers frequently gave their checks for the cattle purchased and left for their home town feeling that they had made an excellent bargain. However, many expressed extreme dissatisfaction when the cattle finally arrived even going so far as to claim that they were by no means the same animals that they were shown when they made the purchase.

For the past two years the Department of Justice of the State of Iowa has been collecting evidence sufficient to require seven days for presentation to the Grand Jury. In answer to a letter of congratulation from us, Mr. John Fletcher, Attorney General said:

June 30, 1930

"I want you to know that I fully appreciate your letter of the 25th instant with reference to the work this Department is doing in the Fairfield, Iowa, cattle cases.

The victims of this organized gang reach from Maine to California. We have information from men in thirty-one states in the Union who have been swindled, and more information is coming to the Department every day. I appreciate the good work that is being done by the farm papers throughout the country in letting it be known to their readers that it is unsafe to deal with these people at Fairfield. It is the only spot in Iowa that I have ever heard of where there is any question about the character of the dealings of men offering cattle for sale. It seems that this gang has been organized for a number of years and it has been a long, hard pull to get concrete cases

area by the name of Borker who buys considerable poultry around the state and also several other small Jewish buyers from this community, but so far as I know there are no regular dealers or commission houses in this area.

I cannot understand why anyone would take a chance in selling his goods to almost a total stranger. No doubt the price offered was considerably in excess of the market price. Since we receive several letters of this kind in a year I am beginning to believe that Barnum was right."

Some Claims to Investigate

HAVE you ever received the following offers?

"Earn \$35 a dozen sewing dresses at home."

"Earn \$35 a week addressing cards at home."

"Make \$24 a dozen embroidering buf-fet sets."

"Bankrupt and Bargain Sales—Make big profits."

"Men wanted to fill positions abroad."

"Earn \$25 weekly addressing and mailing circulars."

"Earn \$5 per hundred addressing envelopes in spare time."

"\$100 a month in your home. Fold and mail circulars."

"Earn \$7 per 100 decorating greeting Cards."

If you have—investigate them before sending in your hard-earned money. Many persons have purchased near-worthless working kits at a high price only to find later that their work was unsatisfactory. Others have been lured into purchasing listing books under the supposition they could get a job in a foreign country.—Better Business Bureau.

The Indian Drum

(Continued from Page 12)

wild, crazy speculation. The ship was lost with all hands; only the Drum, believed in by the superstitious and the most ignorant, denied that. The Drum said that one soul had been saved. How could a child of three have been saved

when strong men, to the last one, had perished? And, if he had been saved, he was Stafford's son. Why should Uncle Benny have sent him away and cared for him and then sent for him and, himself disappearing, leave all he had to—Stafford's son?

Or was he Stafford's son? Her thought went back to the things which had been sent—the things from a man's pockets with a wedding ring among them. She had believed that the ring cleared the mother's name; might it in reality only more involve it? Why had it come back like this to the man by whom, perhaps, it had been given? Henry's words came again and again to Constance: "It's a queer concern you've got for Ben. Leave it alone, I tell you!" He knew then something about Uncle Benny which might have brought on some terrible thing which Henry did not know but might guess? Constance went weak within. Uncle Benny's wife had left him, she remembered. Was it better, after all, to "leave it alone?"

But it wasn't a thing which one could command one's mind to leave alone; and Constance could not make herself try to, so long as it concerned Alan. Coming home late one afternoon toward the middle of December, she dismissed the motor and stood gazing at the gulls. The day was chill, gray; the air had the feel, and the voices of the gulls had the sound to her, which precede the coming of a severe storm. The gulls recalled sharply to her the day when Alan first had come to them, and how she had been the one first to meet him and the child verse which had told him that he too was of the lakes.

(To be Continued Next Week)

How a Chain Store Gets Its Supplies

(Continued from Page 3)

honest, efficient cooperative maintaining storage and wholesale facilities would be extremely helpful to both buyers and producers. Such a cooperative could establish and require high quality and a uniform pack. It would keep inferior stuff off the market, which reduces the price to everybody, and it would assist the farmer in finding an outlet for his marketable stuff.

Like Mr. T, the buyer for the chain restaurant this buyer for the chain store was also very emphatic about the quality of the stuff that he buys.

Quality Pays

"Cost per container," he said, "is not the only item for consideration. During the past few weeks, eastern shore cabbage has been available at \$2 to \$2.50 per 50-pound crate, while middlewestern cabbage has cost twice that much. In spite of this, we gave preference to the higher priced cabbage because of its very superior quality, and we still saved money on the deal; that is, the quality product paid us, as it does every time."

In answer to my question, Mr. W. said that in some of the company's stores, merchandise is exchanged for farm foodstuffs, eggs being much favored for such exchange. Where it is possible, that is, where price and quality are right, fresh stuff is bought near where it is to be sold.

How Early Stuff Affects Home Grown Products

You will be much interested in what Mr. W. said in answer to our question about early fruits and vegetables jading the public appetite before local supplies are available. Mr. W. thought that the early fruits and vegetables did interfere with the local stuff later. For example, he plans to buy little of watermelons and peaches after July 4 because they will no longer be a novelty and therefore the demand will fall off.

You will remember that this is just the opposite of what Mr. T. said, the chain restaurant buyer.

I think most buyers would agree with Mr. W. For example, after you have had sweet corn for two or three months, the local product is certainly not going to be any treat.

This buyer also said that local peaches, those grown within fifty or sixty miles of New York, do not bulk as large in New York City market as they used to. Some outlet, probably the roadside stand, has diverted what local peaches there are from New York City.

We had quite a discussion about canned goods. Mr. W. thought that there was much less home canning being done by village and city women, although of course farm women still put up their own fruit and vegetables. But the purchases of canned stuff by farm women never were heavy. I asked Mr. W. if the increased consumption of fresh foods had decreased the demand for canned goods. He did not think so, but judging from talks we have had with other buyers I think that canned goods are on the decrease.

A definite change in the demand for both fresh and canned goods is for a smaller package than was formerly used. Spinach, instead of coming in barrels, comes in bushel baskets; apples in bushel baskets (eastern growers please take notice); and potatoes in 120-pound bags.

"We repack most of our foodstuffs," said Mr. W., "tomatoes being one of the best examples. We prefer to buy 144's, and aim at that size; by doing our own repacking we are surer of the stores getting a product of uniform size and ripeness, which can be sold easily."

Prefers Western Apples

Our conversation was especially interesting from the eastern apple growers' standpoint. Mr. W. felt very definitely that the western apple, because of its fine color and attractive pack, had completely taken away New York's apple market. He did not hesitate to say that his corporation bought western apples because they knew what they were getting as to variety and size. He averages one hundred cars

The Masterpiece of Cream Separator Design and Efficiency

Bankers, county agents, creamerymen, dairymen, members of cow-testing associations, and newspaper publishers have seen and vouched for the remarkable performance of the McCormick-Deering Ball-Bearing Cream Separator under varying conditions, at public demonstrations held throughout the dairy regions this year. And this unequaled performance of the McCormick-Deering is being duplicated every day on hundreds of thousands of dairy farms where milk is skimmed under all conditions and varying temperatures. Hot or cold or in between—its all the same to this cream separator.

The McCormick-Deering is the masterpiece of cream separator design and efficiency. It is the world's easiest-running and closest-skimming cream separator. The McCormick-Deering is the ball-bearing machine—with ball bearings at all high-speed points. It is as good looking and as easy to clean as it is efficient.

Consult with the leaders in your community who have seen the McCormick-Deering in operation. Ask any McCormick-Deering owner about the cream-saving qualities of his machine. And have the McCormick-Deering dealer demonstrate right on your own farm.

of apples a week, not counting what is obtained also by trucking. Virginia and West Virginia apples are favorites too because of their fine color.

Both Mr. W. and his special apple buyer felt that it was absurd to have five hundred different varieties of apples on the market. The market and the grower would be better off without these varieties.

"We prefer Baldwins and Greenings for cooking; Northern Spies for eating; and Rome Beauties for baking. I think New York ought to concentrate on cooking apples," said Mr. W., "because the finer colors are so readily obtainable from the West and Virginia."

Again I pause to remark how woefully eastern growers have fallen down in convincing the general public of the splendid quality of eastern apples, when one of the greatest buyers in the market says that the eastern grower should concentrate on cooking apples! And remember that Mr. T., the restaurant buyer, also held this same opinion.

Mr. W. thought also that Wisconsin cheese and butter had the market pretty well grabbed.

Sectional Preferences

This chain of stores covers the country from Boston to Denver. It is inter-

esting to know how demands in the various sections differ. For example, New York and the Northeast like a white skin potato, while the Middle West likes its potatoes to have a pink skin. In New York City, the Long Island potatoes get preference, Brooklyn being loyal enough so that it takes practically no other kind.

All poultrymen know how the markets for white and brown eggs differ in different sections.

Perhaps the outstanding lesson from both of these interviews with two of the greatest food buyers in the country is the fact that eastern growers are losing the hold on their markets. It is evident that if farmers in the East are going to retain their fair share of these greatest and best markets in the world, radical steps must soon be taken to organize, grade, pack and advertise.

Clean thoroughly all spray equipment that has been used for oil sprays before using the outfit for applying lime sulphur.

The American Country Life Conference will meet at Madison, Wisconsin, on October 7 to 10, 1930.

On The Banks of The Wabash

THIS well-loved song is dear to the hearts of the folks of the Middle West. Here are two Wabash river scenes in Tippecanoe county, Indiana, and Paul Dresser, author and composer of the song. Read the story on page 2.

Songs that Mother Used to Sing

HERE'S A JOB for the BEST FUEL, the BEST LUBRICANT

This tractor pulls three plows and three harrows all day long.

THE ENGINE stays cool, and there are no repair bills due to faulty lubrication or unbalanced gasoline. For the fuel used is Socony Special *plus* Ethyl, the lubricant Socony Aircraft Oil.

New York and New England farmers have come to recognize the efficiency and economy of these products. They know, also, that—

Ruddy Harvester Oil is especially adapted for use where a heavy oil is necessary. It contains no injurious acids, is not affected by temperature changes, and reduces friction to a minimum.

Socony Household Oil is useful on the farm wherever a light lubricant is required.

Especially adapted to light machinery it will not gum or become rancid.

Socony Turex Oil is made to lubricate Diesel and other internal combustion engines, and for special lubrication of all machinery where a truly high-grade, long-life lubricating oil is essential.

Other Socony products that are helping the farmer include: Eureka Harness Oil . . . Standard Hand Separator Oil . . . Mica Axle Grease . . . Socony Disinfectant . . . Socony Motor Oil . . . Socony 990A-Motor Oil for Model A Fords . . . Dendrol Dormant Spray Oil . . . Socony Gasoline and Socony Special Gasoline *plus* Ethyl.

Songs That Mother Used to Sing

On The Banks of The Wabash
By DAVE THOMPSON

Oh, the moonlight's fair tonight along the Wabash,
From the fields there comes the breath of new mown hay,
Through the sycamores the candle lights are gleaming,
On the banks of the Wabash, far away.

IT IS a dark, drearysome day in December. It is cold. There is a light snow on the ground which hardly covers the bare ugliness of a winter's view of a bit of ground which has not been plowed the past summer. The tune persists in running through my head.

"Oh, the moonlight's fair tonight along the Wabash."

It isn't so. And if it were, what of it? There are a lot hotter rivers, as rivers go, than the Wabash. What is the matter with the Tippecanoe in Indiana, the Prairie in Wisconsin, the Okaw in Illinois? Why does the Wabash get a break?

"Oh, the moonlight's fair tonight along the Wabash."

From the fields there comes a breath of new mown hay—"

New mown hay! That is the breath of the onion in the stew which is simmering invitingly for dinner. And it is six month's past haying time. Fanciful stuff, in a world of realism, that's what it is—

But the tune keeps running round and round in my stubborn head.

"Through the sycamores, the candle-lights are beaming,

On the banks of the Wabash, far away."

Wrote Many Songs

The words lose their exact meaning—they become symbols of things in your past, which, like the banks of the Wabash, are far away. They have meaning to you and to me because they had meaning to the man who wrote the song and melody, picturing scenes of his boyhood. It was a business with him—writing songs; just as growing goldfish or running a beauty parlor may be a business with you. His was the third in the firm name of Howley, Haviland & Dresser, offices, 4 East 20th St., New York City; branch office in the Masonic Temple, Chicago. Paul Dresser was the name which he signed to songs which became—On the Banks of the Wabash, Far Away; My Gal Sal; The Blue and the Gray; Just Tell Them That You Saw Me; On the Bowery; You don't belong to the Regulars; I Believe it, For My Mother Told Me So; all songs which were sung on the streets, and whistled on the farms when I was a boy in days which are gone.

He had been born Dreiser—in Terre Haute, Indiana, April 2, 1857. But the meagre record of his boyhood seems to show that he got out of school, into jail, turned out of home, and into the minstrel show business at about the same time. In the business of minstrelsy as it was done in Indiana in those days, there was no place for a name like Dreiser, so Paul Dresser it became.

You, the same as I, have watched the blackface artist performing from the tail end of a wagon in a medicine show. Pretty silly stuff, much of it seems. However, at least one medicine show, the one that picked up young Dresser, proved to be the training ground for the singer who one day was

"Here's a cracker. Now beat it, because that's all you're going to get."

—SIDNEY GOLDBERG, N. Y. U. '31

The 1930 Cabbage Situation

Growers Plan Increase in Acreage--What Will the Prices Be?

REPORTS issued by the United States Department of Agriculture covering the mid-season domestic cabbage crop indicate about the same acreage as was planted in 1929, but an increase of about 10 per cent compared with the past 5 years. The estimated production of domestic cabbage in the mid-season states is forecast at 167,100 tons, an increase of about 5,000 tons over the 1929 crop and about 12,000 tons over the average crop of the past 5 years (see table 1, herewith).

The 1930 acreage of late domestic cabbage is forecast at 35,110 acres. This represents an increase of 5,000 acres or about 16 per cent over the 1929 figures and an increase of 8,600 acres compared with the average acreage grown during the past 5 years (see table 2, herewith).

The 1930 acreage of late Danish cabbage is forecast at 35,770, an increase of about 2,000

By DR. M. P. RASMUSSEN
New York State College of Agriculture

TABLE 2—Forecast of 1930 Acreage of DOMESTIC CABBAGE in Important Late States, Compared with 5-Year Average.

State	Average acreage 5-years 1925-29	Acreage forecast 1930	Increase or decrease in 1930 compared with 5-year average
Colorado	1,210	1,600	plus 390
Indiana	1,594	2,450	" 856
Michigan	2,780	3,730	" 950
Minnesota	1,024	1,090	" 66
New York, except L.I.	9,244	12,140	" 2,896
Ohio, except S.E.	2,546	3,160	" 614
Oregon	1,248	1,000	minus 248
Pennsylvania	944	920	" 24
Utah	285	300	plus 15
Wisconsin	5,802	8,720	" 2,918
Group Total	26,506	35,110	plus 8,604

acres or 5 per cent over the 1929 acreage, and about the same increase compared with the average crop of the last 5 years (see table 3, herewith).

Acreage Largest on Record

The acreage that growers expect to plant to domestic and Danish cabbage in the late states is 70,880 acres. This planting is 10 per cent larger than the 1929 acreage which was the largest acreage on record. The average acreage during the past 5 years has been 60,240, so the 1930 acreage represents an increase of about 18 per cent over the 5-year average. These data warrant the careful study of New York State cabbage growers. If a normal season follows and a normal crop yield is obtained, cabbage supplies are likely to be excessive during the fall and winter. Carload shipments of cabbage show little variation from year to year and there is no in-

dication that cabbage consumption is increasing to any appreciable extent. The high prices current during the spring of 1930 were due primarily to partial crop failure in early cabbage areas. Carlot shipments of cabbage from early cabbage areas were approximately 50 per cent less during the first 6 months of 1930 than during the similar period in 1929.

1929 Acreage was Entirely Adequate

The severe drought last summer reduced the yield per acre markedly and was the only factor that prevented an excessive crop of cabbage during 1929. Slightly more than 67,000 acres of late cabbage in 1927, with normal weather, resulted in the excessively large crop of 736,100 tons and prices to farmers at western New York points, f. o. b. cars, ranged from \$6 to \$12 per ton, mostly from \$7 to \$8. No one can tell what the weather is likely to be this summer, but it is obvious that if the forecast 70,880 acres of late
(Continued on Page 8)

TABLE 1—Forecast of 1930 Cabbage Acreage in Intermediate Domestic Cabbage States, Compared with 5-Year Average, and Production for 1929 and 1930.

A Visit to Oberammergau

A New Yorker's Impressions of the Inspiring "Passion Play"

By D. D. COTTRELL

FROM all parts of the world more than 5000 people had come on a pilgrimage to this little Bavarian village of Oberammergau, located 2800 feet above sea level in the foothills of the Tyrol Alps, about sixty miles a little southwest of Munich in Germany, to see 600 of

enacted decade after decade with scarcely a break for nearly three centuries.

Our party of sixty, conducted by Rev. Dr. Ray Allen of Buffalo, New York, on his nineteenth tour to Palestine, representing thirteen states from Rhode Island to California, after visiting England, Holland, Belgium and Germany, arrived in Munich, the ancient capital of Bavaria, for a few days' stay, having as our objective attendance at the Passion Play the last Sunday in May. Saturday afternoon we left by auto busses for Oberammergau over wonderful roads, through a fertile and well worked farming country, whose inhabitants mostly live in the numerous small villages instead of on their farms as we do in America. The whole outlook as we drove along gave a vivid idea of their wonderful thrift. A few miles before reaching the village our route left the somewhat hilly, rolling country and climbed by a winding road over rugged mountains and around sharp curves, above precipices hundreds of feet high, until suddenly the beautiful valley of the Ammer River and the village we were seeking suddenly came into view.

We stopped at the

central information bureau where we were met by the boys and the long-haired bewhiskered men of the village, practically none of whom speak anything but German, who took our luggage and escorted us to our lodging places in the different homes mentioned on our tickets, which had been arranged for before leaving New York City.

There are a few small hotels or "pensions", but most of the visitors live in the different homes. The management of the play delivers to each place of entertainment a ticket for each person entertained, according to the class of accommodation furnished. The price of tickets for the

The theatre at the edge of Oberammergau where the Passion Play is given.

its 2300 inhabitants fulfill its age-old mission of enacting "The Passion of Our Lord Jesus Christ." In 1633, the inhabitants vowed in solemn assembly that, if a deadly plague from which they were suffering was stayed, they would once every ten years perform with all due reverence and solemnity a play commemorating the love and passion of Christ, as revealed in His life, resurrection and ascension. What Will Happen to Prices This Fall?

FARMS of Kansas and other western wheat states are alive with activity in harvesting the wheat crop. The new combine is rapidly replacing the harvester and reducing the amount of hand labor.

But the wheat farmer is discouraged. New wheat is selling as low as 65 cents. The farmer is torn between his usual policy of selling his wheat from the field, or holding it for a better price. All eyes of western farmers are turned toward the Federal Farm Board for help.

In the East, conditions are better, although farmers are worrying about what is going to happen this fall. There is no doubt that prices of farm products will be too low. One of our upstate friends told us very emphatically recently that the trouble with the country is that "we are over-produced". There is no doubt of this, but the chief trouble right now is that we are under-consumed, that is, the millions out of labor or on reduced time in the cities have cut down the demand.

There now is more money in the country than in the city, for the first time in years. Sales of farm stock are being made, and farm real estate is moving a little for the first time since the war, so that while the situation cannot be regarded too optimistically, we believe that the good farmer will come along all right. Fortunately, dairying, the chief farm industry of the East, is the most stable of all farm enterprises, and while the milk checks will be lower, they can be depended upon to come along every month in the year.

A Glance at the Crops

WE are just back, on July 9, from a trip of several hundred miles through some of the good dairy country of old New York. Haying, the biggest single job of the year on most farms, is in full swing. There is a lot of good hay this year. Recent rains have brought in a good bottom in many meadows, so that the tonnage counts up fast.

We are always impressed at haying time with what liming of acid soil does in improving the crop. One can see the difference between lime and no lime at haying time almost as far as he can see the field itself. It is interesting to note also the great change in the use of new haying

machinery that has come about in recent years. Hay loaders are getting to be the rule instead of the exception, and on many farms the tractor is used to pull the load and loader.

The cool nights are holding the corn back, but we never worry much about the corn crop, if there is a good stand. It is the fastest growing crop the farmer raises, and it only needs a few hot nights in August to bring a good crop. Of course, this is true only if the corn is kept free of weeds. We have noticed a good many fields this year where it is hard to see the corn because of the weeds.

Upstate potatoes in sections that we saw are looking well and the rains are keeping pastures in good shape.

Red Schoolhouses Are Now White

IT is certainly a lot of satisfaction to the staff of AMERICAN AGRICULTURIST to ride up and down New York State and see so many one-room schoolhouses painted and repaired in such fine shape. We helped to secure the legislation which so greatly increased the State aid for these one-room schools, and then last summer we called the attention of trustees and district officers to the fact that hundreds of them could paint or repair their schoolhouses without extra cost to local taxpayers if they did it before August 1. This was because the new law allowed districts to spend up to \$1300 last year in order to draw their full share of State money.

Well, the results are marvelous. If there were any "little red schoolhouses" left before last summer there certainly are not now. They are all white, and hundreds more of them are in good repair, both inside and out.

Hailstorm Spreads Ruin

THAT farming is perhaps the greatest gambling game in the world was again demonstrated on Sunday, July 6, when a great hailstorm swept across Ulster and Dutchess Counties, New York, raising havoc with fruit and crops. Fortunately, the storm covered only a narrow strip of territory, from a mile to three miles wide, but it was one of the worst in years for those unfortunate enough to be in its path. The total loss will run into several hundred thousand dollars. It is reported that some of the hailstones were as big as eggs. Corn was shredded; potatoes, tomatoes, squash and other vegetables were almost driven into the ground; and the apple crop in many orchards was very badly damaged. One man reports a loss to apples alone of close to \$10,000.

No one but a farmer who has watched with pride the development of a good crop can appreciate what a shock it is to see it all ruined in a few brief moments. It takes courage to get up again and go on with a smile.

A detailed telegraphic report of hail damage, not only from this storm but throughout the season, in the different fruit sections, is given on our New York News Page.

Another A. A. Contest

BECAUSE AMERICAN AGRICULTURIST contests are so successful, and because the letters that come in are so interesting and make such good reading, we are announcing another contest with more substantial prizes.

For the best letter on the subject, "Is It Profitable to Carry Accident Insurance?", AMERICAN AGRICULTURIST will give a prize of \$10, a second prize of \$5, and \$1 for each of the five next best letters. Letters should set forth all of the good reasons for accident insurance that you can think of. If possible, give an example either from your own experience or that of friend or acquaintance. Your letter should not be over three hundred words in length and must be in the A. A. office, 461 Fourth Avenue, New York City, before September 1. Write plainly, and on one side of the paper only.

We feel, with the increasing number of acci-

dents constantly occurring in this mechanical age, that every effort should be made to keep people thinking about how to prevent accidents and how to take care of those who are injured.

To Increase Use of Dairy Products

OUR friend, R. W. Balderston, formerly secretary of the Inter-State Milk Producers' Association, and now efficient manager of the National Dairy Council, writes some very interesting comments about the present dairy situation. Mr. Balderston says:

"As some of us see it, the present storage stock and the present business depression make it necessary to emphasize in our publicity the economy of dairy products so that consumers, when they are tightening up their belts for perhaps the first time in several years, will appreciate that it is false economy to cut down on dairy products."

Putting his sentiments into action, the National Dairy Council, under Mr. Balderston's direction, is promoting a great butter consumption campaign, which will include literature, advertising, movies, cooking demonstrations, speeches, radio, to show the consumers the need of using butter.

This is good work, but let us not forget that farmers themselves are also consumers, and if every farmer and his family do their share it will go a long way to increase butter consumption.

Millions Starving

SOMETIMES people in this twentieth century boast of our progressive civilization and all our modern means of transportation and communication. It may surprise some of our readers to know, therefore, that reports from northern China state that five million Chinese have starved to death. More than forty million others have suffered from food shortage. The missionaries report that the present famine is the worst in more than fifty years. That is on one side of the world.

Here in America, we have more food than we know what to do with. The American government is spending millions of dollars trying to help farmers get rid of their surplus, while the farmers themselves are going without the necessities and luxuries which go to make a high standard of living because they cannot sell their products for a living price.

How woefully poor, with all of our boasting, is our whole transportation and marketing system when millions starve on one end of the world because of too little food and millions suffer on the other end because of too much.

We Do Not Judge by Spelling or English

"If you print this letter, will you please help me out by putting it into good English, I am much better with the team than I am with the pen."—A.E.M.

WE hope that no farmer ever will hesitate to write to AMERICAN AGRICULTURIST because he may not be able to spell each word right or put every sentence into good English. You need not fear any embarrassment. If we print your letter, we will correct it and will not use your name in any way unless you so wish.

True education is not necessarily measured by ability to spell or write. Education is rather the amount of real wisdom that a man or woman has acquired which may be obtained from a college or from the "school of hard knocks."

Eastman's Chestnut

THE patter of tiny feet was heard at the head of the stairs. Mrs. Kinderby raised her head, warning the members of the bridge club to be silent.

"Hush," she said softly, "the children are going to deliver their good-night message. It always gives me a feeling of reverence to hear them. Listen."

There was a moment of tense silence, then:

"Mother," came the message in a shrill whisper, "Willie found a bedbug."

With Our A.A. Boys and Girls

REPRESENTATIVE 4-H Club members from forty states together with their state leaders camping on the grounds of the United States Department of Agriculture in Washington from June 17th to 24th made a real demonstration of what this type of education for rural people is accomplishing. These outstanding young people, dressed in uniforms, made a deep impression on the people of Washington wherever they went. They met President Hoover and had their picture taken with him on the White House grounds.

The program of the camp, while somewhat recreational in nature, placed more emphasis on a careful study and consideration both by Club members and by their leaders on the problems

leadership of Mr. Gilbert Gendahl, Regional Executive, has the largest Lone Scout enrollment of any of the 12 Regions of the United States.

* * *

All farm boys now in Scouting in Rural Troops, Home or Farm Patrols, or as Lone Scouts will want to take an active part during the entire summer in working with County Agricultural agents and cooperating with State and National officials in warfare on the gypsy moth, mosquitos, house flies, Japanese bean beetle, corn borers, and other pests. See your Scout leader and the County Agent and make inquiry as to just what type of campaign is best or is now under way and how you as an individual Scout or how your group may participate in this great

or on a platter or in a salad bowl. Always plan to make it look pretty. A nest of crisp, curly lettuce always helps make a salad pretty.

Bits of parsley, stuffed olives, little

Ruth, Rocky and Chucky

MY father has been a reader of the AMERICAN AGRICULTURIST for quite a few years. Every month I read the boys' and girls' page. I am sending my pony and my picture. His name is Rocky and he is about ten years old. He likes candy, peanuts, milk, bread, bananas, ice cream and about anything you offer him.

He knows how old he is for he will tell you by shaking his front foot. He shakes hands, stands on his hind legs, comes into the house and walks back out again. When he gets loose he comes up on the porch and hits the door. I am also sending a snapshot of my dog. He is a Scotch terrier and water spaniel. His name is Chucky. He loves to hunt woodchucks and coons and delights in chasing cats up trees. The pony and the dog and I have wonderful times together.—RUTH HANSEN, Penn Yan, N. Y.

pickles, radish roses, shreds of green pepper, strips of pimiento are helps in dressing up plain vegetable salads. Try them on a picnic salad.

* * *

A Dressing for Fruit Salad

This salad dressing is very good for fruits or cabbage, but not for most vegetable, egg or potato salads.

3 eggs or 6 egg yolks

½ cup sugar

½ cup vinegar

Put the sugar and vinegar in a double boiler to heat. Beat the eggs. Pour the hot sugar and vinegar over the beaten eggs, stirring all the time while you pour. Put it all back in the double boiler to cook until it is thick.

Cool.

When you wish to make a salad, use equal parts of dressing and cream. Whip the cream and beat in the dressing.

A nice fruit salad for June would be one with banana, pineapple, strawberries and marshmallows. Mix these fruits which have been cut into small pieces and sweeten a little. Put a spoonful of the fruit on a lettuce leaf and a spoonful of dressing on top. On the very top put a cherry, a nut meat or a nice red berry from your own garden.

Did you ever hear that to be a good salad maker you need to keep plenty of imagination on hand? I guess that means that lots of good salads can be made if you keep thinking up new things that will go together well.

Try These on Each Other

1. What weed do pigs like?
2. The name of what grass contains the call of a waterfowl?
3. Another weed bears the name of a small barnyard fowl. What is it?
4. Which weed is feared by picnickers or other parties going through wooded places?
5. What weed has the name of an artist's tool?
6. What weed grows on the edge of the stream and is eaten for greens in early spring?
7. What weed with yellow flower is avoided by people troubled with hay-fever?
8. Everybody who has to mow the lawn knows a certain low-growing weed with broad leaves and flowers on a tough stem about 10 or 12 inches long. Name it.
9. Guess the name of this weed: The first syllable has the name of the prickly seed-case of some trees or plants; the second syllable is the name of the place where ships tie up.
10. What weed with clusters of white flowers appears often in hay fields after hay harvest?
11. What weed is especially disagreeable in shocking and threshing oats?

The Department of Rural Scouting, B.S.A., will greatly appreciate Boy Scouts in the States of New York and New Jersey making a special effort to help us locate black-walnut trees, shagbark and shellbark hickories, located on historic spots, and reporting the same to the Department of Rural Scouting, 2 Park Ave., New York City.

A Letter to Betty

Dear Betty—I am writing to you about my luck in cooking. Some things I had luck with but others went wrong and I had to do these until they were right. I have four other sisters and have six cows and two calves and one bull. We have a lot of hogs and about a dozen hens. I have a larger sister and she is taking up the lessons too. My mother says I can make a better one-egg cake than she can. I am very proud of this and am glad I took the lessons. At first she didn't want to bother with me and told me some times that she didn't have time but now she is glad she helped me because I am a big help to her now. Sincerely yours, A. W., Mass.

Salads

A good salad is cool and crisp and fresh looking. It tastes better if you can make it look pretty, too.

Try to have everything cold that you put into a salad. Dressing, lettuce and the vegetables or fruits used should all be kept in as cold a place as you can find. A good refrigerator makes this easy. If you haven't a refrigerator you will need to find a cool place in the cellar or wherever mother keeps milk and butter cool.

Salads may be served on salad plates

The Song of the Lazy Farmer

THE home advisor came one day out here to visit us, and say, that girl is certainly a peach, she beats them beauties on the beach. She visited with me a spell and then she says: "That there old well looks out of place, you ought to sell a cow and take the cash from it to fix your old house up a bit. A nice, progressive man like you should always be the first to do the things that make you up to date; a force pump, now, would elevate the water up into a tank, so take some money from the bank and put a water system in, the way it works will make you grin. Your neighbors will be jealous when they see you've got the acumen to do away with your old pump, a man that don't would be a chump."

I seen that that there girl was right, she put it in a diff'rent light, a feller like me couldn't think of gittin' on without a sink, Mirandy's gittin pretty frail, she shouldn't lug a water pail. We ought to have a bathtub, too; tomorrow morning what I'll do is git a plumber to come out and put in ev'ry pipe and spout. Mirandy'll sure appreciate a kitchen that's right up to date. I'll never stop until we've got a water system, cold and hot. That home advisor sure will see that I am up to date, by gee!

STARTLING BROODER

RESULTS IN 1929, Revealed in new booklet

BROODING became a science in January 1929 when the American Brooder was introduced to the poultry industry. A nation-wide survey of American Brooder results in 1929 has been made. The complete returns are now in. They are astounding . . . unbelievable to anyone unfamiliar with this great advance in brooding. Revolutionary facts and figures from large and small poultrymen in almost every state of the union prove conclusively that in one year the American Hot Water Brooder for Broilers and Baby Chicks has firmly established itself as the FIRST brooder in America. Progressive poultrymen will be intensely interested in the new free booklet prepared by American Incubators, Inc. which gives the whole story. Send for it today. It's free! No one can afford to be without these vital facts about brooding.

Fruit Prospects On July First

EDITOR'S NOTE—Following is the annual July fruit report secured from members of the New York State Horticultural Society with the cooperation of the New York State Department of Agriculture and Markets. This report should not be confused with the regular Government Crop Report which will be issued later.

FRUIT trees blossomed about a week earlier than last year, although the usual spread of ten days to two weeks between the Hudson Valley and Western New York narrowed down to four days. Conditions in the Valley were almost ideal for pollination. In western New York, varieties of apples which blossomed late were in full bloom during a period of cool weather, and there was less activity of bees than might be desirable. Aside from sweet cherries and peaches in a few scattered localities, there was, apparently, little damage from winter killing of buds. Early season weather was reasonably favorable for controlling fungus diseases with sprays.

For the state as a whole, the "condition" of fruits was substantially better than a year ago. There is, however, a fairly wide range of conditions throughout the state, and it is too early to be definitely certain as to the outturn of any of the fruit crops except cherries, since the weather conditions and the control of insects and fungus diseases from now until harvest will have an important bearing on the final outturn.

In 1929 in particular, the July "condition" report did not accurately report the final crop outturn because of the unusually dry summer which seriously retarded growth of the fruits, resulting in many small sizes and, thus, much less volume than would normally be expected. Similarly with the 1926 crop, unusually favorable fruit conditions resulted in a crop somewhat better than would be expected from the July "condition."

APPLES:—Although there have been some recent developments of scab, particularly in western New York, apples came up to July 1 unusually free from disease. Generally speaking, conditions are relatively much better in the Hudson Valley than in Western New York and the Champlain Valley. All varieties of apples except Baldwins generally bloomed and set well, and the prospects for a good crop are excellent.

Baldwins, the major variety of winter apples, bloomed light throughout the state, and the prospects are now rated as poor in Western New York, although fairly good in the Hudson Valley. Greenings, on the other hand, promise a heavy crop throughout the state, while McIntosh show by far the best condition for July 1, in at least ten years. Northern Spies are extremely irregular, although the tendency is for a light crop. Ben Davis apples promise fairly well.

PEARS:—In contrast to the very low July 1, "condition" reported during several years past, pears appear to promise an unusually good crop of all varieties.

PEACHES:—Peaches, likewise, give better than average promise, especially in Western New York, although, because of unfavorable weather conditions a few years ago, the number of bearing trees has decreased considerably. Early varieties give slightly better promise than the Elbertas. A number of comments indicated that Oriental Peach Moth is becoming a serious factor in the Hudson Valley and in many parts of the Lake Ontario section.

PLUMS:—Plums are relatively better in Western New York than the Hudson Valley, although the state

average "condition" promises a better crop than in any year previous to 1926.

QUINCE:—Quinces are about the same as last year.

CHERRIES:—Cherries give promise of an abundant crop, the sour cherries having the highest average "condition" reported by the Society in at least ten years. Sweet cherries, which were injured by frost to some extent, still promise better than an average crop.

GRAPES:—July 1, is too early for a fully satisfactory report on grapes, since full bloom does not take place until mid-June in the grape sections of Western New York. The "condition" as reported is above average and considerably better than last July. Average "condition" of fruits as reported by members of the New York State Horticultural Society about July 1, each year.

How the Grading Law Affects Quality

In your opinion has the New York apple grading law worked out to improve the standard of the New York pack?

ADMITTING that some progress has been made, there is still plenty of room for more. Probably the biggest handicap is the tendency to sell so much fruit under the unclassified grade. The growers who have studied the situation most believe that the unclassified grade is demoralizing the trade which handles New York State apples.

The remedy, of course, is to stop using it and to actually grade the apples as they should be graded. In many cases this means grading them a little better than the law actually requires.

A New Variety

What can you tell us about the new variety, McCoun?

SO FAR as we know, no one has as yet grown the McCoun apple in sufficient quantities to try out on the market, but the reports that come to us are favorable. It is reported that this will keep as long as Baldwin and that it grows to about the size of the McIntosh or Cortland.

Dairyman

Does Feed Affect Contagious Abortion ?

By PROFESSOR F. B. MORRISON,
N. Y. State College of Agriculture

EDITOR'S NOTE—This is the third of the interesting discussions that we have had in recent issues on contagious abortion. These talks were given by leaders in animal husbandry work throughout the East who recently held a conference on this subject at the New York State College of Agriculture.

With the discovery of the importance of vitamins and of minerals in animal nutrition, has come a general appreciation of the injurious effects inadequate rations may have upon the health of livestock. It is but natural, therefore, that dairymen have often raised the question as to whether the best possible feeding will aid in preventing infectious abortion.

In 1907 Professor E. B. Hart and his colleagues at the University of Wisconsin began extensive investigations to determine the effect of rations from restricted sources on reproduction in cattle. In these experiments it was discovered, that when cows were fed only straw from wheat or oats as the roughage, along with grain and grain by-products, they aborted or produced dead or weak calves. On the other hand, when the only roughage was corn forage, normal calves were produced. A little later it was found that timothy hay which had been grown on very acid marsh soil gave the same results, when fed as the only roughage, as did wheat straw or oat straw. These reproductive failures were not due to infectious abortion, for the herd was tested for this disease.

Legume Hay Furnished Early Clues

For several years the cause of these results eluded the investigators. All the rations were carefully "balanced", so as to provide the amounts of protein, carbohydrates, and fat recommended in feeding standards. Therefore, it did not seem that there could have been a deficiency of these nutrients.

It was found relatively early in the experiments that if half of the straw was replaced by well-cured legume hay the cows would produce normal calves. What did this legume hay supply that was lacking in the straw? Furnishing Vitamin A, which had just recently been discovered at that time, did not prevent the trouble. Adding calcium to the ration helped, but did not make the ration entirely satisfactory.

Not until Vitamin D, the anti-rachitic vitamin, was discovered in 1922, was the problem entirely solved. Animals must have this vitamin in order to assimilate and use the calcium and phosphorus in the feeds they eat. Even if there is an abundance of these minerals in the ration, a lack of Vitamin D may prevent their utilization.

In 1924 it was found that when the "wheat ration", containing wheat straw as the only roughage, was supplemented by bone meal to supply plenty of calcium and phosphorus, and by cod liver oil to supply vitamins A and D, the cows produced healthy, vigorous calves. The deficiencies in the original ration had thereby been entirely corrected.

Relation to Infectious Abortion Questioned

All along farmers had been asking whether the results of these investigations might not have some application in the prevention of infectious abortion. We advised them that the reproductive failures in these experiments were due to faulty nutrition, and not to infectious abortion. We stated, furthermore, that such restricted rations as were fed in these experiments were very unusual and extreme. There was, therefore, no evidence in these trials that the best possible feeding of cattle would prevent or cure abortion due to the infectious Bang's

disease. However, on the other hand, there was no proof that a liberal supply of vitamins and minerals might not possibly be of help in the disease.

The investigation was finally begun in August, 1926, under the primary leadership of Professor Hart of the Agricultural Chemistry Department and Dr. F. B. Hadley of the Veterinary Science Department of the University of Wisconsin, and with the cooperation of members of other departments.

Two Rations Compared

Two lots, each of 22 high grade Holstein heifers were purchased, all of which were free from both tuberculosis and contagious abortion, as shown by test. One lot was fed a relatively poor ration, consisting of corn silage, timothy hay from acid soils, and a grain mixture of corn and oats, with gluten meal to balance the ration in protein content. In summer these animals were grazed on grass pasture. This lot was thus fed a ration low in lime and relatively low in phosphorus, but of adequate protein content.

The other lot was fed as good a ration as could be provided. This consisted of alfalfa hay, corn silage, and a good grain mixture including wheat, bran which is high in phosphorus. To this was added bone meal to furnish an abundance of calcium and phosphorus, and also cod liver oil to supply vitamins A and D. In summer this lot had alfalfa and sweet clover pasture. To make sure there was no deficiency in iodine, iodized salt was fed instead of common salt.

These animals were, therefore, provided an ideal ration from the nutritional standpoint, and one which provided plenty of calcium, phosphorus, and iodine, and also an abundance of vitamins.

It was decided to keep the animals free from infection with the abortion disease until they had undergone the strain of milk production. All the heifers dropped normal calves in the spring of 1928, with no case of abortion and no case of udder trouble. Incidentally, this is a demonstration of the practicability of establishing a disease-free herd by buying young disease-free heifers and keeping them away from other cattle.

Results After Infection

The cows in both lots were exposed to infection with infectious abortion about three months after being bred for their second calves, the animals in each lot being equally exposed.

In the lot fed the excellent ration, 69 per cent of the cows aborted and nine animals retained the afterbirth. In the lot fed the "poor" ration, only 47 per cent of the cows aborted and only three animals had retained afterbirths. Also, the percentage of reactors to the abortion test was somewhat higher in the lot fed the excellent ration.

These results show that the best possible nutrition has no effect in reducing the infection with the abortion disease or in preventing abortion due to it. The larger percentages of reactors and of aborting animals in the lot fed the better ration were probably due to individual differences in the resistance of the cows to the disease, instead of being due to any effect of the two rations.

There is therefore at present no indication that feed will control contagious abortion, or that resistance to this disease can be increased by building up the mineral or other nutritional reserves of the animal.

In recent experiments, as spray pressure was increased control of leaf hoppers on potatoes increased, but the number of aphids increased with the higher pressures.

You get maximum profits in terms of cash income and improved herd or flock by using Park & Pollard feeds.

With pasture feeding use Herd Health 16% or Park & Pollard Fitting Ration.

June Prices Announced

The Dairymen's League announces the following pool prices for June for 3.5% milk.

Gross	\$1.90
Expenses	.06
Net Pool	1.84
Certificates of Indebtedness	.15
Net Cash Price to Farmers	1.69

	Net Cash	Net Pool
June 1929	2.12	2.27
June 1928	1.91	2.06
June 1927	1.98	2.13
June 1926	1.66	1.81

The Sheffield Producers announce the cash price to producers for 3% milk in the 201-210 mile zone, as 1.84 per hundred, (2.04½ for 3.5% milk). This is 10½¢ below May price.

	3%	3.5%
June 1929	2.30	2.50
June 1928	2.12½	2.32½
June 1927	2.22	2.42
June 1926	2.12½	2.32½

Butter Market Better

CREAMERY SALTED	July 12, 1930	July 5, 1930	July 13, 1929
Higher than extra	35½-36	34	34½-42½-43
Extra (92 sc.)	34½-35	33½	42
84-91 score	31	34½	28½-33
Lower Grades	28	29	26½-28

During the week ending July 12 the butter market has shown a much improved condition, values gaining in some cases as much as 1½ cents. The statistical situation is primarily responsible for the

improved condition. Government reports of cold storage holdings in the leading cities show that the peak is passed and that we are beginning to taper off towards last year's figures. On July 11 the four leading markets reported 55,608,128 pounds of butter in cold storage compared with 47,423,278 pounds in storage on the same week day last year. From July 3 to July 11, the four cities report an increase in holdings of 5,923,832 pounds compared with an increase a year ago of 6,033,686 pounds. According to reports if we were to consider the twenty-six principal markets in the country we would find the reduction in the into-storage movement considerably more marked.

In addition to the statistical situation, the recent heat wave that swept the West had a very bullish tendency upon sentiment. This heat wave with its accompanying misery put the speculators on the job. At the same time there has been good buying for current use with the result that prices have been forced into higher levels at which the market appears to be holding steady.

Operators in the market are inclined to be rather conservative. They are uncertain about the future market due to the uncertainty in the industrial and economic outlook. Accordingly receivers are free sellers and are anxious to avoid any situation that would tend to strain the market. Receipts have shown some shrinkage in New York City but as yet there is plenty of butter to go around.

Fresh Cheese Prices Lower

STATE FLATS	July 12, 1930	July 5, 1930	July 13, 1929
Fresh Fancy	17½-18½	18½-19½	23½-25
Fresh Average			
Held Fancy	25	26	25
Held Average	23	23	27½-29½

The Wisconsin cheese market played hob with the New York market during the second week in July. The decline in Wisconsin markets permitted dealers to offer Wisconsin cheese at big concessions. Naturally, bargain day in the West took all the attention away from the New York makes with the result that prices had to come down to Western levels. The break started on Wednesday, July 9, and by Friday 17½¢ to 18½¢ was the prevailing rate. The market closed on Saturday quite unsettled. There is no telling what is going to happen with the opening of the market on the 14th. We do not look for any improvement until the accumulation of cheap western cheese is out of the way.

On July 10 the ten cities making daily reports had in cold storage 17,273,000 pounds of cheese compared to 15,230,000 pounds of cheese on the same week day last year. From July 3 to July 10 the storage holdings increased 923,000 pounds, compared with an increase during the same period a year ago of 1,430,000 pounds.

Egg Receipts Still Heavy

In spite of continued shrinkage in the lay, New York is receiving heavy shipments of eggs and storage stocks continue to pile up. With reports of continued shrinkage in production, one would imagine that the market would strengthen. Fancy nearby eggs have been bringing slightly better prices but when we get into the intermediate classes we find no improvement, due primarily to the fact that the Pacific Coast producers are heavy shippers and are keeping the market fully supplied. The Pacific Coast eggs are dominating the trade and the other fellows do not get much of a show. With heavy reserves piling up in the cold storage houses speculators are reluctant to plunge very heavily.

Over-production in the poultry business is just as acute as it is in the butter and cheese. On July 11 the ten cities making daily reports had in their cold storage houses 5,871,000 cases of eggs compared with 4,673,000 cases on the same week day last year. The into-storage movement continues to exceed that of last year. From July 5 to July 11 the ten cities

reported an increase in holdings of 107,000 cases compared with an increase during the same period last year of 77,000 cases.

The extreme heat that struck the West will undoubtedly further cut production. However, we have so many eggs on hand at the present time that we do not look for any prolonged improvement until the accumulation has melted away.

The second week in July found the live poultry market more like its old self. Good weather, short receipts and satisfactory consumer demand have given us a firm market and higher prices, although they are far from what we would like to see them. Live fowls during most of the week were short of the trade needs. This shortage helped the broiler market. If we could only hold the market like this for a few weeks it would be a wonderful relief. However, the week closed rather quiet and if the situation prevails we are afraid the market is going to be easier during the coming week.

Potato Receipts Heavy

Receipts of potatoes in the New York market during the week ending July 12 were heavy especially during the early part. As a result prices sagged. However, as the week came to a close there was a let up and the situation strengthened. The best Va. Norfolk's have been bringing \$2.50 to \$2.75 while the best from the Eastern Shore sold as high as \$2.88. Marylanders have been covering a range of from \$2.25 to \$2.75 while Long Islands generally bring from \$2.50 to \$3.25 per bag.

Meats and Livestock

CATTLE—One load medium Virginia grass steers, averaging around 1325 pounds \$8.50, steady. Cows scarce, steady. Bulls nominal. Common and medium cows \$5.00-6.50. Low cutters and cutters \$2.50-4.50.

VEALERS—Scare, active, strong to 50¢ higher. Good to choice \$12.00-14.50. Medium \$9.50-11.50. Cull and common \$7.50-9.00.

HOGS—Steady, good to choice 190-235 pound weights \$10.00-10.50, few mediums \$9.00.

LAMBS—In moderate supply, active, around 75¢ lower than yesterday's erratic advance, or mostly \$1.00 higher than Wednesday. Good to choice \$12.00-13.00. Medium \$9.50-11.50. Common \$7.50-8.50.

COUNTRY DRESSED CALVES—There were light receipts during the week or normal for this time of the year. Small calves were particularly short in supply and higher by about two to three cents per pound. Good heavyweight calves were in the majority and proved hard sellers toward the end of the week. Market closed about steady and higher than last

week. Fresh receipts per pound: Choice 18-19¢; fair to good 16-18¢; small to medium 15-17¢.

LIVE RABBITS—Fresh receipts light. Demand very slow. Market steady. By the coop, 15-20¢ per pound.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine, per pound 21-30¢; ½ blood 23-29¢; ¾ blood 24-29¢; ¼ blood 24-29¢; low quarter blood 25-27¢; common and braid 23-25¢.

The 1930 Cabbage Situation

(Continued from Page 3)

cabbage are planted and if normal weather is experienced, the yield of cabbage is likely to be excessive. Under the circumstances, cabbage growers may find it to their advantage to hold expenditures for fertilizer and labor on the cabbage crop to a minimum this year.

Farm News from New York

Wallabout Market Farmers' Rentals Put on Yearly Basis

ON Thursday, July 10, Justice Strong, in the Supreme Court in Brooklyn, New York, reserved decision on an application brought by certain Long Island farmers. The application was for an injunction to prevent Thomas F. Dwyer, Commissioner of New York City Markets from enforcing a new ruling which concerns farmers' market stands in the Wallabout Market. The Wallabout Market in Brooklyn is the largest farmers market in New York City.

Briefly, the events leading up to the situation are as follows: In the past, farmers who used the Wallabout Market were charged 50 cents a night for the use of an inside stand or \$1 a night for a corner stand. Producers came with their loads and lined up outside the market and when a whistle was blown, there was a mad scramble to get the best location. The new regulations which caused the application for injunction provide that farmers pay a yearly sum in advance of \$263.50 for a corner stand and a sum varying from \$91 to \$100 for an inside stand.

Whereas the city newspapers have carried the idea that many Long Island farmers were dissatisfied with what was spoken of as increased cost, Commissioner Dwyer states that the new scale was arrived at only after a meeting with a number of influential Long Island vegetable growers and that the new prices will not cost producers more money. Commissioner Dwyer spoke of one man who was paying the nightly rental and in addition to this, \$1 a week to a watcher who did no watching and \$6 a week to a carrier or helper who did no carrying. Under the old arrangement, this producer paid \$599 in one year for the privilege of using a stall in the Wallabout Market. Under the new plan, each producer will be given a permanent stand which will be held for him until 12 o'clock midnight. In many cases, we understand, this will allow Long Island producers to leave their farms from 2 to 3 hours later in the evening and still be sure of their location.

It is said that 180 Long Island farmers have already made applications and paid their fee under the new ruling. The Wallabout Market will handle from 325 to 350 producers. In addition to Long Island farmers, there are

about 50 New Jersey farmers who commonly use this market.

To sum up the whole situation, Commissioner Dwyer feels that the change in rates and method of paying will improve conditions on the market. The New York Department of Agriculture and Markets also believes that this basis of paying is the best for farmers and H. H. Cambell, Nassau County Farm Bureau Agent states that a big majority of farmers in Nassau County seem to approve the new arrangement.

It is reported to American Agriculturist that those who are loudest in their objections to the new plan are those who were especially well taken care of under the old arrangement and who feel that they will not get as good stands as they did in the past. We are unable to verify this report but plan to talk with farmers representing both sides of the controversy and give you further developments in our next issue. There seems, by the way, to be a fairly general feeling that the court will sustain the action of Commissioner Dwyer. We understand that the state agriculture and market law specifically gives

to a market commissioner the power to make rulings affecting the management of the market.

July Potato Crop Estimate Shows Increase

The 1930 potato crop according to the July forecast of production issued on July 11 by the U. S. Dept. of Agriculture, is estimated at 398,419,000 bushels. This estimate represents an increase over the 1929 crop of 41,000,000 bushels but is less than the 1928 and 1927 crops.

Heavy increases are reported in the many northern states, principally New York, Pennsylvania, Michigan, Wisconsin, North Dakota and Minnesota. According to the report Maine has about the same crop in sight as last year. New York's increase is said to approximate 6,000,000 bushels. Michigan is slightly over 10,000,000 bushels ahead of last year while Wisconsin shows an increase of almost 6,000,000 bushels. Minnesota is 5,000,000 ahead of last year according to the report.

Dairymen's Notes

Sheffield Producers Notes

IN June, 1930, the Sheffield Producers Cooperative Association, Inc., produced and sold 139,294,691 pounds of milk to the Sheffield Farms Company. This is an increase of 20,126,513 pounds over the amount in June, 1929, and 4,500,514 pounds over the amount in May, 1930.

Our June, 1930, production is the largest of any month since the Association was formed. Their June milk brought the members of the Association approximately \$3,000,000.

The price per hundred pounds paid to producers was \$1.84 for three per cent Grade B milk in the 201-210 mile zone with the usual freight, grade and butterfat differentials and, of course, is equal to \$2.04 for milk sold on a 3.5 basis.

It is indeed fortunate for dairymen that production costs are at a relatively low point. Such a large surplus as there was in June is undesirable but if we are to have such a surplus the

time to produce it is when it may be produced at the least cost. Pastures have been good and grain price relatively low.

The production peak has now been passed and if consumer demand drops no lower the falling off in surplus will automatically increase the blended price.

While production is large it would not be burdensome if the country was not suffering from extreme business depression. Thousands of workmen are out of jobs. This has caused a severe reduction in their living expenses resulting in a great falling off in the consumption of milk, cream and ice cream as well as other products. A general business revival with normal employment would have a very beneficial effect on the dairy business.

* * *

Dairymen's League Notes

ACCORDING to the Dairymen's League consumption of fluid milk in New York City the week of the 4th dropped 30,000 cans due primarily to the holiday which took approximately two million people out of the city. Cream consumption for the same period was about 400 cans less than it was a year ago and ice cream sales have also dropped, presumably due to business conditions which are not of the best.

Production is fair although the decline has been more rapid than it was last year. At present it is estimated that League dairies are producing twelve pounds per day per dairy less than they were for the same period last year.

Pastures are fairly good for the season but it is believed that dairymen are feeding somewhat less grain than they were at this time last year. Hay is progressing rapidly. Reports indicate that the crop is rather spotty, being good in some sections and considerably below average in others.

* * *

Lists More Borden Stock

APPLICATION to list 21,200 additional capital shares of the Borden Company has been approved by the New York Stock Exchange, bringing the total listed by the company to 4,087,172 shares.

The additional stock is to be used in acquiring the H. L. Neuman Company of York, Pa.; the Zile-Neuman Company of Westminster, Md.; Neuman & Neuman of Littlestown, Pa.; the Hansen Dairy Company of Los Angeles, Cal.; the Home Dairy Company of Kansas City, Mo.; the Rabe Dairy Company of Elmhurst, Ill., and the ice cream business of the Naperville Creamery Company of Naperville, Ill.

British Put Embargo on U. S. Apples

THE British government has banned the importation of certain grades of American apples from July 7 to November 15. The reason given for this embargo is to protect the British Isles against certain insects. On the other hand, there is a feeling in some quarters that the action may have been hastened by a feeling of indignation against our new tariff.

Secretary of Agriculture Hyde, in a statement recently issued, promises a full investigation of the situation to determine all possible facts on the apple fly situation in the country and Canada in order to determine the possible danger to the British apple industry.

Among the Fruit Growers

Hail Storm Visits Hudson Valley

ON the evening of July sixth a vicious hail storm swept across Ulster and Dutchess Counties causing damage estimated at \$50,000 in Dutchess Co. alone. Damage was also done in small areas in other counties. As soon as we learned of this storm we sent out telegrams to County Farm Bureau Managers in a number of fruit counties and they promptly and unanimously responded with the information we asked for. The following are the replies which they sent:

Dutchess County—The greatest damage done was in the southern part of the county to apples, although all growing crops were considerably affected. Total loss is estimated at \$50,000.

Ulster County—Hail damage severe in strip running east and west across county varying from one half mile to mile in width. Pears probably hurt least. Apples almost total loss in some orchards.

Columbia County—Some local damage done by hail in northern Columbia County July 6th. Injury not extensive in fruit areas here. Fruit prospects good and fruit is of good quality.

Greene County—No damage from hail in Greene County.

Orange County—No hail storms July 6th in this county.

Niagara County—No recent damage done by hail in Niagara County.

Wayne County—No hail has entered Wayne County since June 18th. Narrow strip about mile wide across northeast corner of county and extending into

Monroe County damaged at that time. Sorry to hear of damage to Dutchess County. Promise of good crop.

Monroe County—No serious general hail damage to Monroe County fruit crops. Some injury to fruit in two small areas. One of these in town of Webster.

Ontario County—No hail in this vicinity at all.

Orleans County—Severe hail storm struck small spot on edge of fruit belt and ruined apples and peaches on about fifty to one hundred acres. Lighter hail storm in small spot in fruit belt caused partial loss on about same acreage. Few individuals lost heavily but total loss small.

Here's a STOCK SPRAY that Kills and Repels

Preferred by leading dairymen everywhere, Tanglefoot Stock Spray kills and repels flies and other insects—protects cows all day in barn or pasture. It is pleasant to use—never stains, discolors, or gums the hair—and won't burn or blister the hide. Milking and feeding are easier because cows and other animals are unmolested and quiet. You get more and better milk—larger cream checks. Tanglefoot will not taint milk—is powerful, lasts longer, goes farther—works equally well on horses, hogs and other farm animals. Try Tanglefoot. We guarantee you'll like it. Leading dealers everywhere sell this remarkable stock spray. Write for free, interesting booklet.

A Watermelon Party

Decorations and Games May Be Planned to Carry Out the Same Theme as the Refreshments

WATERMELON invariably seems doubly delicious when eaten in a jolly company, so why not give a watermelon party, when the luscious melons are "just right"? Invitations may be sent on cards cut from pink cardboard, in the shape of a slice of melon, the rind being outlined with green crayon, and a few seeds "touched in" with black. The following invitation could be used,—

*"Days of sunshine and of rain
Bring the melons here again,
We have some and some to spare,
Come around and have a share!"*

The "Melon Vine" is a good contest as a starter. For the vine use long

FLOSSIE FLARE APRONS, NOS. C361, C362, AND C363 are exceptionally attractive with the lower section made in circular formation and two pockets to add considerably to their practicability. Except for the few stitches which are necessary for finishing stamped design they are completely made up. They are of good grade unbleached muslin with fast color binding that matches the embroidery. Price for each apron 40c or \$1.00 for three. If floss is desired, send 35c extra if only one apron is wanted or 50c extra if all three are ordered. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

strips of green cambric, knotting and tangling and winding about the room in "cobweb" style. At intervals tie upon the "vine" ovals of green cardboard, to suggest melons, writing upon each the name of some stunt. There should be one of these melons for each couple. The first couple, appointed by the hostess, starts to untangle the vine, till a "melon" is reached, and they then entertain their companions with the stunt required. The next couple takes up the task, and so on, till all have had a chance. If preferred, the "melons" may be omitted from the vine, and each couple given three minutes to untangle as much as possible. At the expiration of this time, the length untangled is cut off to be measured. The pair untangling the most, receives as reward, a box of pink and green bonbons.

An entertaining trick consists in placing a watermelon seed on the forehead of a guest, telling him to shake it off. This seems after frequent shakings, impossible, but the explanation is that the seed has been pressed very firmly upon the forehead, and then quickly taken off, giving the feeling that it is still there.

"Yes" or "No" is a good game for the Watermelon Party. Give each person a bag holding twelve watermelon seeds. The bags could be made of pink or green cheesecloth. Now the guests must go about asking each other questions on any subject, but whoever answers "yes" or "no" must give up a melon seed to the questioner. At the end of fifteen minutes, time is called and the one with the most seeds, wins a whole watermelon, (to be taken home.)

A "Cakewalk" usually means an "African" dance, and would be quite appropriate to a melon party. But this cakewalk is really a walk. Provide a number of cakes of soap, each one moistened to be somewhat slippery. Now give each "cakewalker" soap, and a knife, with the instructions to walk

a given distance without letting the soap slip from the knife blade. The successful contestant may be rewarded with a cake of perfumed soap.

Time for refreshments now, and in the centre of the table is a most appropriate centerpiece, half a melon (cut across) in points, and on each point is a cheerful pickanninny doll. The watermelon may be served in generous slices, or if a more dainty way is desired, cut it in cubes and serve with vanilla ice cream.—Elsie Duncan Yale.

Prevent Ivy Poisoning

PROFESSOR W. C. MUENSCHER of New York State College of Agriculture says that no one is immune from ivy poison but that it is necessary to come into actual contact with the plant to become infected. If face and hands are bathed freely in a solution of 5% iron chloride in a half and half mixture of alcohol and water, no harmful effects need be expected. This can be applied before or immediately after going where ivy grows. It is cheap and obtainable at almost any drug store.

Ivy poison is soluble in oil and therefore no lotion or soap containing oil should be used because the poison would only be spread to other parts of the body. Kitchen or laundry soap which contains free alkali is best to use, with plenty of hot water, if the other remedy is not available.

Cooking soda, moistened with water, helps to relieve pain if one has been infected. Soaking in hot water is also relieving in its effect. Fluid extract of Grindelia, diluted with 6 to 10 parts of water, can be applied with a clean bandage, changing frequently and keeping it moist.

Professor Muenschler advises against using sugar of lead, especially on open pustules because of the possibility of lead poisoning. If the case is a bad one, a physician should be consulted. Bulletin E191 tells all about how to identify poison ivy, how to avoid it and how to treat it. This bulletin may be obtained free from the Mailing Room, Roberts Hall, Cornell University, Ithaca, New York.

Tested Recipes

Sanford Apple Sauce

Slice five medium sized apples after removing skin and core. Chop inner

A Sandwich Cloth

HERE is a shelter for your sandwiches—a green and white enveloping cloth. You doubtless have hot biscuit or muffin cloths and this one is cut like them, only larger. We had it bound all around with green bias tape to save you the bother and it is stamped with a welcome little oasis design. It surely should have some connection with sandwiches, too. This is order number M617 and includes the bound and stamped cloth with enough green, black and orange floss to embroider its sheltering palms.

M617—Sandwich Cloth, as described 25 cents
Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

stalks of a bunch of celery very fine (the tender unbleached celery is best if direct from field), break one half cupful walnut meats and combine the three, blending thoroughly. Whip one cupful of cream and fold into the celery-apple mixture. Serve in small glass dishes.—L. M. T.

Macaroni and Cheese with Ham

1 cup macaroni
2/3 cup grated cheese
1/4 cup finely chopped cooked ham
1 1/2 cups white sauce
Recipe for 1 1/2 Cups White Sauce

2 tablespoons butter
2 tablespoons flour
1 1/2 cups milk
Salt and pepper to taste

For the white sauce you will find the directions in Lesson No. 4 where it tells about making cream potatoes.

I break up the macaroni, if it comes in long pieces, into pieces about one inch long. I have plenty boiling water

CROSS-STITCH PICTURE NO. B3396 is 6x8 inches, a quaint design stamped on fine quality oyster linen for single cross stitch embroidery. Frame with glass, colored mat, instruction chart and black and green embroidery floss included for 85c. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

and I add salt (1 teaspoon). I cook it 20 minutes, unless the directions on the box say to cook a shorter time. Some kinds of macaroni cook more quickly than others do, but it is better to cook a little longer than not enough.

Drain off the hot water and put the macaroni in a buttered baking dish. Put it in a warm place while you make the white sauce. You could make the white sauce while the macaroni cooked. That's the way I like to do.

When my white sauce is cooked smooth and creamy, I add the grated cheese. If the cheese is too soft to grate, then I have to cut it very fine so it will melt quickly. After it is melted I add the cooked ham all cut up fine and then I am ready to pour this over the cooked macaroni and bake slowly in the oven until we are ready to serve it. About 10 or 15 minutes is long enough.

* * *

Baked Carrots

Boil six medium sized carrots until tender. Drain, roll in flour and put in buttered baking dish. Sprinkle lightly with light brown sugar, dust with cinnamon and dot with butter. Pour in thin cream to cover and bake slowly for twenty minutes.—L. M. T.

A Visit to Oberammergau

(Continued from Page 3)

play varies from 10 to 20 marks each. A mark is about 24 cents. No tickets are to be bought except at the place at which entertainment is furnished.

About 4:30 Sunday morning, the writer was awakened by the ringing of the church bell and before long was on his way to the beautiful Catholic church of the village where he saw the players and a large number of visitors receive the communion as a fitting preparation for the play, which in itself is a devout religious observance and impresses the visitor as such.

About 7:30 the beautiful theatre, which is entirely open toward the stage but covered and closed on the other three sides, begins to fill; and when the chorus of forty-eight trained singers proceeded by Anton Lang, who gives the prologue this year, appears promptly at 8 o'clock the 5200 seats are all

filled. The prologuer begins in German, "Bow down in deep adoring love, O race by the curse of God oppressed, etc."

The chorus, which stands in semi-circular form, opens and gradually moves backward while the curtain that conceals the center of the stage raises and shows the first tableaux emblematic of the fall of man, Adam and Eve fleeing from the Garden of Eden. The back of the stage is open to the sky and mountains; the wooded hillsides with pasturing herds form part of the scenery, giving play to light and shadow infinitely superior to anything the best electricians can achieve.

Today the mountains with some snow on them are shown in all their grandeur and beauty as patches of sunshine and cloud chase each other across their face. The wind sweeps the colorful costumes of the players as the crowds go with Peter and John into Jerusalem. Alois Lang, the wood-carver and sculptor, portrays the Christ throughout with beautiful poise, harmonious movements and wonderful strength, humility and pathos, which makes his whole appearance most realistic.

Deep emotions are vividly portrayed in the plot of the Pharisees against the Christ; in the Sanhedrin scene while they discuss and bargain for the betrayal; in the scene of the last supper; in the remorse of Judas because he has betrayed innocent blood; in the mob scene before Pilate's house when he washes his hands, declaring he will have nothing more to do against this just man; and in the different heart-rending scenes which lead up to the Crucifixion. As Mary bade farewell to her son and as the Christ bade farewell to his disciples, a wave of almost uncontrollable emotion swept over the thousands in the audience, as they viewed this realistic and unforgettable scene.

Annie Rutz, who has been doing her best since she was seventeen years old in helping to earn the family living, but now at the age of 22 has been postponing her wedding for a considerable time so she could take the part of Mary, says:—"The world thinks it does not want to hear the old story of Our Lord, but we know it has a message for men and women of our day. It is our duty to try and impart it to the world." As her voice breaks in grief in the scene of the Crucifixion, it is not just good acting but the putting of herself into the part and trying to impress this wonderful story on a sin-sick world.

As Alois Lang hangs for fifteen minutes on the cross, it seems as though you are in the crowd that saw such a scene more than nineteen hundred years ago—not as one of the jeering mob, but as one of the few who saw him as the Divine Redeemer who gave his life for the redemption of the world.

There are no make-up, no artificiality, no lighting effects, throughout the whole play. None are allowed. Mary has never used rouge in her life. Hannsi Preisinger, who takes the part of Mary Magdalene, comes from a wealthy family but she helps prepare and serve the food for the tourists entertained in her father's inn.

The action of the play is from 8 A. M. until 11:30, and from 2 P. M. until about 5:30. The seats are opera chairs. The weather was cool enough to make a sweater and overcoat comfortable, and you are thankful that you brought along the blanket which your hostess so kindly loaned you to put over your knees. You almost lose all sense of the passing of time as the sixteen acts with numerous scenes and the twenty-four tableaux come before you so continuously and logically as the play proceeds.

It was the pleasure of the writer and a number of others in the party to have seen the play in 1910. We thought then that it was the greatest production ever staged, but we believe that this year it is better than ever before. How anyone can see this play once and not feel a wonderful uplift to more noble living seems to me to be impossible.

Aunt Janet's Corner

How to Know the Marks of a First-class Mind

MANY people regret all their lives that they never had a high school or college education. No doubt, the formal training afforded by these institutions helps one in making his mind do the work he wishes it to do, but there are many, many fine minds which never had nor never will have such training. Yet every single day presents opportunities for the mind to be trained in good habits of thinking. In the home and on the farm where one has to pick and choose what shall be done first and how it shall best be done, the demand for a well-trained mind is constant. The person has nothing to say about the quality of mind he was born with but he has everything to do with the way he uses to the best advantage the mind he has.

Dr. Glenn Frank, President of the University of Wisconsin, has the following to say about the "Four Marks of a Fine Mind:"

"A good mechanic studies the tools of his trade continuously and critically. The better he knows his tools, the better he can use his tools. He knows that good craftsmanship is impossible unless he keeps his tools adjusted to his tasks.

Our brain is, of course, the major tool we bring to the task of living. Like good mechanics, we profit from keeping our brains under continuous and critical study. As a sort of primer to guide us in such a study of our own minds, I suggest that a first class mind bears these four marks:

First, humility. A first class mind is never cocksure; it is always willing to admit that it may be wrong; it is never afraid to say it does not know; it does not specialize in closed questions; all questions are open questions to it; it is always ready, in the presence of new knowledge or fresh challenges, to question the soundness of its earlier observations and the sanity of its earlier conclusions.

Second, curiosity. A first class mind is never satisfied with surface observations; when in its humility, it has

admitted that there is a question to be considered, it turns a restless and ruthless curiosity on the question; it is never satisfied with a sweeping judgment; it ferrets out every detail and tries to see just what bearing each detail has on the whole question.

Third, courage. A first class mind is marked by a subtle blending of courage and imagination, the result of which is that it takes the results of its analysis of a problem it has worked over and puts these results into various new combinations in an effort to find some new and better theory for action; it is never afraid to set up a tentative new theory of action; it is willing to follow a new idea, if it is sound, even if it upsets former notions and former ways of doing things.

Fourth, responsibility. A first class mind has a sense of responsibility in handling new theories; it puts them through all sorts of tests to prove both their logical soundness and their practical utility.

The practical fruits of the intellectual virtues are obvious. Humility makes for open-mindedness. Curiosity makes for careful analysis. Courage for creativeness in blazing new trails. Responsibility makes for reliability in action."

—AUNT JANET.

Restraining the Necklace

IT very often happens that one of the children has a present of a string of beads, pretty and inexpensive. It is strung on thread, and some unlucky day the thread breaks, the beads are scattered and there are tears in abundance. To forestall this, I always restring a new necklace, using a strand of picture wire. (Not the wire "as is", but unwinding a strand of it.) Thus the necklace is made practically unbreakable.—A.B.S.

The efficient parent makes use of the child's early years to implant desirable habits.

For Hot Summer Days

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

Pajama Pattern No. 2571 provides for the young girl the same smart beach pajama that is popular with the older set. In the bright printed cottons, this design would be stunning and practical for beach use. The pattern cuts in sizes 6, 8, 10, 12 and 14 years. Size 8 requires 2½ yards of 39-inch printed material and 1½ yards of 32 or 35 inch plain material. Price, 15c.

Dress Pattern No. 2546 uses the soft, molded lines which are most becoming to the feminine figure. The capelet sleeves, low flared circular flounce and bow at left hip give the season's style accent and are worn easily by most figures. Printed silk crepe, chiffon voile or silk chiffon with a plain sash would make up charmingly in this pattern which cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 4½ yards of 39-inch material with ¼ yard of 32-inch material for bow. Price, 15c.

Junior Dress Pattern No. 2547 is delightful for the young girl of 8, 10, 12 and 14 years. Dotted dimity, Swiss, organdie, shantung or linen in the exquisite summer colors would make a dress that the dainty miss would be proud to wear. The shaped hip-yoke helps to hold the dress in position while the rippling flounce adds grace and comfort. The 8-year size requires 1½ yards of 39-inch material with ¼ yard of 27-inch contrasting. Price, 15c.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA IS PARTICULARLY EASY ON COLORS

COLORED frocks and gay prints—how attractive they are this summer. And how easy it is to keep them bright and gay if you wash them with Fels-Naptha!

For there's naptha in Fels-Naptha. You can smell it—*plenty there!* Naptha, the safe dirt-loosener, combined with good golden soap. Working together, they bring you *extra help*—loosening dirt without hard rubbing even in *cool* water. And that, of course, means a lot in keeping colors bright and cheery!

Don't forget that Fels-Naptha's big job is the family wash. There, you can use water of any temperature—hot, lukewarm or even cool. You can use tub or machine. Soak or boil your clothes, just as you like. Fels-Naptha

will do a splendid job. And do it so quickly that your hands are in waterless time, which helps keep them nice. Get Fels-Naptha from your grocer today.

SPECIAL OFFER—We'll be glad to send every user of Fels-Naptha Soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-7-19. Fels & Company, Philadelphia, Pa.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

A NEW \$2000 Farm Machinery Policy

for American Agriculturist Subscribers

The Policy Pays

\$2000 for loss of life while operating a wagon, sleigh, tractor, plow, harrow, disc, land-roller, grain drill, corn planter, potato planter, cultivator, mowing machine, hay rake, hay tedder, reaping or binding machine, bean puller, potato digger, spray rig, hay baler, manure spreader or buzz saw, which is tipped over, broken or otherwise disabled.

\$15.00 for 15 weeks for loss of time while totally disabled as result of injury in accidents as listed above.

Policy also pays death indemnity or weekly indemnity if struck by lightning or in a burning farm building, also if thrown from farm machines.

**This policy is for
American Agriculturist
subscribers only**

Our field representatives will show you a sample policy and take your application.

E. C. WEATHERBY, *Circulation Manager*, Ithaca, N. Y.

The Indian Drum—By William McHarg and Edwin Balmer

She went on into the house. A telegraph envelope addressed to her father was on the table in the hall. A servant told her the message had come an hour before, and that he had telephoned to Mr. Sherrill's office, but Mr. Sherrill was not in. There was so reason for her thinking that the message might be from Alan except his presence in her thoughts, but she went at once to the telephone and called her father. He was in now, and he directed her to open the message and read it to him.

"Have some one," she read aloud; she choked in her excitement at what came next—"Have some one who knew Mr. Corvet well enough to recognize him, even if greatly changed, meet Car-ferry Number 25 Manitowoc Wednesday this week. Alan Conrad."

Her heart was beating fast. "Are you there?" she said into the 'phone.

"Yes."

"Whom shall you send?"

There was an instant's silence. "I shall go myself," her father answered.

She hung up the receiver. Had Alan found Uncle Benny? He had found, apparently, someone whose resemblance to the picture she had showed him was marked enough to make him believe that person might be Benjamin Corvet; or he had heard of some one who, from the account he had received, he thought might be. She read again the words of the telegram . . . "even if greatly changed!" and she felt startling and terrifying warning in that phrase.

* * *

CHAPTER XV

OLD BURR OF THE FERRY

IT was in late November and while the coal carrier *Pontiac*, on which he was serving as lookout, was in Lake Superior that Alan first heard of Jim Burr. The name spoken among some other names in casual conversation by a member of the crew, stirred and excited him; the name James Burr, occurring on Benjamin Corvet's list, had borne opposite it the legend "All disappeared; no trace," and Alan, whose investigations had accounted for all others whom the list contained, had been able regarding Burr only to verify the fact that at the address given no one of this name was to be found.

He questioned the oiler who had mentioned Burr. The man had met Burr one night in Manitowoc with other men, and something about the old man had impressed both his name and image on him; he knew no more than that. At Manitowoc!—the place from which Captain Stafford's watch had been sent to Constance Sherrill and where Alan had sought for, but had failed to find, the sender! Had Alan stumbled by chance upon the one whom Benjamin Corvet had been unable to trace? Had Corvet, after his disappearance, found Burr? Had Burr been the sender, under Corvet's direction, of those things? Alan speculated upon this. The man might well, of course, be some other Jim Burr; there were probably many men by that name. Yet the James Burr of Corvet's list must have been such a one as the oiler described—a white haired old man.

Alan could not leave the *Pontiac* and go at once to Manitowoc to seek for Burr; for he was needed where he was. The season of navigation on Lake Superior was near its close. In Duluth skippers were clamoring for cargoes; ships were lading in haste for a last trip before ice closed the lake's outlet at the Soo against all ships. It was fully a week later and after the *Pontiac* had been laden again and had repassed the length of Lake Superior that Alan left the vessel at Sault Ste. Marie and took the train for Manitowoc.

The little lake port of Manitowoc, which he reached in the late afternoon, was turbulent with the lake season's approaching close. Long lines of bulk

freighters, loaded and tied up to wait for spring, filled the river; their released crews rioted through the town. Alan inquired for the seamen's drinking place, where his informant had met Jim Burr; following the directions he received he made his way along the river bank until he found it. The place was neat, immaculate; a score of lake-men sat talking at tables or leaned against the bar. Alan inquired of the proprietor for Jim Burr.

The proprietor knew old Jim Burr—yes. Burr was a wheelsman on Carferry Number 25. He was a lakeman, experienced and capable; that fact, some months before, had served as introduc-

in Burr's reception of it; but he had not expected that. None of those on Benjamin Corvet's list had had any knowledge of Alan Conrad or had heard the name before.

Alan was silent, watching the old man; Burr, silent too, seemed listening to the conversation which came to them from the tables near by, where men were talking of cargoes, and of ships and of men who worked and sailed upon them.

"How long have you been on the lakes?" Alan inquired.

"All my life." The question awakened reminiscence in the old man. "My father had a farm. I didn't like farm-

vet? No." Old Burr's uneasiness seemed to increase. "What sort of communication?"

"A request to send some things to Miss Constance Sherrill at Harbor Point."

"I never heard of Miss Constance Sherrill. To send what things?"

"Several things—among them a watch which had belonged to Captain Stafford of the *Miwaka*."

Old Burr got up suddenly and stood gazing down at Alan. "A watch of Captain Stafford's?—no," he said agitatedly. "No!"

He moved away and left the place; and Alan sprang up and followed him.

He was not, it seemed probable to Alan now, the James Burr of Corvet's list; at least Alan could not see how he could be that one. Among the names of the crew of the *Miwaka* Alan had found that of a Frank Burr, and his inquiries had informed him that this man was a nephew of the James Burr who had lived near Port Corbay and had "disappeared" with all his family. Old Burr had not lived at Port Corbay—at least, he claimed not to have lived there; he gave another address and assigned to himself quite different connections. For every member of the crew of the *Miwaka* there had been a corresponding, but different name upon Corvet's list—the name of a close relative. If Old Burr was not related to the Burr on Corvet's list, what connection could he have with the *Miwaka*, and why should Alan's questions have agitated him so? Alan would not lose sight of Old Burr until he had learned the reason for that.

He followed, as the old man crossed the bridge and turned to his left among the buildings on the river front. Burr's figure, vague in the dusk, crossed the railroad yards and made its way to where a huge black bulk, which Alan recognized as the ferry, loomed at the waterside. He disappeared aboard it. Alan, following him, gazed about.

A long, broad, black boat the ferry was, almost four hundred feet to the tall, bluff bow. Seen from the stem, the ship seemed only an unusually rugged and powerful steam freighter; viewed from the beam, the vessel appeared slightly short for its freeboard; only when observed from the stern did its distinguishing peculiarity become plain; for a few feet only above the water line, the stern was all cut away, and the long, low cavern of the deck gleamed with rails upon which the electric lights glinted. Save for the supports of the superstructure and where the funnels and ventilator pipes passed up from below, that whole strata of the ship was a vast car shed; its tracks, running to the edge of the stern, touched tracks on the dock. A freight engine was backing loaded cars from a train of sixteen cars upon the rails on the starboard side; another train of sixteen big box cars waited to go aboard on the tracks to the port of the center stanchions. When the two trains were aboard, the great vessel—"No. 25," in big white stencil upon her black sides were her distinguishing marks—would thrust out into the ice and gale for the Michigan shore nearly eighty miles away.

Alan thrilled a little at his inspection of the ferry. He had not seen close at hand before one of these great craft which, throughout the winter, brave ice and storm after all—or nearly all—other lake boats are tied up. He had not meant to apply there when he questioned old Burr about a berth on the ferry; he had used the merely as a means of getting into conversation with the old man. But now he meant to apply; for it would enable him to find out more about old Burr.

(Continued on Page 13)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the *Miwaka*. Spearman is angered because Constance shows so much interest in the mystery. Alan's investigations all seem to point to the sinking of the *Miwaka*.

tion for him to the frequenters of this place. When the ferry was in harbor and his duties left him idle, Burr came up and waited there, occupying always the same chair. He never drank; he never spoke to others unless they spoke first to him, but then he talked freely about the old days on the lakes, about ships which had been lost and about men long dead.

Alan decided that there could be no better place to interview old Burr than here; he waited therefore, and in the early evening the old man came in.

Alan watched him curiously as, without speaking to any one, he went to the chair recognized as his and sat down. He was a slender but muscularly built man seeming about sixty-five, but he might be considerably younger or older than that. His hair was completely white; his nose was thin and sensitive; his face was smoothly placid, emotionless, contented; his eyes were queerly clouded, deepset and intent.

Those whose names Alan had found on Corvet's list had been of all ages, young and old; but Burr might well have been a contemporary of Corvet on the lakes. Alan moved over and took a seat beside the old man.

"You're from No. 25?" he asked, to draw him into conversation.

"Yes."

"I've been working on the carrier *Pontiac* as lookout. She's on her way to tie up at Cleveland, so I left her and came on here. You don't know whether there's a chance for me to get a place through the winter on No. 25?"

Old Burr reflected. "One of our boys has been talking of leaving. I don't know when he expects to go. You might ask."

"Thank you; I will. My name's Conrad—Alan Conrad."

He saw no recognition of the name

ing. The schooners—they were almost all schooners in those days—came in to load with lumber. When I was nine years old, I ran away and got on board a schooner. I've been at it, sail or steam, ever since."

"Do you remember the *Miwaka*?"

"The *Miwaka*?"

Old Burr turned abruptly and studied Alan with a slow scrutiny which seemed to look him through and through; yet while his eyes remained fixed on Alan suddenly they grew blank. He was not thinking now of Alan, but had turned his thoughts within himself.

"I remember her—yes. She was lost in '95," he said. "In '95," he repeated.

"You lost a nephew with her, didn't you?"

"A nephew—no. That is a mistake. I lost a brother."

"Where were you living then?"

"In Emmet County, Michigan."

"When did you move to Point Corbay, Ontario?"

"I never lived at Point Corbay."

"Did any of your family live there?"

"No." Old Burr looked away from Alan, and the queer cloudiness of his eyes became more evident.

"Why do you ask all this?" he said irritably. "What have they been telling you about me? I told you about myself; our farm was in Emmet County, but we had a liking for the lake. One of my brothers was lost in '95 with the *Miwaka* and another in '99 with the *Susan Hart*."

"Did you know Benjamin Corvet?" Alan asked.

Old Burr stared at him uncertainly. "I know who he is, of course."

"You never met him?"

"No."

"Did you receive a communication from him some time this year?"

"From him? From Benjamin Cor-

The Indian Drum

(Continued from Page 12)

He went forward between the tracks upon the deck to the companionway, and ascended and found the skipper and presented his credentials. No berth on the ferry was vacant yet but one soon would be, and Alan was accepted in lieu of the man who was about to leave; his wages would not begin until the other man left, but in the meantime he could remain aboard the ferry if he wished. Alan elected to remain aboard. The skipper called a man to assign quarters to Alan, and Alan, going with the man, questioned him about Burr.

All that was known definitely about old Burr on the ferry, it appeared, was that he had joined the vessel in the early spring. Before that—they did not know; he might be an old lakeman who, after spending years ashore, had returned to the lakes for a livelihood. He had represented himself as experienced and trained upon the lakes, and he had been able to demonstrate his fitness; in spite of his age he was one of the most capable of the crew.

The next morning, Alan approached old Burr in the crew's quarters and tried to draw him into conversation again about himself; but Burr only stared at him with his intent and oddly introspective eyes and would not talk upon this subject.

(To be Continued Next Week)

HANDY ANDY Says "Here's How"

To Wash Dishes Without Wiping Them

By Ray Inman

WHY WIPE DISHES! IT IS QUITE UNNECESSARY.
• PUT A SHELF OVER
• THE KITCHEN SINK

SLANT IT SO THE WATER WILL DRAIN INTO SINK.
• PUT A RAILING ON
• ENDS AND FRONT. . .

HAVE 2 PANS OF HOT WATER.
• WASH IN FIRST, RINSE
• IN SECOND, AND —

STAND THEM ON EDGE IN RACK. IF YOU WISH YOU CAN POLISH THE DISHES AFTER THEY DRY.

With the A. A. Poultry Farmer

Raising Broilers the Year 'Round

By AMOS KIRBY

It was a real pleasure for me to visit the plant of Frederick Blencowe, at Woodstown, N. J., recently where I was shown how broilers and even roasting chickens are being grown under the battery system. While the roasting chicken proposition represents a line to itself, it has possibilities that can be successfully followed out if the specialist in broilers is caught at times with chickens that cannot profitably be moved when they weigh 2 to 2½ pounds each.

Mr. Blencowe is an Englishman. His father was a London broker and conducted a big and a successful business. In 1908, he came to America and located at Lake Simco, about 50 miles North of Toronto. After spending 15 months in Canada, he drifted to the United States and settled near Philadelphia and since that time has been in close touch with conditions in South Jersey. About one year ago he moved to Woodstown and entered upon the poultry deal which we are about to describe.

With only a limited amount of land, possibly one half an acre including the spot where the dwelling house stood; poultry raising under the conditions which he had been accustomed to were out of the question, so it was a case of securing additional land or going into the hot-house broiler production under the battery system.

From now on we will let Mr. Blencowe tell his own story of his exper-

ience with the battery brooder and what he thinks of it as a practical method of brooding chickens.

"My experience with battery brooders, has been confined to one of the well-known hot-water heated types of batteries that is now on the market and I know nothing about the other types that have been widely advertised. We installed a four section brooder last fall and have had it in operation for about one year and have not had the least bit of trouble with it during that time. While our experience has been limited to one year, we have worked out a system that has met with unusual success, except for the usual run of hard luck for which this or any battery cannot be blamed. It has been our practice to put about 75 chicks in each compartment at the start. The brooder people tell us that we can put 100 chicks to each section, but we believe that that is too many to crowd in one section even at the very first. Our advice to inexperienced brooder operators is that it will be much better to put too few, rather than too many chicks in each compartment and then follow that out to the finish.

Abundant Space Helps Chicks

"We believe that a large part of our success with the battery brooder has been due to not crowding the chicks at any stage of their development. We have worked out a scheme for our plant that has given us plenty of space for expansion and has made it possible for us to have broilers to sell all through the season from February until the first of September. It has been our experience that we can have day old chicks and twelve week old broilers in the battery at the same time and maintain the proper temperatures for all ages with the one hot-water unit."

The Blencowe plant is located in a barn that was built about 40 years ago, when horses and carriages were in use. The battery room is heated with the small hot-water heater that goes with the battery. No other heat is supplied even in mid-winter when the ground is covered with snow. Mr. Blencowe tells us that last winter when the temperature was down to nearly zero, the room was never below 70 degrees at the outer wall while under the hoover in the battery the thermometer registered 95 degrees for the day old chicks.

"Doesn't it take a lot of coal to run a battery filled to only one-third capacity?" we asked. "No," replied our host, "We find that we can operate this plant on about 25 cents per day for coal and that covers the very coldest days that we have here in South Jersey. You may know that an average coal burning brooder stove will use that amount of fuel and then handle only 300 to 400 chicks."

Start in Mid-October

"Our plan is to start operations about the middle of October and then continue buying day old chicks each week until the middle of May. We buy local chicks from flocks which we know have been B.W.D. tested and which are known to be in a good healthy condition. These chicks were placed in four compartments. We leave the 75 chicks in their section for four weeks. At the beginning of the fifth week, we divide them and leave only 25 to each section. At the beginning of the seventh week, they are again divided leaving only 20 to a section and at the ninth week they are again separated leaving only 15 to each section. They are then left that way until they are marketed."

"That explains the way we carried out our operations last winter, but this spring we modified our plans and began taking the chicks out of the battery at six weeks of age and putting them on the floor of the old hay mow that is above the battery room. We made this change for two reasons," explained Mr. Blencowe. "In the first place it has developed that the dealers prefer a range grown broiler if it can

be secured. Another advantage of the floors for the last six weeks is that it enables us to increase the number of birds that we can carry in our plant. It seems that the range grown broiler holds up better when transported than the battery broiler although it is not any better flavored. There is nothing that equals a battery developed broiler for tenderness and quality when it comes to the table," emphatically declared Mr. Blencowe.

There is one objection to placing the birds on the floor and that is it sets the birds back one week. He believes that if he had heat and could put them on the floor or on range at four weeks of age they would not have this setback. Another year, heat will be installed and the birds will be taken out of the battery two weeks earlier.

All Mash Ration Used

"Does a battery broiler put on weight as fast as an open range bird or as one grown on the floor?" was another question that we asked. "We believe so", continued our friend. "Our experience has been that we can get a broiler to weigh 2¼ pounds at ten weeks of age in the battery which is just as good or better than under ordinary methods."

One of the interesting features of the Blencowe plant and its many hundreds of birds has been the healthy appearance of the stock. The battery room is kept quite dark. Even the electric light bulbs are painted blue. The interior of the batteries is kept quite dark and all of the light in the room is directed on the feed troughs and the water fountains.

Another feature that has worked out very nicely under the Blencowe system has been the feeding of an all mash feed. No grain, except what has been ground with the mash is ever fed to the birds, and finer, more healthy, or better colored chickens have never been grown than these in this particular battery.

"We are considering only one slight change in this feeding system," continued Mr. Blencowe. "We believe a mixture of wheat and corn after they are six weeks of age and put on the floors would help some in their natural development."

No Odors in Hot Weather

Another feature of this plant is the absolute freedom from odors even on a very hot day. When we visited the plant, there were several hundred birds in the machine and the temperature was 78 without any fire in the heater and there was hardly a trace of an odor of any kind. Electric ventilators have been installed which keep the air fresh and sweet all of the time.

"What about the using of the battery by the man who is raising breeding stock?" we asked. "A man who is developing 1,000 to 2,000 layers each season cannot keep the birds shut up in a battery all summer. What can he do with a battery?" we continued.

"I am mighty glad you brought up that point," replied Mr. Blencowe. "For the man who is raising breeders, or broilers or simply chickens for roasters or capons, the battery has a lot of advantages. On this point get me straight, as with the battery, for the first four weeks, there is no known method of brooding chicks equal to it and I doubt if there ever will be even though we might all go back to the broody hen. Every poultryman can use a battery to a good advantage. If his business at the present is too small to use it he should build it up to the size where he can utilize this type of equipment."

All Conditions Under Control

"Here is the point regarding the battery," continued Mr. Blencowe. "By using the battery one can brood 500 or 2,000 chicks with every known condition under absolute control. Temperature, feed, water, freedom from crowding, elimination of toe picking and even the weather. With a battery in a properly constructed building, the poultryman during the first four weeks of the chick's life can eliminate every chance of chilling and its accompanying ills for regardless of weather conditions on the outside, the temperature can be controlled to a certainty and any poultryman who has used brooder stoves in early March knows of what I am speaking."

Broiler Day Old Chicks

Light Breeds, \$10 per 100. Light and Heavy, \$12. Heavy, \$14. Small quantities a trifle more. Straight breeds a little higher. Prompt shipment. C.O.D. Post-paid. Live delivery. Twelve varieties. Custom Hatching. We hatch all year. Started chicks priced according to age. Send for folder.

Is Your Milk Buyer Bonded?

"The G. Marks Dairy Company of Farmingdale, Long Island bought milk from me and a number of my neighbors last summer. Finally our checks began to go to protest and at present we have \$160. coming to us. Can you give us any help in collecting this money?"

INASMUCH as there is a state law requiring buyers of milk to take out license and post a bond we communicated with the State Department of Agriculture and Markets on this claim who reported that following evidence that the G. Marks Dairy Company were purchasing milk without a license, evidence of the violation was turned over to the State Department of Law. In commenting on the situation, the State Department of Agriculture and Markets writes as follows:

"This is another case where it would have been better for your subscriber to have refrained from selling milk to this unlicensed purchaser. While this Department does all that it can to induce purchasers of milk to comply with the requirements of the law and while evidence of the violation of the law by the purchase of milk without a license is procured and turned over to the Department of Law for action the producers themselves are in a position to refuse to sell milk until a license has been obtained and this is one of the quickest ways of bringing about compliance with the law upon the part of purchasers who are inclined to be delinquent in so doing."

Evidently this law does not protect a seller of milk absolutely. In other words, a dairy company must buy milk before they violate the law and following a violation it is likely to require some time to get a conviction. Consequently as the Department says the best way to en-

force a law is for every dairyman to refuse to sell milk to a company which has not been licensed and bonded by the department.

Licensed Commission Merchant Discontinues Business

ANY person who shipped farm produce to ARTHUR H. GORDON, 126 West Avenue, Wallabout Market, Brooklyn, N. Y. to be sold on commission, and has not received payment can file a verified complaint with the Commissioner of Agriculture and Markets, Albany, N. Y. against his commission merchant's bond. Blank form of complaint can be obtained from the Commissioner of Agriculture and Markets, Albany, N. Y. and must be filed with him on or before October 1st to receive consideration.

Does Not Answer Letters

"Last fall I sent a check for \$16.00 to the J. G. Prestage & Sons Company of Allegan, Michigan. Now I cannot get the nursery stock I ordered neither can I get back my money. Can you help me on this matter?"

WE have been unable to get any reply from the J. G. Prestage & Sons Company and upon investigation we are told that complaints similar to the one mentioned by our subscriber are common against this concern. We are publishing this information so that our subscribers may be governed accordingly.

In a later letter our subscriber enclosed a letter from the Post Office Department stating that it has usually

been found impracticable to bring legal action under the postal fraud statute on one complaint.

If any other subscribers have had difficulties similar to this subscriber we will be glad to call them to the attention of the Post Office Department.

No Reply

"What can you tell me about the Fay Clearing Company of Albany. They agree to collect my bad bills for 50% of the first hundred dollars and ten percent of all bills collected after that?"

ALTHOUGH we have written to the Fay Clearing Company several times they have absolutely refused to reply to our letters, and we can only

Results

YOUR letter of April 3rd received and I am very grateful to the American Agriculturist for all their kind interest and efforts in my behalf. The paint arrived yesterday exactly eleven months from date of ordering. I am quite sure I would not have the paint now had it not been for your taking up this matter for me, as I had written several times enclosing self addressed envelope and never received a reply.

Your are doing a great service for your many subscribers in taking care of matters of this kind and I am sure all others benefited by your Service Bureau must feel the way I do regarding it.

repeat the advice that we have given several times in the past; namely, that we believe it wise to use caution in dealing with collection agencies that do business at long distance.

We have had several complaints against this concern and have never received replies to any letters we have written them.

Makes Good on Check

SOME time ago we mentioned in the Service Bureau Columns a protested check issued by Mr. H. G. Wescott.

Since that time two of our subscribers have received checks from a Binghamton attorney with a letter stating that pursuant to the terms of the suspended sentence given Henry G. Wescott by Justice A. E. Cady he was to make good beginning June 15th, 1930 the protested checks which he gave last fall. The payments are being made on the installment basis.

We of course are glad to know that our subscribers will not lose this money.

Two Protest Fees

"Last March I sold a bull to a Mr. Cohen of Utica, N. Y. who gave me a check which was protested because of insufficient funds. I have written to him asking him to make the check good but did not get any reply. I wonder if you can help me."

WE wrote to Mr. Cohen and in a short time received a letter from our subscriber saying that Mr. Cohen had written him asking him to re-deposit the check. Our subscriber did this only to get it protested again.

We have written several letters to Mr. Cohen but up to date he has not answered any of them.

More About Unordered Cards

FOLLOWING a recent item about Unordered Christmas cards, the following letter was received from one of our subscribers. Needless to say we thoroughly agree with the sentiment expressed.

"I was reading article in the American Agriculturist a week or so ago about the complaint of one of the Agriculturist readers regarding the Betty Philips Christmas cards. I too was sent a dozen of Betty Philips' cards which were sent at the request of a friend and for me to please forward \$1.00 for same. I did not send the dollar as I believe in the saying: 'It's a good fellow who pays for what he orders.'"

If these friends wanted you to have the cards why didn't they send the dollar? I believe if Betty Philips and a few other such companies lose out a few times on such schemes they will be more particular to whom they send their wares without people ordering the same."

During June

Your Neighbors Collected Thousands of Dollars

Leaving a Hideous Trail of Waste . . .

THE FEARFUL

These foul, contaminating insects are bound to invade your home. Be prepared to fight them. Have FLY-TOX handy. Pure, clean, stainless, fragrant. It is the scientific insecticide developed at Mellon Institute of Industrial Research by Rex Research Fellowship.

FLY-TOX

KILLS THEM ALL
Absolutely Harmless to People and Animals

Protection for Animals, too . . .

Use STOCKAID on your livestock. Another scientific insecticide. Repels and kills Flies, Mosquitoes, Fleas and Lice. Harmless to people and animals. Will not stain. Has pleasant odor. Will not irritate the skin. Will not clog sprayer. Used in the largest dairy barns in the country. Fully guaranteed.

Songs That Mother Used to Sing

(Continued from Page 2)

to write the popular songs for the nation.

He was living in New York City when he wrote the song which is now written into the laws of the State of Indiana as its state song. In the Acts of 1913, 10135A, it reads:

Song of State: That the song entitled, "On the Banks of the Wabash, Far away," words and music by Paul Dresser, be and is hereby established as the state song of Indiana. The form in which this song shall be sung as the state song of Indiana shall be as follows:

Round my Indiana homestead wave the cornfields,
In the distance loom the woodlands clear and cool,
Often times my tho'ts revert to scenes of childhood,
Where I first received my lessons—nature's school.
But one thing there is missing in the picture,
Without her face it seems so incomplete,
I long to see my mother in the doorway,
As she stood there years ago, her boy to greet.

Chorus

Oh, the moonlight's fair tonight along the Wabash,
From the fields there comes the breath of new mown hay,
Through the sycamores the candle lights are gleaming,
On the banks of the Wabash, far away.
Many years have passed since I strolled by the river,
Arm in arm with sweetheart Mary by my side.
It was there I tried to tell her that I loved her,
It was there I begged of her to be my bride.
Long years have passed since I strolled through the churchyard,
She's sleeping there, my angel, Mary dear,
I loved her but she thought I didn't mean it,
So I'd give my future were she only here.

In the summer of 1896, his younger brother, Theodore Dreiser, and Paul were living together, Paul being in the height of his success. Theodore, just trying to get a start in the writing business, had gone over to the office of Paul's firm one Sunday morning. Not a pretentious place, with its two rooms, in one a piano, at which Paul was sitting. Theodore was at the desk.

"Write About a River"

Finally he stopped the aimless search for the melody that would not come.

"Say, Sport," he usually called his younger brother by this slang term for good fellow in the nineties. "give us an idea for a song. I can't think of a thing. What do you say?"

Theodore, said carelessly, "Why not write something about a state or a river? Take Indiana—or the Wabash, that's as good as the Swanee any day, and you know all about it—you were born there."

Paul became excited over the idea.

"Say, Sport, that is an idea. Now go ahead, and sketch it out a little more."

After some more urging, and with more or less disdain, Theodore wrote a rough draft of the idea, a verse and chorus.

The Banks of the Wabash was not put into finished form until the next year.

"On the Banks of the Wabash" was a hit. As such it was sung on the stage, in the concert halls, on the streets, in

bar rooms, in public gatherings, and in homes. But, unlike thousands of other hits, it did not die. Something about moonlight—new mown hay—sycamores—candle lights—river banks—and the picture of mother standing in the doorway; something about the sweetness of the melody in which is mingled the waving of the cornfields, the wind in the woodlands clear and cool, the wash of the Wabash along its banks; something there was in this song that made it live. It became a song of the people.

Paul Dresser lived to know that it was more than a hit—that it was the song by which the world would remember him as a singer of songs. In 1903, he stood with others in a big public gathering in Terre Haute where he had been born, on the spot where he had remembered his mother standing in

the doorway, when writing the song, and joined in singing "On the Banks of the Wabash, Far Away." A proud city was paying him tribute for adding to its fame. One of the least of its sons, a ragged boy raised in a poor family, had gone forth with a song in his heart, which when it burst forth, became planted in the hearts of the home lovers of the nation.

Indiana, the state of which he sang—"Round my Indiana homestead wave the cornfields"—Indiana calls the song her own. In the austere bound volumes containing the Statutes of the State of Indiana, she says it shall be sung with these words:

"Oh, the moonlight's fair tonight along the Wabash,
From the fields there comes the breath of new mown hay,

Through the sycamores the candle lights are gleaming,
On the banks of the Wabash, far away."

All together, now—strike a chord there on the piano—not too loud, fellows—half close your eyes—that's it—just like Paul Dresser dreamed it something more than 30 years ago.

Change places with your husband next washday

For homes with electricity, the Maytag is available with electric motor.

TUNE IN

on Maytag Radio Programs over N.B.C. Coast to Coast Network Monday Evenings, Daylight Saving Time—9:00 E.T., 8:00 C.T., 7:00 M.T., 6:00 P.T.—Standard Time is one hour earlier.
WJZ, New York; KDKA, Pittsburgh; KYW, Chicago; KSTP, St. Paul; WSM, Nashville; WREN, Kansas City; KOA, Denver; KSL, Salt Lake City; WKY, Oklahoma City; KPRC, Houston; WFAA, Dallas; KECA, Los Angeles; KGW, Portland and Asso. Sta.

If your husband did the washing, he would insist on having a new Maytag, for the same reason that he buys power machinery for his field work.

The quick-washing Maytag gives you extra hours to spend in other profitable ways. The gentle, water-washing action makes the clothes last longer... washes everything clean without hand rubbing.

THE NEW MAYTAG

You owe it to yourself to see this latest creation of the world's largest washer factory. The one-piece, cast-aluminum tub is extra roomy. The new-type roller water remover is extra convenient and thorough. The new oil-packed drive is extra quiet and smooth-running.

A Week's Washing FREE

Write or phone the nearest dealer for a trial home washing with the New Maytag. If it doesn't sell itself, don't keep it. Divided payments you'll never miss.

THE MAYTAG COMPANY

Newton, Iowa :: Founded 1893
PERMANENT PHILADELPHIA FACTORY BRANCH,
Maytag Building, 851-3 North Broad St.,
Philadelphia, Pennsylvania

THE GASOLINE MULTI-MOTOR

This Maytag engine represents sixteen years development... half a million in use. It is a woman's engine... so simple and compact that by removing only four bolts it is interchangeable with the electric motor. A step on the pedal starts it.

The Churn and Meat Grinder Attachments

These two attachments, sold as extra equipment at reasonable cost, add extra usefulness to your Maytag. The Churn Attachment is made of aluminum, sets over the center post and churns the butter with the same power that washes the clothes. The Meat Grinder Attachment grinds meats, nuts, fruits, relish at two pounds per minute.

Believe me if all those endearing young charms

Believe Me If All Those Endearing Young Charms

THOMAS MOORE wrote many songs which we all love, but none is so much loved as the one which our mothers all sang, "Believe Me—". Moore was born in Dublin, Ireland, although his mature life was spent largely in England. Above is a picture of his birthplace. Read the story on page 6.

Songs that Mother Used to Sing

Reduce your cost of production with a **FORDSON**

JIM LEE is filling his silo today. Neighbors and helpers on hand at the crack of dawn. All there and ready to buck into the work . . . including the Fordson Tractor.

Yesterday the improved Fordson plowed 6 acres. Tomorrow it will be back at the plow again after a good day at the belt. This spring and summer it pulled the gang-plow, the drill, the binder. This winter it will turn the buzz-saw and do other odd jobs around the barn. Uses for the improved Fordson are as numerous as the farm-power jobs. New and modern features help the improved Fordson do its work quickly, easily.

Its plucky engine can deliver 30 actual horse-power at 1100 r.p.m. at the belt. The willingness of the engine to start, even on the coldest of mornings, can be traced to its high-tension magneto with enclosed impulse-starter coupling. It is equipped with hot-spot manifold and carburetor for gasoline. The air-washer holds enough water for the day's run.

The transmission is fitted with large roller bearings and the large gear has a double-bearing mounting. Gears shift easily from increased release movement. The filter that separates grit and carbon from the oil is easily cleaned—but should it get clogged, oil system will keep right on working. There is no complicated piping to get stopped up!

Extra weight has been added to the front and rear of the improved Fordson. Strong fenders are now standard equipment. Either spade-lugs or angle-cleats are available.

Try the improved Fordson. Let it help you get your farm-work done on time and at less cost.

The improved Fordson plows at the rate of 3½ miles per hour with a two-bottom, 14-inch plow

The improved Fordson handles all farm-power implements equally well

Not only draw-bar power, but belt power, is available in the improved Fordson

The New England Dairy Market Plan

Producers' and Dealers' Organizations Unite to Meet Crisis

THE New England milk industry is about to try a plan of milk marketing which may have far-reaching results. Because dairymen in the New York milk shed have almost exactly the same marketing problems, the New England plan will be of vital interest.

AMERICAN AGRICULTURIST neither recommends nor endorses this new scheme, for we are now sure that it is right, but we commend the officials, the dairymen and the milk dealers of New England at least for a courageous attempt to solve their greatest problem. All of us interested in the milk industry will watch the attempt to work this plan out with much interest and sympathy.

A Discouraging Situation

Before explaining the plan, let us first look at the crisis in the New England milk situation, which led to the suggestions for solving it. Like New York, there are several farmers' milk producing organizations in New England, all in competition, all trying to cut one another's throat, and each trying to get possession of the Boston market at the expense of the other farmers and of the whole milk industry.

This is not a criticism of any individual farmers' cooperative, for several of them have done splendid work in securing better prices for their farmers, and without them the farmers would be infinitely worse off. The largest New England milk cooperative is the New England Milk Producers' Association, a good, constructive organization, well managed. Other

cooperatives that have done excellent work for their members are the Vermont Federation of Creameries, the Vermont Dairies, Inc., and many independent cooperatives.

The situation from the milk dealers' point of view is equally bad. Price cutting, resulting in general lowering of prices and bad morale, has existed among the dealers for years.

As a result, everybody was convinced of the necessity for some plan to bring about improvement.

Commend Commissioners of Agriculture

A good deal of praise is due the Commissioners of Agriculture of the different New England

states who gave a large amount of time and thought to the problem. At the request of both producers' and distributors' organizations, the Commissioners of Agriculture appointed a New England Milk Board, consisting of Reginald W. Bird of Boston, a former member of the Federal Regional Milk Commission, Guy F. Boyce of the Vermont Marble Company, and Judge Benjamin F. Cleaves of Portland, Maine, all excellent, successful men in their own business. We wonder, however, why it was necessary to call on outside business men to settle something that the farmers and dealers should have worked out themselves.

After due study and consideration, this New

England Milk Board suggested a plan consisting of several definite recommendations, both to producers and to dealers. Moreover, it told both sides of the controversy that unless everyone concerned would give these recommendations a fair trial the Board would immediately close up and go home. As a result of this, nearly everyone involved, representing both producers' organizations and those of the dealers, has accepted and agreed to try out the suggestions proposed by the Milk Board. Conferences have already been held to work out details.

The plan starts with the fact that the chief difficulty in the Boston market is due to lack of uniformity in sales practices. When each organization sells at a different price and under different conditions, chaos reigns. New York farmers know this from sad experience in their own New York markets. The recommendations in the

(Continued on Page 7)

Summary of the New England Milk Market Recommendations

1. Organization of a general producers' association, made up of representatives from all of the New England dairy cooperatives.
2. Formation of a sales plan by producers so that all dealers get their milk at the same prices.
3. No price changes to be made until after general conferences representative of all producers and dealers involved, such conferences to be called by the Commissioners of Agriculture.
4. Dealers' present association to be reorganized with headquarters office established with a secretary, where each dealer must register the prices at which he sells his milk; no rebates on the part of the dealer; and no change in the dealer's price until after twenty-four hours' notice to the general secretary of the dealers' association.
5. No outside cream to be admitted into New England markets except in cases of emergency.
6. Proper differential in prices established between store milk and home milk, such differential to be based on actual costs of service.
7. Change in retail price of fluid milk, that is, Class 1 milk, only twice a year.
8. Appointment of a new Milk Administrator to carry out the recommendations of the producer and dealer organizations and to settle disputes.
9. Formation of a Board of Arbitration in cases where the Milk Administrator's ruling is not satisfactory.

Increased Profits in Can-house Tomatoes

New Methods That Lessen Labor and Increase Yields

By AMOS KIRBY

THE introduction of more modern methods in the growing of the can-house tomato crop in Southern New Jersey in the last five or six years has completely revolutionized the industry. Not only has labor saving machinery replaced many of the former back-breaking hand methods, but science and the ingenuity of the growers have brought about many changes that are more or less startling to those who have not kept in close touch with the situation in recent years.

Since the close of the World War, when tomato prices were as high as \$30 a ton, growers have been facing a constantly decreasing market value, and at the same time, yields have been growing smaller and smaller. Foreign competition has made itself felt in this area, as the bulk of the tomatoes from Italy are unloaded in New York, Philadelphia, Boston and Baltimore, which is the logical market for tomatoes from this section of the country also.

About this time, the white potato industry began to strike a number of bad years, with low prices and small yields. Many of the growers began to look around for another crop to replace potatoes and the tomato was found to fit into the crop rotation to a better advantage than any other that could be grown.

This situation brought another factor into the tomato game, the big scale producer. Farms that formerly grew 20 to 30 acres of potatoes now took up tomato growing on a large scale basis. Instead of 30 acres of potatoes, the order was changed to 15 acres of potatoes and 15 of tomatoes.

Another problem then arose. The potato grower had been accustomed to using all of the labor saving equipment that was available. He had been accustomed to the planter, the sprayer, the digger and even the grader. When he turned to the tomato, he found the sprayer about the only piece of labor saving machinery available. All he found was a series of back-breaking jobs from the time the plants were put out with a shovel until the tomatoes were ready to pick. This was all very discouraging and it was probably the beginning of a number of changes that have come over the industry.

Growing the Plants

One of the most important changes that have come over the late tomato growing business in

the last three or four years has been the method of growing the plants. Not so long ago, practically all the plants were from seed sown in the open field about the first to the tenth of April. This would permit the seed to come up at the early part of May when all danger of frost was over. These plants would be ready to go into the field around the last of the month. Some years, when the ground was cold and the sky cloudy, the plants would not be ready for the field until the tenth to the middle of June, and at times it was getting nearer the first of July before the last of them were put out.

When the county agents demonstrated that much larger yields could be secured from earlier set fields, growers began to adopt other methods. Hundreds of hotbed sash were bought by the more progressive growers and the early plants started in cold frames. This gave the growers, plants that were ready for the field late in May and, in some instances, they could be set around the tenth of that month.

The past two years have seen another forward step in the plan of growing tomatoes. With the introduction of the Marglobe variety and its acceptance as the standard second early variety of the big commercial producing section around Swedesboro, we find the late tomato growers adopting the same methods in the growing of good plants that are used by the commercial growers. They are building special flue heated plant beds for the starting of the seedlings. After the plants have put out the rough leaves

The Row on the Wallabout Market

CERTAIN conditions existing on the Wallabout Farmers' Market in Brooklyn have for a long time caused a feeling of righteous indignation on the part of Long Island vegetable growers using that market. These conditions were: First, the presence of speculators whose activities were believed by the farmers to cause lower prices for their produce; second, the necessity of arriving at the market at about 6 P. M. in order to be sure of getting a desirable location in the free-for-all rush which occurred at 6:30 P. M.; third, the necessity of paying for water to fill truck radiators during cold weather; and fourth, the absence of covering over the stalls which resulted in discomfort, inconvenience and loss of produce during bad weather.

Following a number of farmers' meetings about a year ago and the appointing of two committees—one from Nassau County and one from Suffolk—to represent growers, a plan was drafted by Commissioner T. F. Dwyer of the New York City Department of Markets and the committees, whereby producers would rent their stalls on a yearly basis, to be reserved for them up until midnight. Farmers usually come on the market in the evening, do some selling and then close up their load until 4 A. M. when most of the business is done. It is believed that this system of permanent stands will in itself put some curb on speculators, and, in addition to this feature, Commissioner Dwyer plans at the earliest possible moment to provide running water at convenient spots around the market and to provide roofs over the stalls to protect loads from damage by rain.

Although the majority of Long Island vegetable growers favor this plan and commend Commissioner Dwyer for his courage in inaugurating it, some opposition has developed. In the first place, as might be expected, the speculators do not favor the new plan, neither do the handlers and watchers who are hired by farmers to watch their trucks and help unload them. Allied with this opposition are a few sincere producers, representing however a decided minority of those using the market. The vegetable growers who favor the new plan state that it will now be possible to leave their farms from two to three hours later and that a permanent location where

buyers can easily find them will result in better prices for produce.

For years there has been much discussion but no action about improving the Wallabout Market and we doubt if any plan could be proposed that would satisfy everyone. Commissioner Dwyer has made an honest attempt to improve the situation. He has won the confidence of the majority of the Long Island vegetable growers, has the support of both Nassau and Suffolk County Farm Bureaus, and best wishes for success from AMERICAN AGRICULTURIST. With such support we do not see how he can fail.—H.L.C.

Cheap Wheat and the Federal Farm Board

THE Federal Farm Marketing Act was passed and the Federal Farm Board established primarily to help the western grain grower. Among other things, the Board made heavy purchases of wheat last year through the Grain Stabilization Corporation, and it is reported that the Board still controls some 60,000,000 bushels of wheat of last year's crop in storage. In fact, the Board had to sell a small portion of it lately because of lack of storage facilities. This wheat, or at least a part of it, was bought around \$1.18 to \$1.20 a bushel, and now the market price is about 70 cents on the farm, the lowest price for wheat in a generation. It is said that the Federal government stands to lose about \$15,000,000 on its wheat purchases.

Wheat harvests through the West are in full swing. There was a large acreage, with good yields, resulting in another tremendous surplus, so Senators Allen and Capper of Kansas have been to the Federal Farm Board and to President Hoover himself urging the purchase by the Board of at least 100,000,000 bushels of wheat in order to stabilize the price. The government rightly refuses to make further purchases, so the Farm Board is coming in for severe and scathing criticism from the wheat growing sections of the West.

There should have been no wheat purchasing by the government in the first place. This unfortunate situation is just another illustration of what happens when the government tries to fix or stabilize prices. Fooling with such a situation is just like monkeying around the business end of a mule—there is almost certain to be a tremendous back kick.

When the Farm Board started to buy wheat, Kansas and other farmers thought their troubles were over, so they proceeded to plant bigger acreages than ever. When there is a surplus of any crop, it is just plain common sense that raising or stabilizing the price would increase the surplus still further.

When the Farm Board sticks to its main job of backing and encouraging the development and work of good cooperative organizations run by the farmers themselves, then it is on the right track. But when it tries artificially to fix or stabilize prices, well, all we have to say is that we hope it stays away from agriculture of the East with such policies.

Did You Ever Thresh with a Flail?

ONE of the most interesting places on the State Fair grounds is the Witter Farm Museum, built by the State under the leadership of the New York State Agricultural Society. In this museum is gathered already a rare collection of early implements and products which thousands of farm people view with interest every year at Fair time. Cooperating with the Fair authorities, the State Agricultural Society also conducts each year demonstrations of the early home and farm handicrafts, such as weaving and spinning, shoemaking, and many other activities practiced by the early farmers.

The program for this year now is being organized, and Charles H. Baldwin, president of the Agricultural Society, and Jared Van Wagenen, Jr., secretary, are very anxious to get your

cooperation in finding an old-fashioned water wheel, and in holding a grain flailing contest. A wooden, overshot water wheel, such as was once used in literally thousands of grist mills, is what is wanted. If you know of such a wheel, communicate with Jared Van Wagenen, Jr., Lawyersville, New York.

If you think you can use a flail as well as your great-grandfather, then why not enter the old-time flailing contest? Each contestant will be given a certain number of bundles of rye grain which will have to be unbound, spread on the floor, threshed with a flail, and the threshed straw rebound. Substantial prizes will be given to the winners. If interested, get in touch with Mr. Van Wagenen.

Time for Good Judgment in Sheep Business

THESE are rather bad days for sheep farmers. Good, fat sheep have sold recently as low as \$3.00 per cwt. in leading markets and wool prices are discouragingly low.

But the wise old shepherd who has followed the business for a lifetime has seen a good many ups and downs come and go. He knows that this is not the time to lose his head and further increase the bad markets by selling out his flock. It is the time to hold on, improve the flock as much as possible, and wait for the pendulum to swing the other way again.

Here Is Something to Shoot At

IT is a far cry indeed from the wild cow who produced a few pounds of milk for a calf in the spring of the year to the modern, high-powered individuals, like the daughters of Matador Segis Ormsby, owned by Carnation Milk Farms at Seattle, Washington.

Four of these daughters have just completed a year's test. The lowest producer among these, and the only one to make less than 900 pounds of butter, made 899.2 pounds of butter from 20,461.8 pounds of milk, at two years and five months of age, milked three times daily. The second daughter, a junior two-year-old, milked four times a day, made 1,171 pounds of butter from 28,329.4 pounds of milk, a record for her class. Another daughter, still on test, made a total during the first three months of 10,873.7 pounds of milk, containing 477.44 pounds of butter. At the rate this heifer is going, she would produce over 43,000 pounds of milk and over 1,900 pounds of butter this year. Of course, she cannot continue at this rate.

These record animals are exceptional, but nevertheless they are illustrations of the great power for breeding which is in the hands of every dairyman whether he owns grades or purebreds. Just one good bull can change the entire business status of any dairyman.

Eastman's Chestnut

EVERY farmer knows that in all the business of America, there is nothing more inefficient or absurd than a part at least of our food distribution system. Go out on Long Island, for example, right in the heart of the most intensive potato and vegetable growing districts in the world, and if you can buy Long Island vegetables at all, in the stores, it will often be after they have been trucked to New York handled through the commission men and wholesalers, and trucked back to the retail stores for local consumption.

This fact is well illustrated by the following story:

Country Boarder: "I suppose we'll be getting some of these nice fresh eggs for breakfast."

Farmer: "Yep, these very eggs, but not till ye come down here next year. Ye see I've got to sell them to the local commission man, and he sells them to the jobber in the city, who in turn sells them back to the fellow who runs the country grocery, and I buy them from him."

How Do You Spend Your Leisure Time?

Prize Letter Winners Say "Ride Some Hobby Hard"

EDITORS' NOTE—We are sure you will agree with us that it is an inspiration to read these letters on "How I Spend My Leisure Time." We wish that space would permit our printing all of the large number that we received.

A life that has no fun of the right kind in it is a life badly spent, and there is no life, however hard, that cannot be made pleasanter and happier by a proper use of spare time.

Read these letters and you will agree.

We want to express our appreciation to all of those who took part and sent in interesting letters. We hope to print more sometime later.

Purebred Cow Pulled Her Out of Rut

First Prize Winning Letter

HOW was I to find a little leisure time? The first five years of our married life my husband peddled milk and ran a large dairy farm. It seemed all I knew was work, babies, hired men, dirty milk bottles and cows.

Queer as it may seem, it was a purebred Holstein cow that pulled me out of life's rut and gave me those coveted hours of leisure. My husband signed for a Holstein journal and joined a cow testing association. After reading the journal, I invested my year's turkey money in a purebred Holstein cow. In the cow testing work, figures showed me that my cow cleared me, above her feed bill, \$258 for the year. Holsteins were no longer to me just cows, but a hobby.

We bought a young herd sire. Last year as a senior yearling, he carried off the blue ribbon at four fairs, including our own State Fair. This year we showed some of his calves, and it's fun for all the family to brush and clean and watch them grow.

One can always find time to ride a hobby, so we joined the Holstein Club, and attend their meetings and annual picnic. Our hobby also furnishes us a vacation at the State Fair and other fairs. We no longer peddle milk but have bought another farm, a backroad farm for pasture.

After a hard day's work, we take a picnic supper, blankets, books and a two mile ride to see our heifers. The children pick berries or flowers, we read or rest, listening to the wind sobbing through the pine trees, or admire the changing beauty of the summer sky as the sun sinks to rest beyond the wooded hills.

Thus many hours of leisure, profit and pleasure have been ours, just because we are "Hobby Riders."—MRS. C.H.F., New York.

* * *

What Better Hobbies than Flowers and Birds?

Second Prize Winning Letter

MY time off has to be taken in small doses, a few minutes now and then, sandwiched in between milk cans, chicken feedings, and the like, while I keep track too, of my three year old who loves to wander in field and pasture for flowers.

"A new one for us list, Muggie," he says, as he deposits a handful of blossoms on the kitchen chair, and extracts a special flower for my inspection. Monday it was bladder campion with its melon-like calyx; today it was blue eyed grass. Our flower list numbers eighty-nine already, and we'll make it ninety tomorrow. So we study flowers together for a pastime. And when my school boy says, "There is something in the lunch box for you, Muggie," I am almost sure that he has found a new one.

We watch the birds, too. I leave my breakfast work for a minute to see what the "White Sparrow by us maple tree" can be. A glance through the window shows a nuthatch, and we put him on our bird list with a B after the date to show who spied him first.

A bird whistle calls, and I take a moment to catch the flash of the first oriole—it brightens the whole day.

"Witchity-witchity-witch" calls from the rose bush; he calls and calls, and finally I snatch time to answer the

summons and see again the little masked warbler from Maryland.

But the most surprising and obliging feathered visitor this spring was a little "all blue-bird"—the indigo bunting, who sat for a few minutes at the foot of the big maple tree outside our dining room window. He left with us a mental blue-print of nature's beauty such as a whole week of vacation might not afford.—MRS. H.B.E., New York.

* * *

Variety Is the Spice of Life

AT last baby is asleep, morning's work is finished, two little sons are out of doors, and it is 9:30 o'clock—one whole hour and half to use for myself!

I dash to my nook on the daybed and grab my book or magazine and immediately I have forgotten that I ever had a care or worry. What a gift it is to be able to thoroughly enjoy one's self reading another's experiences and to be able to gain advice that will benefit our labors and lighten our work. How refreshed we feel, even if for a few minutes we completely relax our bodies and at the same time obtain a new slant on life.

During some of my leisure time, I try to give each member of the family a special attention—a romp or new toy for baby; some different pictures or a new way to build with blocks for two year Kenneth; another alphabet letter or new game for three year Donald. Then for husband there should be any amount of time to discuss mutual interests and events.

Oh, there are so many extra things for me to do—letters to be answered; telephone calls to make; articles to be sewed; radio programs to be heard; flowers and fruit to be gathered and dozens of little tasks, too numerous to mention. Variety is certainly the spice of life, and I truly enjoy finding something new and interesting to do each day.

Of course, I want an entire change of scenery occasionally. A sermon every Sunday certainly recreates us, if we only give it a fair chance, and grange twice a month gives me a different outlook and also entertains.

Best of all my outside interests are the community parties. Quite frequently we all meet and play cards, visit, eat and have a good time.

How wonderful it is to have fun every day, to conquer our troubles, to over-

come our evils and to live a full healthy, happy life.—MRS. L.B., Pennsylvania.

* * *

She Grows Flowers for Fun

IN summer, gardening is my hobby. Since my garden is near the back door, I can run out and pull a few weeds in spare minutes, or make the acquaintance of the flowers that have opened over night when I go out in the morning to fill the hoppers on the pullets' range. While busy in the kitchen, I can enjoy my lovely flowers every time I glance outdoors. Evenings, after darkness has put an end to work, what quiet joy to sit on the porch and breathe the fragrance of the garden!

At first, I was interested only in the flowers. Then color gained my attention. I read everything I could about color harmony and tried out various color schemes, using Nature's paintbrush to make my garden picture. Gradually I learned of landscape art and the proper use of shrubs, trees and lawn to make a setting for the home.

Curiosity led me to learn to which wild flowers my garden favorites are cousins, and next to delve into their pasts, so I could know whether a flower originally grew wild in China or the Rocky Mountains.

When I began gardening, I could raise only the common annuals. Reading bulletins and books, advice from other gardeners, and practice taught me how to propagate by cuttings, divisions and slips, as well as the trick of raising from seed those temperamental perennial beauties so frail as infants though so lusty when grown.

Half the fun of gardening is to exchange plants and seeds with other flower lovers, to visit their gardens and talk "flowers". I have begun a number of friendships that way.—MRS. H.R.B., New York.

Happiness from Painting

WHILE away at boarding school I, being a poor girl, was allowed to do my own washing. One of the teachers requested me to do hers along with mine, which I did, and was delighted to earn a little money.

With this money I took nine lessons in oil painting which has resulted in giving me much pleasure all through my life. I have been married twenty-five years, have taught school twenty-

eight. During this time I did my housework, baking, sewing, washing and all, but still found time to do my loved work, painting. Often, when I sit down for a few minutes, I draw something which later I paint. Sometimes I so manage my housework that I have time to paint all day, then again half a day, sometimes not more than an hour or two.

By working in this way I have been able to decorate the walls of my home with oil paintings and water colors, the latter being something I took up without lessons. Where so many have celluloid birds hanging in their windows I have birds and butterflies made from drawing paper and painted on both sides. Even my kitchen table oil cloth is decorated with roses which I drew and painted.

I paint on dishes, bottles, glass tobacco jars, hats, dresses, sofa pillows tops, postal cards, etc. In this way I get much enjoyment, and it is a great financial help, as I sell many of these things. I have also given painting lessons three summers.

I feel that this has made my life richer, deeper, better and have no reason to regret that I gained all this by washing a few soiled clothes.—MRS. A. M., New York.

* * *

Fun from Collecting Stamps

COLLECTING postage stamps is a fascinating, instructive and inexpensive pastime. It is said that King George of England has the largest stamp collection in the world and that it affords him much pleasure.

While in my collection are a goodly number of foreign stamps, my keener interest is in the various United States issues of which there are more than many people, perhaps realize.

In my collection are twenty different two-cent stamps. During the past few years, a number of special two-cent stamps have been issued; the Sesqui-Centennial, Washington at Valley Forge, General Sullivan's Expedition, Edison's Golden Jubilee, Ohio River Canalization, General Wayne's Battle of the Fallen Timbers. This year, there is the Massachusetts Bay Company, 1630-1930. Each of these stamps commemorates some noted event in our nation's history and now aviation has given us the air mail stamps.

The oldest stamp in my collection is a green three cent stamp bearing the picture of Washington. It was carried in the mail fifty-three years ago.—MRS. J.W.K., Pennsylvania.

* * *

Mounted Wild Flowers

WHEN I was a student at the Trenton Normal School, I pressed and mounted two hundred different kinds of wild flowers. Now after forty years, it is one of my greatest pastimes, to take a walk to the farthest end of our farm where there are swamps and woods of about twenty acres. I enter this secluded spot in two ways, but on my return trip I emerge from a different place every time.

My object in going to this place is to find as many flowers as possible like the ones I pressed so long ago. Sometimes I find as many as a dozen in one trip. Occasionally, I come across one I have never seen. Then comes the task of tracing it. Thus far, I have found one hundred fifteen of my old friends.

In the fall of the year I look for pods, cones and creeping pine, in fact, anything I can find in plant life.

There is a stream of water running through this land and on a warm and rainy day I fish in this stream and sometimes am fortunate enough to get a shiner or a trout.

In the winter, I do a great deal of reading. When real tired I like something in the nature of fiction and enjoy riddles and solving puzzles.

So I find, even if one has very few associates in the country, one can be happy if she knows how to fill her leisure time; and thus, when pleasantly occupied, the days, weeks and years pass all too quickly.—MRS. E.B., New Jersey.

The Song of the Lazy Farmer

ain't so worse when you can have so nice a nurse. I'm frettin' now for fear I will, too soon git over bein' ill, it's pleasant here with not a thing to do but just to rest, by jing, and visit with that nurse of mine, an operation sure is fine!

I HAD to stay in bed a spell until my abdomen was well where that there doctor felt about a-gittin' my appendix out. Of all the places I have been the hospital that I was in was most expensive, I won't tell how much I spent a-gittin' well. The bed was soft, the food was good, the doctor told me that I should be thankful I was still around instead of buried in the ground. But yet, when I have paid my bill, my banker's sure to have a chill at that there overdraft he'll get, a-payin' it will make him sweat.

This place is hard upon my purse, but I have got a pretty nurse, she holds my hand and tells me that, each day I'm puttin' on more fat, she says she'd never had a gent so handsome and intelligent, to be a patient on her floor; I've come to like her more and more, an operation

BIGGER SUMMER MILK CHECKS with B-B 20% Hi-Test Dairy Feed

WITH green pastures, cows need a balanced ration for top-notch milk production. And with pastures slowly drying up, they need it more than ever.

Feed B-B Hi-Test Dairy Feed now. This economical 20% protein feed contains the right variety of minerals, vitamins and other needed milk producing ingredients. B-B Red-E-Mixt is another excellent 20% dairy feed for summer use.

We Guarantee Most Production

The perfect balance of these feeds insures a longer lactation period and perfect physical condition. Feeding it now means maximum production both now and later on.

We guarantee B-B Dairy Feeds most productive per dollar of feed cost—or money back.

BULL BRAND FEEDS
DAIRY AND POULTRY

WHY...of all SILO FILLERS Bought in Wisconsin 40% are GEHLs

Wisconsin dairymen, owning 20% of the silos of the whole U. S., appreciate the GEHL cutter's emphatically superior points, including its big capacity at low speed, light running and clean cutting due to nearness of knives to rollers.

Positively self-feeding, non-clogging; easy knife adjustment; gears running in oil; improved fan blade attachment; throws MORE green corn at only 500 r.p.m., a safe speed requiring less power.

Power Cost as
Low as \$1.75

—per silo, a challenge record for low expense. 5 h. p. motor or 2-plow tractor runs the GEHL like a top. Save regrets by not buying any cutter until you get our catalog and name of nearest dealer. Write today.

A UNADILLA SILO will boost your milk profits all next winter!

Stored safely away in a Unadilla Silo your corn will be the juiciest, most palatable and nutritious green feed possible to provide in winter. Appetizing feed which will increase milk flow and profits and save cost of dry feeds.

If you are facing a short hay crop make the most of your corn crop by harvesting it into a Unadilla. Your stock will appreciate and respond generously to the change.

Write at once for large illustrated catalog and prices. Shipment of any size Unadilla can be made at once in either Oregon Fir or Spruce. Liberal cash discount for cash on delivery. Time payments also. Address,

UNADILLA SILO CO., Inc.
Box B Unadilla, N. Y.

We are sales agents for Papec and Rowell-Trojan Cutters in non-conflicting territory. Write for catalog and prices.

A.A.'s Western New York Farm and Home Talk

A Good Growing Season

By M. C. BURRITT

NINETEEN-THIRTY continues to be one of the best growing seasons in many years. Practically all crops in Western New York appear to be above the average at this season of the year. Wheat may be considered an exception

M. C. Burritt

as the stand is generally very poor. There are some poor stands of tomatoes and cabbage but generally tomatoes, cabbage, beans, corn and spring grain give promise now of excellent crops. Orchards too, look the best in many years and have made very good growth although the apple crops may not be as large as it at first appeared.

It has been a good season to get results from fertilizers. There has been enough moisture to make fertilizer available and not so much as to make the excess water a limiting factor in growth, as happens in some years. Applications of 500 pounds of 5-20-5 on cabbage and of 1000 pounds of 4-12-4 on tomatoes are already quite apparent in the rapid vigorous growth of plants as compared with the much sparser slower growth of unfertilized fields or those with light applications of low analyses. The amount of fertilizer used per acre on these intensive crops is increasing every year. And insofar as lack of soil fertility for maximum growth is a limiting factor in the size of the crop this is good practice. The cost of preparing land, setting the plants, cultivating, overhead, etc. are all about the same whether the yield is small or large.

Nitrogen for Apples

I have been using a nitrogen carrier on apple trees for several years in the way of trial and experiment. Up to this year applications of from six to eight pounds to 28 year old Kings in sod against a check for three years has shown slight but unimportant gains. But this season nitrogen applications are everywhere apparent in the size and color of the foliage and the size and amount of the fruit. The contrast of the King rows where the effect is perhaps cumulative in part is especially striking. Twenty Ounce, Wealthy, Baldwin all show the same results and where no nitrogen application was made foliage is sparser, lighter in color and trees have made less growth.

I am somewhat at a loss to account for these sudden effects. They may be

in part accumulative, but not altogether, because trees well fertilized and in good general condition show results, too. A dry season early without the early water saturation of the soil followed by enough but not too much well distributed rainfall no doubt has been the main cause. Also I have been gradually changing over my system of orchard practice from cultivation to sweet clover and alfalfa sods. I have thought that this fact explained my failure to get results from nitrogen. Now the sods are running out after three or four years and nitrogen may be giving better results. I shall watch comparative yields with much interest.

Western New York will have the crops to put it back on its financial feet

Songs that Mother Used to Sing

Believe Me, If All Those Endearing Young Charms

By DAVE THOMPSON

Believe me, if all those endearing young charms,

Which I gaze on so fondly today,
Were to change by tomorrow, and fleet in your arms,

Like fairy gifts fading away:
Thou would'st still be adored, as this moment thou art,

Let thy loveliness fade as it will;
And around the dear ruin each wish of my heart

Will entwine itself verdantly still.

It is not while beauty and youth are thine own,

And thy cheeks unprofaned by a tear,
That the fervor and faith of a soul can be known,

To which Time will but make thee more dear;

No, the heart that has truly loved never forgets,

But as truly loves on to the close;
As the sunflower turns to her god when he sets,

The same look which she turned when he rose.

THE words are written by the Irish poet, Thomas Moore who was born in Dublin, Ireland, May 28, 1779, and written by Moore and published by John Power, manufacturer of Military Music Instruments, Music Seller & Publisher.

These men wrote and published many tunes which we all remember among the songs that mother used to sing. As much remembered and loved as the one above, are: "Tis the Last Rose of Summer"; "Oft in the Stilly Night"; "The Harp That Once Through Tara's Hall"; "The Time I've Lost in Wooing". All of these Irish Melodies published by Power, and written by Moore over a period of 30 years; interrupted but once by a short disagreement between the author and the publisher, were written to fit old Irish Airs.

Used Old Airs

"Believe me, If All Those Endearing Young Charms," was written to the tune of "My Lodging, it is on the Cold Ground."

Tom Moore's feeling toward the purpose of his work in composing words in keeping with the spirit of his time for these old Irish Airs is expressed in the prefatory letter to the Marchioness Dowager of D—: "It has often been remarked, and oftener felt, that our music is the truest of all comments on her history. The tone of defiance, succeeded by languor or despondency—a burst of turbulence dying away into softness—which is naturally produced by the efforts of a lively temperament to shake off, or forget, the wrongs which lie upon it; such are the features of our history and character, which we find strongly and faithfully reflected in our music."

A Quarrel

The Irish Melodies were very profitable to Moore, giving him a dependable source of income through many years of his life, through his arrangement with Power; and that they made money for Power, in turn, is shown in

again. But will it have the prices? This is what is worrying farmers now. Let us hope that wheat prices are not an augury of what may be expected. The cabbage outlook is the most discouraging for the large acreage is off to a good start with good and frequent rains. Is three dollar cabbage in sight? Growers with contracted cabbage, tomatoes, peas, beans, corn, etc. are in the strongest position. Apple and other fruit prices, especially peaches ought to average well. A New Jersey fruit and vegetable grower who has already harvested lettuce, spinach, early cabbage and a few early apples writes "I never knew such a low price year since Cleveland's time. It was sure bad then. But I feel all will right itself in the near future."

I do not write this because I feel pessimistic but rather to caution against the over optimism which good crops is likely to engender. Overproduction of crops, unemployment and uncertainty in business and the rising price of gold is a bad combination and should spell caution against further expansion and counting any unhatched chickens.—Hilton, N. Y., July 13, 1930.

a remark of the publisher relative to several long poems which Moore sent for publication, written during times when he should have concentrated upon the Irish Melodies. About these long poems, Power said: "I do not want such literary efforts. I want Irish melodies, or simple ballads, like the Canadian Boat Song, which will sell and leave me a profit from which to pay Moore."

Personal appearances in highest London society were arranged for Moore every summer during the height of Moore's popularity, because it seemed to Power to be good business. Moore's songs were designed for the men and women of England's capital, and their popularity, and hence their sale, was increased by the poet himself who spent a full month every season, dining among the nobility, and singing his songs. He had a good voice, and accompanied himself on the piano. He was vivacious, a keen wit and jolly good fellow, small, handsome in appearance, a dandy in dress, and loved nothing better than the time he had to devote to this part of his business life. Being lionized was extremely to his liking. His "Journal" published after his death is one series of entries of dinner dates, who were there—such personages as Lord Moira, Lord Byron, Washington Irving, Rogers—any one or many of the brilliant company of poets, wits, and politicians that peopled London in those days.

Moore was born in Dublin, Ireland—and although all his mature life was spent in England, with 14 months out for a trip to the Bermudas where he had been appointed Registrar of the Admiralty Court; and the United States and Canada; and a few years in France where he went while his affairs were in a temporary financial tangle, he returned often to his home land and added to his store of old Irish Airs which he used in his melodies. Something of his personal appearance may be gained from the description of his dress upon one such visit: "He wore a smart white hat, kid gloves, brown frock coat, yellow casimere waistcoat, gray duck trousers, and blue silk handkerchief carelessly secured in front with a silver pin." He was a small, handsome man, and this dress caused his countrymen to exclaim, upon seeing him: "Bedad, isn't he a darling creature, and doesn't he look like one of the good people!" Meaning, of course, fairies.

Throughout his long, busy life, Tom Moore was devoted to his parents, his wife, and children. His long, regularly sent, and loving letters to his mother in Dublin, have seldom been equaled by one whose career has been so closely associated with the bright lights—although they were candle lights.

In spite of the great amount of time and energy given over to high living, Thomas Moore was a prolific writer—biographies—memoirs—histories—long poems—all taking much of his time and serious effort. Most of those

(Continued on Page 9)

The New England Dairy Market Plan

(Continued from Page 3)

New England milk marketing plan are summarized briefly in the box on this page. The more important ones are explained in the following paragraphs.

Board to Represent All Dairy Cooperatives

From the producer's standpoint, the recommendation to form an overhead organization, to include the New England Milk Producers' Association, the cooperative creameries, and all others engaged in producing milk and cream for sale in the Boston market, is by far the most important. Attempts to get the organizations in New York State together has been tried time and again without result.

Each group of dairymen would be represented on an executive board which would have control of the whole marketing situation from the producer's standpoint. This board would establish a sales plan and contract which would bring about uniformity for all of the groups so that the ultimate price at which the milk is sold would be practically the same to each dealer.

What a wonderful ideal for any market, if this can only be attained! Think of the millions of dollars that would be saved to producers if such a plan could be used in the New York market so that the unnecessary and costly price cutting could be eliminated.

It is definitely recommended also that no creamery or milk producers' organization should sell milk to Boston dealers at one price and then directly to customers of these dealers at a lower price than that fixed by the dealer.

Suggestions for Dealers Also

Equally important were the Board's recommendations to the dealers. These include the reorganization of the present dealers' association so that those dealing in milk and cream may work with one another to increase the efficiency of their business for the benefit of the consumer. Such a dealers' general organization should have proper officers and offices where all prices established by each dealer should be registered and open to the public. No rebates in any form should be allowed and no prices should be changed by any dealer except upon twenty-four hours' notice to the general secretary.

Here again we see these recommendations are aimed against secret price cutting.

The Chain Store Problem

The chain store problem comes in also for a recommendation, which is that there should be established a differential which will allow for the actual saving in the loss of bottles and especially of bad debts and delivery charges saved by the chain stores, and that aside from this differential there should be no further difference between the dealer's retail prices of milk and cream to the consumer and the chain store's retail prices.

New York dairymen will also be interested in the recommendation that all dealers should cooperate with the local Board of Health to exclude cream coming into the New England milk shed, unless there shall be an emergency whereby there is a shortage of cream, in which case these restrictions could be removed temporarily while such shortage existed.

This is exactly what New York State is trying to do in new regulations to exclude western cream.

The Milk Board's recommended plan provides for a Milk Administrator, to be appointed by the Commissioners of Agriculture of the different states, subject to the approval of the dealers and producers. This official would see to it that the different rules and regulations of the producers' and dealers' organizations are properly carried out and in case of disagreement, he would assist in bringing about a settlement.

Provides for a Board of Arbitration

If he is not able to settle the difficulty himself, a Board of Arbitration would be formed, members of which would be appointed by the Boston Chamber of Commerce, the New England Council and the Commissioners of Agriculture.

The Board recommends that changes

(Continued on Page 8)

Strike off the Shackles of Cramped-Style Farming

Large-scale equipment, like the McCormick-Deering 15-30 Tractor and 4-bottom plow shown below, helps you to make the most of your time and energy, and makes you master of all your farm operations.

Lowest Tractor Prices in Years

The economies effected by International Harvester through modern, large-scale manufacture are now being passed on to farmers in the form of substantial price reductions. The McCormick-Deering 15-30 is now selling at the lowest price ever . . . the 10-20 price is the lowest in years.

Features of These Tractors

One-piece main frame. Removable cylinders. High-tension magneto. Impulse starter. Hand brake. Ball-bearing crankshaft. Combination fuel manifold. Speed governor. Adjustable drawbar. Impeller-pump cooling. Thirty-four ball and roller bearings. Alemite-Zerk lubrication. Oil air-cleaner, and many other features.

with

McCormick-Deering Tractors

The big, powerful 15-30 will put your operations on a thoroughly modern, more profitable basis. Its generous reserve power gives you complete control over the important jobs that now limit your progress. It enables you to use equipment of ample size for drawbar, belt, and power take-off. It makes farming easier—more pleasant. It cuts costs—boosts profits.

On smaller acreages the husky McCormick-Deering 10-20 will give the same freedom from the limitations of old-fashioned methods. It puts McCormick-Deering tractor quality within the reach of every farmer.

Any McCormick-Deering dealer will quote you the new prices on the 10-20 or 15-30 McCormick-Deerings. Step in and look over the features of these up-to-date tractors. In the meantime, write for a tractor folder.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
Soft Cheese	2.21	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for July 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Closes 1/2c Higher

CREAMERY SALTED	July 19, 1930	July 12, 1930	July 20, 1929
Higher than extra	36 -36 1/2	35 1/2-36	42 1/2-43
Extra (92 sc.)	35 1/4-35 1/2	34 1/2-35	42 -
84-91 score	30 1/2-35	31 -34 1/2	38 1/2-41 1/2
Lower Grades	29 -30	28 -29	37 -38

The butter market closed a fraction of a cent higher than it did a week ago, although during the week trade showed considerable fluctuation. The speculators have stood by the market very well and as the market closes the situation is reasonably good. For one thing a more confident feeling prevails throughout the trade. Naturally here and there a soft spot has been in evidence, but the more favorable statistical situation more than offsets any temporary and local change. On July 18 the four principal cities reported 59,676,015 pounds of butter in cold storage compared with 53,648,683 pounds on the same week day a year ago. From

July 11 to July 18 the four cities reported an increase in holdings of 4,607,887 pounds compared with an increase during the same period last year of 6,220,488 pounds.

No Change in Cheese Prices

STATE FLATS	July 19, 1930	July 12, 1930	July 20, 1929
Fresh Fancy	17 1/2-18 1/2	17 1/2-18 1/2	23 1/2-25
Fresh Average			
Held Fancy	25 -26	25 -26	27 1/2-29 1/2
Held Average	23 -	23 -	

There has been no change in cheese prices since our last report, although trade has been nothing to brag about. In fact, buying has been of a very conservative nature during the last week due to reports of heavy accumulations during June and a mounting surplus throughout the country, compared with last year. The into-storage movement from ten cities making daily reports totaled 17,813,000 pounds of cheese, compared with 16,366,000 on the same week day last year. The into-storage movement from July 10 to July 17 totaled 540,000 pounds compared with an increase of holdings during the same period last year of 1,036,000 pounds of cheese.

Fancy nearby eggs are experiencing a difficult uphill fight. They are showing increasing strength but any gains they have been making have been accomplished with extreme difficulty due to the abundance of good quality eggs being offered by the Pacific Coast at relatively low prices. The volume of New York City's receipts continues to be heavy. The reports of shrinkage in the West and curtailed collections sounds like the story of "wolf, wolf" to us. Certainly there is no sign of a let-up at the terminals. Eggs seem to roll in as freely as ever. We more or less expected this situation in 1931 but we never expected that it would strike as hard as it has during the present deal. During the early part of the week ending the 19th, eggs accumulated more rapidly than they did during the same period a year ago.

On July 18 storage stocks from the ten markets making daily reports totaled 5,946,000 cases compared with 4,720,000 cases last year. From July 11 to July 18 holdings increased 75,000 cases in the ten cities compared with an increase of 44,000 cases during the same period last year.

Poultry Market Closes Weaker

TURKEYS	20-25	20-25	25-35
DUCKS, Nearby	14-22	14-22	-25
GESE	-12	-12	16-17

The live poultry market was quite a surprise during the early part of the week. Receipts were not abnormally heavy and demand was fairly good, all up until Friday and then somebody pulled the plug out of the barrel and all the goodness drained away. It must have been the heat, for the lack of a better excuse we will blame it on that. Certainly the break and the heat came together. In the express market fowls were enjoying excellent demand up until Friday when the market weakened. Leghorns suffered the most. Broilers by express have held up better than the freight market and they have been enjoying a steady market compared to an irregular freight market. At the close they are inclined to firmness. Just what is going to happen during the week ending the 26th is hard to say. Considerable hinges on the retailers. If they work on a close margin we are going to see a strong wind up on next week's market.

Meats and Livestock

CATTLE—Steers scarce, weak to 30c lower. Cows scarce, steady. Bulls nominal. Two loads around 1370 pounds, med-

ium grass steers \$8.50. Low cutter and cutter cows \$2.50-4.50.

VEALERS—In light supply, steady. Good to choice \$11.00-14.00. Medium \$8.50-10.50. Common \$6.50-8.00.

LAMBS AND SHEEP—Lambs fairly liberal supply, mostly 50c lower. Good to choice \$10.00-10.50. Medium \$7.50-9.50. Common \$5.50-7.00. Medium to good ewes steady from \$3.00-3.50.

COUNTRY DRESSED CALVES—There were light receipts during the week. Heavyweight calves were in the majority and proved hard sellers toward the end of the week. Market closed weak and lower than last week. Fresh receipts per pound: Choice 17-18c; fair to good 15-17c; small to medium 13-15c.

LIVE RABBITS—Fresh receipts light. Demand very slow. Market steady. By the coop, 15-20c per pound.

NOTE—At this season of the year, especially during the extreme heat waves, shippers should ice country dressed calves thoroughly, especially under as well as over the haslet, before shipment. The Health Department of New York City is exerting every precaution in the handling of dressed meat during the hot weather. Dressed calves arriving in New York City must have the liver, lungs, heart and spleen naturally attached unless killed under Federal inspection. Calves should be well cleaned before and after killing. Any calves received dirty or with dirt matted in their hair will not pass inspection of the Health Department.

The above quotations taken from the weekly letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Observers in the American and the Canadian Northwest report that wheat yields will be lower than previously estimated as a result of the continued hot weather. Rust is reported to be at work in North Dakota although the premature ripening of the crop may beat out the rust. At the same time that the reports of crop damage are arriving from our Western areas, European reports indicate heavy crop losses due to extremely wet weather in France and Germany. This has resulted in increased export buying which has started the market up on an upward swing.

Wool

The wool market has been slow. New York better fleece wool, unwashed, fine per pound 21-30c; 1/4 blood 23-29c; 3/4 blood 24-29c; 1/4 blood 24-29c; low quarter blood 25-27c; common and braid 23-25c.

No. 1 Hay Scarce

As the week came to a close there was practically no No. 1 hay in New York City. The offerings consisted of medium grade and low grade stock in small bales. Late receipts were light but accumulations in Manhattan were heavy. The demand has been very weak and as a result the market has been barely steady. No. 2 timothy has sold as high as \$26 in large bales. Other grades of timothy are as low as \$15. The best mixtures bring \$25, others as low as \$18 and \$19.

Fruits and Vegetables by Radio

Once again we urge our readers to make use of the daily radio market reports. The market on perishables fluctuates so rapidly and over so wide a range that it is impossible to give any comprehensive idea of what is taking place.

During the hot weather at the close of the week ending the 19th the market reported heavy losses in perishables. It is

always advisable especially during these times to pack produce and ship it that it will suffer the least deterioration. Well packed lettuce stood the hot weather fairly well. Lettuce that was jammed into crates in any manner was hard to handle except on a scoop shovel.

The New England Dairy Market Plan

(Continued from Page 7)

in the retail and wholesale prices should be as infrequent as possible. To this end it is suggested that only two prices for the entire year be established, a lower price for the flush period and a higher price for the remainder of the year.

Everyone who understands the market knows that it hurts milk consumption to change the price frequently.

It seems to the writer that these fundamental recommendations are right, and that organizations and dealers in every milk shed, and especially in New York, must eventually come to some such plan.

As suggested above, however, the weak place in the scheme is the fact that milk producers themselves have too little part. Too much is left to outside business men, particularly in the case of the Milk Administrator and the appointment of an Arbitration Board. No milk sales plan is likely to be satisfactory to producers in which dairymen and their organizations do not have full power to act.

Farm News from New York

Potato Tours Occupy the Center of the Stage

ON August 4th and 5th, there will be a large meeting of both certified seed potato growers and those interested in buying certified seed, on the occasion of the annual Blue Tag Potato Tour being conducted by the New York Co-operative Seed Potato Association, Inc.

The Tour starts from the Court House at Cortland, Monday morning, August 4th at 8:30 standard time. During the first day fields of Green Mountains, Cobblers, Russets and Rurals under certification will be visited and methods of certifying and developing high producing strains will be explained at various stops by college men. One of the outstanding stops will be at the farm of H. D. Forward at Camillus, who is a 1929 Premier Potato grower and Master Farmer.

Monday night will be spent at the New York State School of Agriculture at Morrisville, where a banquet will be held. Dr. A. R. Mann, Dean of the New York Agriculture College is expected to be the chief speaker of the evening.

During the second day the tour continues to other central New York seed potato farms including that of A. G. Allen of Waterville, who was last year crowned "1930 State Potato Champion" at the Syracuse Show.

The afternoon of the second day, August 5th will be spent at Fuller Farms, Hubbardsville, where a few timely talks will be given and where some up to date potato machinery will be shown. Seed potato growers are giving special attention to producing high quality seed and manufacturers of potato machinery are co-operating in helping them get machinery which will handle potatoes efficiently, economically and without losing.

Empire State Potato Club Tour

THE program committee of the Empire State Potato Club of which Wm. Stempfle of the Steuben County Farm Bureau is chairman, is working on plans for a banner tour on August 19 and 20. This is the second tour for the club but the first tour of its kind in New York state, in that the entire emphasis is to be placed on the use of machinery for the production and handling of this important New York state crop. The start will be at nine thirty, eastern standard time on the farm of Streeter and Cross at Pike, Wyoming County, on August 19th. Here one of the field tests in co-operation with the Wyoming County Farm Bureau and the New York State College of Agriculture is being conducted.

Other stops will be on the farms of Fred Walkley at Castile, Lewis Toan at Perry, Call and Britt at Morganville near Batavia, Porter and Bonney at Elba, ending for the day with a banquet at the Hotel Hamilton in Batavia.

The second day's program will be entirely on the farm of K. C. Livermore at Honeoye Falls.

Manufacturers of machinery used in the planting, fitting, harvesting, and grading of the potato crop have been assigned plots on which they may demonstrate their machines.

A program will be conducted in the afternoon on the production and handling of potatoes by men who are making a success of the business. In order that the large crowd may hear what the speakers have to say an electric amplifier from Cornell will be installed so as to make the program agreeable to both the speakers and the audience.

Seen and Heard on the Long Island Potato Tour

"JUST as it looks now, and unless something happens in the meantime or blight sets in or we have an awful lot of leafhoppers or something, we're going to get a good crop." Thus guardedly and in many cautious variants potato growers on Long Island from Mineola to Orient expressed themselves as to their prospects for the season during the Long Island tour the last week in June. We all knock on wood and write D. V. as a qualification for a promise to go somewhere or do something in the future and potato men who have been in the business long are inclined to make such provisos double strength. Nevertheless the tone of voice and the glint in the eye of

most of the growers did not indicate depression. Speaking somewhat as a veteran Long Island potato tourist, the writer has no hesitation in saying that the general appearance of the fields was the best he has ever seen on the eight or ten trips which he has made during previous years at just about the same time in the season.

Speaking from the certified seed angle none of the representatives from the states which had sent their seed to the Island felt the need of finding a place to hide or catching the next train back. The samples in the various demonstration plots looked good. There were exceedingly few cases of high disease count. Especially remarkable were the results of the special test run by Professor Hardenburgh and the farm bureaus where samples sent direct from various certification states as representative of large seed acreages being grown this year were particularly clean. Only eight out of nearly fifty samples showed any disease at all.

If ever a section of country had its full quota of variety Long Island is it. From that part which is a portion of the greatest city in the world to the areas of uncleared scrub growth in the interior, from the most "ritzy" estates of the millionaire to the fisher's cot—if we may get poetical—on the beach or to the Indian reservation by the Shinnecock Hills, the Island is filled with constant surprises and changes, and by no means the least of these comes by constantly breaking out from either wooded sections or closely built up residential sections upon vistas with potatoes as far as the eye can reach—and see what is on the ground, at any rate. "How far do those rows run," we asked a man who spoke of his field as a rather small one. "Oh, over to those woods" "How far is that?" "Oh, not more than a mile, I guess". Just a little patch, it took as many as two or three rows to make an acre.

Throughout all this country the tour was skillfully and pleasantly laid out by the Nassau and Suffolk County Farm Bureaus. Some twenty stops were made at demonstrations and at typical fields, and addresses and discussions of spud lore were made by the doctors, the professors, misters and citizens, including Hardenburgh, Hockett, Crosby, Livermore, Fernow and Clayton of the various New York agricultural services, Stuart, and Sherman of the U. S. D. A., Martin, of New Jersey, Dickey of Pennsylvania and representatives of various other states. HAROLD L. BAILEY.

Majority Favor Wallabout Market Change

FOLLOWING recent reports to the effect that 600 Long Island farmers were opposed to the new ruling put into effect at the Wallabout Market by Commissioner T. F. Dwyer on July 1st, Henry Morgenthau, Jr., Publisher of the AMERICAN AGRICULTURIST had a special investigation made. Under the old system a farmer could not engage a regular stall for the sale of his produce and it was necessary for him to be at the market as early as six o'clock in the evening in order to get a desirable location. Long Island farmers have been greatly dissatisfied for a number of years with the inefficiency and confusion which reigned under this system and also because they were compelled to pay extra and unnecessary fees to persons not connected officially with the market or in the employ of the city.

Contrary to many reports we have found that the large majority of the Long Island farmers are commending the stand taken by Commissioner Dwyer and the establishment by him of the new plan. Under the new system real farmers are rented permanent locations on a yearly basis at a reasonable fee. Up to the present moment 180 farmers have applied and have been assigned stalls on this basis. Many of the Long Island farmers believe that by having the same stall every night the buyers will get to know them and their location so that they will be enabled to get from \$15 to \$50 more per truck load for their produce. The plan also will enable the farmer to leave his home two or three hours later and save him the worry

of a last minute rush to get a good location at the market.

If You Can Use a Flail

ON the news page of our July 12 issue we mentioned of a plan which is underway for a threshing contest using old-time flails at the New York State Fair this Fall. In order to determine just how many contestants to expect, Mr. Van Wagenen and Mr. Charles Baldwin of the Department of Agriculture and Markets, Albany, N. Y., are anxious to have entrants get in touch with them at the earliest possible moment. We will be glad to forward inquiries to one of these men, or if you prefer you can write them direct, addressing Mr. Baldwin at the Department of Agriculture and Markets, or Mr. Van Wagenen at Schoharie, N. Y.

Dairymen's League Notes

SHIPMENTS of milk to the New York City and metropolitan area markets for the week ending July 12 were 27,380 cans below the previous week, and 67,000 cans under the same week in 1929. Cream shipments were off 6,861 cans from the previous week and about the same quantity under the corresponding week last year.

Reasons for the slump in milk demand include departure from the metropolis of thousands of persons on vacation, restricted buying power and only moderately warm weather with excessively high temperatures rather lacking. Ice cream sales are reported at 15 to 20 percent below last year, not only in New York City but in other cities of the state too. This is due almost entirely to economic conditions because even during the brief hot spells consumption has not reached normal peaks.

Milk production throughout the New

York Milk Shed is estimated to be 13 to 16 pounds less than a year ago. Much of the decline in production is attributed to the fact that dairymen are not feeding their cattle as they did last year. This is probably a result of the lower milk prices.

G. L. F. Distributes Dividend

THE Grange-League-Federation Exchange is again distributing its annual dividend. For several years now the G.L.F. has never missed payment of its regular 6 per cent dividend on its shares, owned by the members of this farmers' organization. Coming at this time when the agricultural situation is depressed, this cash dividend is particularly appreciated by farmers.

Songs That Mother Used to Sing

(Continued from Page 6)

efforts are forgotten—they live entombed in the volumes of the best public libraries—but if they were all he did, the name of Tom Moore would long have been forgotten.

Irish Melodies—in these verses the poet lives today. Of them he wrote: "With respect to these verses which I have written for these melodies, as they are intended rather to be sung than read, I can answer for their sound with somewhat more confidence than their sense."

And of him, Thomas Walsh, in a brief biography, says: "Tom Moore, the darling of English aristocracy, the wit of fashionable Bohemia, lives for us principally as the pretty Irish lad from Dublin—only the songs which came from his heart are remembered."

Little Recipes for Little Cooks

LESSON No. 17

by Betty

Mother
Is Letting
Me Help
With the
Canning
—It's Such
Fun!

Let's Have a Picnic

THESE hot July days are a wonderful time to have a picnic under the trees in the front yard, or in a nice place along a nearby brook. We had a picnic just the other day and it was such fun! We packed our basket full of good things—mother helped us—and went out under the trees where it was cool to eat. It was loads of fun and everything seemed to taste so good outdoors. Why don't you and some of your friends do it, too?

Dear Little Cooks:

I guess some of you will be surprised to have me tell you how I canned a jar of fruit all myself because you might have thought that was too hard for little cooks. But it's heaps of fun to have a nice jar of fruit to put away all labeled with your own name on it.

I was just crazy for one of my own, but I hadn't quite dared to ask because I was pretty sure mother would say I wasn't old enough yet. But one day I had worked awfully hard helping mother get her berries ready for canning and when she said I was a wonderful help, she gave me a hug, and then I thought maybe she would let me try so I asked her. My! I was happy then, for she said I could.

I canned raspberries, but the same way would do for most any berries, for cherries, currants or peaches or pears. Rhubarb is something almost any little cook could have to try and it keeps well, too.

—BETTY.

My First Canning

Mother had me go to the basement for a pint jar and she had me pick out a new looking cover because she says it never pays to use poor covers or old rubbers in canning for that would mean that our fruit or vegetables might spoil no matter how careful we were.

After I had washed my jar and cover, I took a new rubber and put it on the jar. Then I put in some clean water and screwed on the cover to see if it was going to be tight. I turned the jar upside down and left it there a little while. It didn't leak a bit, so I knew it was all right to use.

Next I put my jar and cover into kettle of warm water and put the kettle on the stove to boil. Mother says boiling makes things clean in a different way than washing and is important in canning.

I knew that I would need some hot syrup ready so I fixed that next. Raspberries take a "medium" syrup, Mother said, so she told me to measure out $\frac{3}{4}$ cup water to 1 cup sugar and put it to cook.

Then I took some fresh, ripe raspberries and looked them over real carefully, to be sure no stems or bits of leaves were left. Then I put them into a colander and dipped the colander into clean water to wash them. They didn't break or mush up that way.

By that time my jar and cover had boiled and the syrup was boiling, too. So I took a pie tin and put it down close to the kettle of hot water. I got a pair of kitchen tongs that mother uses to lift out hot jars. I had a holder handy and I got the jar out without getting burned at all. I carried my hot jar on the pie tin, over to the table and packed it full of red berries.

As quick as I could, I poured on the hot syrup till the jar was nearly full, about one-fourth inch from the top. Then I dipped the rubber in the boiling water and put it on my jar and screwed on the cover quite tightly, because, if I left it real loosely on the jar, fruit juice would bubble out while it was cooking.

Then I took hold of the top of the jar with a holder and lowered the jar carefully into the kettle of hot water that mother used (she calls it a water-bath) and put it over a good fire where I left it till it had boiled for 15 minutes. That is the time most berries need to cook in hot water before they can be quite sure to keep.

Leaving them in longer might make them a mite safer, but the color and taste are better with shorter cooking. I lifted my jar out and tightened the cover up good and let it cool. The next day I looked at it and it was tight and fine so I put a label with the name of the fruit and my own name on it and put it away in a cool, dark, dry place for the winter.

I brought it out and opened it one night when I was getting supper, and when we sat down to eat, of course, everybody wanted to sample some of my canning. They took just a little the first time but then they asked for more and more until it was all gone. I thought it was good, too. Daddy said he was proud of me and that made me very happy.

Syrups for Fruits

For pears, apricots, apples, pineapple, use thin syrup, 1 cup sugar to 1 cup water.

For berries, currants, sweet cherries, peaches, plums, strawberries, rhubarb, use medium syrup, 3 cups sugar to 2 cups water.

For gooseberries, wild plums, sour cherries, etc., use thick syrup, 2 cups sugar to 1 cup water.

Time Table for Common Fruits

Leave the following fruits in hot water bath the number of minutes given after each: apples, 20; apricots, 20; cherries, 20; currants, 20; peaches, 20; pears, 20; plums, 20; rhubarb, 16; strawberries, 15 or 16.

Fruit may also be canned by cooking in an open kettle and packing in hot, clean jars, but we little cooks will find it easier to use my method until we have more experience.

Try a can of rhubarb by just washing and cutting up in pieces and packing rhubarb in clean jars and filling with clear, cold water and seal up the jars tight. Any little cook can do this.

Here's a Picnic Salad

Here is the way I made a good potato salad that looked pretty and tasted good. Try it for a picnic this hot weather.

First I made a cooked salad dressing:

Vegetable salad dressing.	2 teaspoons mustard.
4 tablespoons butter.	Pinch pepper.
1 tablespoon flour.	1 cup milk.
1 tablespoon salt.	$\frac{1}{2}$ cup vinegar.
1 tablespoon sugar.	3 eggs.

Make a white sauce of flour, butter and milk (Lesson 4). To the white sauce add the salt, sugar, mustard and pepper, well mixed. Beat eggs and stir in slowly and add vinegar last. Cook till thick. Cool well before using.

I take cold boiled potatoes and cut them into tiny cubes. I make half as many picnic eggs as I plan to have people to eat the salad. Then I mix the salad dressing with cream enough to thin it so it pours like rich cream. I beat it well in a bowl with an egg beater and add the cold potatoes.

You can add thin slices of onion if you like them (I do) and add nearly half as much cool, crisp, celery cut into thin slices. I also cut several little sweet pickles into thin slices, too.

I mixed the dressing, the potato, celery and onion and pickles all together carefully, so as not to make it "mushy," then I lined a glass bowl with lettuce leaves and put in the salad. On top I smoothed it a little and made holes just large enough to hold the halves of the picnic eggs, yellow side up. All over the top I put slices of pickle or stuffed olives and it looked so pretty. When there are radishes, red ones, I like to make a border of radish roses. You know they taste good at picnics, too.

Haven't you all seen mother make radish roses? She just takes a nice, clean, red radish and begins at the leaf end and cuts through the thick red skin or peel from the top almost to the bottom on four sides. Then with a paring knife she works the peel lose almost to the bottom. This loosened peel makes four petals that stand out like a flower's petals. With these radish roses around the edge, my salad was "as pretty as a picture" they all said.

Meringue or "Goodies"

The next thing I am going to tell you how to make has a long, hard name, "Meringues," but my name for it is "Goodies" and it is lots easier to say. Try to make it and see if the name doesn't fit.

3 egg whites.	$\frac{1}{2}$ teaspoon vanilla.
1 cup sugar.	$\frac{1}{4}$ teaspoon almond extract (if you have it).
$\frac{1}{2}$ tablespoon vinegar.	

I beat the egg whites very stiff, very stiff indeed, and then I add the sugar very slowly and keep on beating with my egg beater all the time. Then I add flavoring and the vinegar and then I beat with my egg beater for 10 minutes longer. It should be stiff enough to stand alone by this time.

Then I put a clean piece of wrapping paper, not waxed paper, on a cookie pan and heap the "Goodie" mixture in little piles like buns, about two inches apart. I bake them in a warm oven. If the oven is hot, the "Goodies" will be spoiled. They should be just very light pale brown at the end of an hour. O, but they are good with ice cream!

When You Can

The Job Is Much Easier if the Tool Fits the Task

IN no other cooking process does it make more difference to have exactly the right tool than it does in canning. Given containers which are large enough to hold the fruit or vegetables while being prepared, sharp knives of the right shape, plenty of stove space and hot water and an adequate canner, the work can be arranged to go smoothly and swiftly. Tools which I find most useful in canning are: sharp, stainless paring knives; measuring cups, both $\frac{1}{2}$ pint and the quart size; measuring spoons; long-handled spoon, either wooden or enameled; colander; funnels, one large and one small-mouthed; flat pan that will hold 6 or 3 pint jars; ladle; skimmer; long-handled fork; canner with racks for jars; jar-lifter. Many, in fact all of these tools can be used for many kitchen processes and should not be charged against canning alone.

Rules for successful canning are: 1. Select young, fresh, tender vegetables or well-grown, firm fruit. 2. Can on day it is picked, especially with asparagus, corn, beans and peas. These vegetables lose their sweet, natural flavor upon standing. Besides that, bacteria multiply rapidly and greatly increase danger from spoilage. Iowa experiments showed that tomatoes which had been held for a day after picking required 35 minute processing while 25 minutes was enough if done the day they were picked. 3. Sort according to size, clean thoroughly and pare or remove skins. 4. Blanch, if necessary, to remove skins from fruit or reduce the bulk of some vegetables. 5. Pack cleaned fruit or vegetables in sound jars (to within $\frac{1}{2}$ inch from the top) add 1 teaspoon salt per pint of vege-

tables and fill the jar to overflowing with hot water. For fruits fill can with syrup. 6. Adjust a new rubber, fasten one clamp over the lid and process according to the length of time needed for the fruit or vegetable. 7. Remove jars from the canner, seal and cool quickly, but not in a draft. 8. Wash, label and store the jars in a cool place.

If a screw-top jar is used it should be screwed tight and then loosened one turn before processing. If the water-bath is used for processing the water should be kept at least one inch over the tops of the jars. This method is satisfactory for fruits and acid vegetables but a pressure cooker should be used for meats and non-acid vegetables in order to make sure of safety from the deadly botulinus organism. The time of processing should be counted from the time the water begins to boil in the water-bath and in the pressure-

Cunning Play Suit

What could be easier to make or to launder than ROMPER PATTERN NO. 2586? It also has the advantage of leaving out arms and legs for the beneficial effects of summer sun. The pattern cuts in sizes 1, 2, 4 and 6 years. Size 4 requires $1\frac{1}{2}$ yards of 27-inch material with $2\frac{1}{4}$ yards of binding. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin, (although coin is sent at own risk). Add 12c for one of the Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

cooker just as soon as the indicator reaches the desired point of pressure. See instructions which come with the canner for the time table.

Recent experiments at Iowa State College proved that by adding lemon juice to non-acid vegetables canned in water-bath, much spoilage after canning could be prevented. Vinegar might be used just as well but its stronger acidity is apt to give a sour taste. The lemon is noticeable only in corn and this may be overcome by adding $\frac{1}{4}$ teaspoonful of soda per pint of corn upon opening the jar.

Varying amounts of lemon juice are used, depending upon the vegetable. A pint of sweet corn requires 2 teaspoonfuls of lemon juice while $1\frac{1}{2}$ teaspoons are sufficient for a pint of asparagus. String beans and Swiss chard need only 1 teaspoon of acid to the pint of vegetable.

The specialists making the acid tests advise processing sweet corn in the water bath $2\frac{1}{2}$ hours for pints, $3\frac{1}{2}$

hours for quarts; pints of asparagus 2 hours, quarts $2\frac{1}{4}$ hours; pints of string beans $1\frac{1}{4}$ hours, quarts $1\frac{3}{4}$ hours; pints of chard 2 hours, quarts $2\frac{1}{2}$ hours.

A delicious uncooked berry preserve which may be used for sauce for ice cream or for winter short cake is recommended by the N. Y. State College

SUNSUIT NO. B391 is ideal for the little child's summer needs and yet satisfies the love of pretty things. It comes in sizes 2, 3 and 4 years, in colors, blue, green, cream and brown. Each little ready-made suit has an attractive motif stamped on it for simple embroidery, the sample shown here being a brown suit with a cute doggie design. Be sure to state color and size with order. PRICE 70c, floss included. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

of Home Economics. Prepare fresh, ripe, perfect fruit (strawberries, raspberries, sour cherries, blackberries or currants) weigh and allow $1\frac{1}{4}$ pounds of sugar for each pound of fruit. Put fruit in a bowl, add sugar and mash with a spoon until every berry is crushed. Cover, stand in a cool place for 24 hours, stirring occasionally. When all the sugar is dissolved, fill clean cold jars with the mixture and seal. The success of these uncooked berry preserves will depend upon every berry being crushed and not canning until every bit of sugar is dissolved.

Old Paint Brushes

I NOTICED your method of softening old paint brushes. I find that they can be softened quite satisfactorily by boiling in a can of vinegar for a few minutes and then washing in warm soap suds. This is a safer way than

Things of Earth

By DOROTHY ROSE

Oh God, no one
Has ever told
Me surely what
The heavens hold,

But now, for things of earth
I give Thee praise,—
For cool blue nights
And shining days;

The morning star
Above a snowy hill,
The ferny woods,
And pines, deep green and still;

For meadow larks
And violets in spring,
For brooks and lovely
Words that sing;

For music, friends,
A home to keep,
For food and laughter,
Books, and sleep.

trying to do it with explosives and everyone has vinegar on hand. Have just cleaned one that had been used for varnish and left exposed until hard.—Mrs. T.J.W.

A LITTLE tea was given for Mother's birthday, so instead of a birthday cake, a large number of cup cakes were iced, and placed on a tray wreathed with smilax. In each cake was placed a tiny taper, and the tray with the lighted cakes was brought in after tea had been served. Each guest took a cake, made a wish for the guest of honor, and then blew out the candle.—A. B. S.

Smart and Youthful

FROCK PATTERN NO. 2592 is chic and delightful in every detail. The flounced sleeve and bolero theme are decidedly youthful in effect while the circular flounce adds grace to the skirt. Chiffon, printed voile, batiste or washable flat crepe would make up nicely in this pattern which can be had in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires $4\frac{1}{2}$ yards of 39-inch material. PRICE 15c.

Wake-up Food

The Indian Drum—By William McHarg and Edwin Balmer

A WEEK passed; Alan, established as a lookout now on No. 25 and carrying on his duties, saw Burr daily and almost every hour; his watch coincided with Burr's watch at the wheel—they went on duty and were relieved together. Yet better acquaintance did not make the old man more communicative; a score of times Alan attempted to get him to tell more about himself, but he evaded Alan's questions and, if Alan persisted, he avoided him. Then, on an evening bitter cold with the coming of winter, clear and filled with stars, Alan, just relieved from watch, stood by the pilothouse as Burr also was relieved. The old man paused beside him, looking to the west.

"Have you ever been in Sturgeon's Bay?" he asked.

"In Wisconsin? No."

"There is a small house there—and a child; born," he seemed figuring the date, "Feb. 12, 1914."

"A relative of yours?"

"Yes."

"One of your brothers' children or grandchildren?"

"I had no brothers," old Burr said quietly.

Alan stared at him, amazed. "But you told me about your brothers and about their being lost in wrecks on the lake; and about your home in Emmet County!"

"I never lived in Emmet County," old Burr replied. "Some one else must have told you that about me. I come from Canada—of French-Canadian descent. My family were of the Hudson Bay people. I was a guide and hunter until recently. Only a few years ago I came onto the lakes, but my cousin came here before I did. It is his child."

Old Burr moved away and Alan turned to the mate.

"What do you make of old Burr?" he asked.

"He's a romancer. We get 'em that way once in a while—old liars! He'll give you twenty different accounts of himself—twenty different lives. None of them is true. I don't know who he is or where he came from, but it's sure he isn't any of the things he says he is."

Alan turned away, chill with disappointment. It was only that, then—old Burr was a romancer after the manner of some old seamen. He constructed for his own amusement these "lives." He was not only not the Burr of Corvet's list; he was some one not any way connected with the *Miwaka* or with Corvet. Yet Alan, upon reflection, could not believe that it was only this. Burr, if he had wished to do that, might perhaps merely have simulated agitation when Alan questioned him about the *Miwaka*; but why should he have wished to simulate it? Alan could conceive of no condition which by any possibility could have suggested such simulation to the old man.

He ceased now, however, to question Burr since questioning either had no result at all or led the old man to weaving fictions; in response the old man became by degrees more communicative. He told Alan, at different times, a number of other "lives" which he claimed as his own. In only a few of these lives had he been, by his account, a seaman; he had been a multitude of other things—in some a farmer, in others a lumberjack or a fisherman; he had been born, he told, in a half-dozen different places and came of as many different sorts of people.

On deck, one night, listening while old Burr related his sixth or seventh life, excitement suddenly seized Alan. Burr, in this life which he was telling, claimed to be an Englishman born in Liverpool. He had been, he said, a seaman in the British navy; he had been present at the shelling of Alexandria;

later, because of some difficulty which he glossed over, he had deserted and had come to "the States"; he had been first a deckhand then the mate of a tramp schooner on the lakes. Alan, gazing at the old man, felt exultation leaping and throbbing within him. He recognized this "life"; he knew in advance its incidents. This life which old Burr was rehearsing to him as his own, was the actual life of Munro Burkhal-

Benjamin Corvet, when he went away, had tried to leave his place and power among lakemen to Alan; Alan, refusing to accept what Corvet had left until Corvet's reason should be known, had felt obliged also to refuse friendship with the Sherrills. When revelation came, would it make possible Alan's acceptance of the place Corvet had prepared for him, or would it leave him where he was? Would it bring him

through enough of the light from the dock to show the name *Stoughton*. It was, Alan knew, a Corvet, Sherrill, and Spearman ship. He moved closer to old Burr and watched him more intently.

"What's the matter?" he asked, as the old man halted and, looking down at the tug, shook his head.

"They're crossing," the wheelsman said aloud, but more to himself than to Alan. "They're laying her up here," he jerked his head toward the *Stoughton*. "Then they're crossing to Manitowoc on the tug."

"What's the matter with that?" Alan cried.

Burr drew up his shoulders and ducked his head down as a gust blew. It was cold, very cold indeed in that wind, but the old man had on a mackinaw and, out on the lake, Alan had seen him on deck coatless in weather almost as cold as this.

"It's a winter storm," Alan cried. "It's like it that way; but to-day's the 15th, not the 5th of December!"

"That's right," Burr agreed. "That's right."

The reply was absent, as though Alan had stumbled upon what he was thinking, and Burr had no thought yet to wonder at it.

"And it's the *Stoughton* they're laying up, not the—" he stopped and stared at Burr to let him supply the word and, when the old man did not, he repeated again—"not the—"

"No," Burr agreed again, as though the name had been given. "No."

"It was the *Martha Corvet* you laid up, wasn't it?" Alan cried quickly. "Tell me—that time on the 5th—it was the *Martha Corvet*?"

Burr jerked away; Alan caught him again and, with physical strength, detained him. "Wasn't it that?" he demanded. "Answer me; it was the *Martha Corvet*?"

The wheelsman struggled; he seemed suddenly terrified with the terror which, instead of weakening, supplied infuriated strength. He threw Alan off for an instant and started to flee back toward the ferry; and now Alan let him go, only following a few steps to make sure that the wheelsman returned to Number 25.

Watching old Burr until he was aboard the ferry, Alan spun about and went back to the *Stoughton*.

Work of laying up the big steamer had been finished, and in the snow-filled dusk her crew were coming ashore. Alan, boarding, went to the captain's cabin, where he found the *Stoughton's* master making ready to leave the ship. The captain, a man of forty-five or fifty, reminded Alan vaguely of one of the shipmasters who had been in Spearman's office when Alan first went there in the spring. If he had been there, he showed no recollection of Alan now, but goodhumoredly looked up for the stranger to state his business.

"I'm from Number 25," Alan introduced himself. "This is a Corvet, Sherrill, and Spearman ship. Do you know Mr. Corvet when you see him, sir?"

"Know Ben Corvet?" the captain repeated. The manner of the young man from the car ferry told him it was not an idle question. "Yes; I know Ben Corvet. I ain't seen him much in late years."

"Will you come with me for a few minutes then, Captain?" Alan asked. As the skipper stared at him and hesitated, Alan made explanation, "Mr. Corvet has been missing for months. His friends have said he's been away somewhere for his health; but the truth is, he's been missing. There's a man I want you to look at, Captain—if you used to know Mr. Corvet."

"I've heard of that." The captain

(Continued on Page 13)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the *Miwaka*. Spearman is angered because Constance shows so much interest in the mystery. Alan locates a carferry pilot named Burr who he believes can solve the mystery. Alan gets a job on the carferry.

ter, one of the men on Corvet's list regarding whom Alan had been able to obtain full information.

Alan sped below, when he was relieved from watch, and got out the clippings left by Corvet and the notes of what he himself had learned in his visits to the homes of these people. His excitement grew greater as he pored over them; he found that he could account, with their aid, for all that old Burr had told him. Old Burr's "lives" were not, of course, his; yet neither were they fictions. They—their incidents, at least—were actualities. They were woven from the lives of those upon Corvet's list! Alan felt his skin prickling and the blood beating fast in his temples. How could Burr have known these incidents? Who could he be to know them all? To what man, but one, could all of them be known? Was old Burr . . . Benjamin Corvet?

Alan could give no certain answer to that question. He could not find any definite resemblance in Burr's placid face to the picture of Corvet which Constance had shown him. Yet, as regarded his age and his physical characteristics, there was nothing to make his identity with Benjamin Corvet impossible. Sherrill or others who had known Benjamin Corvet well, might be able to find resemblances which Alan could not. And, whether Burr was or was not Corvet, he was undeniably some one to whom the particulars of Corvet's life were known.

Alan telegraphed that day to Sherrill; but when the message had gone doubt seized him. He awaited eagerly the coming of whoever Sherrill might send and the revelations regarding Corvet which might come then; but at the same time he shrunk from that revelation. He himself had become, he knew, wholly of the lakes now; his life, whatever his future might be, would be concerned with them. Yet he was not of them in the way he would have wished to be; he was no more than a common seaman.

nearer to Constance Sherrill, or would it set him forever away from her?

CHAPTER XVI

A GHOST SHIP

"COLDER some to-night, Conrad."

"Yes, sir."

"Strait's freezing over, they say."

"Pretty stiff ice outside here already, sir."

The skipper glanced out and smiled confidently but without further comment; yet he took occasion to go down and pass along the car deck and observe the men who under direction of the mate were locking the lugs under the car wheels, as the trains came on board. The wind, which had risen with nightfall to a gale off the water, whipped snow with it which swirled and backed with the switching cars into the great, gaping stern of the ferry.

Officially, and to chief extent in actuality, navigation now had "closed" for the winter. Further up the harbor, beyond Number 25, glowed the white lanterns marking two vessels moored and "laid up" till spring; another was still in the active process of "laying up." Marine insurance, as regards all ordinary craft, had ceased; and the Government at sunrise, five days before had taken the warning lights from the Straits of Mackinaw, from Ile-aux-Galets, from north Manitou, and the Fox Islands; and the light at Beaver Island had but five nights more to burn.

Alan followed as the captain went below, and he went aft between the car tracks, watching old Burr. Having no particular duty when the boat was in dock, old Burr had gone toward the steamer "laying up," and now was standing watching with absorption the work going on. There was a tug a little farther along, with steam up and black smoke pouring from its short funnel. Old Burr observed this boat too and moved up a little nearer. Alan, following the wheelsman, came opposite the stern of the freighter; the snow let

The Indian Drum

(Continued from Page 12)

moved alertly now. "Where is he?"

Alan led the master to the Ferry. Old Burr had left the car deck; they found him on his way to the wheelhouse.

The Stoughton's skipper stared. "That the man?" he demanded.

"Yes, sir. Remember to allow for his clothes and his not being shaved and that something has happened."

The Stoughton's skipper followed to the wheelhouse and spoke to Burr. Alan's blood beat fast as he watched this conversation. Once or twice more the skipper seemed surprised; but it was plain that his first interest in Burr quickly had vanished; when he left the wheelhouse, he returned to Alan indulgently. "You thought that was Mr. Corvet?" he asked, amused.

"You don't think so?" Alan asked.

"Ben Corvet like that? Did you ever see Ben Corvet?"

"Only his picture," Alan confessed. "But you looked queer when you first saw Burr."

"That was a trick of his eyes. Say, they did give me a start. Ben Corvet had just that sort of trick of looking through a man."

"And his eyes were like that?"

"Sure. But Ben Corvet couldn't be like that!"

The Cause of Bloody Eggs

By L. E. WEAVER

"Some of our chickens are laying eggs with the whites being mostly clear blood. The yolk of the egg is O. K. Please tell me what is the cause of this. Do you think it is the feed? They are a good strain of white leghorns and their feed consists of ground feed and wheat. They are getting skim milk for drink."—MRS. C. S., New York

THE eggs which you describe are known as "bloody whites." They are more or less common in any flock that is laying heavily. They differ from the ordinary "blood spot" in that the blood is mixed into the white in the bloody egg and is only a small clot on the yolk in the blood spot. Both types of eggs are quite easily detected by candling. It is to remove them that one should always candle all eggs sold to a select trade. A purchaser who is not familiar with eggs will be almost sure

to think she is getting an egg with a chicken in it when she opens one of these bloody eggs.

The cause is evidently some sort of hemorrhage in the oviduct. But what causes the hemorrhage is one of the unsolved problems of the poultrymen. It is possible that the feed may be responsible in part. As a rule there is less of the trouble after the birds are let out on range. The same hen is apt to lay several such eggs on successive days.

Weak Chicks Cannot Survive

"I am having trouble with my baby chicks. They were one week old last Wednesday. Last Thursday they started to droop, their wings spread away from their bodies and they seem to get smaller and

Increased Profits in Can-house Tomatoes

(Continued from Page 3)

grown plant that is ready to go into the field the first ten days of May rather than the last of the month or the early part of June.

The Plant Setter

The next big change that has come over the tomato industry of South Jersey has been the introduction and the acceptance of the transplanter. It was customary a few years ago, to put out all of the tomato plants by hand—the grower would take a shovel and make an opening in the ground and then put the plant in place. An average day's work for one man would be the placing of an acre of tomatoes. This did not take into consideration the help of a boy for dropping the plants or another man to apply the water.

Then came the transplanter. Instead of three men putting out an acre per day, they are now putting out an acre per hour. Of course, to keep this going all day long, requires the help of two other men, one to pull the plants and have them at the machine and a second to bring water out to the field in barrels or a tank. We know of growers who are now putting out ten acres of tomatoes in a day and having from 90 to 95% of them live.

The check row attachment on the transplanter has also been a big aid to growers. They are now able to farm the fields both ways with the riding cultivator which in turn has greatly reduced the hand labor for hoeing.

The Watering Feature

One of the biggest incentives to use the transplanter has been the saving of time in applying the water to the plants. Formerly, when the growers watered the plants, they little realized that the water did not reach the spot where it would do the most good. Pouring a cup of water on the ground rarely caused it to penetrate the soil down to the roots of the plant, but instead dried out and left the ground baked hard frequently resulting in a dead plant from lack of sufficient moisture. This meant many replantings, an uneven stand, and irregular ripening of the fruit. With the transplanter, the water is put around the roots of the plant and this ball of moist soil enables the plant to start to put out roots almost immediately.

Spraying Increases Yields

There is now no question in the mind of the average grower but that the sprayer is as necessary as any other implement on the tomato farm. Not only is the traction sprayer an accepted tool in controlling the insects, but it adds many days to the life of the plant, enabling it to more fully develop the fruit to a marketable size. Blight, and other diseases that frequently hit the late fields in early September often reduce the yields 50 per cent. The foliage, once it starts to go, is hard to save, but where it has been properly sprayed, the vines are there to carry the fruit

American Agriculturist, July 26, 1930
in a few hours they are dead. I have already lost four. I feed mash chick starter and scratch feed. They get a bluish black below the vent and the down on those spots comes out so they are entirely bare around the vent."—E. A. W., N. Y.

IT is possible that your chicks have some disorder which should have treatment, but I am inclined to think that the ones that are dropping out now are the weaklings which we very often find in any lot. These chicks either are not able to eat or are unable to digest what they do eat. At any rate they never gain in weight. They exist for a week or more on the absorbed egg yolk but as soon as that is used up they drop out. It is better so as they would never grow into profitable birds. If this is the case in your flock your losses should stop after a few days. If they do not improve you should ask the aid of an experienced poultryman, or send some of the chicks alive to the New York State Veterinary College, Ithaca, N. Y., and mark the box "Poultry Diagnosis."

I notice you are feeding both a commercial chick starter and scratch grain. This particular chick mash is intended as an all-mash for the first 6-8 weeks. You will do well to stop feeding the scratch grain.

through to maturity. Instances are known where the vines have died early in the season but the fruit has matured, although of small size and inferior quality.

Earliness Pleases Canners

The most important part of this new culture in can-house tomatoes has been the favorable reception by the canner. A few years ago, we thought of tomatoes as merely tomatoes and tons of tomatoes were all that the canner needed. Today it's different. The canners learned that August tomatoes were of a superior quality, contained more solids, less water, and were of a better color. As an inducement for the delivery of more August tomatoes they are offering a premium of one and two dollars per ton.

Under the present plan, some of the more progressive canners are now paying a premium of one dollar per ton for tomatoes delivered at their plant prior to September the first, while one other plant is offering a premium of two dollars for tomatoes delivered before the middle of August and one dollar a ton up until the first of September. Growers are quick to take advantage of this premium.

We know of one field, set out around the middle of May, that yielded nearly ten tons to the acre. Fifty per cent of these tomatoes were delivered at the factory before the first of September on which the canner paid a premium of \$2 per ton. Compare this field with another one on the same farm, where the tomatoes were not put out in the field until three weeks later. Here the yield was only six tons to the acre and the premium picking was allowed on only three tons.

The price paid by the canner was \$22 per ton for August delivery and \$20 per ton for September tomatoes.

Field set May 15 yielded 5 tons at \$22 per ton or.....\$110.00
Field set May 15 yielded 4 1/2 tons at \$20 per ton or..... 90.00

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Some Testimony

"I noticed in a recent issue a request for information about the W. O. Coffee Company of Iowa. I would like to ask whether the subscriber who made this inquiry has tried Aurine. I am using it, although not regularly as I am only slightly deaf but would not be without it in the house."

WE print this letter to show how easy it is to get honest testimonials for products which are of doubtful value. We referred this inquiry to the New York League for the Hard of Hearing who replied:

"The chief stock in trade of the Aurine concern is testimonials which would impress on the sufferer the idea that Aurine Ear Balsam will cure deafness and other ear troubles. Prospective victims are urged to send in \$2. for a package. Those who bite get an ounce of oil—the 'balsam', an elongated toothpick with a pledget of cotton on one end, a medicine dropper, and a small wad of absorbent cotton. They are told to instil three or four drops of the Aurine Ear Balsam into each affected ear once a day, and to clean the external opening every other

morning with the wooden swab. In cases of discharging ears the victim is told to mix five drops of Aurine Ear Balsam with four tablespoonfuls of warm water and inject it into the ear with the glass dropper every other day. The victim is urged: 'Stick to Aurine Ear Balsam and get rid of your trouble.' A preliminary examination of Aurine Ear Balsam was made in the chemical laboratory of the American Medical Association and the chemists reported that the product appears to consist largely of glycerin with boric acid, aromatic oils and what apparently is a local anesthetic."

A Cancelled Check Is Good Evidence

"Recently I received a card from Wm. S. Renchard of New York City asking for 50c, stating that in return for it a marked news item concerning me would be sent. I suspected it was an easy money scheme so I answered the inquiry and sent a check instead of cash. In reply, I received a note saying they were awfully sorry but the clipping had evidently be-

come lost and that they were returning the check to me."

WE regard all clipping schemes of this type essentially easy money schemes. Perhaps the check was returned because it would give evidence against this particular clipping service.

Expert Service

SOME of our subscribers have recently received letters from the Empire Investors Service of New York City. An investigation by the New York City Better Business Bureau showed that this service was started in February by a stenographer who merely rented

For Doctor Bill and Hired Help

I AM glad to acknowledge receipt of the North American Accident Insurance Company's draft for \$37.14.

It helped quite a bit in paying doctor bill and hiring a man to help out while I was laid up. I think it a very fair and square insurance protection.

desk space. She sent out letters offering to give an analysis of a particular stock. When asked about this analysis she admitted that the information on the stock was secured from the Public Library. After talking with representatives of the Better Business Bureau she decided to quit operating as an investor's service and go back to her job as public stenographer.

Parasites of Business

BUSINESS parasites are those individuals who live off the gullibility of the public. By offering unusual bargains or positions they get you and are gone before you know you have been swindled.

Before you give a "cash bond" to an unknown man or woman who offers you a job at a good salary—find out if they have enough responsibility to pay the promised salary.

Before you buy spices or medicines from the agent at your door who claims part of the money you give him goes to the support of orphans—find out how much of your money goes to the orphans.

Before you pay good money to peddlers for rugs or laces represented to be imported or smuggled—get some expert advice as to the quality or value offered. Such representations are usually false.

Before you obligate yourself in any way at the solicitation of a stranger—get enough facts to enable you to decide that you are dealing with a representative of a responsible firm.—BETTER BUSINESS BUREAU.

Wages Low in South America

A SUBSCRIBER asks for the name and address of a "good reliable South American Service Bureau." So far as we know there is no such thing. A number of men have been picking up some easy money by advertising in a way that would lead readers to believe that there are many jobs in South America. So far as we know no one has ever secured a job through these men.

I personally know of a man who spent several years in South America. He says that unskilled labor gets very small pay and that an American would be foolish to compete with this low wage. The kind of men who go to South America are sent by some large companies having business there and usually they send only men who have been in their employ for years and who are thoroughly trained in their respective fields. It costs too much to send men who are not highly trained. According to this man there is little there to attract anyone anyway and he was mighty glad to get back to this country.

We Call On Our Next Door Neighbor

Two Weeks in Canada Make Us Want To Go Again

By H. L. COSLINE

Associate Editor, American Agriculturist

IT is always a little dangerous to write about a country after a mere two weeks' stay in it, yet one can only record personal observations and trust that they will at least be accurate in their main points. Canada, after all, can hardly be called a foreign country, although it is certain that every member of the party of seventy-five who took the recent two weeks' tour of the American Agricultural Editors' Association as guests of the Canadian Government and the Canadian railroads, had certain preconceived ideas radically changed. In fact, in mentioning the lack of information about Canada's climate, one of our hosts related the story of a visitor from Georgia who drove into Canada in the middle of July with a toboggan firmly strapped on the top of his car!

The special train carrying our party left Windsor, opposite Detroit. We travelled north nearly to Hudson Bay, then East to Quebec, through New Brunswick to Prince Edward Island, then through Nova Scotia to Montreal, Ottawa, Toronto and Niagara Falls, and back to Windsor, a total of nearly four thousand miles.

Were I required to give my impressions of Canada in a paragraph, I would mention its almost unlimited natural resources of

timber, minerals, water-power, fishing and farming land. I would not stop there because people are always more important than any of these. We found our Canadian hosts kindly and hospitable and what is perhaps more important, we came away with a feeling that our neighbors across the border could teach us much about governing a country for the benefit of its people, civic cleanliness including the lack of rubbish and billboards, and the development of natural resources for the public good.

We, in the United States, are somewhat inclined to believe that the frontier is a thing of the past, but a trip some five hundred miles north of Detroit will quickly dispel any such idea. Before reaching this point, we passed through a vacation coun-

try of rivers, lakes and hills. Very suddenly we passed from it to a flat farming country known by Canadians as the "Clay Belt". At the southern edge of this belt, the land has been under cultivation about thirty years. There are good buildings, certain crops grow well, and there is a general air of prosperity. As we traveled northward, we found that the land had been more and more recently brought under the plow, until finally we reached a section where it is still possible to take up a homestead.

Around Kapuskasing, which is only 150 miles from James Bay, settlers are required to clear two acres of land a year, to erect a small house and barn, and to live on their holdings for at least six months of each year. There is, of course, no income for the first year outside of the possible sale of

(Continued on Page 2)

Left—A homestead near Kapuskasing, Ontario. On land recently cleared, the stumps are more in evidence.

Lower left—Silver Black Foxes are an important source of income on Prince Edward Island.

Below—The power plant at Queenstown on the Niagara River, that develops a half million horsepower.

We Call On Our Next Door Neighbor

(Continued from Page 1)

pulp wood, which sells to paper factories for \$6.00 a cord, a price which just about pays the homesteader for the time he puts in cutting and peeling it. Would we advise going there? Well—that depends on a lot of things. If you have the true pioneer spirit and are willing to dispense, temporarily at least, with many things you now call necessary, you might do a lot worse. The houses are, for the most part, made of logs, yet they look fairly comfortable and in thirty years this section will undoubtedly look as prosperous as the one already referred to where the settlers have been cultivating the land that long.

Just on the border of the "clay belt" we stopped at Cobalt, an important silver mining center. Silver on the shore of Lake Cobalt was found in 1903 and since that time it is estimated that ore to the value of \$105,000,000 has been taken out of this area. Just at present the entire city is not as prosperous as it was a few years ago, due to a severe drop in the price of silver. We always think of a mine as an underground proposition, yet most of the ore at Cobalt is taken out of open cuts, frequently put down as much as 300 ft. deep. In several of them we could still see snow on the bottom, which had not melted since last winter.

Canada manufactures an immense amount of newsprint paper, and while we were at Kapuskasing, we had the opportunity of going through a large paper mill. At one side of the mill was an immense pile of spruce timber, which to our eyes seemed large enough to last indefinitely, yet this pile, we were told, is only used in an emergency. During most of the year the pulp wood timber is taken directly from the river which flows by the mill.

The bark is taken off the logs by tumbling them around in great revolving cylinders, after which workmen handle each piece separately to clean off any remaining bark and particularly to drill out the knots. Any logs which are over five or six inches in diameter are split. The logs are then ground by a natural stone which is quarried into grind stones about six ft. in diameter. This ground-up material is then cooked with steam and sulfurous acid, and the fibre is rolled into sheets that look like cardboard. This is known as pulp and a considerable amount of it is shipped to other factories to be made into paper. This particular plant, known as the Spruce Falls Power and Paper Company, manufactures both pulp and paper.

Although the paper on which we print American Agriculturist does not come from this mill, it is manufactured from wood just as we saw it done there. A roll ready for shipment weighs about 500 lbs. and is wrapped and numbered so that it can be identified in case of complaint.

All through the eastern provinces of Canada we ran into numerous evidences of the struggle between England and France for the possession of Canada. It was in the year 1608 that Samuel D. Champlain, the illustrious

French explorer, sailed up the mighty St. Lawrence River and established a French colony on the present site of the city of Quebec. For a century and a half after this the country remained in the possession of France until the decisive battle between Montcalm and Wolfe on the Plains of Abraham in the year 1759, gave England undisputed possession. There is a fine statue of Champlain at one side of the picturesque hotel, the Chateau Frontenac, which is itself at one corner of the Plains of Abraham. Just a stone's throw away is an old fort whose walls are 16 ft. in thickness. Although this fort was doubtless very imposing in its day and is still interesting as a matter of history, it is doubtful if it would withstand modern artillery for more than an hour. On the Plains of Abraham two statues may be found, one marking the spot where Montcalm was mortally wounded, and the other showing the exact place where Wolfe fell.

Later in Nova Scotia, or New Scotland, we visited Acadia, the land made famous by Longfellow's "Evangeline". Different stories are told as to just why the English deported the Acadians from their prosperous homes. One story gives jealousy as the motive, and states that the English wanted to possess the land, while another version claims that it resulted from the shooting of several English soldiers by the Acadians. Whatever the motive, it seems certain that the British officer who was delegated to take care of the

there is a statue of Evangeline, and a little chapel which is supposed to be on the exact spot of the original Acadian church. There we also found Evangeline's well and a row of old willow

80,000 people and 80% of these are engaged in farming. The farms have a general air of prosperity and there are few foreclosures and few sales of farm property. On the island the persons

The ox cart of a French-Canadian farmer on the Gaspé Peninsula, Province of Quebec.

trees, which were undoubtedly living at the time the Acadians were deported.

A little farther down the Annapolis Valley, at the village of Annapolis Royal, are the ruins of an old fort which changed hands between the English and French six times before it

who do not go to church are rather looked down upon by the general public. Divorce is practically unknown, although we understand there was one divorce there, about 60 years ago. What a fine thing it would be if someone could determine the reasons for this record and transfer the conditions responsible for it to the United States.

There are few improved roads on the island. Automobiles are quite common although the "gas buggy" did not gain entrance to the island without a struggle. Up until 1912 automobiles were prohibited, and until 1919 their use was greatly restricted, being prohibited during the days each week when farmers customarily drove their produce to market. Some farmers so resented automobiles that they drove spikes through planks and put them in the roads so that the tires would be punctured. Horses on the island are still afraid of automobiles. In fact we met one who showed his fear in no gentle way.

The annual value of the potato crop, which is an important item on Prince Edward Island, is about \$5,000,000, while the annual value of the fox crop is placed at \$3,000,000. There are about 500 fox ranches on the island, many of them operated by farmers as a side line. It was from 1910 to 1919 that the big boom in fox farming occurred, when pairs of foxes were sold as high as \$20,000. At this time many of the residents on the island lost money by investing at just the wrong time. Now the industry is on a more stable basis. Pairs of foxes can be bought from \$200 to \$400, which is considered a fair value based upon the actual value of the pelts. We stopped at one fox farm owned by the Hudson Bay Company which ranches a thousand foxes.

Just as in the United States, the type of agriculture in Canada varies widely in different sections. We did not visit any section where wheat is important, but we did see plenty of certified potatoes in Prince Edward Island and New Brunswick, some orcharding in Nova Scotia and plenty of fine dairies, hogs, and poultry in other sections. Practically all of the hogs, by the way, are Yorkshire, a bacon breed, and judging from the bacon which was given to us on the diner, this breed produces a bacon which is way ahead of anything which we get in the United States. In the newer sections corn is not grown because of the northern latitude, but a prosperous agriculture is being built up on a foundation of hay, small grain and livestock, including dairy cattle, beef cattle, hogs, sheep and poultry.

You have all heard and read much concerning Canada's development of electric power. Some of us on the trip may have felt that the stories coming to us were too good to be true, until some of our Canadian friends actually showed us their bills for electric cur-

(Continued on Page 10)

Every Canadian river carries its quota of pulp wood. This scene shows a few cords at Ottawa.

deportation was anything but pleased with the job which was given to him.

It is interesting to know that Longfellow never visited this land. The story of the couple who were parted by the deportation was told by an Acadian to a Mrs. Halliburton, who in turn told it to Longfellow, and it made such an impression on him that he wrote "Evangeline." Now, at Grand Pre,

was finally permanently captured by the English.

The Bay of Fundy between Nova Scotia and the mainland has some of the highest tides in the world. These create quite a shipping problem, as provision must be made for unloading boats both at high and low tide. At various times there has been much speculation over the possibility of building a dam across the Bay of Fundy, allowing the water to come in at high tide and then making it earn its passage to the sea again by turning dynamos to generate the electrical energy. Perhaps the future will see this come to pass.

At St. Johns, on the west coast of the Bay of Fundy, we saw a natural wonder, spoken of as the "Reversible Falls." Although we did not stay long enough to see the Falls flow both ways, the phenomenon was explained to us as follows: Near the Bay of Fundy there is a rather narrow rocky opening, and a river which flows into the Bay. When the tide goes out this narrow opening holds back the water in the river to an extent that causes quite a fall. Later, the tide comes in so rapidly that the water is unable to get through this narrow gap, and backs up to an extent which creates a falls flowing up the river. This is said to be the only spot in the world where there is an actual fall of water in opposite directions twice every twenty-four hours.

On Prince Edward Island there are

At Grand Pre we visited Evangeline's Well, and the chapel on the spot where stood the original church of the Acadians.

What Will Potatoes Bring ?

Acreage Is Heavier--Disease, Bugs and Weather Will Tell

ACCORDING to the July report of the United States Department of Agriculture, the 1930 potato crop will approximate 398.5 millions of bushels. This is an increase of approximately 38.6 millions of bushels over the 1929 crop, but only 17.7 millions of bushels more than the average crop produced during the past five years. The 1930 acreage of potatoes in the United States is estimated to be 3,482,000 compared with 3,370,000 acres harvested during 1929, and the 5-year average of 3,379,000 acres during the years 1925-1929.

Late States Most Important

It should be borne in mind that the production figures published by the United States Department of Agriculture embrace *all* white potatoes grown during the calendar year 1930, including a relatively large volume of early potatoes, which have already been consumed, and a smaller volume of mid-season potatoes which will largely be consumed before the "late" crop reaches the market. The grower of late potatoes is primarily interested in the production in the 19 "surplus" late states which ordinarily produce 70 per cent of all white potatoes in the United States.

About 14 Per Cent Increase Over 1929

Production of white potatoes in the 19 important surplus states is forecast at 280.5 million bushels during 1930 (table 1). This compares with 245.1 million bushels during 1929, and a normal or average crop of 264.3 million bushels during the past five years. In other words, the 1930 potato crop in these nineteen states is forecast at approximately thirty-five million bushels or fourteen per cent more than the 1929 crop, but only sixteen million bushels or six per cent more than the average crop of the past five years.

Approximately sixty per cent of the increase

By DR. M. P. RASMUSSEN
New York State College of Agriculture

in the 1930 crop compared with last year is found in the eastern and east central states (table 1). Although Maine reports a decrease of about three million bushels from last years crop, its 1930 crop is still forecast at forty-seven million bushels or approximately twenty per cent above its 5-year average production. The states of Michigan and Wisconsin together account for almost fifty per cent of the total increase over the

TABLE 1—Estimated Production of Late White Potatoes July 1, 1930 Compared With Production During 1929 And The Average For The Past 5 Years. (Figures are in thousands of bushels)

State	Average production 1925-29	Production 1929	July 1, 1930 forecast	Increase or decrease compared with 1929

Pennsylvania	26,228	25,740	28,320	" 2,580
East Central				
Michigan	26,325	18,410	29,193	plus 10,783
Wisconsin	25,380	20,240	26,568	" 6,328
West Central				
Minnesota	30,907	27,370	30,900	" 3,530
North Dakota	9,660	6,960	11,000	" 4,040
South Dakota	4,923	4,422	5,525	" 1,103
Nebraska	7,908	8,924	8,740	min. 184
Western				
Colorado	13,334	12,320	11,180	min. 1,140
Wyoming	1,933	2,090	2,200	plus 110
Montana	3,570	1,980	2,700	" 720
Idaho	18,348	17,136	21,645	" 4,509
Utah	2,896	3,330	3,000	min. 330
Nevada	736	680	420	" 260
California ...	6,939	5,250	5,320	plus 70
Oregon	4,984	3,780	4,410	" 630
Washington ..	10,192	8,680	8,990	" 310
Total 19 States..	264,364	245,122	280,511	" 35,389
Total U. S.	381,162	359,796	398,419	" 38,623

1929 crop. Both of these states, however, had abnormally low yields per acre during 1929. With a forecast production of 30,740,000 bushels in 1930, New York gives promise of supplying about six million more bushels than during 1929. Idaho and North Dakota have each increased production about four million bushels compared with 1929.

If then, conditions are not altered during the remainder of the growing season, prospects are for a crop about ten per cent *above* normal in the state from Maine to Wisconsin, about five per cent *above* normal in the west central states of Minnesota, North Dakota, South Dakota, and Nebraska, and about five per cent *below* normal in the far western states.

Deficit States Have Smaller Crop

During both 1927 and 1928, potato production in the sixteen "deficit" late states was abnormally large and reduced decidedly the outlet for potatoes from the nineteen surplus states. Unless conditions change markedly, such a situation is unlikely to occur during 1930, since the 1930 production in the sixteen deficit states is forecast at 81.5 millions of bushels, a decrease of about two million from the 1929 crop and about four million or about five per cent below the normal or five-year average crop.

1930 Late Potato Situation Similar to 1927

In general, the 1930 potato crop seems to face conditions somewhat similar to those of 1927, though slightly more favorable. The 1927 crop in the nineteen surplus late states was practically identical with that forecast for 1930. The 1927 crop in the sixteen deficit late states was about ten per cent larger than that forecast for 1930. In view of the promised similarity between the

The Japanese Beetle—An Undesirable Immigrant

How the State of New Jersey Is Saving Its Crops From This Pest

ABOUT a decade and a half ago a small insect was introduced in Burlington County, New Jersey. This insect was a stranger in our midst, having traveled to New Jersey across the Pacific Ocean and thence across the continent on some iris roots that came from Japan. All unwittingly these roots were planted and shortly the bright colors of this insect, then unknown in the United States, made it noticeable. Identification was made by Mr. H. B. Weiss, of the New Jersey State Department of Agriculture, who recognized it as a species common in Japan and the Orient generally. It immediately became known as the Japanese beetle. Since then it has increased with great

By WILLIAM B. DURYEE

Secretary New Jersey Department of Agriculture

rapidity and has become one of the most injurious insect pests that this country has ever been called upon to combat.

The life history of this insect is interesting. The adult beetle is present from about the middle of June until early October. It attacks most of our ornamental plants, trees and fruits. The female beetles deposit eggs in the soil, especially on lawns and golf courses. These eggs hatch in about two weeks and the young grubs immediately start feeding on the roots of the grasses. It is not unusual in the heavily infested area to have the entire sod roll up like a mat as a result of the destruction of the root system.

These grubs become full grown about the fifteenth of October, at which time they descend to four or five inches below the surface of the soil where they pass the winter. When the soil becomes warm in spring they ascend toward the surface and resume their feeding for about a month or six weeks. The feeding is then practically discontinued and the grubs transform into pupae, remaining in that stage for two or three weeks before emerging as beetles.

In order that one may recognize the famous Japanese beetle, we give the following description. The adult beetle is about a half inch long.

The head and thorax are shining bronze green in color, with the wing covers tan or brownish and along the sides of the abdomen are white spots made of tufts of white hair, with two very distinct white spots at the tip of the abdomen. These white spots, if present, definitely identify the insect as the Japanese beetle.

Present methods of control of this insect have been worked out by the Japanese Beetle Laboratory at Moorestown, New Jersey. One of the most effective methods of control is the application of arsenate of lead to the soil at the rate of five pounds of powdered lead arsenate to each one thousand square feet of turf as a means of destroying the grubs which may be present. The treatment should be applied preferably before August first, in order that it may work

into the soil and be consumed by the grubs while they are feeding on roots. This treatment is good for four or five years.

It is necessary also, where the beetles are numerous, to apply sprays to ornamental plants which will protect them from attacks of the adult beetle. This spray is known as oleate-coated lead arsenate and may be purchased from various seed and supply houses in the infested area. Directions are given on these packages and the application should be made accordingly. The

Parking Fees in State Parks Are Wrong in Principle

WE are in receipt of numerous complaints from residents of many different sections of New York State, against the newly adopted policy of the State of charging for parking automobiles in State parks. New York is to be congratulated for the splendid progress it has made in creating these fine recreational centers for the benefit of its people. Now why spoil it by a pica-yune and questionable policy of charging for what amounts to an admission fee to these parks for, of course, the great majority of people must reach the parks by automobile.

The next step will be the State entering still further into commercializing nature by selling pink lemonade or peanuts either directly or through concessions! The more nearly the parks can be kept in an atmosphere of naturalness and with freedom from commercialism and officialism, the more they will be appreciated by the common people. The people of the State are indignant and have a right to be. They know that they have paid their share through taxation for creating these parks and their facilities and now it seems to them inconsistent to charge for the privilege of using them.

The argument is made that the parking and protecting service costs the State money and yet the State is very careful to print a notice that it will not be responsible for any losses of parked automobiles or their contents. It is also argued by the State authorities that because the general maintenance of the parks costs the State huge sums, the people ought to help by paying a moderate parking cost. The answer to that is, buy and create fewer parks if necessary, but do not cheapen the whole principle by petty commercialism.

Scarcity of Gold Causes Falling Prices

LOW prices of farm products and other commodities may be due just as much to too little gold in the world as to over-production of commodities themselves. Professor Warren of Cornell states this well when he says:

"Prices are an expression of the exchange of one commodity for another. When both gold and wheat vary in supply, it is misleading to attribute all the change in the price of wheat to either the supply or demand for wheat."

If you think of gold as just something that you trade for other products, it will help you get the idea. When there is a lot of gold, more can be

paid for products and prices are naturally high; vice versa, when there is little gold, not much of it can be traded for products and prices become low. There is a scarcity of gold in the world at the present time; therefore, this is one cause of low prices for your wheat, your milk, or whatever you have to sell, or buy. As there is no likelihood of the amount of gold increasing in the next few years, Professor Warren points out, prices are likely to continue low for some time. Fortunately, the greatest reduction of prices has already occurred.

One of the great troubles of our whole economic system is this changing value of gold. What would you think of a yardstick which one month was 36 inches long, the next only 30 inches, and the third month possibly only 25 inches long? You can imagine how this would upset our whole scheme of measurements. But that is exactly what happens with gold, which we use as a yardstick in measuring the value of commodities. This variation of the value of gold is one of the chief causes of fluctuations in prices and hard times.

It would seem that there ought to be brains enough in the world and among the economists to figure out an unvarying yardstick for the money system that would always remain constant.

A Good Marketing Job

THAT was real marketing work when potato dealers and growers in central and south Jersey got together and agreed to postpone digging and selling potatoes until July 28. The story is told by Amos Kirby, our New Jersey editor, in the New Jersey edition this time.

Ordinarily, there would have been a good deal of digging during the middle of July and the green potatoes would have been put on the market, already over-supplied, and at a time also that was so hot that there would have been tremendous losses.

Here is a suggestion for dealers and producers of any specialized farm crop in other sections.

Weekly Grange News for A.A.

MAY we call your especial attention to the New York State Grange news on our New York news page this time. This is a new feature for the A.A. and is prepared by Mr. Frank J. Riley, secretary of the New York State Grange.

No one in the State is in better position to know what is going on in this great organization than Secretary Riley and you can depend upon him to write up Grange news items so that they will interest every member of the Order. Look for them each week.

Some Measurements of a Man

THE job which we get the most inspiration from during all of the work of the entire year, is visiting the nominees for Master Farmers, their families and their homes. Yesterday we called on a man whose farm was located several miles from the nearest village and uphill nearly all of the way. All feed, lime and fertilizer supplies have been hauled up that hill during a long lifetime and enough of such supplies had been hauled which, together with other good farm practices, made several hundred acres of barren old hilltop blossom like a rose.

This man had a little start. He had inherited a farm, but it is a question whether it was of very much value to start with. All around it were and still are thousands of acres of very poor hill land producing nothing much beyond daisies and paint brush. But this man's farm tells a different story. He was one of the first users of lime in his county. Clover is the foundation of his farming and we saw acre after acre of it stretching away that would easily cut three tons to the acre. Most of it was already in the barn. Certified seed is used for several of the other crops. The cattle were purebred and averaged nine thousand pounds of milk per year per cow. Best of all there was a large family of children, every one of

whom had either had a college or normal school training.

"What a privilege", we said to this man, "it must be to look back across forty years of your labors here and be able to measure such fine results." What an inspiration to his boys and to all the other young farmers who know him, are the life and works of such a man."

Country Doctors Growing Old

A SHORT time ago the Albany Medical College made a survey of the country doctor situation, and found that, in the rural districts of eighteen counties in northeastern New York, 37 per cent of the physicians were sixty years of age or over. The average age of all active physicians in the district was 53 years.

It does not take much imagination to see that hundreds of country communities are going to be without medical service when these fine old doctors pass on to their just reward.

A Chance to Try Your Hand at Writing

HERE is a chance to try your writing ability on a little A.A. contest on the subject, "Is It Profitable To Carry Accident Insurance?" AMERICAN AGRICULTURIST will give a first prize of \$10. a second prize of \$5. and \$1. each for the next five best letters on this subject. After giving reasons why accident insurance is necessary during these perilous times, try to cite an example of some accident that actually happened. Letters should not be over three hundred words in length and should be sent to the A.A. office at 461 Fourth Avenue, New York City, before September 1.

Down With the Billboards

WHAT a shame it is that the beauty of our public highways is so ruined by billboards and various other forms of advertising. It seems too bad that the State and Federal government should spend so many millions to build these great scenic highways and then have a large amount of their natural beauty lost through unsightly advertising.

In New York and some other states there is a law against erecting signs within the highway limits, but it is largely nullified because the signs are placed just over the fence on private lands. Farmers themselves could help eliminate the billboards if they would refuse to have any of them erected on their property.

Shop Talk—Skip It if You Wish

"In June 1871 I came to this place (Fort Collins Colorado). At that time there were twenty-five people here. Today there are more than twelve thousand. It is the most productive valley in Colorado.

"You will be interested to know that I got a hunch out of your paper long ago about Jersey cattle. I imported the first Jerseys into this state in 1873.

"Please send me a current copy of American Agriculturist; I want to see what it looks like now to compare with 1871."—R.Q.T.

THIS interesting letter brings to mind the thought that is often with us, and that is the influence either for good or evil that a large publication like AMERICAN AGRICULTURIST has. We like to look back across the years, nearly a century now since the AMERICAN AGRICULTURIST was started, and think that maybe thousands got "hunches" out of the columns that made life a little easier, better and happier for them.

Eastman's Chestnut

"WOULD you give a shilling to the Lord, please," asked a lassie soliciting for the Salvation Army.

"How auld are ye, lass?" queried the Scotchman.

"Nineteen," answered the girl.

"Weel, I'm past seventy, and I'll see Him afore ye, so I'll hand it to Him mysel'," replied the Scotchman.

News from the Publisher's Farm

ON the night of July 7th a hail storm swept over my farm and orchard and in twenty minutes succeeded in wiping out any possible profit that I might expect to make from my orchard this year. Back in

HENRY MORGENTHAU JR.

1914 when I set out my first apple trees I looked forward to the time when my orchard would bear a full crop. This year we had the largest and best crop of apples that we have ever had. I am glad that I did not have all of my eggs in one basket and that I have my dairy to fall back upon.

Production in our dairy has held up quite well. We passed our low point of production in the middle of July. From now on we have cows freshening every month and we will be able to keep up our minimum guarantee of fourteen cans a day without any trouble. For the past month we have been feeding our cows green clover and alfalfa. We next fed them green oats and by the end of July we will be cutting fodder corn to give them every night. Some of our cows which have been milked three times a day are doing exceptionally well and will make very creditable records. Fortunately our corn was not sufficiently advanced to be permanently damaged by the hail. The day after the hail storm our corn field looked pretty sick. We have a larger acreage in squash this year than last and while the squash plants were also severely injured by the hail they are beginning to recover and we are hoping for a good crop.

* * *

The week of July 14th to the 19th I accompanied the Governor on the inspection of the upstate institutions and prisons. I had always known that being Governor was a he-man's job but after my trip through Schenectady, Amsterdam, Utica, Syracuse, Auburn, Seneca Falls and Ithaca, I realize more than ever before the many responsibilities that are placed on the shoulders of our chief executive. Besides all the responsibilities placed on the Governor, the final decree of life and death for men sentenced to the electric chair rests with him. On July 17th three men were sentenced to die at Sing Sing for murder. All day long messages were being sent to the Governor through his counsel in regard to these sentenced men. It does not seem fair to place all of this responsibility on one man. I suppose it is the most difficult and trying task that any Governor has to assume on taking office.

I am glad that both parties in the state are now backing the \$50,000,000 bond issue which will supply the money with which to build the much needed facilities for our state institutions. I had not realized until the Governor pointed it out that 90% of the state's wards eventually return to their homes. Knowing this, does it not seem most important that criminals, while in prison, should be treated in such a manner that, when they return to their homes, they should once more be in a mental frame of mind to become good citizens? The overcrowding in insane asylums and prisons is most shocking. Inasmuch as the state has assumed the responsibility of taking care of its unfortunate wards, it is not asking too much that this be done in an efficient and humane manner.

* * *

This fall the voters are going to have an oppor-

tunity to express their opinions as to whether or not the barge canal should be turned over to the Federal Government. Inasmuch as this canal has cost the citizens of the State of New York something like \$100,000,000 to date, I think it behooves all of us to post ourselves as to the advisability of surrendering this important waterway. I was interested in learning that up to date the canal has carried so far 40% more tonnage this year than last. As I consider this question in regard to the future disposal of the canal such an important one, I am asking Mr. Eastman, our editor, to secure several articles giving both sides of the question in order that our readers may thoroughly understand the proposition before voting on it.

In going through Auburn prison we were all glad to see that the new cell block is rapidly reaching completion. When the Governor drove through the prison yards there was absolutely no demonstration of any kind, which seems like a good omen, and I hope means that there will be no future insurrection at Auburn previous to the completion of the new cell block. I want to take this opportunity to tell our readers that they could all be proud of the women's prison at Auburn. This prison has 120 inmates and it seems to me that as a prison it is almost ideal. The prisoners are locked up only

at night and they are permitted to fix up their rooms in any manner that they wish. The walls and floors are absolutely immaculate and reminded me of the deck of a battleship.

One of the real treats on the trip was the sail down Lake Cayuga and our visit to Enfield and Taughannock State Parks. Future generations will certainly thank the men who have been farsighted enough to lay out these various park areas throughout the state and preserve for all time a playground for all of the people. Seldom have I seen such natural beauty as the Taughannock Waterfall. The Finger Lake Parks are of course one of many state parks scattered throughout New York State and each year more and more people are taking advantage of the facilities offered in this way for camping, fishing and swimming.

I have come home from this trip with the feeling how little any of us know about the business of the State of New York, and furthermore, if the citizens who live upstate could once in a while visit New York City and the citizens of New York City visit upstate, we would all understand each others problems a great deal better.

Henry Morgenthau Jr.

A Visit with the Editor

EDITOR'S NOTE—Every Monday noon at 12:25 p. m., Eastern standard time, a series of sketches prepared by E. R. Eastman, editor of American Agriculturist, is broadcast from the General Electric Company's station WGY by Mr. Markham, the announcer, under the title of "Editor Ed. Looks At Life." These little pieces have become popular because they are written especially from the point of view of the men and women who live on the land. You will find the whole farm program given every noon from WGY to be well worth your attention and we suggest especially, that you tune in Monday noon to listen to these little sketches by Mr. Eastman. Here is one on the beautiful quotations from the writings of Robert Burns which was broadcast recently.

* * *

MORE than any other man, Robert Burns was the spokesman of the Scotch people, particularly of the common folk, and so for the next few minutes I have selected for Mr. Markham to read to you

quotations from the high points of the great Scotch poet's writings.

Probably there has never been a farmer who has not plowed out a nest of mice and stopped to watch them scurry for shelter. Burns, who was a farmer boy, had this experience, and wrote about it, in a little poem called "To a Mouse." We quote it in part:

Wee, sleekit, cow'rin, tim'rous beastie,
O, what a panic's in thy breastie!
Thou need na start awa sae hasty,
Wi, bickering brattle!
I wad be laith to rin an' chase thee,
Wi' murd'ring pattle!

* * *

I'm truly sorry man's dominion
Has broken Nature's social union,
An' justifies that ill opinion,
Which makes thee startle,
At me, thy poor, earth-born companion,
An' fellow-mortal!

* * *

Thou saw the fields laid bare and waste,
An' weary winter comin fast,
An' cozie here, beneath the blast,
Thou thought to dwell,
Till crash! the cruel coulter past,
Out thro' thy cell.

But, Mousie, thou art no thy lane,
In proving foresight may be vain:
The best laid schemes o' mice an' men
Gang aft a-gley,
An' lea'e us naught but grief an' pain,
For promis'd joy.

* * *

Still thou art blest, compar'd wi' me!
The present only toucheth thee:
But, Och! I backward cast my e'e
On prospects drear!
An' forward, tho' I canna see,
I guess an' fear!

Here is another one, also written after Burns had been plowing in the field in April 1786:

Ev'n thou who mourn'st the Daisy's fate,
That fate is thine—no distant date;
Stern Ruin's ploughshare drives, elate,
Full on thy bloom,
Till crush'd beneath the furrow's weight,
Shall be thy doom!

Here are a number of other typical Burns quotations which speak for themselves. They are well worth memorizing.

Man's inhumanity to man
Makes countless thousands mourn.

* * *

From scenes like these old Scotia's grandeur
springs,
That makes her loved at home, revered
abroad;
Princes and lords are but the breath of kings,
"An honest man's the noblest work of God."

* * *

Oh wad some power the giftie gie us
To see oursel's as others see us!

* * *

Flow gently, sweet Afton, among thy green
braes;
Flow gently, I'll sing thee a song in thy
priase.

* * *

To make a happy fireside clime
To weans and wife—
That's the true pathos and sublime
Of human life.

* * *

But pleasures are like poppies spread,
You seize the flower, its bloom is shed;
Or, like the snow-fall in the river,
A moment white, then melts forever.

* * *

Nae man can tether time or tide.

* * *

Of all the numerous ills that hurt our peace,
That press the soul, or wring the mind with
anguish,
Beyond comparison the worst are those
That to our folly or our guilt we owe.
In every other circumstance, the mind
Has this to say—"It was no deed of mine;"
But when to all the evil of misfortune
This sting is added—"Blame thy foolish self!"

What poet has sung better of love than this?

Till a' the seas gang dry, my dear,
And the rocks melt wi' the sun:
I will love thee still, my dear,
While the sands o' life shall run.

And fare thee weel, my only
love,
And fare thee weel awhile!
And I will come again, my love,
Tho' it were ten thousand
mile.

* * *

Auld Nature swears, the lovely
dears,
Her noblest work she classes,
O;
Her prentice har' she tried on
man,
And then she made the lasses,
O.

* * *

What tho' on hamely fare we
dine,
Wear hoddin-gray, and a'
that;
Gie fools their silks, and knaves
their wine,
A man's a man for a' that.

* * *

Of all the poems of friendship there never was one written more beautiful or more expressive of true sentiment than that fine classic of Robert Burns, "Auld Lang Syne."

We twa hae run about the
braes,
And pu'd the gowans fine;
But we've wander'd mony a
weary foot
Sin auld lang syne.

"Seldom have I seen such natural beauty as the Taughannock Waterfall."

Don't deny yourself the profits that come from feeding Park & Pollard feeds.

PIGS - PIGS - PIGS

READY FOR IMMEDIATE SHIPMENT
A choice lot of those good heavy old fashioned young feeders, that will make hogs quickly and fill the pork barrel. Those heavy legged, square backed Chester and Large Yorkshire crossed, Berkshire and Chester crossed 6-8 weeks old \$5.00; 8-10 weeks old \$5.50. A few choice White Chester boars and unrelated sows at \$12.00 a pair. Ship any number you want C.O.D. on approval. I assure you satisfaction and pigs that will more than please you.

ED. COLLINS, 35 Waltham St., Lexington, Mass. Tel. 1094W

SPRING PIGS READY TO SHIP

When starting to raise a hog, why not have the best to start with? Do you want pigs that will live and grow fast? If so, try pigs from our quality stock. These prices are for feeders or breeders.

Chester & Yorkshire cross or Chester & Berkshire cross
6 TO 7 WEEKS OLD, \$4.50 EACH
8 TO 9 WEEKS OLD, \$4.75 EACH
Keep them 10 days, and if in any way dissatisfied, return pigs at my expense. Crating free.
Chester White Barrows 8 to 10 weeks old, \$6.00 each.
WALTER LUX, 388 Salem St., Woburn, Mass. Tel. 0086
P. S.—Will ship any number C.O.D.

RELIABLE PIGS FOR SALE

Buy where quality is never sacrificed for quantity. We sell only high grade stock from large type Boars and Sows, thrifty and rugged, having size and breeding. Will ship any amount C.O.D.

Chester & Yorkshire — Berkshire & Chester
6 to 8 weeks old, \$4.50
8 to 10 weeks old, \$4.75
Choice Chesters, 8 wks. old \$5.25

Satisfaction guaranteed or money refunded, 10 days trial allowed. Crates supplied free. A. M. LUX, 205 Washington St., Woburn, Mass. Tel. Wob. 1415.

PIGS! PIGS! PIGS! PIGS!

Why not have quality when starting to raise a hog? Large Yorkshire and Chester White cross, color white; Berkshire and Chester White cross, color black and white
6 to 8 weeks @ \$4.50 each

They are all good blocky pigs, the kind make large hogs. Will crate and ship in lots of two or more C.O.D. F.O.B. Woburn to your approval. No charge for crating. John J. Scannell, Russell St., Woburn, Mass. Tel. 0230

Dibble's Seed Wheat

Honor

—recommended by New York Department of Plant Breeding as the best White Wheat. Over 100 acres on the Dibble Farms and we offer 3000 bushels our own growing re-cleaned and graded @ \$1.50 PER BUSHEL, yields of 37, 40, 45 and 50 bushels per acre on large fields right here at Honeoye Falls.

Russian Rosen Rye—\$1.50 PER BUSHEL.

Northern grown Grimm and Common Alfalfa and other seasonable Seeds for August and September sowing. Send for Circular, Price List and Samples to

Edward F. Dibble Seedgrower
Box C, Honeoye Falls, N. Y.

Vegetable Plants—Ready Now.

Cabbage plants—Copenhagen Market, Enkhinzen Glory, Succession, Danish Ballhead, Red Dutch, Red Danish, Long Island Savoy \$2.00 per 1000; 5000, \$9.00. Re-rooted cabbage \$2.25 per 1000. Tomato plants—Field grown, Marglobe, Bonny Best, John Baer, Jewel, Stone and Matchless \$3.00 per 1000, 500, \$13.00. Cauliflower Plants—Early and Late Snowball and Erfurter \$4.50 per 1000; 5000, \$20.00. Brussels Sprouts—Long Island Improved, \$2.50 per 1000. Celery Plants—Field Grown, Golden Plume, Easy Blanching, White Plume, Winter Queen and Giant Pascal, \$3.50 per 1000 Re-rooted. (Send for free list of all plants.)

With the A. A. Fruit Grower

The Advantage of Thinning

Although thinning takes time, some growers believe that it is profitable. The advantages of thinning are:

1. To increase the proportion of high-grade fruit without reducing the total yield.

2. In some years it may reduce the breaking of limbs caused by heavy crop.

3. A higher percentage of the crop is marketable and each apple is larger so it is likely to reduce the handling cost at harvesting time.

4. The thinned fruit is likely to show better color than fruit not thinned.

The operation of thinning is usually done following the June drop and enough apples are taken from the trees so that those remaining are at least six to eight inches apart. The West Virginia Experiment Station found that it cost on an average of \$.218 per tree to thin some 21-year old trees figuring the cost of labor at 20c an hour.

Worden Grapes Shell

Why do Worden grapes frequently shell so seriously?

IN the first place, the Worden grape is more subject to trouble from shelling than many other varieties. Then again, some people believe that too close pruning may increase this trouble.

For Growers of Small Fruits

A NEW book has just been published by John Wiley & Sons, Inc., 440 Fourth Avenue, New York City, entitled "Growing Tree and Small Fruits" by Knapp & Auchter. This book is intended to meet the needs of schools and departments of agriculture. Since these agencies are concerned primarily with practical phases of fruit growing, it follows that this book, if it achieves its purpose, should also be useful to those who are actually engaged in growing fruit. The list price of this book is \$3.00.

Yield of Currants and Gooseberries

"What should we expect in the way of yield of currants and gooseberries?"

IN a bulletin on bush fruit, Professor I Card estimates that currants ought to yield from one hundred to one hundred fifty bushels per acre although he has recorded three hundred and twenty bushels to an acre. The Canadian Experimental Farm at Ottawa mentions an average of over 4 years of two hundred and two bushels per acre.

Gooseberries commonly yield at the rate of three hundred to five hundred bushels per acre when the plants are set four feet by six feet.

Renewing a Strawberry Bed—There is always a question whether it pays to attempt to grow a second crop of strawberries. Where only a few are grown for home use it seems that the

extra quality obtained from new plantation warrants setting out new plants. Where the grower decides to renew a plantation, the plants are mowed after picking is completed and then through cultivation the rows are narrowed down to strips about 10 inches wide. These are kept cultivated and new plants will set. An application of well rotted stable manure or commercial fertilizer will help the plants to make a good growth.

What Will Potatoes Bring?

(Continued from Page 3)

1927 and 1930 seasons, the prices obtained by growers during 1927 may be of interest. They are shown in table 2.

Competing Crops

The 1930 sweet potato crop is estimated at approximately seventy-four millions of bushels. This is about eleven millions of bushels or thirteen per cent less than the 1929 crop, and about six million less than the average of the past five years.

The dry bean crop for 1930 is estimated to be almost twenty-three millions of bushels, an increase of 3.3 millions over the 1929 crop and of 4.7 millions over the average of the past five years.

The rice crop for 1930 is estimated to be 38.3 millions of bushels, a decrease of about 1.9 million bushels compared with the 1929 crop and over 2.3 millions of bushels below the average production of the past five years.

Table 2

Prices Paid Growers Per Bushel for Late White Potatoes, (Wagonloads Cash to Grower, at Shipping Point) 1927 Season*

Month	Western New York	Maine	Mich.	Idaho
1927				
September		\$.54	\$.75	\$.50

March	1.21	1.26	1.12	.87
April	1.06		.94	.43
May71		.58	

*Data obtained from shipping point reports, issued by United States Department of Agriculture.

The wheat crop is estimated to be about the same size as in 1929, with a somewhat heavier carryover. The 1930 corn, barley and rye crops are all expected to be considerably larger than those of 1929.

July Forecast Not Final

The July forecast should by no means be regarded as final, and it should be remembered that this forecast is based solely on the observed condition of the crop. Subsequent forecasts will be made by the United States Department of Agriculture on the 10th of each month and should be watched carefully. Much can happen to the late potato crop between now and harvest time. Last year a severe drought in August reduced the late crop by about twenty million bushels. If normal weather prevails, however, the final estimate in December will probably not differ materially from the July forecast.

Well-matured, strong, one-year-old scion wood should be used for grafting.

CHIROPRACTOR: Well, I'm afraid it's going to rain again today.

PATIENT: How do you figure that out?

CHIROPRACTOR: I can feel it in your bones.

More About Herd Test Rules

EDITOR'S NOTE—In the June 21 issue of *American Agriculturist* we gave you a brief summary of the Holstein Herd Test Rules. On this page you will find outlined the principal features of the tests conducted by other breed associations. If you wish more detailed information your breed association will be glad to give it to you.

* * *

Ayrshire Herd Test Rules

IN order to start a herd on test, the owner must file an application with the Ayrshire Breeders' Association at Brandon, Vt.

The test may begin with the first day of any calendar month.

Members of dairy herd improvement associations may start their herds on test, and the reports of the local tester will be accepted by this association, when approved by the state superintendent of testing. Regular advanced registry supervisors will be appointed to conduct tests in herds not entered in dairy herd improvement association work. This association will make arrangements with the State Colleges for the supervision of tests.

The Ayrshire rules do not permit the milking of cows more than three times daily, nor the handling of more than forty milkings by the supervisor in one day.

The supervisor must oversee the milking of each animal, and take a sample of the milk of each milking to be tested for butterfat content. Composite samples are not acceptable.

It is optional with the owner whether he weigh and report the daily weights or permit the association to compute the monthly total from the report of the supervisor.

In addition to production records, this association also requires that feed records be kept on all cows. This, we believe to be a most important phase of the test. It furnishes just the information the breeder needs to maintain a profitable herd. Statements of production and feed costs are furnished owners each month.

A certificate is issued to each herd completing a year's test. There are no production requirements to be met to qualify a herd for a certificate.

* * *

The Jersey Herd Improvement Registry

THE object of the herd improvement registry test is to give breeders of purebred Jerseys a method of testing sponsored by the American Jersey Cattle Club that shall include the entire herd. This system was adopted on July 1st of 1928 and provides such safeguards to the accuracy of the records as to enable the American Jersey Cattle Club to recognize the tests and to issue a certificate to the owner showing the average production of the herd in addition to the individual records of each cow in milk. These records are also to be preserved by the club and published for the use of all breeders.

The cost of entering a herd on the herd test is only \$5.00 per year. Either monthly or bi-monthly supervisions may be used at the option of the owner. If bi-monthly tests are employed each supervision which is twenty-four hours in length shall be preceded by a preliminary or dry milking. Daily milk weights are to be kept by the owner but are not sent in to the Club office unless specifically requested. The herd test or Herd Improvement Registry may be readily combined with either Register of Merit testing or with cow testing association work at little additional cost. It may be started the first of any calendar month and is to be continued for at least a twelve month period.

It is not enough for a breeder to know that he has one or two cows in his herd capable of producing six or seven hundred pounds of butterfat, he must also watch for the low producers just as carefully. The herd average
(Continued on Page 8)

A four-row cultivator like this, fueled with Socony products, will cover 65 acres a day.

SIXTY-FIVE ACRES A DAY WITH SOCONY

FIFTEEN acres a day with a two-row cultivator pulled by three or four horses; eight acres, with a one-row cultivator and two horses. But sixty-five acres, at 4 miles an hour, with a four-row cultivator, may be covered when the best motor fuel and the proper lubricant are used.

New York and New England acreage farmers have come to recognize that Socony Special plus Ethyl and Socony Aircraft Oil are exactly what they require for this purpose. They know also that:

Mica Axle Grease, made for axle lubrication on wagons and farm machinery, is of the best grease stock and ground mica, that it fills up the pores and crevices of the axle and forms a hard, bright, smooth coating that reduces friction.

Eureka Harness Oil preserves harness and leather. It is pure mineral oil and cannot turn rancid. It does not destroy the stitching since it contains no acid. It penetrates the leather and lasts longer.

Standard Hand Separator Oil is a quick-acting oil adapted to close-fitting bearings. It is free from gum, and is anti-rust and anti-corrosive.

In addition, farmers find it pays to put the following Socony products to work for them: Ruddy Harvester Oil . . . Socony Household Oil . . . Socony Turex Oil (for Diesel and Oil Engines) Socony Motor Oil . . . Aircraft Oil . . . Verdol Summer Spray . . . Socony 990A Motor Oil for Fords . . . Socony Disinfectant . . . Socony Gasoline and Socony Special Gasoline plus Ethyl.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
3 Soft Cheese	2.21	
3 Evap. Cond. Milk Powder		
4 Hard Cheese	1.90	1.70
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for July 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Market Holds Gains

CREAMERY SALTED	July 26, 1930	July 19, 1930	July 27, 1929
Higher than extra	37 1/2-38	36 -36 1/2	44 -44 1/2
Extra (92 sc.)	36 1/2-37	35 1/4-35 1/2	43 -43 1/2
84-91 score	32 -36	30 1/2-35	39 -43
Lower Grades	31 -31 1/2	29 -30	38 -38 1/2

The butter market has made a phenomenal gain since our last report, the basic reasons for the improvement being the much improved statistical condition of the market. The prolonged spell of hot, dry weather throughout the Western producing territory, to say nothing of the East, has been responsible for sharp decreases in production. The reports of diminished make have been food for the bulls. Receivers in the New York market have been anxiously working to keep the market well under control in order to avoid any move which might strain the position of the market.

On July 25 the four principal cities reported cold storage holdings of butter totaling 63,142,327 pounds compared with 58,454,842 pounds on the same week day last year. These figures are the closest they have been for some time, and if present conditions continue to prevail for any length of time we are going to see a much improved butter market, in fact, some reports lead us to believe that before this year winds up we will see a very radical change. In some sections weather conditions have been unusually severe and it is doubted if production can be brought back to anything like normal.

The hot weather in the East has not had much material effect on the consumer market covered by the Metropolitan district. There have been some slight advances in retail rates but in general there has been a strong tendency to maintain a good selling market. Buying

for current use has been fairly good although some jobbers have been keeping to their own storage holdings which now show an attractive profit.

We look for the market to hold steady. We believe that the low point has been passed. Of course there will be periodical fluctuations but on the whole we look for the curve to trend upward. The relation of the present market to that of a year ago of course will be directly affected by the industrial situation and the make of butter. It hardly seems possible, with prices where they are, that heavy grain feeding will be profitable in some of the western areas. With reduced production the market will be in a better position.

No Change in Cheese

STATE FLATS	July 26, 1930	July 19, 1930	July 27, 1929
Fresh Fancy	17 1/2-18 1/2	17 1/2-18 1/2	22 1/2-25
Fresh Average			
Held Fancy	25 -26	25 -26	29 1/2-29 1/2
Held Average	23 -	23 -	

There has been no change in the cheese market since our last report. Fresh cheese has been meeting slow demand and there has been plenty of cheese to meet the call. Fresh New York State flats have not been over plentiful but they have not been getting much inquiry. The bulk of the business has been going to Wisconsin. The Western market has not been showing any inclination to lower prices, in fact, offerings are somewhat lighter. However, as yet no speculative interest has appeared and the market moves along unchanged. On July 24 the ten cities making daily reports had in cold storage 18,604,000 pounds of cheese compared with holdings of 17,929,000 pounds on the same week day last year. From July 17 to July 24 the ten cities reported an increase in holdings of 791,000 pounds compared with an increase in the holdings during the same period a year ago of 1,563,000 pounds. If the present rate of storage activity continues, in comparison with a year ago, the slight surplus we have over last year will be eliminated. If that takes place we look for renewed activity on the part of speculators, and for a while we expect to see better prices, until such time as raw materials for butter are diverted to the cheese making factories.

*Prices include premiums.

The hot weather played havoc with the egg market during the week ending July 26. Most of the damage centered around Western shipments for they constitute the bulk of New York City arrivals. In spite of persistent reports of decreased production in the West, shipments continue burdensome. New York City's receipts of Western eggs were heavy early in the week ending July 26, in fact they were so heavy that on Tuesday strong selling pressure developed and values broke. Most of the trouble centered around damage by heat. Almost everything showed weak, shriveled yolks and a large percentage of shipments containing fertile eggs showed germ development. Naturally most of these arrivals were unfit to store and most of them were unfit for the better class trade. In fact some of them were not at all saleable. As a result there was extreme pressure to move any heated stock as soon as possible to avoid further deterioration. As a result the market was absolutely demoralized.

Fortunately for nearby producers shipments have been rather limited and fancy qualities being in demand have met a slight price improvement. Nearby shippers are urged to use every precaution in handling their eggs to avoid the effect of heat on the eggs. Frequent collections, good storage facilities and frequent shipments will keep down heat damage and yield a better revenue. Personal attention to shipments frequently makes it possible to send eggs by night express and thereby avoid the heat of the day.

Heavy shipments from the west continue to add to our surplus over a year ago. On July 25 the ten cities making daily reports had in cold storage 5,992,000

cases of eggs whereas on the same week day last year the same cities reported holdings totaling 4,755,000 cases. From July 18 to July 25 the ten cities stored 11,000 more cases of eggs than they did during the same period last year.

Live Fowls Easier; Broilers Firmer

FOWLS	July 26, 1930	July 19, 1930	July 27, 1929
Colored	21-22	-27	-30
Leghorn	15-17	19-22	26-
CHICKENS			
Colored

CAPONS			
TURKEYS	20-25	20-25	25-35
DUCKS, Nearby	15-22	14-22	25-35
GESE	-12	-12	20-25

The live poultry market has not given us anything to crow about, and the situation does not look so good for next week. Fowls have been having a tough time of it and we doubt very much if the situation does not look so good for next week. period started Saturday night, July 26 to last for nine days. Advices indicate that shipments are materially lighter, but from all indications more than enough poultry is available. Added to the lighter buying we have the extremely hot weather which diverted trade from fowls to broilers, further embarrassing the fowl market. Broilers were not so active early in the week but toward the middle and the end of the period, trade improved with price improvement reported. The market closed on the 26th with a slight advance.

Again we advise shippers to grade their live poultry wherever it is practical. Buyers are using every excuse to depress prices. Careful attention to grading details takes away an argument for a concession.

Feeds and Grains

FUTURES	July 26, 1930	July 27, 1929
(At Chicago)		
Wheat (Sept.)	.91 3/4	1.47 3/4
Corn (Sept.)	.86 3/4	1.06 3/4
Oats (Sept.)	.37 3/4	.50 3/4
CASH GRAINS		
(At New York)		
Wheat, No. 2 Red	1.04	1.03 1/2
Corn, No. 2 Yel.	1.07 1/2	.99 3/4
Oats, No. 2	.47 1/2	.48 1/2
FEEDS		
(At Buffalo)		
Gr'd Oats	31.00	32.50
Sp'g Bran	23.00	23.50
H'd Bran	25.50	26.50
Standard Mids	23.00	23.50
Soft W. Mids	31.50	31.00
Flour Mids	31.00	30.00
Red Dog	33.50	33.00
Wh. Hominy	33.50	32.00
Yel. Hominy	33.00	32.00

Gluten Feed	33.00	33.00
Gluten Meal	43.00	43.00
36% C. S. Meal	36.00	36.00
41% C. S. Meal	39.00	39.00
43% C. S. Meal	41.00	41.00
34% O.P. Linseed Meal	42.50	42.50

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hot dry weather has been responsible for crop damage throughout the corn belt, resulting in price advances. Weather reports extend little hope for relief by rain and as a result sentiment remains bullish. Higher prices are expected unless rains comes through. Corn had a stimulating effect on the oat market and had some reaction on wheat, although the wheat market has been rather heavy.

Hay Market Firm

Receipts of hay were moderate the early part of the week ending July 26. The demand was slow with prices unchanged. But with a sharp decline in arrivals coupled with an improved demand toward the week-end values have advanced \$1.00 per ton. No sales of No. 1 large reported, a car of small bales of this grade sold at \$27.00. Mixtures and lower grades ranged from \$25 down to \$17. Inquiry was for hay of best quality. Several cars of new hay arrived in a somewhat heated condition and met with difficult disposition at special rates, which ranged from \$3.00 to \$5.00 per ton under old of similar quality. The market closed steady to firm. Rye straw receipts light, demand good, prices advanced \$1.00 per ton to \$17.

Meats and Livestock

CATTLE—One load of Steers sold, \$8.00, about steady. Around nine loads unsold. Demand poor. Indications are that market will go lower. Cows weak to 25c lower. Bulls slow, weak to 50c lower.

Common to medium cows \$4.75-6.00. Low cutters and cutters \$2.00-4.50. Cutter to medium bulls \$4.50-6.50.

VEALERS—In light supply. Market barely steady; trend easier. Few 50c lower. Good to choice \$9.50-12.50. Mediums \$6.00-9.00. Cull and common \$4.00-5.75.

HOGS—Steady. Good to choice 160-220 pounds \$9.75-10.25. Packing sows \$7.50.

SHEEP AND LAMBS—Lambs in light supply. About steady. Good to choice \$8.50-9.00. Mediums \$6.50-8.00. Common \$5.00-6.50. Few culls \$4.50. Ewes steady, \$4.00 down.

COUNTRY DRESSED CALVES—Daily fresh receipts were light. Sales were very slow with lightweights and small mostly in demand. Heavyweight calves of which there were more than any other were neglected by the buyers and towards the end of the week had to be sold at low prices to move. Market in general was in bad shape all the week and closed weak and lower on all but small with a number of heavy good calves still unsold. Fresh receipts per pound: Choice 13c; fair to good heavy calves 10-11c; small to medium 13-14c.

LIVE RABBITS—Receipts light all the week. Demand very slow. Market steady. By the coop, 15-20c per pound.

Wool

Wool market has been slow. New York better fleece wool, unwashed, Fine, per pound 21-30c; 1/2 blood 23-29c; 3/8 blood 24-29c; 1/4 blood 24-29c; low quarter blood 25-27c; common and braid 23-25c.

More About Herd Test Rules

(Continued from Page 7)

from year to year is the best criterion of whether a breeder is going forward or backward in his work. Furthermore, the Herd averages as published by the American Jersey Cattle Club have a distinct commercial value that should not be overlooked.

* * *

How Records are Secured on Short-Horns

THE American Short-Horn Breeders Association does not operate a herd improvement test. All of the testing that is done for our Record of Merit work is done on individual animals. There are three general classes of records made—A, B, and C. In all classes it is necessary that daily weights of milk be kept and reported to this office each month. The difference between these records lies in the method of reporting the amounts of fat.

Class A. records are made under the supervision of Official Testers from the State College or Experiment Station. B records are made under the supervision of a Dairy Herd Improvement Association. Class C. records are really Private Records, but one test must be made by a disinterested, competent person during the test period.

In addition to these we have Double Letter Records—AA—BB and CC. These have the same supervision as the single letter records respectively, but they are 305 day records requiring 90% of the production in the single letter records and the cow must give birth to a living calf within 14 months of date of starting period.

FARMS FOR SALE

175 Acre Equipped Farm \$5029 Last Year's Income

Private lake, 40 acres nearly level black loam tillage. 40 cow spring pasture. Est. 1000 cords hardwood worth \$8 at farm; 50,000 ft. timber, 200 apple trees, pears, cherries and berries. Fine 7-room newly painted and papered house, bath; convenient barn 40x90, silo, garage, poultry house. To settle estate \$5,000, part cash. If taken soon, pr. horses, 14 good cows, bull, 5 heifers, tools, machinery, acre potatoes, 1/2 ac. turnips, 1/2 ac. cabbage, 3 ac. corn, oats, hay and 5 cords dry stove wood included. See pg 22. Catalog 1000 bargains. Free. STROUT AGENCY, 255-R Fourth Ave. at 26th St., Gramercy 1805.

\$1500 Secures High Grade Farm Crops, Stock and Equipment

62 Acres corner Macadam highway, edge village. 5 Acres woodland, 12 cow spring pasture; 75 apple trees, pears, cherries, grapes. Convenient 10-room 2-story house, furnace, electricity, running water available; glorious river views. Barn 38x44, cement basement. James-Way stanchions for grade-A milk. All buildings perfect repair. Feeble owner's low price \$5500 with \$1500 down and long time terms. If taken soon, 4 good cows, extra fine matched pair 5-year old horses, harnesses, wagons, machinery, tools, corn, potatoes, grain, hay included. J. E. Hoadley, BONDED STROUT AGENT, 95 Chenango St., Binghamton, N. Y.

Farm News from New York

Farm Board Still Refuses to Buy Wheat

THE Federal Farm Board and wheat prices are still in the spotlight. Briefly, the latest developments are as follows: Following the Federal Farm Board's refusal to buy more wheat and the sustaining of this action by President Hoover, who refused to bring pressure to bear, a group of senators, including Senators Capper and Allen of Kansas; Pine of Oklahoma; Howell of Nebraska; McMaster of North Dakota, conferred with Chairman Legge and again urged the purchase of 100,000,000 bushels of wheat of the 1930 crop. Chairman Legge repeated his earlier statement that the Wheat Stabilization Corporation should not go on the market at this time.

Chairman Legge seems to feel that political considerations are in part the cause of some attack on the Farm Board and says: "The Farm Board was created to assist the farmer and not for politics. From now until November, politicians will be so busy saving the farmer that it might be just as well to take a vacation, although if we are expected to resume that burden after election, perhaps a little progress can be made by carrying on in the meantime."

At the recent Farm Bureau-Grange picnic at Atlantic Highlands, New Jersey, both President Sam Thompson of the Farm Bureau Federation and Master L. J. Taber of the National Grange, spoke of the activities of the Farm Board. National Master Taber said:

"The Board has not accomplished what we hoped it would do, but let us give it time to work out its program as this problem cannot be solved in a day."

Crop Conditions in New York State

THE season has been favorable for the growth of nearly all of the general crops in New York State, according to a state-federal report just issued from the New York State Department of Agriculture and Markets.

In spite of the fact that the potato acreage in New York has been decreased from about 270,000 acres last year to 265,000 this year, the condition is so much better that the production promises at this time to be about 30,740,000 bushels, compared with 24,840,000 harvested last fall and the five-year average of 31,046,000 bushels. Long Island's production was very light last year on account of the long continued dry weather. This year the growing conditions have been nearly ideal with the result that the crop is looking extra well at the present time. The potatoes in upstate New York, although much later, are in general coming along in good shape.

For the whole United States, this year's potato production promises at this time to amount to about 398,419,000 bushels, compared with 359,796,000 bushels harvested last year, 465,350,000 bushels harvested in 1928 and 402,741,000 bushels harvested in 1927. Weather conditions or at-

tacks of insects and disease organisms before harvest time would change these forecasts.

Field bean production promises to be high in New York this year if the weather remains favorable and injurious insects and diseases do not become too severe. The acreage has been increased about 20 per cent over that planted last year, and the condition is just about average, although about 5 points lower than on July 1 last year. Michigan, with a bean acreage about seven times that of New York, has also increased its acreage about 20 per cent. All of the other important bean growing states have increased their acreage until for the whole United States the bean acreage this year has been increased about 12 per cent and from present indications points to a production of about 22,972,000 bushels, compared with 19,693,000 bushels last year and the average for the past five years of 17,323,000 bushels.

Indications point to a lighter than usual hay crop in New York this year. Prospects improved considerably during June, but are still below average. The crop is now forecast at about 6,114,000 tons, compared with 6,653,000 tons last year and the five-year average of 6,841,000 tons. Many of the new seedings are light, and many of the old meadows are extremely weedy. Last year's drought and last winter's light snow covering injured the hay fields considerably. Light hay production is the rule through the states of Ohio, Indiana, Illinois, Michigan, Wisconsin and Minnesota. For the whole country, the production of hay promises about 85,431,000 tons, compared with 101,715,000 tons last year and 93,630,000 tons, the five-year average.—R. L. GILLET, *Agricultural Statistician.*

Most Upstate Counties Show Gain in Population

RECENT census figures give New York State a population of 12,609,555, a gain over the 1920 census of 21.4%, New York City with a population of 6,958,791, has more than half the inhabitants of the state. All but 11 of the 57 upstate counties show an increase. Allegany County has 10 fewer persons than in 1920. Schenectady shows a loss of 217, Delaware 1660, Greene 26, Hamilton 20, Herkimer 1750, Lewis 61, Oswego 319, Schoharie 1641, Schuyler 188, Wyoming 1580.

New York Milk Markets

WHILE the week ending July 19 showed a drop in milk consumption in the New York City and metropolitan area of 19,814 cans below the previous week and 41,492 cans under the corresponding week in 1929, the following week showed marked improvement.

The week just ended was a week of real hot weather. Steadily the demand for more and more milk increased. Sources of supply were taxed to their capacity. Production declined steadily

throughout the whole New York Milk Shed as the torrid weather settled over the territory, burning pastures and rendering cows unable to produce at capacity. Similar conditions in the west were reported and a decline in shipments of western cream to markets outside of New York City sent the price of that commodity up to around \$18.

Did You Give the Information?

THE Dairymen's League has adopted a unique but very effective method of getting production information from its members. On the back of each check sent out to members is the following blank with the request that the members answer the questions before endorsing the check.

Number of cows in herd today
Milking..... Dry.....
Number of cows and heifers that
that freshened during July
Cows..... Heifers.....
Number of animals bred in July
Cows..... Heifers.....
Number of animals sold
Bought..... Died.....
Acres of green feed planted
This year..... Last year.....

There will be no question but that the cashed checks will come back to the League office but, human nature being as it is, it is likely that not all of them will come back with these questions answered. Certainly if any milk marketing organization is to serve its members to the fullest extent it is necessary that it have all available information about production conditions and we urge that every member take the few moments necessary to give the information asked for before sending back the check.

New York County Notes

Genesee County—The forepart of this week was so cold that farmers

worked in the field with their light coats on. However, it was plenty hot enough later. Late peas are being rushed to the canning factories. There seems to be a large acreage of unusually fine ones this year. Oats and barley are heading out and wheat will soon be ready to cut. Many are already plowing for winter wheat. Clover hay is very light. The red clover seems to have winter killed almost entirely. Timothy hay is better but weedy. Patrick Murry, a farmer and resident of Byron was seriously injured when his team started up while he was loading hay. He was thrown to the ground and struck on his head. It is thought that he has a broken neck and there are very little hopes for his recovery.—Mrs. R.E.G.

* * *

Rensselaer County—We are having ideal weather for haying the past week. Clover was not a very good crop and the frequent rains of early July made the curing of it difficult. Corn is making excellent growth and most crops are doing well. Berries and small fruits brought prices a bit higher than last year. Milk prices are not quite as satisfactory this year, but farmers are optimistic.

Pennsylvania Potato Growers Plan Meetings

PENNSYLVANIA potato growers are planning several meetings in the near future. On August 18 to 23, a group will go to Canada on the ninth annual excursion. On their way to Prince Edward Island they will stop for a day in Aroostook County, Maine. Any pennsylvania growers who are interested in taking the trip should get in touch with L. T. Denniston, Pennsylvania State College of Agriculture, State College, Pa.

On July 29-30, Pennsylvania potato growers in seventeen counties will meet at the National Farm School near Doylestown for the southeastern Pennsylvania potato field day.

New York Grange Notes

By F. J. RILEY

EVERY member of the Grange in New York State is working toward the goal of 12,000 members for the seventh degree at Rochester in November.

We are proud to have in our State the oldest Grange, Fredonia No. 1, the largest grange, Webster No. 436 with 1056 members, the largest class ever initiated in the sixth degree in any State, 1432 last February in Syracuse, and 129,250 members in our State, the largest membership of any State in the Union.

Now we must not fall down on our goal, then we can boast of having initiated the largest class ever initiated in any order in the world.

The Webb-Rice rural school bill which was sponsored by the State Grange and became a law at the last session of the Legislature has had its initial test coming to our attention, an order being issued by a school Superintendent in Onondaga County to consolidate Halfway and Hartlot districts with Elbridge District, which has just completed a new high school building. An appeal was made by both districts to Judge Barnum of Onondaga County and a commission of three men appointed, after taking all evidence on

both sides the commission rendered its verdict July 16th to vacate the order of the District Superintendent.

The officers of the State Grange are to run a special bus to Canton, St. Lawrence County August 12th to confer the sixth degree in special session on a class of 300 or more candidates the trip will continue from there to Malone, Franklin County on August 13th thence to Plattsburg, Clinton County on August 14th.

The officers will then retrace their way back to Watertown, Jefferson County on August 15th the home county of E. J. Walrath, chairman of the Executive Committee of the New York State Grange, thence to Lowville, Lewis County the home of State Lecturer, Miss Elizabeth Arthur. On August 16th, in each of these counties 300 or more candidates are in readiness for the sixth degree preparatory for the seventh at Rochester in November.

On September 8th this tour will continue until all counties having their quota have been covered.

In the first six months of 1930 twenty-seven Juvenile Granges have been organized in New York State. This is some record for Juvenile Granges.

The Safety Responsibility Law Has Teeth

During the first six months of this year, January - June, the Commissioner of Motor Vehicles **SUSPENDED 451 LICENSES**

on account of failure to satisfy judgments.

And in 7697 cases, proof of financial responsibility was required.

Let us guarantee your responsibility under a Guardian Casualty Policy. You get full protection and save \$3.00 to \$10.00

Cool Desserts For Hot Days

These Tested Recipes Are Delicious but Inexpensive--the Farm Supplies Many Ingredients

SWEETEN one quart of strawberries to taste having them quite sweet. Put them into the freezer can with the unbeaten whites of three eggs and freeze, using three parts ice to one part salt, as for any ice cream. Serve in glasses, garnish with whipped cream and whole berries.

Try this recipe with other berries, particularly raspberries. If the strawberries are very large, they should be halved.

Maple Mousse

1½ cup maple syrup 2½ cups heavy cream
1 cup milk 1 tablespoon powdered gelatine
1 tablespoon cold water ½ cup chopped nuts

Mix syrup and milk. Add gelatine which has been soaked in cold water, then dissolve over boiling water. Fold in cream whipped stiff. Freeze until firm and turn out in molded form.

LAYETTE SET NO. C1425 consists of gertrude, dress, bib and bonnet stamped on exceptionally fine count batiste with crisp finish. Very few outline and lazy-daisy stitches will make this set. Directions for sewing and stitching are furnished. The complete set is only \$1.00, postpaid to any address and if floss for embroidering is desired, send 25c extra. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

Serve in slices over which are sprinkled the chopped nuts.

Orange Cream Punch

4 cups thick sweet cream 4 egg whites
2 teaspoons lemon juice sugar to sweeten to taste
1 cup orange juice

Sweeten cream to taste. Add fruit juices and let stand in pan of crushed ice half an hour. Fold in the whites of eggs and serve at once in tall glasses.

A drink as rich as this is almost a meal in itself. However, it is most delicious but if you have to watch your calories, beware of too much rich food.

Peach Ice Cream

12 mellow peaches 1½ cups sugar 1 pint cream

Press the peaches through a colander. Add the sugar to the cream, and stir over the fire in a double boiler until the sugar is dissolved and the cream is hot but not boiling, cool. When cool turn into can and freeze. Remove the lid and add the peaches. Turn slowly until the mixture is again frozen.

This recipe is simply "delish".

Lemon Sherbet

Pour 1 quart of boiling water over the juice and rind of 4 lemons. Let stand until cool and then strain. Add 3 cups sugar. Add 2 quarts of milk. Place in freezer and freeze.

Add the acid gradually to the milk so that you may discontinue as signs of curdling appear.

Maple Parfait

1 quart of maple syrup, yolks of eight eggs. Heat the syrup nearly to boiling point, add yolks well beaten and cook until it coats the spoon. Strain and cool. When cool, add one quart of cream and freeze.—MRS. R. C. DEL.

Not By Bread Alone

RECENTLY, while visiting with a neighbor I spoke of the pleasure I had found in taking dinner with a friend. The enjoyment had come, large-

ly, from the lack of formality, the absence of any suspicion that I considered the meal to be the event of the day, and the discussion of topics of mutual interest, simple, lovely things of everyday life—the opening of a new flower in her garden, the bright saying of a tiny neighbor child—intermingled with subjects of world-wide interest. In the conversation of my hostess lay no small part of the charm of her hospitality. It sent one home warm and fed and comforted, wondering why we spread our tables so carefully at times and let our friends depart hungry for sympathy and smiles and cheer.

The face of my listener brightened with a knowing smile as she told of a dinner served by my friend, not in the dining room but on a small table in front of an open fire in the sun parlor, with a smaller table near at hand so that rising to serve was needless.

Her food was good; she offered me soup, cold boiled tongue, homemade bread, a bit of delicious cake, pineapple—and with all the piquant sauce of wit, the flavor of real friendliness."

The Contrast Between "Homey" and "Hotel" Meals

It was much to be preferred to the company meals of which tired farm women write to magazines, meals the cooking and serving of which call for expenditure of much time and energy.

When will we admit that regal hospitality lies oftenest in simplicity? The home is kept on the plane with hotels if guests have nothing better to carry away than memory of gorgeous eats served by one too tired and nervous to enjoy her friends.

Better to serve food minus frills and let our friends take back to city homes memory of a day rich in good fellowship, a walk in cool, dim forests, or under the pink bloom of apple trees, the parting clasp of friendly hands—cool, steady hands that heaped a basket with flowers and fruit for the home in the city, even as the hearts of visitors were filled with the rest and peace

which is found oftenest, I think, in the country, with country folks.

"He who gives himself with his gift feeds three; Himself, his hungry neighbor and Me." M. C. S., Pa.

We Call On Our Next Door Neighbor

(Continued from Page 2)

rent. One in particular was approximately \$2.50 for power for two months to supply a six room house, well equipped with electrical conveniences including a hot water heater.

The development of Ontario's electric power is under the direction of the Hydro-Electric Power Commission of Ontario, which is "entrusted with the duty of supplying the electrical needs of the citizens of Ontario municipalities at the lowest possible cost consistent with the financial stability of the undertaking." A report of this commission states that 86.2% of all Ontario consumers get current for 1.9c per kilowatt hour or less, that 12.4% of consumers pay between 2c and 3.9c, that 1.3% of consumers pay from 4c to 6.9c, and that only 1/10 of 1% of all consumers pay 7c or more per kilowatt hour. If our readers could get current on this basis, what a boost it would give to rural electrification!

At Queenstown, several miles below Niagara Falls, is located one mammoth power plant. The water to operate this plant is taken in above the falls and carried through a canal 12¾ miles long, which for a part of the way is cut through rock to a width of 48 ft. and a maximum depth of 85 ft. The water is carried for this distance in order to take full advantage of the entire fall of the Niagara River. By a treaty negotiated in 1909, Canada is allowed to divert water at the rate of 36,000 cu. ft. per second, while the United States is allowed 20,000 cu. ft. per second. Naturally, we wondered why Canada is given this preference,

and learned that approximately this proportion of the water going over Niagara Falls originates respectively in the two countries.

In the power house at Queenstown we saw nine generators with a total capacity of 550,000 horsepower. Each generator can produce sufficient current to supply the needs of a city of good size. It seems almost inconceivable that man's ingenuity could install the machinery to do this work, or visualize the plans for such a development.

President Hoover signed the new tariff bill while we were in Canada, and naturally there was plenty of discussion about it. Inasmuch as the law was not signed until after we left the United States, and particularly as there was not much we could say in defense of it anyway, we disclaimed all responsibility for it. While our Canadian hosts never forgot that we were their guests, they could not refrain from expressing their indignation in emphatic terms. One speaker pointed out to us that whereas the Canadian people have been exporting goods to the value of \$500,000,000 annually, to the United States, they at the same time had been buying goods to the value of \$1,000,000,000, just twice the value of the exports. This speaker also mentioned the big increase in American capital which has been invested in Canada. In 1916 this amounted to \$650,000,000, while at present this sum has grown to \$3,500,000,000. Naturally, he said, Canadians value this foreign capital which helps in the development of their country, and while they have no thought of retaliation so far as the tariff is concerned, they may find it necessary to look elsewhere for markets for their goods. By the way, Canadian exports are 2½ times as great per capita as are the exports from the United States.

I cannot close this brief account of our trip without some word of appreciation to those from the Canadian government and the various railways, whose efforts made our trip so pleasant. During the entire two weeks there was not a hitch in the program, and apparently those responsible for it were having just as good a time as we were. Anyone who has planned such a trip, however, knows that a good deal of work had been done, otherwise it would not have moved along so smoothly. We enjoyed every minute of our trip, but after all we were glad to get home. Who would want always to sleep on a pullman train or in a different hotel every night? One of the fine things about any trip is that it brings us home refreshed in body and spirit and ready to take up our daily tasks again.

We came back to our work with a feeling that Canada and the United States have much in common, and with the remembrance of the wonderful hospitality and friendship which was accorded to us. They have a great country with almost unlimited natural resources as yet untouched. Though much of northern Canada may never be important agriculturally, we anticipate that the frontier will be pushed further and further into the wilderness. Many parts of Canada are now a wonderful vacation country for America, and as one Canadian said "tourists are the only American product on which we do not have to pay a tariff." Then again Canadians supply the United States with an inconceivable amount of paper, and with reasonable conservation which Canada is already beginning to practice it would seem that the supply of pulp paper in Canada should be inexhaustible.

Unfortunately, it seems that visitors do not always give the best possible impression of their home country when they are away from it. Although our hosts did not mention our faults, we suspect that they know many of them. Someone has said that a friend is one who likes us in spite of our faults, and we hope that this holds true in this case. Our hosts certainly treated us royally, and we trust that they liked us as well as we liked them.

Patchwork Pattern Books

We now offer four patchwork books each containing twelve authentic old time quilt designs, with exact cutting patterns of each part and detailed instructions for making. Each book has 16 pages 7½ by 10 inches, printed in two colors. The patterns given in each book are as follows:

BOOK NO. M631A: Square and Compass, Double T., Greek Cross, Jacob's Ladder, Rob Peter and Pay Paul, Dove in the Window, Eight Pointed Star, Wedding Ring, Maple Leaf, Grandmother's Fan, Wild Goose Chase, Skyrocket.

BOOK NO. M631B: Bear's Paw, Weathervane, Crazy Ann, Rose Applique, The V Block, Pine Tree, Drunkard's Path, Swastika, Pieced Star, Lafayette Orange Peel, Old Maid's Puzzle, French Star, Album.

BOOK NO. M631C: Crow Tracks, Cherry Basket, Crossed Canoes, Spider Web, Monkey Wrench, Dutchman's Puzzle, Honey Bee, Hands all 'Round, House on the Hill, Baby Blocks, Churn Dash, Blazing Star.

BOOK NO. M631D: Rising Sun, Milky Way, Bird's Nest, Cross and Crown, Noon Day Lily, Pin Wheels, Order No. 11, Ocean Wave, Rambler, Hollyhock Wreath, Wind-blown Square, Lone Star.

Price per book 15c. Special group price, all four books to one address 50c.

Order from Embroidery Dept., American Agriculturist, 461 Fourth Avenue, New York City.

Aunt Janet's Corner

New Letter Contest Will Close August 26th

IF ANYONE feels that living too far from neighbors is a hardship, here is another angle to the matter which may console her for her loneliness. A brand-new real estate development in a suburban village about 20 miles from Manhattan has crowded together as close neighbors families from many different localities, different states even.

Then the struggle "to keep up with the Joneses" began. All seemed to feel that the social position of the family depended on her ability to go her neighbor one better in everything. If one woman was seen airing her winter window draperies on the line and putting up summer drapes, then the whole street must do the same as quickly as possible so as not to be thought behind the times. When the weekly wash was put out, back-fence discussion of its size—by the other neighbors, of course—and not always kindly discussion, took place. In the school meeting the male newcomers to the town got up and quarreled with the old-timers on almost every question submitted whether they understood previous conditions or not.

What an uncomfortable attitude to take for everybody concerned! Instead of the quiet, helpful, friendly, mind-your-own-business and-let-your-neighbor-mind-hers feeling, somebody got off on the wrong foot and this is the result.

No doubt it will all shake down after a while and the natural leaders

will come to be recognized, not necessarily those who change window drapes most often or have the handsomest wash, but those who have the intellectual and spiritual interests of the

Brother's New Suit

2610

LITTLE BOY'S SUIT PATTERN NO. 2610 is so cool and comfortable for hot weather with its sleeveless, collarless blouse and brief shorts. The simulated monogram adds a novel touch. Make it of khaki or denim for morning wear and broadcloth, linen or shantung for afternoon. Pattern cuts in sizes 2, 4 and 6 years. Size 4 requires 1½ yards of 35-inch figured material with ¾ yard of 32 or 35-inch material. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

community at heart. An old farming community with its feeling of permanency and established order has much to be thankful for.

Aunt Janet

Aunt Janet's Contest

ENOUGH "argufying" has been going on that we should like to see what A.A. readers have to say about the subject, "Should a farm woman use canned stuff and baked goods (store bought)?" Most farm women have pretty definite ideas on this question and now we should like the reasons for them. "Just because" is not enough of a reason but anything that saves woman-power, time, labor or money is a reason, provided the food product is acceptable from the nutrition and flavor standpoints. For the best letter on this question there will be a prize of three dollars, for the next best two dollars, and for all others which are printed, one dollar. Letters should stay within the 300-word limit and should be received at this office not later than August 26. Address to Aunt Janet, American Agriculturist, 461 Fourth Ave., New York City.

Colored clothes hampers are being used to a great extent to supplant the former laundry bags. These hampers can be gayly painted to match the color scheme of each room, and they are not only convenient, but very attractive. Give your rooms just a touch more of utility coupled with beauty in the form of these gay hampers.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR That's why

FELS-NAPTHA IS FINE FOR SOAKING OR BOILING CLOTHES

FELS-NAPTHA is one soap that is always willing to work—your way. Boil your clothes if you like. Soak them if you wish. But use Fels-Naptha and you'll get a wash that will delight you—quicker and easier than you ever expected.

The reason is simple enough—Fels-Naptha brings you two active cleaners in every bar. Not "just soap," but unusually good golden soap and plenty of naphtha. Working hand-in-hand, this sturdy pair bring you extra help. Together, they loosen the most stubborn dirt and wash it away without hard rubbing—in water of any temperature.

Next washday, remember—the bargain that counts is the one that saves you. What you want is more help, not more bars. And Fels-Naptha gives you extra help. Try it in tub or machine.

Try it for easier household cleaning—for windows and woodwork, for milk cans, strainers, incubator trays. Your hands will find it gentle. For Fels-Naptha works so quickly that you don't have them in soapy water so long.

Get Fels-Naptha at your grocer's. The ten-bar carton is specially convenient!

SPECIAL OFFER—We'll be glad to send every user of Fels-Naptha Soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naphtha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-8-2. Fels & Company, Philadelphia, Pa.

2605

DRESS PATTERN NO. 2605 is a fortunate pattern for full figures because of its smart designing intended to slenderize. It is right up-to-the minute in style details and lends itself equally well to the silks and cotton fabrics. It cuts in sizes 16, 18 years, 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. Size 36 requires 4½ yards of 39-inch material with ¾ yard of 39-inch contrasting and 1¼ yards of binding. PRICE 15c.

The Indian Drum—By William McHarg and Edwin Balmer

Alan prepared to go on duty. He would not let himself be disappointed by the skipper's failure to identify old Burr; the skipper had known immediately at sight of the old man that he was the one whom Alan thought was Corvet, and he had found a definite resemblance. It might well have been only the impossibility of believing that Corvet could have become like this which had prevented fuller recognition. Mr. Sherrill, undoubtedly, would send some one more familiar with Benjamin Corvet and who might make proper allowances.

Alan went forward to his post as a blast from the steam whistle of the switching engine, announcing that the cars all were on board, was answered by a warning blast from the ferry. On the car decks the trains had been secured in place; and, because of the roughness of the weather, the wheels had been locked upon the tracks with additional chains as well as with the blocks and chains usually used. Orders now sounded from the bridge; the steel deck began to shake with the reverberations of the engines; the mooring lines were taken in! the rails upon the fantail of the ferry separated from the rails upon the wharf, and clear water showed between. Alan took up his slow pace as lookout from rail to rail across the bow, straining his eyes forward into the thickness of the snow-filled night.

Because of the severe cold, the watches had been shortened. Alan would be relieved from time to time to warm himself, and then he would return to duty again. Old Burr at the wheel would be relieved and would go on duty at the same hours as Alan himself. Benjamin Corvet! The fancy reiterated itself to him. Could he be mistaken? Was that man, whose eyes turned alternately from the compass to the bow of the ferry as it shifted and rose and fell, the same who had sat in that lonely chair turned toward the fireplace in the house on Astor Street? Were those hands, which held the steamer to her course, the hands which had written to Alan in secret from the little room off his bedroom and which pasted so carefully the newspaper clippings concealed in the library?

Regularly at the end of every minute, a blast from the steam whistle reverberated; for a while, signals from the shore answered; for a few minutes the shore lights glowed through the snow. Then the lights were gone, and the eddies of the gale ceased to bring echoes of the obscuration signals. Steadily, at short, sixty-second intervals, the blast of Number 25's warning burst from the whistle; then that too stopped. The great ferry was on the lake alone; in her course, Number 25 was cutting across the lanes of all ordinary lake travel; but now, with ordinary navigation closed, the position of every other ship upon the lake was known to the officers, and formal signals were not thought necessary. Flat floes, driven by wind and wave, had windrowed in their course; as Number 25, which was capable of maintaining two thirds its open water speed when running through solid "green" ice two feet thick, met this obstruction, its under-cut bow rose slightly; the ice, crushed down and to the sides, hurled, pounding and scraping, under the keel and along the black, steel sides of the ship; Alan could hear the hull resounding to the buffeting as it hurled the floes away, and more came, or the wind threw them back. The water was washing high—higher than Alan had experienced seas before. The wind, smashing almost straight across the lake from the west, with only a gust or two from the north, was throwing up the water in great rushing ridges on which the bow of

Number 25 rose jerkily up and up, suddenly to fall, as the support passed on, so that the next wave washed nearly to the rail.

Alan faced the wind with mackinaw buttoned about his throat; to make certain his hearing, his ears were unprotected. They numbed frequently, and he drew a hand out of the glove to rub them. The windows to protect the wheelsman has been dropped, as

stations of their departure. It had commenced again; this was unusual. Something still more unusual followed at once; the direction of the gale seemed slowly to shift, and with it the wash of the water; instead of the wind and the waves coming from dead ahead now, they moved to the port beam, and Number 25, still pitching with the thrust through the seas, also began to roll. This meant, of course, that the

"The *Richardson* heard four blasts of a steam whistle about an hour ago when she was opposite the Manitowoc. She answered with the whistle and turned toward the blasts. She couldn't find any ship." The officer's reply was interrupted by some of the others. "Then . . . that was a few minutes ago. . . . they heard the four long again. . . . They'd tried to pick up the other ship with radio before. . . . Yes; we got that here. . . . Tried again and got no answer. . . . But they heard the blasts for half an hour. . . . They said they seemed to be almost beside the ship once. . . . But they didn't see anything. Then the blasts stopped . . . sudden, cut off short in the middle as though something happened. . . . She was blowing distress all right . . . The *Richardson's* searching again now. . . . Yes, she's searching for boats."

"Any one else answered?" Alan asked.

"Shore stations on both sides."

"Do they know what ship it is?"

"No."

"What ship might be there now?"

The officer could not answer that. He had known where the *Richardson* must be; he knew of no other likely to be there at this season. The spray from the waves had frozen upon Alan; ice gleamed and glinted from the rail and from the deck. Alan's shoulders drew up in a spasm. The *Richardson*, they said, was looking for boats; how long could men live in little boats exposed to that gale and cold?

He turned back to the others about the radio cabin; the glow from within showed him faces as gray as his; it lighted a face on the opposite side of the door—a face haggard with dreadful fright. Old Burr jerked about as Alan spoke to him and moved away alone; Alan followed him and seized his arm.

"What's the matter?" Alan demanded, holding to him.

"The four blasts!" the wheelsman repeated. "They heard the four blasts!" He iterated it once more.

"Yes," Alan urged. "Why not?"

"But where no ship ought to be; so they couldn't find the ship—they couldn't find the ship!" Terror, of awful abjectness, came over the old man. He freed himself from Alan and went forward.

Alan followed him to the quarters of the crew, where night lunch for the men relieved from watch had been set out, and took a seat at the table opposite him. The louder echoing of the steel hull and the roll and pitching of the vessel, which set the table with its dishes swaying, showed that the sea was still increasing, and also that they were now meeting heavier ice. At the table men computed that Number 25 had now made some twenty miles north off its course, and must therefore be approaching the neighborhood where the distress signals had been heard; they speculated uselessly as to what ship could have been in that part of the lake and made the signals. Old Burr took no part in this conversation, but listened to it with frightened eyes, and presently got up and went away, leaving his coffee unfinished.

Number 25 was blowing its steam whistle again at the end of every minute.

Alan, after taking a second cup of coffee, went aft to the car deck. The roar and echoing tumult of the ice against the hull here drowned all other sounds. The thirty-two freight cars, in their four long lines, stood wedged and chained and blocked in place; they tipped and tilted, rolled and swayed like the stanchions and sides of the ship, fixed and secure. Jacks on the steel deck under the edges of the cars,

(Continued on Page 15)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the *Miwaka*. Spearman is angered because Constance shows so much interest in the mystery. Alan locates a carferry pilot named Burr who he believes can solve the mystery. Alan gets a job on the carferry.

the snow had gathered on the glass; and at intervals, as he glanced back, he could see old Burr's face as he switched on a dim light to look at the compass. The strange placidity which usually characterized the old man's face had not returned to it since Alan had spoken with him on the dock; its look was intent and queerly drawn. Was old Burr beginning to remember—remember that he was Benjamin Corvet? Alan did not believe it could be that; again and again he had spoken Corvet's name to him without effect. Yet there must have been times when, if he was actually Corvet, he had remembered who he was. He must have remembered that when he had written directions to some one to send those things to Constance Sherrill; or, a strange thought had come to Alan, had he written those instructions to himself? Had there been a moment when he had been so much himself that he had realized that he might not be himself again and so had written the order which later, mechanically, he had obeyed? This certainly would account for the package having been mailed at Manitowoc and for Alan's failure to find out by whom it had been mailed. It would account too for the unknown handwriting upon the wrapper, if some one on the ferry had addressed the package for the old man. He must inquire whether any one among the crew had done that.

What could have brought back that moment of recollection to Corvet, Alan wondered; the finding of the things which he had sent? What might bring another such moment? Would his seeing the Sherrills again—or Spearman—act to restore him?

For half an hour Alan paced steadily at the bow. The storm was increasing noticeably in fierceness; the wind-driven snowflakes had changed to hard pellets which, like little bullets, cut and stung the face; and it was growing colder. From a cabin window came the blue flash of the wireless, which had been silent after notifying the shore

steamer had changed its course and was making almost due north. It seemed to Alan to force its engines faster; the deck vibrated more. Alan had not heard the orders for this change and could only speculate as to what it might mean.

His relief came after a few minutes more.

"Where are we heading?" Alan asked.

"Radio," the relief announced. "The *H. C. Richardson* calling; she's up by the Manitowoc."

"What sort of trouble?"

"She's not in trouble; it's another ship."

"What ship?"

"No word as to that."

Alan, not delaying to question further, went back to the cabins.

These stretched aft, behind the bridge, along the upper deck, some score on each side of the ship; they had accommodations for almost a hundred passengers; but on this crossing only a few were occupied. Alan had noticed some half dozen men—business men, no doubt, forced to make the crossing and, one of them, a Catholic priest, returning probably to some mission in the north; he had seen no women among them. A little group of passengers were gathered now in the door of or just outside the wireless cabin, which was one of the row on the starboard side. Stewards stood with them and the cabin maid; within, and bending over the table with the radio instrument, was the operator with the second officer beside him. The violet spark was rasping, and the operator, his receivers strapped over his ears, strained to listen. He got no reply, evidently, and he struck his key again; now, as he listened, he wrote slowly on a pad.

"You got 'em?" some one cried. "You got 'em now?"

The operator continued to write; the second mate, reading, shook his head, "It's only the *Richardson* again."

"What is it?" Alan asked the officer.

The Indian Drum

(Continued from Page 12)

kept them from rocking on their trucks. Men paced watchfully between the tracks, observing the movement of the cars. The cars creaked and groaned, as they worked a little this way and that; the men sprang with sledges and drove the blocks tight again or took an additional turn upon the jacks.

As Alan ascended and went forward to his duty, the increase in the severity of the gale was very evident; the thermometer, the wheelsman said, had dropped below zero. Ice was making rapidly on the hull of the ferry, where the spray, flying thicker through the snow, was freezing as it struck. The deck was all ice now underfoot, and the rails were swollen to great gleaming slabs which joined and grew together; a parapet of ice had appeared on the bow; and all about the swirling snow screen shut off everything. A searchlight which had flared from the bridge while Alan was below, pierced that screen not a ship's length ahead, or on the beam, before the glare dimmed to a glow which served to show no more than the fine, flying pellets of the storm. Except for the noise of the wind and the water, there had been no echo from beyond that screen since the shore signals were lost; now a low, far-away sound came down the wind; it maintained itself for a few seconds, ceased, and then came again, and continued at uneven intervals longer than the timed blasts of Number 25's whistle.

Hot Weather Diet for Hens

JUST before sailing for London to attend the World's Poultry Congress, our old friend, L. E. Weaver, stopped at our office for a chat and incidentally to ask what would be most interesting to you when he makes his report of the Congress and later when he will spend several weeks on the continent.

During our conversation, Lee, who is a practical poultryman, as well as a Professor, mentioned an interesting observation made on his own flock which we believe is worth passing along. Noting that his old hens had a tendency to pick out the wheat from the scratch feed and leave the corn, he decided to increase the proportion of wheat during the summer months and as a result production from the old hens has been better than ever before. He concludes that old hens can easily be fed enough corn to make them too fat, but, if given the opportunity, prefer to eat wheat and keep a slim figure. Year old pullets are not so subject to this trouble, in fact, they seem to need more corn to maintain their weight.

This, of course, means one kind of scratch feed for old hens and another kind for pullets but the extra eggs secured on the Weaver farm have more than paid for their extra work. We always have our ears open for suggestions that will make more money for our readers so pass along this experience with the suggestion that you try it.

Growing Profitable Pullets

AN important problem in handling a flock of pullets is to get them into proper condition for best fall and winter production. The weight of the birds,

about the time they start to lay, is a good indication of their being in condition to maintain production during the coming season. While early maturity is a desirable quality, unless early maturing pullets are in good flesh, they will not be able to carry on under the strain of fall and winter production.

Leghorn pullets should weigh from 3 1/4 to 3 1/2 pounds when they start laying; heavy breeds, such as Rhode Island Reds, Plymouth Rocks, and Wyandottes, should weigh about a pound more. To bring birds up to this weight, scratch grain should be fed liberally during the latter part of the growing season. To change the mash mixture by reducing the protein, as sometimes is suggested, is not advisable, as it may have the effect of decreasing total feed consumption. By heavy grain feeding, those birds which have a craving for additional carbohydrates may be satisfied, without upsetting the rest of the flock, as might be the case if the mash formula were changed.

How Feed is Given

We recommend feeding in the late afternoon as much as the birds will consume in about two hours. At Farmingdale all grain is fed on top of the mash in the mash boxes. Supplementary grain feeding may be given in the morning and grain late in the forenoon.

The best scratch grain is cracked corn. Not more than 50% of the mixture should be wheat. Where facilities permit, a feeding of soaked or germinated oats or barley may replace one of the dry grain feedings with good results.

It is not advisable to attempt to put

on weight by any change in the ration after pullets start to lay. Laying birds are extremely susceptible to such changes, which may stop egg production and throw the birds into a partial molt, which will keep them from laying for weeks. While a partial molt is almost unavoidable with early hatched stock, the best practice is to defer molting as long as possible by feeding the regular laying ration.

LOCKE JAMES

N. J. Poultrymen May Make Contest Entries Now

NEW Jersey poultry breeders who desire to enter one or more flocks in either of the three egg-laying contests to be conducted by the State Agricultural Experiment Station for the 1930-1931 season are urged by John W. Goodman, contest superintendent, to make their entries now.

These competitions, scheduled to begin on October 1, or one week after the close of the present egg-laying trials, will be held at Flemington, Vineland, and Paterson. Nearly 125 of the 250 available pens in the three have already been spoken for.

Copies of the contest rules and application blanks may be obtained by writing to local county agricultural agents or to the poultry department at the agricultural experiment station, New Brunswick.

Kerosene and lard mixed in the proportion of one-half pint of kerosene to a pound of lard or any of the recommended stock dips can be used to control cattle lice. The treatment must be repeated in two weeks.

To save cutting glass to fit, use standard sized windows in all farm buildings.

* * *

Do not attempt to brood chicks in too large flocks.

The Japanese Beetle--An Undesirable Immigrant

(Continued from Page 3)

traps is that the attractant brings all the beetles from the neighbor's yard and, as not all of them get into the trap, severe damage may be done in the vicinity of the trap to the plants growing there. It is a good thing to induce your neighbor to use the same method of trapping and make it a community affair.

Second, the State Department of Agriculture has undertaken a suppression campaign against the insects by the spraying of large areas that are under attack, frequently in cooperation with municipalities. Hundreds of thousands of beetles are thus destroyed and the number materially reduced in these centers.

Third, agents of the Federal Department of Agriculture have visited Japan, China, India and Korea and, by employing school children in those countries, have gathered parasites which are effective there in keeping them under control. These parasites are then shipped across the Pacific and the American continent, where they are released in the Japanese beetle area. People often ask whether these parasites are likely to become a serious pest in themselves. The answer is emphatically "No." They feed only upon the Japanese beetle. This constitutes one of the problems in keeping the colonies going, because unless the beetles are sufficiently numerous to supply food for the parasites, the latter die and the work of establishment is lost.

Finally, there is another force that is working in man's favor, which is a disease among the grubs. This has not been isolated as yet but is believed to be effective in destroying them when they reach a certain stage of saturation in the soil.

Another phase of the Japanese beetle problem is the quarantine and inspection service, which is a most important adjunct of the work in New Jersey. Other states are alarmed at the possibility of invasion from this insect and therefore each shipment of

nursery stock, each package of farm products and every shipment of any commodity that can harbor the beetle must be inspected or certified to as being free from infestation before it can be accepted for shipment in interstate commerce outside the infested area.

Some idea of the extent of this project in New Jersey may be gained from these figures: The total number of plants certified for shipment during last year was more than 25,000,000; more than a million packages of farm products; nearly 22,000 bales of hay, straw and moss; and 7,524 carloads of sand, soil and marl, together with 1,153 bales of cut flowers. This quarantine and inspection service is the means of holding in check the spread of the insect while methods of control are being worked out at the Japanese Beetle Laboratory in Moorestown.

Another force of men is employed as scouts and these are working principally outside the present quarantine lines, for the purpose of determining how far the beetle jumps each year into new territory. When their reports are received, new quarantine lines are established through federal and state action.

If you travel through Burlington County and some counties adjoining it in New Jersey this year, or in the eastern part of Pennsylvania, you will see evidence of injury on unsprayed fruits and foliage. It is not unusual to see fruit not protected entirely covered with beetles, and as many as 175 have been taken from the surface of a single apple. When we see the potential damage that these insects can cause, we realize the importance of the work that is being done in the fields described.

While the Japanese beetle is a serious insect menace its control through sprays, lawn treatments, parasites and other methods has been developed to the point where those living in the heavily infested regions do not feel the concern that was evident before these protective measures were devised.

New Inheritance Law Effective Soon

BECAUSE we have received so many questions about the changes in the New York State Inheritance Law which goes into effect Sept. 1, 1930, we are giving you the following brief summary of the provisions of the new law. It is always difficult to explain legal matters in every day language so that they will be absolutely clear but we believe that the following summary gives the principal points you should know.

The term "dower right" is fairly well understood, but perhaps we should explain the term "curtesy". A husband has an interest in his wife's property by curtesy but this differs from a wife's dower interest in her husband's estate in that it does not become effective until after the wife dies. In other words, a husband has no interest in property belonging to his wife during her lifetime. Following are the principal points in the new law:

1. The difference between real and personal property as assets of an estate are abolished, thus doing away with the distinction between heirs-at-law and next-of-kin, and creating one class of individuals to take real and personal property. Both classes of property are therefore treated alike, and pass to the same persons in like proportions.

2. The rights of husband and wife are made uniform and equal.

3. The husband's estate by curtesy, and the wife's right of dower as to real property acquired after August 31, 1930, are abolished and more substantial rights are substituted in their stead.

4. If a person dies intestate (without a will) his or her real and personal property are distributed in the following manner:

(a) One-third to the surviving spouse, residue to the children.

(b) If there be no children, but a parent or parents, the surviving spouse takes \$5000 and one-half of the balance, the parent or parents taking the other one-half.

(c) If there be no children and no parent living, but a brother, sister, nephew or niece survives, the surviving spouse takes \$10,000 and half the residue; the brothers and sisters and their descendants taking the other half.

(d) If none of the relatives named above survive, then the surviving spouse takes the whole.

(e) If no spouse survives, the whole estate passes to the children.

(f) If no spouse, children or parents survive, the whole estate passes to and

is distributed among the relatives in equal degree to the deceased.

5. If a will fails to provide, or unjustly provides, for a surviving spouse, the spouse may elect to take the intestate share set forth above as against the will. The surviving spouse, however, may not elect to take more than one-half of the estate.

6. A legal representative of an estate is given the power to sell, mortgage or

Fate Is No Respector of Persons

EVERY day everywhere men and women are struck down by accidents without warning. In this high-speed existence of ours no one is accident-proof.

Accidents occur 113 times as often as fires.

One death in every 11 results from an accident.

One man in every 4 sustains a disability each year.

One person is killed in an automobile accident every 26 minutes.

Over 1,400 persons are injured every day in automobile accidents.

More than 5,000 persons are killed and 50,000 injured each year as the result of fires.

More than 7,000 passengers, trespassers and employees are killed each year in railroad accidents.

One person is accidentally killed every 6 minutes.

Twenty-three persons are accidentally injured every minute.

And Yet Some People Say They Don't Need Accident Insurance.

lease real property, unless the will expressly prohibits.

7. The new act becomes effective September 1, 1930. It does not affect wills executed prior to that date.

When Is a Commission Firm Not a Commission Firm

WE have recently received several inquiries as to the business rating of Mr. Simon Fassberg who has been soliciting shipments of farm produce from our readers. We understand that

Mr. Fassberg is now working for a Mr. Kaufman, who is a licensed and bonded commission merchant, and that Mr. Fassberg has been soliciting shipments on the stationery of Mr. Kaufman. Mr. Fassberg has been notified by the State Department of Agriculture and Markets that he cannot solicit farm produce on commission in his own name and we understand that Mr. Kaufman has promised that Mr. Fassberg will not, in the future, solicit shipments on the stationery of the firm. Of course the department has no jurisdiction over outright purchases made by Fassberg in his own name.

The records show that Simon Fassberg went into bankruptcy in Pittsburgh, in 1913, and that he was also involved in several other failures in Pittsburgh. He was also connected in some way with A. Paul Junior and Company, a New York concern that failed in 1925, causing a considerable loss to shippers. Later, he was connected with the Farmers Poultry & Egg Company of the West Washington Market. These facts are all a matter of record and we are passing them on to our subscribers for their information.

Recently, we have also received inquiries as to the reliability of the New England Commission Company, Inc. of the West Washington Market. We are informed that Joseph C. Berman is connected with this company. As many of our readers will remember, Mr. Berman, who has been in business with various concerns, became involved in some difficulties last fall and finally his license as a commission merchant was revoked by the State Department of Agriculture and Markets. The bond, amounting to \$3,000 was not sufficient to pay shippers for all of the stuff which they had sent to him. In this connection we wish to point out that in spite of its name, the New England Commission Company is not a commission company, and is not licensed and bonded as such by the State Department of Agriculture & Markets. We believe it is only fair that our subscribers have all the facts, so that they will not consign to the New England Commission Company on the supposition that they are a commission company licensed and bonded by the State Department of Agriculture and Markets.

Letters We Enjoy

"I feel certain they would not have approved of it had it not been for your kind assistance in bringing it to their attention.

* * *

"Now I wish to thank you a great many times for the service which you extended me. I feel that if it had not been for you I never in no way would ever have been able to receive one dollar on my account.

Hugh F. Purcell, deceased of Aurora, New York while working on his farm this spring was struck by lightning and instantly killed.

The last time an AMERICAN AGRICULTURIST salesman called he made it possible for Mr. Purcell to take out a \$1000 farm machinery policy that provided death indemnity in case one was struck by lightning. The unexpected happened and to Mr. Purcell's family AMERICAN AGRICULTURIST delivered the North American Accident Insurance Company's draft for \$1000.

Now the AMERICAN AGRICULTURIST has in cooperation with the North American Accident Insurance Company a new and better farm policy that pays \$2000 for loss of life if struck by lightning. The policy also covers accidents while operating 20 farm machines, also a wagon or a sleigh.

This new policy may be secured through any of the authorized and bonded representatives of the AMERICAN AGRICULTURIST.

The Ford truck hauls for profit

WITH the Ford truck, an early start for market means an early arrival . . . and a ready sale of your products, at good prices for the day. You will be gratified by the ease with which this sturdy truck covers the miles, swings your load safely up-hill and down; by the way it takes rough stretches without stiff jolts; and by the abundant power it brings to bear on mean grades, or muddy, miry ground.

You will be pleased, as well, by the unflagging service the Ford truck gives, load after load, day after day; and by its low cost of operation over extended periods of time.

Beneath the good-looking lines of Ford truck bodies is a strong and rugged chassis. The 4-cylinder engine develops 40 horse-power at 2200 r.p.m., which is but a moderate engine speed. A specially designed carburetor

and hot-spot manifold; valves of large diameter; cylinder head of special design; and aluminum alloy pistons all contribute to the performance of the Ford engine.

Features of the chassis, which are of great importance to your satisfaction with the service of the truck, are the 4-speed transmission; provision for power take-off mounting; new, larger brakes; heavier front axle and spring; new spiral bevel gear rear axle; and the dual rear wheels available at small additional cost.

Go to your Ford dealer, see the sturdy and handsome bodies with which the truck is equipped, and examine the chassis in detail. Let the dealer show you at what small cost you can own and operate a Ford truck, and how profitably it can serve you.

Auld Lang Syne

ROBERT BURNS, the greatest of Scotch poets left a rich legacy to the world, but none of his works are more dearly loved than the words of this fine song which we all know and sing. Probably no song has a greater expression of fellowship than has this one. Burns' picture at right; his birthplace near Ayr, Scotland, above. Read the story, page 2.

Songs that Mother Used to Sing

Here's the New, Power-Driven McCORMICK-DEERING Potato Digger

Built for use with tractor power take-off

Power from the power take-off of the tractor operates the elevator of the new McCormick-Deering Power-Drive Potato Digger. Regardless of soil conditions, agitation is always positive. The potatoes are clean. Time is saved. Labor and other harvest expenses drop.

In soils where finer control of elevator agitation is required you can use the special automobile-type transmission available on special order. It has three speeds forward, and one re-

verse. You can change the speed of the elevator to get exactly the right amount of agitation for all soils, regardless of the forward rate of travel. The reverse feature is helpful in dislodging stones caught in the elevator links.

The entire machine is built extra strong to work with tractors. You can tell at a glance it's made to last. One- and two-row types. Ask the McCormick-Deering dealer to show you the new McCormick-Deering Power-Drive Digger. Write for a folder.

Songs that Mother Used to Sing

Auld Lang Syne

By DAVE THOMPSON

Should auld acquaintance be forgot
And never brought to min'?
Should auld acquaintance be forgot,
And day o' lang syne?

For auld lang syne, my dear,
For auld lang syne.
We'll tak a cup o' kindness yet,
For auld lang syne.

We twa hae run about the braes,
And pu'd the gowans fine;
But we've wandered many a weary foot
Sin auld lang syne.

We twa hae paidl't i' the burn,
Frae morning sun till dine;
But seas between us braid hae roar'd
Sin auld lang syne.

And here's a hand my trusty fiere,
And gie's a hand o' thine,
And we'll tak a right guid willie-waught,
For auld lang syne.

And surely you'll be your pint-stoup,
And surely I'll be mine;
And we'll tak a cup o' kindness yet,
For auld lang syne.

ROBERT BURNS died at the age of 37 years, five months, and 26 days. He died in a position he has held for 135 years—that of the greatest of Scotch poets. And still, up to his 26th year not a line of his poetry had been published. He was born the son of a poor tenant farmer, January 25, 1759; he died holding a job as exciseman which paid him an income of 70 pounds a year, July 21, 1796. He was born poor, was poor all his life, raised a family, and died with his financial affairs just about even with the board.

Yet his legacy to the world is one of the richest ever left by any mortal. Had he done nothing more than write the words of the song "Auld Lang Syne," it would have been enough for one whose whole span of life covered but little more than a third of a century. But this is not to be an attempt to place a value upon the life and poetic works of Rabbie Burness, as he was called when a boy in Alloway in the Parish of Ayr. It is to tell as nearly as can be told of the origin of the Song That Mother Used to Sing—Auld Lang Syne.

Publishes First Book

The first publication of a book of poems by Robert Burns, when he was 26 years of age brought him a profit of about 20 pounds from the first edition of 600, which he had printed in an attempt to raise money for a trip overseas which he contemplated. In his preface for this first edition of his poems which he had composed while he worked with his brother Gilbert on the farm trying to earn a living for the family, Burns wrote, "The following trifles are not the production of the poet, who with all the advantages of learned art, and perhaps amid the elegancies of upper life, looks down for a rural theme. Unacquainted with the necessary requisites for commencing poetry by rule, he sings the sentiments and manners he felt and saw in himself, and in his rustic compeers around him, in his and their native language. Now that he appears in public character as an author, he does it with fear and trembling. So dear is fame to the rhyming tribe, that even he, an obscure, nameless bard, shrinks aghast at the thought of being branded as an impertinent blockhead, obtruding his nonsense on the world; and because he can make shift to jingle a few doggerel Scotch rhymes together, looking upon himself as a part of no small consequence, forsooth. He begs his readers, particularly the learned and polite, who may honor him with a perusal, that they make every allowance for education and circumstances in life, but if after a fair, candid, and impartial criticism, he shall stand convinced of dullness and nonsense, let him be done by as he would in that case, do by others; let him be condemned, without mercy, to contempt and oblivion."

Far from condemning him to contempt and oblivion, the folks of the 'upper life' took this first volume to their hearts, and acclaimed the author. They invited him to come to Edinburgh, that a second larger edition might be printed. He was the lion of the season in the literary and social circles of that city the winter of 1786-7, and gained enough from his book, that after paying all his expenses he had 500 pounds. This was affluence to the poor farmer lad who had never before had any money which was not the wage of heavy, drudging toil. With it he helped his brother Gilbert and the family by giving them 200 pounds. He made extensive travels about Scotland, gaining new interests and experiences.

Through these published volumes he began a correspondence with Mrs. Dunlop, of Craigie, which continued to his death.

Goes Back to Farm

After his travels he again rented a farm, fixed up the house for himself and Jean Armour, whom he had married, and farmed on the estate known as Ellisland, whose owner was Patrick Murphy, more interested in trying to get a steam-engine to propel a boat than he was in farming.

From Ellisland, Robert Burns wrote many letters to Mrs. Dunlop, among them one commenting upon the meeting between her and an old friend. In this letter was embodied his version of 'Auld Lang Syne.'

His verses did not come to light again until 1792, when Burns wrote to his publisher, Thomson, in Edinburgh.

"One more song, and I am done. 'Auld Lang Syne.' The air is but mediocre, but the following song, the old song of the olden times and which has never been in print, nor even in manuscript, until I took it down from an old man's singing is enough to recommend my air." It was printed in 1794, the old air to which it was sung was called, "I feed a man (lad) (lass) at Martin-mass."

This air has not survived, and the tune to which the song is now sung is from the overture of the comic opera "Rosina," the music of which was composed by William Shield, who was born at Durham, 1748, and was buried in Westminster Abbey, 1829. He wrote the music of 35 operas, operettas, dramas, and pantomimes.

Failing to make a living farming, Burns took the job as exciseman, and managed to live on the income. He realized that his excesses had caused him to be labeled a failure in life, but he strongly opposed the idea that he had fallen into poverty through these excesses. On this he wrote, "Burns was a poor man from birth, and an exciseman from necessity; but—I WILL SAY IT!—the sterling of his honest worth poverty could not debase, and his independent British spirit, oppression might bend, but could not subdue."

He was buried in Dumfries, July 26, 1796, with military honors, he being a member of the Dumfries volunteers. His friends, numerous in his life of extreme contrasts, have multiplied with the years. Where old friends gather, this beautiful old song, "Auld Lang Syne," is sung—through a tear and smile for its author—Robert Burns, the farmer of Ayr—the greatest singer of them all.

HEAD TRAINER (to new assistant): And, mind you, if I ever catch you smoking on the job, why you're through!—LIFE.

A Chance for a Real Holiday

Exhibits, Entertainment and Old Friends at the State Fair

THE New York State Fair this year will open on Labor day, Monday, September 1, and there will be something of interest, in fact several somethings, doing every moment until the Fair closes on Saturday night. We have before us as we write, the detailed program for each day and a long letter from Director Ackerman outlining some of the most interesting features. As we look this program over, we wonder how many farm people appreciate what the State does to entertain and instruct in this great institution known as the State Fair. We wonder too, how many of us realize that the State Fair is really a farm institution created and maintained especially and primarily to promote the interest and welfare of the farm and the farm home. We are sure that the management likes to have you feel that it is *your* Fair and will welcome your suggestions and help to keep it improving.

Much progress has been made by the Fair management in New York in recent years, to make its work more interesting and valuable. It has been reorganized and placed under the leadership of the State Department of Agriculture and Markets, headed by Commissioner Berne A. Pyrke. The actual management of details rests with J. Dan Ackerman, who as director, gives all of his time during the fifty-two weeks of the year to making the one Fair week a success. A special effort has been made to subdue the noisy midway, to eliminate all gambling devices and questionable schemes and in particular to increase the inducements and the features of special value and appeal to farmers. We have always maintained that the County and State Fairs should in practice be farm

fairs and this, the New York State Fair is, under its new management.

Much has been done toward bringing out the full interest and value of the many exhibits by fuller labels and descriptions but we believe that some criticism is still due in this respect, especially in relation to the livestock exhibits. No matter how good an animal may be or what records she may have, if she is hidden under a blanket and if there is no description of her records posted where all visitors may read it, then most of the value of her as an exhibit animal is lost. We again urge those in charge not to lose the value of splendid exhibits by inadequate descriptions.

Space will not permit even the mere listing of half the features on the program of the Fair this year. We will mention a few outstanding exhibits

and events, but probably will miss the very ones that you will want to see.

The State should be especially commended for the attention it has given to boys' and girls' work at the Syracuse exhibition. To all of those who are interested in young people and especially to those who believe in the future of agriculture, it is an inspiration to see the hundreds of enthusiastic boys and girls, the very pick of country life, who attend the Fair and represent the 4-H Clubs, The Young Farmers' Clubs and the young people of the farms in general.

In commenting on the boys' and girls' work and its remarkable growth in recent years, Director Ackerman said: "In three years the entries from boys and girls have jumped from 1,700 to 3,400. This year the new boys' and girls' building will be dedicated with appropriate ceremonies participated in by Governor Roosevelt and presumably also by his Agricultural Advisory Commission, headed by Henry Morgenthau, Jr. The new building nearing completion, will cost \$250,000 and affords suitable display space for exhibits, except livestock. There will be also, dormitories for the boys and girls with an assembly hall and cafeteria.

"As in previous years, the livestock entered by the young club members will be taken care of under canvas. The large number of entries and the character of the livestock produced by these future farmers, emphasizes the need of a young livestock building called for in the revised State Fair plan."

Those who attended the Fair during the last two or three years will certainly remember with pleasure the new

(Continued on Page 14)

The State should be especially commended for the attention it has given to boys' and girls' work. Here we have the 4-H Dairy Club champions in each breed at the 1929 State Fair.

Eastern Apple Growers Find Situation Favorable

New York Crop Normal--Other Sections Below Average

EDITOR'S NOTE—This is the third of a series of articles by Dr. Rasmussen that have appeared in recent issues on the outlook for different crops. The first was on cabbage, second on potatoes and this one will give you in a few moments' reading, the production and market facts on the apple situation to date. We believe that these authoritative and accurate articles mean hundreds of dollars to those who read and profit by them.

THE forecast of the 1930 apple crop made by the United States Department of Agriculture on July 1st offers considerable cheer to New York apple growers. While the 1930 commercial crop in the entire United States is expected to be practically identical with that of 1929, New York State will probably have about 1.1 million barrels more than last year. Its chief competitor, the Shenandoah-Cumberland Valley area, will on the other hand have almost 1.5 million barrels less (table 1). The Michigan apple area will probably have about 2/3 as many apples as last year, and the Ozark Region will probably have about 100,000 barrels less than in 1929. Production in the early apple areas in New Jersey, Delaware, Ohio and Illinois will probably exceed 1929 by about 630,000 barrels. Prospects for early apples are, therefore, less favorable than for fall and winter varieties.

Barreled Apple Area Below Normal

In the barreled apple area as a whole, the 1930 crop is forecast at 15,468,000 barrels. This is about 1 million barrels more than last year (almost 2/3 of which increase are early apples) but about 1.2 million barrels less than the average for the past 5 years. New York State is one of the very few states having a normal crop this year, compared with the average of the past 5

By DR. M. P. RASMUSSEN
New York State College of Agriculture

TABLE 1—Estimated Commercial Production of Apples in Competing States, As Of July 1, 1930, With Comparisons For 1929 And 5-Year Period 1925-29. (Figures are in thousands of barrels)

State	Average production 1925-29	Forecast July 1, 1930	Production 1929	Increase or decrease 1930 crop compared with 1929 crop
BARRELED AREA				
Maine	506	536	692	Loss 156
New Hamp.	225	234	198	Gain 36
Massach.	642	781	567	Gain 214
New York	4,521	4,508	3,404	Gain 1,104
Pennsylvania	1,092	993	762	Gain 231
Maryland	444	328	455	Loss 127
Virginia	2,718	2,108	3,100	Loss 992
West Virg.	1,334	868	1,400	Loss 532
New Jersey	668	828	430	Gain 398
Delaware	411	391	287	Gain 104
Michigan	1,216	864	1,206	Loss 342
Ohio	604	327	247	Gain 80
Arkansas	398	320	220	Gain 100
Missouri	482	330	330	Loss 50
Kansas	302	144	288	Loss 144
Illinois	1,067	888	840	Gain 48
Total	16,630	14,448	14,476	Loss 28
BOXED AREA				
Washington	8,611	7,819	8,300	Loss 481
Oregon	1,294	1,603	750	Gain 853
California	1,684	2,094	1,433	Gain 661
Idaho	1,550	1,236	1,650	Loss 414
Colorado	858	336	720	Loss 384
Utah	176	164	80	Gain 84
New Mexico	200	131	252	Loss 121
Montana	87	103	125	Loss 22
Total	14,460	13,486	13,310	Gain 176
Total U. S. barreled and boxed	32,563	28,964	28,973	Loss 9

years. The New England states will have about 173,000 barrels more than last year, and Pennsylvania will show an increase of about 231,000 barrels.

In the boxed apple area, Oregon, California and Utah reported an increase of about 1.6 million barrels over the 1929 crop. The remaining boxed apple states report decreases of 1.4 million barrels, however, so the net increase in boxed apples will probably not exceed 200,000 barrels. The entire boxed apple crop is about one million barrels below the average of the past 5 years.

Prospects Good for New York Apples

If nothing unusual occurs to change the July forecast, the prospects would seem good for a fairly satisfactory apple season in New York State during 1930. In view of the relative scarcity of barreled apples in competing areas, it will probably pay New York growers and shippers to exercise unusual care in grading and packing their apples this year. The action taken recently by the British government, prohibiting the importation into Great Britain of "low grade" American apples between July 7 and November 15 of each year, makes such a program especially imperative. According to press reports, apples that do not grade U. S. No. 1, or "fancy" or "extra" will not be permitted to be imported into England. Since probably 10 to 15 per cent of the commercial apple crop in New York goes into export channels this regulation warrants most careful attention by New York apple growers and shippers.

Competing Crops

Practically all of the fresh fruits which compete directly with apples promise larger crops

No. 6

The Milk Situation

DAIRYMEN and their organizations are now confronted with the problem of maintaining milk prices in the face of hard times that prevail in the city.

We have come to the time of the year when pastures are falling off, production is decreasing and when it is necessary to feed rather heavy of concentrate, so that the costs of production are rapidly increasing. Ordinarily at this time of the year milk prices would advance materially but the dealers and the producers organizations are hesitating at this writing on July 28 to advance the price of milk because increase in retail prices may still reduce milk consumption.

We can understand this hesitation but we think it is a mistake not to advance prices. Farmers have suffered for years while the city was enjoying prosperity. We are having a remarkably hot summer which always tends to increase milk consumption. Milk is a necessary food and more and more consumers in recent years recognize its great value. Therefore we do not believe that a reasonable advance in the price will seriously affect consumption and we see no reason why farmers should be asked to continue to produce milk at less than the cost of production. The dairymen's milk selling organizations all through the country have done a remarkably good job during the last several months in maintaining prices of fluid milk in the face of the falling market and the great surplus stock of all manufacturers of dairy products. Let them keep up this good work by insisting that the prices of class one milk at least be reasonably advanced to conform with the increased cost of production which comes at this time of year.

Butter Surplus Reduced—Storage Holdings of Eggs Heavy

FOR several months butter has been selling close to 10c a pound below 1929 prices. One of the chief factors responsible for this situation has been the high storage holdings as compared with previous years. The situation, however, is gradually improving and dairymen may now feel a little more optimistic over the prospects for the fall and winter. On June 1, storage holdings of butter were 22,000,000 pounds higher than a year ago. On July 1, this surplus has been reduced to 15,000,000 pounds and by the middle of July it was estimated that the surplus was further reduced to 9,000,000 pounds. It is generally expected that the government report of August 1 will show holdings to be about the same as last year and that unless we have unusually favorable production conditions, holdings after August 1 will run below last year.

Butter prices have been responding to this good news and on July 12, higher than extras at New York were quoted at 35½c to 36c; on July 19, 36c to 36½c and on July 28 at 37½c.

Unfortunately, we cannot report the same favorable situation in the egg market. The government report on July 28, covering 26 cities showed over 7,500,000 cases in storage as compared with less than 6,000,000 cases on the same date a year ago. A New York City cold storage dealer in discussing the situation estimated that the entire country has 2,500,000 more cases of eggs in storage than there were a year ago and that one-half million cases of this surplus are stored in New York City.

This unfavorable situation results partly from an increase of 1 per cent in the number of laying hens on July 1, but more particularly to under consumption, due in part to unfavorable industrial conditions in the cities. It looks like a good time to cull out the old hens that have stopped producing and to be more than usually particular in discarding any pullets which are not quite up to grade when they are put in the houses this fall.—H. L. C.

Crop Reduction Must Include All

RECENTLY the Standard Farm Papers of America, with hundreds of thousands of subscribers in every part of the country, conducted a survey to get the farmers' opinion on the policy of controlling or reducing the acreage of leading farm crops. About half of those who replied were in sympathy with the idea of cutting down production by reducing acreage, but practically all agreed that no such plan could be worked on a voluntary basis. It is plain to anyone that it would be unfair for some farmers to reduce the amount of their acreage in order to lessen the surplus if others were all raising more stuff than ever.

We therefore suggest to the Federal Farm Board, which is rightly concerned with reducing the surplus by cutting down the acreage, that before any progress can be made some plan will have to be evolved that will include the great majority of farmers.

Does Education Pay?

YESTERDAY we were visiting with a bright young farmer who had just completed two years in college and was hesitating very seriously about going on to school any farther. We told him that we thought he would always regret it if, having come so close to graduation, he failed to complete the course.

Thousands of other young men and women are hesitating between going further to school or going to work. We know from our own memories and experiences just how they feel. They want to get to earning and a year or two more is a long time to the young. But education pays and pays big in most cases in actual dollars and cents. Recent records compiled by the New York State College of Agriculture in western New York, covering the crop years of 1908, 1918 and 1928 make it possible to study the relation between education of the farmer and the success with which the farm business is conducted.

The survey shows first that the general level of education is being raised. More people, both in city and country, are better educated now than they were even a few years ago.

The survey shows also that, while there are many exceptions, in general the farmers who have not gone beyond the common school have a business that is smaller and poorer than the average. Those who have attended high school or a similar school generally have a medium sized, good business, but the business of those who have attended an agricultural school or college is usually larger and better than the average for the entire region.

Bringing the matter down to the relation between education and actual income on the farm, the investigations indicated that farmers having only a common school education made on the average \$144 labor income in 1928. Those hav-

ing non-agricultural school education, that is, business school or non-agricultural college, made a labor income in the same year of \$202. Those having a high school education or its equivalent made a labor income of \$834, and those having an agricultural school education, that is, state school or agricultural college, made a labor income of \$1262.

Do not misunderstand us. Education and income, or education and any kind of success do not always go hand in hand, but on the average they do. On the average, education pays, and most of us are average.

How About Pasture Water?

A FEW days ago we were in the pasture of a farmer friend where the feed seemed to be fairly good. There were comparatively few flies and yet the dairyman said that the production of his cows had fallen rapidly during the last few weeks of hot weather. He was feeding heavily a concentrate for this time of year and he could see no reason why his cows should fall off so in production.

After taking a walk over his pasture with my friend, it did not seem difficult to locate the chief reason why the cows were not producing. They were not getting enough water. In fact there was no water in the pasture. A small creek flowed through the pasture lot most of the year but it was dry. The farmer thought that the cows had opportunity to get plenty of water at milking time in the barn, but he forgot the long, hot day during which they received no water whatever.

In thinking about this particular man's situation, we wondered how many other pastures were in the same condition at this time of the year. Of course, if there is no water in the pasture it may be difficult to provide it. But if it can possibly be done it may make a lot of difference and save a lot of feed bills to find some way to provide plenty of water in the pasture.

The Airplane Nuisance

My place is near the Cortland airport which was recently opened. People are continually going across my meadows and crops on foot. As I am on a dirt road where a good view of the airport can be had, they drive their cars on the grass.

What can I do after posting these signs if people continue to trespass?

They are having parachute jumps from the airport, and no matter where they come down, in meadows or new piece of oats, the people will flock there by automobile or on foot, which causes more damage besides the continually going across. They climb my pasture fence, which is woven wire, and one place I found where the cows could have gotten out. What is best to do?—F. E. B.

WHAT farmer of twenty years ago ever dreamed of such a problem as the one stated in this letter? Yet it is very evident that these troubles are going to increase and that more and more farmers must contend with the airplane nuisance. It can be much worse than the automobile because it is not confined to the highways.

The remedy which this man seeks is not very satisfactory. It consists first in posting the land and then in arresting one or several of the trespassers and hailing him before the local justice's court. A few examples may stop the nuisance.

Eastman's Chestnut

JARED VAN WAGENEN, JR., contributing editor of AMERICAN AGRICULTURIST, tells a couple of good stories, one of which I heard him relate at a meeting after the toastmaster had given him a particularly flowery introduction.

"The kind introduction by our toastmaster to-night," said Mr. Van Wagenen, "reminds me of the cat who fell in the molasses barrel. After he finally got out and was licking himself off, the cat said: 'Pretty sticky—but I like it!'"

The other story is about the young fellow who went to buy a lipstick for his girl. The clerk told him that the prices ranged from 10 cents to \$2.

"Well," said the young man, "as I have to eat most of it, I guess I had better buy the \$2 grade!"

Hot Subjects for Hot Weather

Readers Discuss Crows, Covered Bridges and Booze

IN the American Agriculturist of June 21, 1930 I saw, "How Would You Like to See all Crows Destroyed?" The only time I ever knew crows to destroy eggs of other birds is when the crows are nesting. I never heard of crows killing rabbits here in Broome County. If the people that raise corn will treat it with a crow repellent, the crows won't bother it. The blackbirds and English sparrows are more destructive to other birds and crops than crows, and owls, hawks, weasels and foxes destroy more game than any other wild animals or birds around here. I, for one, say let the crow live. If they should get too thick around farm buildings farmers can shoot a few and the rest will stay away. If sportsmen want more game, they should live up to the law better than some of them do. The only way there will be more game is for land owners to post their land. I like to hunt and fish as well as anyone, but I say, live up to the law.—B. C. K.

Would Shoot Them All

NOTING the letter in your issue of June 21 relative to the friend or foe, the Crow. I am very much interested.

First, the following question would appear to be in order: Is the crow of value on account of its beauty, its usefulness to the farmer as a weed, seed and insect destroyer, as source of legitimate recreation to the tired farmer or sportsman, or as a table bird?

Second, is the pheasant on account of its beauty, usefulness as a weed, seed and insect destroyer, desirable as a source of recreation (which in these days of strenuous application to work appears to be necessary to the farmer and business man?). Is the pheasant a pleasant contemplation as a table bird?

The pheasant, it is true, will pull a little corn if the seed is not treated, and this possibly for about two weeks. He or she may, if the corn lot is near the wood lot, help themselves to a little when the corn is near ripe or in shock, but for approximately fifty weeks of the year, of what is their diet comprised? Weed seeds of the kinds most bothersome to farmers, even the Burdock pest, and scattered grain left by the binder.

What of the crow? (I wish I could kill everyone I see) The rascals come (in nesting time) right into the trees on the lawn, take the young from nests of the robins and other birds, and rob, it is estimated, one third of the pheasants' nests, often when the eggs are near hatching, pull the corn, and take one half one's small chickens. Although it may be a fact that they destroy some injurious insects, they have, I believe, never proven beneficial as weed seed destroyers.

Someone may say that I am prejudiced but are not the above, facts? It is true I have no use for the crow except that when I find an old hen bird sitting on a nest, it is some satisfaction to raise the old trusty shotgun and put an end to her and know that there will be four or five less to bother me the next season when the pheasants are nesting.—E. H. B.

Why Bridges Were Covered

THE reason why oldtime bridges were covered was that in those days when there were no iron spikes and all timbers had to be pinned together, it was necessary, in order to brace the flooring, to build the sidewalls of criss-crossed timbers extending from the floor to the top; and to prevent swaying of the sidewalls it was necessary to place cross timbers at the top of these sidewalls; and in order to prevent rotting from rain, etc., these top cross timbers were covered with plank or flooring. In using wood timbers, to secure strength, these timbers had to be very heavy and large, and the only way was to pin them together with wooden pins. Should rain get into these joints it would be only a matter of time when

rotting would ruin the structure. Then, too, to make the structure stationary and firm, it was necessary to brace it with sidewalls and these in turn with the cross members at the top of the sidewalls.—I. F. W.

* * *

"Grandpa Built Them Strong"

WHY were bridges covered? To preserve the timbers of course; take the roof from your house and see how long it will stand. A short distance from our home are two of these bridges—both span the west branch of the

An old-time covered bridge across the Delaware River in Delaware County, New York.

Delaware river. They were built many years ago by Robert Murray, a sturdy old Scotchman. Grandpa built them strong to carry the traffic of his day, but the old chap failed to vision the high heavy motor truck of the present time so the larger ones cannot pass through.

Both bridges are now on dirt roads. I suppose when better roads come Grandfather's bridges will have to go but I am sure they would have fallen many years ago if the roof had been left off, and we know that many a team and traveler have been sheltered under this same roof—when a storm found them far from other shelter.

Another covered bridge, also built by Robert Murray, crosses the east branch

of the Delaware at Downsville, N. Y. This bridge was built in 1854. Here is a bit of the contract: "All timbers in said bridge are to be covered and secured from the weather". Grandfather furnished all material and built the bridge foundation and all for the sum of \$1,700.00.—Mrs. R. M.

* * *

Carried Snow To Keep from Getting Stuck

HAVING read your question of "Why were bridges covered", in the American Agriculturist I will try to answer it. They were covered for protection to the whole bridge against storm.

I am seventy-four years of age and have carried snow a great many times to keep from getting stuck with a load of wood.—D. J. S.

* * *

Says Majority of Farmers Do Not Drink

I HAVE just read that letter by F. D. J. on booze in Northern New York and must say that he either got his information out in Colorado with his first drink or he is one of those wets who

think any statement on the subject will be swallowed whole.

He would be turned away dry from at least 80% of the farm houses and were he able to look into their cellars he would find that half of them either had no cider or it would be in the vinegar barrel and those making and selling white stuff are not so plenty.

That yarn about gallon after gallon of white stuff coming into camp every night doesn't say much for either the construction company or the liquor. It must have been a lot more civilized than any I have seen or there wouldn't have been much work done.

Upstate New York is not dry by any means but it is not the farmer who is making and handling it, most of it is Canadian. I think F. D. J. is about as familiar with the Northern New York situation as the New York World. If these wets who don't drink but are so considerate of those who do, would sit down and honestly think over the benefits of license they should have a change of heart. I suppose it would be perfectly right and proper to kill a lot of decent citizens by making it legal for a lot of auto driving hoodlums to take a drink or drinks whenever the spirit moved.—J. A. H.

Freight on Farm Products Not Increased

EDITOR'S NOTE—The New York State Department of Agriculture and Markets has done an excellent piece of work for New York State fruit and vegetable growers in successfully arguing against increased freight rates on eastern fruits and vegetables. This case was brought up back in 1924 and in all probability the majority of our readers have not kept closely in touch with its progress. We also wish to commend the efforts made by the New York State Farm Bureau Federation along the same lines. The following is a brief account, giving the history of the case.

INCREASED freight rates authorized by the Interstate Commerce Commission to be made effective on or before November 1, 1930, will not impose higher transportation costs upon the farm products of northeastern states. The Commission's decision in the so-called Eastern Class Rate Case not only exempts agricultural products

from increases but will result in some reductions.

In 1924 the Interstate Commerce Commission, upon petition of a joint committee of shippers and carriers, instituted a general investigation of the class rate structure. Freight rates may be considered under two general groups: class rates, which are applicable generally to practically all articles moving in commerce and between all stations, and commodity rates, which apply only to the specific commodity and from and to points named in the governing tariff. Class rates only were in issue in this case.

As far back as authentic records are available, the products of New York State agriculture, except milk, have moved principally upon class rates. Practically all of the products of southern and western farms, move to their markets on specific commodity rates.

The wide scope of this investigation resulted in prolonged hearings extending from February, 1925 to May, 1926. At the initial hearing the carriers submitted to the Commission proposed rates which would result in heavy advances in rates from New York State, particularly on fruits, such as grapes and peaches and vegetables, such as celery and lettuce which are rated in classes higher than fifth. Even in respect to fifth class commodities, such as apples, pears, onions, potatoes, cabbage and hay, substantial increases would have resulted.

Recognizing that in its depressed economic situation, New York State agriculture was in no condition to sustain a further burden in the shape of increased freight rates, particularly when no similar increases were contemplated in rates paid by its southern and western competitors, the Department of Agriculture and Markets, which was then the Department of Farms and Markets, undertook the defense of the case in behalf of the agricultural industry of New York.

An exhaustive study of the proposed rates was made, showing the results of their application to about 11,000 cars of fruits and vegetables moving from points in New York State to destinations in Official Classification territory. The results of this study, together with numerous comparisons with rates on the same commodities in the west and south, were submitted in evidence to the Commission in July, 1925. At the same time evidence of the severe economic depression under which New York State agriculture was, and is,

Two Bibles

By DR. J. W. HOLLAND
The A. A. Philosopher

I HAVE been greatly impressed recently by two Bibles which I have seen.

One was in the old South Presbyterian Church in Newburyport, Massachusetts, founded by George Whitfield, the greatest preacher of Colonial days.

The caretaker showed me Whitfield's Bible. He opened it at the fifty-third chapter of Isaiah, where Whitfield was wont to place his sermon notes. The pages were tattered and torn beyond legibility where he has pounded the Book in the fervor of his oratory.

The other Bible I found in a drawer in my hotel room in New York. It was a Gideon Bible, and on top of it the chambermaid had thoughtlessly put the door card, "Please do not disturb."

These two Books are pretty typical of Whitfield's generation and ours. The old, mangled

Bible made me glad that someone could have gotten so excited over the salvation and

character of men and women as to pound the Bible about it. We modern descendants of these stern old Colonial fathers and mothers are getting more polish and culture than was possible for them. This is all well enough, unless in the getting of culture we forget that spiritual character is the one lasting basis of any enduring culture. We present day Americans have our eyes set forward rather than upward.

The Bible in the drawer of my hotel dresser is typical of our age. More Bibles are being printed now than in any other day of the world's history, but in all probability more of them are undisturbed than in former days.

Last week I was speaking with a lumberman in Michigan. He said "My father wore out two or three Bibles during my childhood, and youth. I have one of them which must be tied together with string." After a while he added, "That older generation had something in their homes and hearts that my wife and I do not have." The sign "please do not disturb" could very appropriately be placed in thousands of American homes, where Bibles lie serene under their blankets of dust.

Dr. John W. Holland

Why Let Hard Luck Ruin Milk Profits?

STARLINE Barn Equipment

SAVES TIME SAVES FEED

Prevents Diseases and Accidents
—With More Milk From Your Cows

THOUSANDS of farmers have converted their barns into real profit-makers with STARLINE equipment... You can do the same. Send for

Can You Afford Not to Use a FARQUHAR POTATO-DIGGER

Whether you produce a large or small crop, a digger will save its cost and make you additional profits the very first year. The "Success Junior" is used by thousands of small growers and has made them big profits.

The Elevator Digger is designed for the larger grower and is equipped to meet the needs in any kind of soil—on level or hillside fields.

We shall be pleased to show you how either type of digger will save you time, labor and increase your profits. Full description contained in catalog 225. Send for it today.

Bees for Pollinating Apples

By M. C. BURRITT

THE apple crop is coming on fast. It won't be long before Duchess will be ready to pick, and considerably earlier than last year. The crop of all varieties is unusually clean and growing well. The New York crop, according to the latest reports, will be considerably larger (not quite 50 per cent) than last year but still well below the average of the last five years. Moreover, this larger crop is chiefly made by the increased production of the fall varieties and Greening and McIntosh all of which are much better

M. C. Burritt

than last year, while Baldwin is much less than last year and Spy about the same. The total crop of the whole country, however, will be only slightly (2 per cent estimated) greater than last year which augurs better than it first seemed for prices.

While Baldwins failed to bloom well the primary factor in producing a good crop of early apples and a poor yield of late varieties was pollination. As several times pointed out in these columns, three factors, are essential to good pollination (1) the presence of pollinating material, i. e., fertile bloom of the right sort, (2) bees to carry the pollen and (3) warm enough weather so that bees can work freely. Two of these can be measurably controlled but the last is beyond human control and therefore, the limiting factor here as in other crop production. Incidentally, the leaf and bud growth and vigor in most apple orchards this season would seem to indicate the probability of a heavy bloom next year and a possible return in western New York to above the average crop next season, providing pollination conditions are right then.

Sterile Varieties Need Cross Pollination

Undoubtedly, one of the effects of the passing of the old mixed variety orchard has been less regular crops of some varieties. The tendency has been to plant large commercial blocks of single varieties often without pollinators. With fertile varieties this did not matter so much but with sterile varieties like Spy it is of vital importance. Yesterday I was walking through my Spy block with an old grower. He remarked that he never had any trouble with Spys but got a good crop every year. "Yes," I said, "but you had them mixed in with ten or fifteen other varieties and so always had plenty of 'pollinators.'" We planted our Spys in a block four rows wide and without the best pollinators. Now we have grafted Romes into the tops of alternate trees throughout the block to provide pollinators.

This year while we are waiting for the grafts to grow we put a pail of bloom in every Spy tree. It was mostly Rome but some was Wealthy, Hubbardson and Delicious. Although the weather was against us when Spys bloomed, the results were good. We have more Spys than in several years though far from a full crop. Some hand pollination was done. It is very apparent that where Spy blossoms were actually pollinated by any means there is a good crop. This is the factor in self-sterile varieties. Where pollinators are not available they must be supplied.

Bees Work in Warm Weather

Many hundreds of thousands of bees were brought into this territory this season. We had the equivalent of one strong hive for each acre of trees so that this factor in pollination was supplied. Strong native colonies were compared with the imported package bees from the south but the results of this are not yet available. As is so often the case, the weather was really the most important factor. We could supply the pollinators in the form of fertile bloom, and the bees in hives, but temperatures we could not control. When the early varieties began to bloom the temperatures were around 80 degrees Fahr. and remained there for nearly a week. All early varieties that bloomed pollinated well and set practically a full crop. Just as the Spys were coming out into full bloom, the weather turned cold and temperatures stayed down around 60 degrees to 65 degrees for several days. Only for a day or two just before the last blossoms fell did the temperature rise again to 70 degrees or more. But where the cross-pollinating bloom and the bees were still available this last day or two counted heavily.

Possibly we may be over-estimating the importance of pollination just now in this period of interest, but I am satisfied that it is one of the limiting factors in western New York orchards. There is evidence to show that it may be of importance even with varieties ordinarily self-fertile in some seasons. And the seasons when crops do not set well are the ones in which it pays to have apples. Some good work is being done by the college in this field which

it will pay growers to study and utilize. The season is advancing very rapidly. Second cutting alfalfa is ready. We brought in the first head of early cabbage yesterday. Cultivation will soon be finished. Tomatoes have been laid by already and an occasional red one may be found. Haying is finished and most of the wheat is in the barns now. Oats and barley harvest will begin this week. It is getting a little dry and a good rain would be welcome again.—Hilton, N. Y., July 27, 1930.

Eastern Apple Growers Find Situation Favorable

(Continued from Page 3)

during 1930 than were raised last year. This year's peach crop is forecast at 47.8 millions of bushels, an increase of 2.1 millions over the 1929 crop but approximately 7.4 millions (13 per cent) less than the average crop of the past 5 years.

The 1930 pear crop is estimated to be almost 24 millions of bushels, an increase of 2.4 millions over the 1929 crop and of approximately 9 per cent over the average crop of the past 5 years.

The grape crop this year is forecast at 2.3 million tons, an increase of about 10 per cent over the 1929 crop but about 100,000 tons below the average crop for the past 5 years.

No definite forecasts are available concerning the production of citrus crops as yet. The condition of the orange crop in both California and Florida, however, as reported July 1st, is considerably above the average for the past 10 years and promises a larger than average production. The same is true of grapefruit in both Florida and California.

New York State Fruit Crops

The grape crop in New York State this year is estimated to be 12,180 tons larger than the 1929 crop and almost 24 per cent larger than the average crop for the past 5 years. The 1930 pear crop in New York State is estimated to be almost 2½ times as great as the short crop of 1929 and is also almost 40 per cent larger than the average crop for the past 5 years. This year's peach crop in New York State is estimated to be about 51 per cent larger than the short crop of 1929, and also about 20 per cent larger than the average crop for the past 5 years.

Watch Further Crop Reports

"There's many a slip twix cup and lip" and the final crop report in December may differ appreciably from the July estimate if bad storms, unusually rainy or hot weather, etc. are encountered before or during harvest time. The reports which will be issued monthly by the United States Department of Agriculture should therefore be scanned carefully by New York growers who wish to keep fully informed concerning apple prospects this year. These reports are usually issued on the 10th of each month from July to December and are often summarized in local newspapers. By comparing these reports with the data given in the accompanying table growers may quickly size up the situation.

ACQUAINTANCE: How artistic and quaint you're making your garden wall, Mr. Smith!

MR. SMITH: My wife gave me the idea; she did most of it with the car.

—Humorist, London.

The NEW GEHL Low Speed Big Capacity SILO FILLER 5-30

Lightest running, cleanest cutting silo filler made. With 25 different makes, the GEHL holds 40% of all sales in Wisconsin. A marvelous cutter with all steel frame and fly-wheel, self-feeding, clog-proof, gears running in oil; improved ball-bearing prevents end play. Will stand the gaff.

Cuts and Throws More Corn at 500 r. p. m.

ASAFE speed using only 5 h. p. motor, cuts power costs to as low as \$1.75 per silo. Post your self on this time and money saver. Interesting catalog upon request. Also name of nearest dealer. Write today.

GEHL BROS. MFG. CO., 429 South Water St., West Bend, Wis.

SWINE

SPRING PIGS READY TO SHIP

When starting to raise a hog, why not have the best to start with? Do you want pigs that will live and grow fast? If so, try pigs from our quality stock. These prices are for feeders or breeders.

Chester & Yorkshire cross or Chester & Berkshire cross
 6 TO 7 WEEKS OLD, \$4.50 EACH
 8 TO 9 WEEKS OLD, \$4.75 EACH
 Keep them 10 days, and if in any way dissatisfied, return pigs at my expense. Crating free.
 Chester White Barrows 8 to 10 weeks old, \$6.00 each.
 WALTER LUX, 388 Salem St., Woburn, Mass. Tel. 0086
 P. S.—Will ship any number C.O.D.

RELIABLE PIGS FOR SALE

Buy where quality is never sacrificed for quantity. We sell only high grade stock from large type Boars and Sows, thrifty and rugged, having size and breeding. Will ship any amount C.O.D.

Chester & Yorkshire — Berkshire & Chester
 6 to 8 weeks old.....\$4.50
 8 to 10 weeks old.....\$4.75
 Choice Chesters, 8 wks. old \$5.25

Satisfaction guaranteed or money refunded. 10 days trial allowed. Crates supplied free. A. M. LUX, 206 Washington St., Woburn, Mass. Tel. Wob. 1415.

PIGS! PIGS! PIGS! PIGS!

Why not have quality when starting to raise a hog? Large Yorkshire and Chester White cross, color white; Berkshire and Chester White cross, color black and white
 6 to 8 weeks @ \$4.50 each

They are all good blocky pigs, the kind make large hogs. Will crate and ship in lots of two or more C.O.D. F.O.B. Woburn to your approval. No charge for crating. John J. Scannell, Russell St., Woburn, Mass. Tel. 0230

PIGS CHESTER WHITES AND DUROCS

Here is your chance to buy real quality pigs of either of the above breeds direct from the breeder. These pigs are from highgrade sows and pure bred boars, and are rugged growthy youngsters. The quality you buy in a small pig means fifty pounds more at killing time.

6 to 8 weeks old \$5.00 each
 Shipped C.O.D. Crated free.

With the A. A. Dairyman

Weeding Out the Boarders

BY FRANK BEAN
 (Wyoming County, N. Y., Dairyman)

THE first thing in making good production records is to get the best feed to go with good ensilage and clover mixed hay, which I have. The feed that I found to be the best for my cows is a 24% commercial dairy ration. Of course, there has to be good care and plenty of fresh water at all times. If I had alfalfa I would feed a 20% ration feed in place of the 24%.

In 1919 I joined the dairy improvement association starting with 18 cows on test. They made an average of 6130 pounds of milk and 231.5 fat. I was very much interested in that for I was high in the association. In 1920 I had an average for 14 cows of 7103 pounds milk and 267 pounds fat. Then the association was discontinued and I kept sorting my cows the best I could.

At that time I was mixing my own feed and getting good results. Of course, now it is hard to get the things you want to mix your own feed. In 1925, the Farm Bureau started another association and I was one of the first to get in for I think it is the best thing if you want to study your cows and pick the best to raise from and keep. My average for that year was 8496 pounds milk and 293.5 pounds fat so I thought I was making good in the association. I was paying more attention to my feeding and care. That year I told the tester I was going to try and reach 10,000 pounds per cow and he said I could not do it for I had six two-year-old heifers to milk. But to my own surprise when the year ended I had an average of 10,905 pounds of milk and 382 pounds fat. So it can be done if you try and keep the best of your cows. This year I had twelve cows. The next year I had fourteen

cows with two more heifers in and I made an average of 11,523 pounds milk and 402 pounds fat.

The next year I held these cows over to help meet the milk shortage so my average was down some which was 10,590 pounds milk and 384.2 pounds fat. For the year now going I have an average for three months of 5,000 pounds milk and 160.5 pounds fat, which I think is very good. In the winter I milk three times daily which I think is a good thing for the cows' udders as they will not have as much trouble when you are crowding them. I do not have an imperfect udder in the dairy. I have sorted out two cows for beef so that helps keep down the milk surplus some. The rest are all perfect cows which are making an average of about fifty-five pounds at the present time.

I think anybody that wants to make a good record on their dairy should belong to the dairy improvement associations, feed good feed, sort out the poor cows and then take better care of the rest of them. Also have a good pure-bred sire to head the herd.

Iodized Salt for Livestock

We have read that iodine is needed by cows in some sections. We have also read that one can buy iodized salt for table use. Is there any company that manufactures iodized salt to be fed to dairy cows?

YES. If you cannot buy iodized salt for your cows locally, write to any of these companies: Mulkey Salt Company, Detroit, Michigan; Morton Salt Company, Chicago, Ill.; Colonial Salt Company, Akron, Ohio.

Getting the Most Out of Binder Twine

SOME 300,000,000 pounds of binder twine are produced annually in the United States, about 220,000,000 pounds of this normally being used on our own farms and the remainder largely going to the farms of Canada and Argentina. This would fill about 5000 box cars, and with the necessary engines would make a solid train about 40 miles long. Of this enormous total, about 85 percent is made from Yucatan sisal, the remainder being largely of manila fiber.

Selecting Good Twine

Good binder twine should run about 500 feet to the pound for average grades, while the better grades may run 550, 600, or even 650 feet to the pound; must be smooth and run through the binder easily, since knots and bunches are likely to catch in the needle, and large and small places coming together either in the twine holder or in the knotter are likely to slip and cause bundles to miss; must have strength enough to stand tying and handling several times in shocking, hauling, and threshing; must be proofed against weather exposure and the ravages of insects; and finally must be reasonable in cost.

How can the farmer secure good twine? The safest way is to buy a standard guaranteed brand. Several manufacturers put out such twine that is always good and which the buyer can be sure will be up to the guarantee as to average length per pound, smoothness, strength, and resistance to weather and insects. One should view with suspicion twine offered below the normal price, especially where it is made by unknown firms.

Other indications of economical twine are:

That an eight pound ball is usually preferable to the five pound size, as the more compact and tighter wound the ball, the better; especially as it requires that much less attention in the twine can.

All twine should be especially treated

with insect repellant—and this you can tell by the odor of the ball.

When the bale is wrapped with high grade burlap with an inner protective paper lining, it is certain to keep better. Use the bale rope lashing—it makes a good halter tie.

Be sure the bale contains a tag guaranteeing the length per pound. See that the bale covering is marked with a trade-mark and that the balls bear marks of identification.

Late buying is another difficulty the farmer should avoid. When he rushes into town at the last minute for his twine the trade-marked twine he wants may be sold out. Then he has to take whatever he can get—and that is usually cheap, unserviceable twine—twine full of knots, snarls and probably short in length. Early buying assures your supply of the twine you want and it costs no more.

Care of Twine

Finally having bought good twine the farmer should take good care of it. It should be kept dry, since damp twine is much more likely to twist and snarl. The balls should be kept in the burlap sacks until used and all unnecessary handling avoided, since this loosens the balls and causes kinks and snarls. Care should be taken in putting a new ball into the twine can to follow carefully the directions as to which end of ball should go down and how the inner end should be taken out. A new ball should be put in as soon as a ball is used up, as handling a ball after it becomes soft is almost sure to cause snarls. A break or a new ball must be tied with a flat knot, either a square knot or a fisher's knot being satisfactory. If the remnant of a ball tangles, the easiest way is to pull it out and let it drag behind. Finally any balls left over should be hung from the barn or machine shed roof with wire, so that mice cannot get to it. The inside of a ball makes a nice snug mouse nest, but will not be worth much for binder use afterward.—I.W.D.

What does the tag say

It tells you whether you are getting quality ingredients or not

It pays to read the tag on every bag of ready-mixed feed you buy. If "Linseed Meal" is shown on the tag, you know you are getting the highest quality protein available. It's the old reliable protein supplement that successful dairymen have used for years. Insure your dairy profits by insisting on it in ready-mixed feeds.

There is a lot of valuable information for you in the new Linseed Meal Book on Summer Feeding. The Linseed Meal wall chart of balanced rations is also valuable—it gives you rations for all farm animals. Mail the coupon for free feeding book and ration chart.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
Soft Cheese	2.21	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Aug. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Closes Firm

CREAMERY SALTED	Aug. 2, 1930	July 26, 1930	July 27, 1929
Higher than extra	37½-38	37½-38	44-44½
Extra (92 sc.)	37	36½-37	43¼-43½
84-91 score	32-36½	32-36	39-43
Lower Grades	31-31½	31-31½	38-38½

After a week of much fluctuation the butter market closed with a firm tone on August 2. A greatly improved statistical situation and consistent reports of decreased production have been the factors responsible for the stronger and higher market. Dry weather throughout the producing areas has resulted in burned pastures and with low prices existing farmers have not been inclined to feed. The resulting decreased production has been reflected in the storage figures for the four principal cities which reported on August 1 holdings totaling 65,091,396 pounds compared with 61,948,782 pounds on the same week day last year. From July 25 to August 1 the holdings in the four cities increased 1,949,069 pounds. A year ago holdings during the same period increased 3,493,940 pounds. The difference in holdings on August 1 this year and last, in the four cities was slightly more than 3,000,000 pounds, while the difference we reported last week was almost 5,000,000 pounds which shows that we are steadily cutting down the heavy surplus over last year that was built up earlier in the season. If production is further curtailed by weather conditions it will not be long before we will see production curves of 1930 and 1929 cross.

Consumption is holding up fairly satisfactorily considering the hot weather and higher retail prices. However, buyers are not operating quite so freely as many are working on their own cold storage holdings. There is plenty of butter in the market in spite of the lower production. We are going to see profit taking in the speculative ranks, which may result in some fluctuation in the market next week. The total holdings in the country are still too heavy. On August 2, 1928 the four cities reported 50,617,357 pounds. Those

were the good old days when butter prices were flirting around the 48c mark.

Cheese Prices Moving Higher

STATE FLATS	Aug. 2, 1930	July 26, 1930	Aug. 3, 1929
Fresh Fancy	18-19	17½-18½	22½-24½
Fresh Average			
Held Fancy	24-26	25-26	27½-29½
Held Average	23-	23-	

The hot, dry weather made itself known during the past week and we are going to hear more of it before very long. Dry pastures have cut milk production and the demand for fluid milk is diverting raw materials from the cheese factories. We expect to see cheese prices advance as this continues. The West is no longer offering bargains and asking prices in Wisconsin are higher than a week ago. Fresh State flats are scarce in New York but the inquiry for them is light. If there were a little improvement in the demand we would see prices change very quickly. The fact that the West is tightening up looks good for our Eastern producers.

On July 31 the ten cities making daily reports had in cold storage 18,712,000 pounds of cheese. On the same week day a year ago the same cities reported 15,663,000 pounds. From July 24 to July 31 holdings in the ten cities increased 783,000 pounds, compared with 912,000 pounds during the same period a year ago.

Eggs Take Big Jump

NEARBY WHITE	Aug. 2, 1930	July 26, 1930	Aug. 3, 1929
Hennery			
Selected Extras	40-45	31-36	43-47
Average Extras	34-38	28-30	40-42
Extra Firsts	26-30	24-26	37-39
Firsts	24-25	22-23	34-36
Undergrades	22-23	20-21	33-
BROWNS			
NEARBY BROWNS			
Hennery	34-38	29-34	38-44
Gathered	25-33	23-30½	33-37½

*Prices include premiums.

Fancy nearby eggs appear to have been hitched to a star this week, or possibly a sky rocket. A 9c jump was reported in the choicest qualities, but all grades shared to some extent in the advance. Sharp decreases in the receipts, heated eggs with consequent shortage in fancy stock were the factors responsible for the advance. Retailers report restricted demand, but there has been enough business to clear receipts showing a good proportion of fine quality fresh eggs. The short supply of choice eggs has caused more buyers to turn to fancy lines of held goods. At the higher rates held eggs can be taken out of the Chambers of Hope at a profit. It was easy to build up the market to its present level in view of the short supply of fancy eggs. As a matter of fact, some of these storage eggs are a whole lot better than a good many of the so-called fresh that are arriving. During this hot weather those shippers who have been paying particular attention to the method of handling their eggs have been reaping fine premiums for their efforts. Eggs handled in the ordinary way have arrived on the market with shrunken yolks and have been sold at prices ranging from 20c to 25c per dozen.

On August 1 the ten cities making daily reports had in cold storage 5,987,000 cases of eggs, compared with 4,795,000 cases on the same week day last year. From July 25 to August 1 cold storage holdings in the ten cities have been REDUCED 5,000 cases, whereas during the same period last year holdings increased 40,000 cases. The worm has turned.

Live Poultry Market Unsatisfactory

	Aug. 2, 1930	July 26, 1930	Aug. 3, 1929
FOWLS			
Colored	20-22	21-22	29-31
Leghorn	14-16	15-17	25-27
CHICKENS			
Colored			
Leghorn			
BROILERS			
Colored	22-23	22-26	20-35
Leghorn	24-26	22-26	20-27
OLD ROOSTERS	16-17	16-17	-22
CAPONS			
TURKEYS	20-25	20-25	25-35
DUCKS, Nearby	16-22	15-22	16-22
GESE	12-13	-12	

The live poultry market has been a disappointing affair during the past week. Price shading has been going on, first in a small way then gradually increasing in volume until the practice swept through the entire market. It was hoped that the market would be satisfactory because the nine day fast by those of the Hebrew faith was not closely observed and supplies were not over burdensome. Contrary

to expectations there was practically no demand to speak of and as a result the market slid along on about the same level as it did last week. Broilers have been more plentiful and prices have been held with difficulty. The hot weather has been largely responsible for a good deal of the lack of demand and then of course the fact that business is slow throughout the industrial field has hurt to no small degree.

Fruits and Vegetables in Full Swing

The fruit and vegetable market is about at its height. Cherries, blackberries, currants, gooseberries, huckleberries, apples, peaches, pears, plums, raspberries are rolling into market from Western New York and the Hudson Valley. The Catskill Mountain district back of Kingston is shipping cauliflower that is selling anywhere from \$1.25 to \$4.50 per crate, which shows how widely qualities vary. Other vegetables coming in from western New York, Central New York, the Hudson Valley, and Orange County are: beets, cucumbers, carrots, celery, beans, peas, lettuce, mushrooms, onions, spinach, squash, tomatoes, white turnips, etc.

Available space makes it impossible to quote the multiplicity of grades and various size carriers. Furthermore, quotations given today as the market closes on August 2 will be much different on Monday when the paper starts rolling into the mail.

There is only one way to get these quotations so that they will be of any value to the shipper and that is by radio. Tune in on WEAJ for the market reports that come at noon-time. The reports given at that time are less than an hour old and certainly you couldn't do any better than if you were right in the market yourself. The perishable market changes so rapidly, sometimes between the time the market opens and noon. Obviously a report several days old will be of no value. Daily contact with the market must be maintained. Direct wire and radio is the only way.

Feeds and Grains

FUTURES	Aug. 2, 1930	July 26, 1930	Aug. 3, 1929

43% C. S. Meal	41.00	48.50	
34% O.P. Linseed Meal	42.50	55.00	

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Fancy Hay Scarce

Receipts of hay were limited at all stations during the week ending Aug. 2. Top quality hay has continued scarce and there is a good outlet for that commodity at \$27. Supplies were mostly of medium and lower grades and were not meeting with a very active demand. Timothy No. 2 and mixtures sold over a range of \$20 to \$26. The river barge at Manhattan is sold out with the exception of 100 bales. Most of the new hay was in a heated condition and was selling in range of \$15.00 to 21.00 per ton. New invoices light. The market closed firm. Rye straw, steady at \$17.00; Oat straw, \$14-15.

Meats and Livestock

CATTLE—Two loads 1160-1255 pound Common and Medium Kentucky Steers strong to 25c higher at \$6.25-\$6.85. No cows and bulls offered.

VEALERS—Few heavy medium Ohio vealers steady at \$6.00-\$8.50.

HOGS—Steady, medium to choice 160-220 pounds \$9.60-10.25.

LAMBS AND SHEEP—Lambs in light supply, largely steady. Good to choice mostly \$9.00-9.50; medium \$7.50-8.50; few

culls \$4.50. Ewes weak to 50c lower. Medium to choice \$2.50-3.50; cull and common \$1.50-2.00.

COUNTRY DRESSED CALVES—Daily fresh receipts were light and carryovers were heavy. Sales were still slow with lightweights and small calves in best demand. Heavyweight calves were in largest supply and toward the last of the week dealers were unable to effect a clearance on stale stocks. Only active demand on choice fresh calves. The market closed irregular. Fresh receipts per pound: Choice 14c; fair to good heavies 10-11c; small to medium 10-12c. Few selects sold at a premium.

LIVE RABBITS—Receipts light all the week. Demand very slow. Market steady. By the coop, 15-20c per pound.

Wool

The wool market has been slow. New York better fleece wool, unwashed, Fine, per pound 21-30c; ½ blood 23-29c; ¾ blood 24-29c; ¼ blood 27-29c; low quarter blood 25-27c; common and braid 23-25c.

Argentine Embargoes U. S. Barrelled Apples

Following on the heels of England's partial embargo on United States apples, comes the news of a rigid embargo on barrelled apples from the United States, put into effect by Argentina. News comes unofficially in the form of a cable to ex-governor, Harry Byrd of Virginia, a large apple grower. This embargo, if it becomes final, will affect around 200,000 barrels of apples, principally from Virginia. Although it may affect Virginia apple growers more directly, there will, of course, be an indirect effect on the entire industry.

Home Markets Often Best

COMMISSIONS, shrinkage losses in transit, and express charges may make it as profitable to sell poultry locally. Recently a coop of twelve four-pound Leghorn fowls were sent to New York City from Ithaca and sold for twenty cents a pound. The express charges were \$1.39, shrinkage 96 cents, commission 43 cents, and the return express on the coop 41 cents. This made the total expense \$3.19. The cost of shipping was one-third the value of the birds. With the price of fowls at twenty cents in New York City they could have brought the same return if sold in Ithaca for fourteen cents alive or twenty cents dressed.

Freight on Farm Products Not Increased

(Continued from Page 5)

laboring was introduced through Dr. George F. Warren of the New York State College of Agriculture, Speaker Joseph A. McGinnies, of the Assembly, and others.

The examiner in his proposed report recommended that the Commission establish mileage scales of rates somewhat higher than those proposed by the carriers in the first instance. He also proposed that no general increase should be permitted in rates on fruits and vegetables. This recommendation was found satisfactory except in minor details, as to which exceptions were filed, and the case was orally argued before the entire Commission in July, 1929.

The decision, made public early in July of 1930, establishes a completely revised class rate structure which the Commission says should be put into effect by November 1. The Commission, fully supported the department's contentions and held that no increase in the rates on fresh domestic fruits and vegetables and hay would be justified from the evidence.

The decision will avert a threatened increase of at least half a million dollars a year on the fruit, vegetable and hay shipments of New York State, while at the same time increasing freight revenue of carriers in Official Classification territory by an amount estimated at approximately \$25,000.00 annually.—V. M. PARSHALL, Director, Traffic Bureau, N. Y. S. Department of Agriculture and Markets.

Farm News from New York

Temporary Injunction Holds Up Yearly Rental Plan for Wallabout Market

IN the issues of July 19 and 26, we told of the plan to change the rentals of farmers' stands on the Wallabout Market in Brooklyn to a yearly basis. At that time we mentioned that a group of farmers had attempted to secure an injunction preventing Mr. Dwyer, the New York City Commissioner of Markets, from putting this plan into effect and that Supreme Justice Strong had, for the time being, reserved his decision. On July 30, Judge Strong signed an order restraining Commissioner Dwyer from changing the rental price until authorized to do so by the City Board of Estimate and Apportionment which does not meet again until some time in September.

It has been rather commonly stated in newspaper accounts that Commissioner Dwyer is doubling the rental of the stands on the market. This statement is true so far as nightly rentals are concerned, but does not hold true for the man who uses the market regularly throughout the season and who, under the new plan, would pay a yearly rental for his stall rather than to pay each night. Incidentally, the new scale of prices was fixed after conferences between Commissioner Dwyer and committees of farmers from both Nassau and Suffolk counties.

Commissioner Dwyer states that the matter of the injunction will be appealed. "My opinion is just as strong as ever that I am right in this matter," says Commissioner Dwyer. "I have no doubt but that the ultimate decision of the court will be in my favor."

In the meantime, Commissioner Dwyer announces that the 180 farmers who made application for a permanent stand for a year in advance will be allowed to retain these stands. An extra force of men will be detailed to the Wallabout market where they will assign all farmers to the same stands each night which were allotted to them under the new plan. No new permanent assignments will be made and until the question of the injunction is settled, the transient rates; that is, for people who hire stands by the night, will revert to the old rate of 50c a night for an inside stand and \$1.00 a night for an outside stand.

H. H. Campbell, Farm Bureau Man-

ager of Nassau County, feels that the new plan is favored by the large majority of vegetable growers in Nassau County. It was designed to improve conditions which for years have proven unsatisfactory to Long Island vegetable growers.

Dr. Robertson Heads State Food Laboratory

APPOINTMENT of A. H. Robertson as Director of the State Food Laboratory of the Department of Agriculture and Markets has been announced by Commissioner Berne A. Pyrke. Dr. Robertson, who has had extended experience in chemical and bacteriological research, succeeds Dr. W. B. White, who was named head of a similar bureau in the U. S. Department of Agriculture and who has recently taken up his duties in Washington. Dr. Robertson is a graduate of

the Owego Free Academy, and obtained the degrees of Bachelor of Science, Master of Science and Doctor of Philosophy from Cornell University. He served in the World War in 1918, as City Bacteriologist of Geneva in 1920-1921, and Assistant Bacteriologist at the New York State Agricultural Experiment Station in 1921-1926.

Vegetable Growers Plan Summer Tour

THE New York State Vegetable Growers' Association is conducting a tour of New York markets and Long Island farms, August 22 and 23, 1930.

The party will leave the Hotel Times Square (255 W. 43rd Street) at 3:15 A.M. Friday morning, August 22 by bus. The tour in town will include the Pennsylvania and Erie piers where perishable produce is received and sold, the auction rooms, the wholesale houses of Washing-

ton Street, and the Wallabout farmers market in Brooklyn.

After the market trip, vegetable farms in Nassau County will be visited with H. H. Campbell, County Agent. Meals will, of course, be properly interspersed and the day will close, not too late, at the New York State School of Applied Agriculture at Farmingdale where the over-night stop will be made.

Saturday morning the party will stop at vegetable farms in Suffolk County with County Agent W. G. Been, and the last visit will be at the Long Island Vegetable Research Farm at Riverhead. The return trip to New York will be made in ample time for night trains. For detailed program and reservations (hotel and bus), address Howard Crandall, 417 Hector Street, Ithaca, N. Y.

About Financial Aid to Fairs

AT the last session of the New York State Legislature, the law relative to financial aid for fairs was amended. Several years ago, the county law was amended to permit boards of supervisors to appropriate and raise money to assist the county fair associations in their county.

The recent amendment permits that aid be given to any agricultural society within the county, provided, however, that such appropriations be made to one society only in any county in any one year.

New York County Notes

Chautauqua County — Potatoes, 40c per peck; eggs, 30c per dozen; butter, 45c per pound; apples, 25c per peck; spring chickens, 25c per pound live; yearlings, 25c per pound live; hay \$15. per ton in field; blackberries, 15c per quart. It is very hot, being 96 degrees in the shade. Hanover Grange has a fine girls' degree team.—Mrs. C. L. B., N. Y.

Oswego County —Haying is nearly finished and the crop is short generally. Oats look fair; potatoes about 25 per cent of normal; fruit is doing well; pears are going to be a big crop; all kinds of vegetables are cheap. There is plenty of help and wages are 20c to 30c per hour. Eggs 25c to 30c a dozen; chickens, 25c to 35c a pound. It has been quite dry the last month. All muck crops cheap. Lettuce 10c to 25c crate.—J. S. M., N. Y.

Yates County—The first job of threshing in the Middlesex Valley this season was done in the O. E. Taylor Farm. Six acres of wheat yielded 280 bushels, an average per acre of 46 bushels. The wheat was sold direct from the machine to L. A. Adams, price 80c per bushel.—L. C. W., N. Y.

Cattaraugus County—Members of the Dairymen's League had their annual picnic at Lime Lake Saturday, July 26. After the usual basket picnic dinner, swimming and boating was enjoyed by the younger set while the business session of the sub-district with delegates and associate delegates present was held. Farmers have just finished harvesting an excellent hay crop and the oat harvest, which is also heavy is begun. There are many idle farms, untenanted, on which weeds and daisies bloom "to blush unseen." There is an excellent stand of silage corn and potato fields are showing a rank growth due to frequent showers.

Eggs and milk and all farm products, with the exception of berries, which are offered for sale are the lowest in years, but on the whole farmers are not discouraged because they are not jobless which is the case of so many living in the cities and villages. Factory workers in many of the villages are employed in repair and construction work on the county and state highways.

DeForest Brain, Randolph, will represent the county in the horseshoe pitching contest at the State Fair in Syracuse again this year. The program is being prepared for the fall session of the Pomona Grange to be held in Gowanda, August 29 and 30 with Representative James M. Mead of Buffalo, as the principal speaker.—M. M. S.

I raised a piece of strawberries which measured 71 feet by 100 feet from which I sold 1235 quarts besides which we ate and canned some of them. We ate them twice and three times a day. Can anyone beat it.

Dairymen's Notes

The New York Milk Market

THE extreme hot weather during the week ending July 26 boosted milk consumption in New York City and the metropolitan area to 721,998 cans, an increase over the previous week of 92,721 cans. Cream shipments for the week were 3,355 cans above the week before.

For the 13 week period from the week ending May 3 to July 26 total shipments of milk to the metropolitan area were 8,876,821 cans. This was 51,918 cans more than was consumed during the same period last year. Cream shipments, however, were 16,323 cans under the total for the same weeks in 1929.

Under normal conditions New York's milk consumption increases five percent per year. This is largely attributed to population growth. During the past year energetic campaigns have been waged to educate the public to greater use of milk. This has probably had some beneficial effect, yet per capita consumption is not as high as it would be were it not for existing economic conditions.

The business depression and consequent lack of employment for thousands of people has resulted in many families retard-

ing their use of milk. Many have stopped using cream entirely. Hotels and restaurants generally are buying smaller quantities of milk and cream than they did last year. This, of course, is because they are doing less business.

Production is about fifteen pounds per day per dairy less than a year ago. The long hot spell damaged pastures, and many dairymen are not feeding their cattle as they did a year ago. This policy might prove short sighted if carried too far. The fall market requirements are yet to be met, and if production is allowed to go too low it might prove difficult. Producers cannot risk failing to supply their market. There is too much milk in other territories awaiting just such a situation.

New Milk Sanitation Bureau Created

AT the last session of the legislature, a bill was passed authorizing a survey of the milk situation to determine the present sources of the State milk supply, particularly from outside its own boundaries, with a view of determining who should be made responsible for the effective sanitary control and inspection of milk and cream. The law empowered the State Commissioner of Health to appoint a staff to carry out this work.

The Bureau of Milk Sanitation has been created under the direction of Walter D. Tiedeman, who for two years has been in charge of the milk work of the State Department of Health. He will be assisted by Dr. A. W. Peacock, Dr. J. E. Miller, C. W. Weber, M. S. and E. J. Buckley, B.S., all of whom have been with the State Department of Health for several years. In addition, the following have been provisionally appointed.

Dr. James D. Brew, Dairy Extension Professor of the State College of Agriculture; C. S. Leete, formerly with the U. S. Department of Agriculture; W. F. Alexander, B.S.; R. O. Swanner, M.S.; Fred W. Graves, V.M.D.; N. J. Hohl, M.S.; M. P. Kloser, B.S.; N. J. Milone, B.S. and C. H. Colvin, B.S.

It is expected, depending upon the recommendations made following the survey, that a permanent program of state milk control work will developed and put into effect.

The Progress of TB Eradication

THE last Legislature appropriated \$400,000 for the retesting of accredited herds at State expense. The money became available on March 18th and on March 19th testing began.

The department records show that on July 1, 1930, 80,188 herds were classified as "accredited", representing 788,758 cattle. From March 19th to July 1, 21,091 herds, made up of 249,996 cattle, were retested at State expense. These herds were located in every county in the State, the tests being applied by 267 Accredited Veterinarians. During the month of June, the percentage of reactors found in accredited herds was three tenths of 1%.

Among the Fruit Growers

Monroe Co.—Apples are sizing up nicely and the earlier varieties are coloring rapidly. Cherry harvest will be cleaned up by the middle of next week. Cherries sprayed according to recommendations are really clean. One canner has processed over 500 tons and he and the inspectors have found only three worms in the 1,000,000 pounds. The only trouble on cherries has been severe wind injury and hail in some sections.

Niagara Co.—Warm, dry weather has prevailed throughout the week. Drought is showing its effects on orchards as well as on vegetable crops.

Dutchess Co.—Dry weather was beginning to affect fruit somewhat during the past week. A short rain during the middle of the week relieved the situation somewhat but early fruits will ripen somewhat ahead of the usual date. Early varieties of apples like Yellow Transparent and Red Astrachan are being harvested. Early peaches are also moving.

Ulster Co.—A large percent of the growers put on some form of a spray or dust during the week. The weather has been very warm and dry during most of the week, with the exception of one or two thunder storms. Nearly every pear orchard is commercially free from psylla nymphs at the present time. If we have the right growing weather, the pear crop will be very fine this season. Early apples such as Red Astrachan, Yellow Transparent and Henry Clay are now being picked. A few of the growers have begun to pick the more matured Clapps Favorite pears for the New York market. The cherry harvest is about over. Tomato picking has started in a few plantings.

Columbia Co.—Quite a number of growers have finished the Montmorency harvest and picking of English Morellos has begun. Apples in main are of good quality though scab is present in un-

sprayed orchards. The fruit in orchards following spray recommendations closely is generally of good quality.

Clinton Co.—As a result of favorable moisture conditions apples are sizing rapidly, and tree growth has been exceptionally good. In nearly all commercial orchards, apples are satisfactorily clean. A severe hail storm at Chazy, July 19 damaged farm crops and young apple trees, but there are not yet many bearing orchards in the vicinity.

Orange Co.—Early peaches—as early as Red Bird and Carmen—are just about ripe.

Oswego Co.—Red raspberries are being harvested. Cherry picking which was checked due to uneven ripening is well along. Apples and pears are continuing to increase in size.

Suffolk Co.—Very little rain has fallen here during the month of July; consequently most crops have suffered. The yield of Green Mountain potatoes has been cut considerably by the dry spell. Cobblers have been hurt by dry weather, but not near as much as late potatoes. The price to farmers yesterday was \$1.65 per bbl.

Hearing on Grape Grades

ON August 25, at the office of the State Department of Agriculture and Markets at Albany, a hearing will be conducted on proposed changes in the New York State grape grades to conform to recent changes in the U. S. grades.

Any reader interested may secure a copy of the proposed changes by writing to the Department of Agriculture and Markets at Albany, N. Y. Comments on the changes may be submitted in writing to the Commissioner any time previous to August 25, or may be submitted in person at the hearing.

"Thrifty" Proves a Better Watchword Than "Economy"

Holding On to Money Is Not Always the Best Way to Make It Get Results for Us

"A PENNY saved is a penny earned." I reflected and acting on this principle I decided to discharge the capable maid who had been helping in our household for the past two months. On hearing my decision my neighbor, Mrs. Grant, had urged me to keep my help through the summer at any rate. She always kept a maid and I thought this was inconsistent with her habit of preaching economy and deploring the wasteful habits of others. As she had no very small children she could have managed without help, even though she were not particularly strong. Thus I reasoned and, strong in the belief that I was practising true economy, I disregarded my kind neighbor's advice

have been well advised to stay at home. My nerves were worn to a frazzle by the constant monotonous round of work that was never completed.

In the meantime, Mrs. Grant was apparently enjoying life to the fullest extent. Frequently while I toiled through the heat of the day, she rested in a hammock beneath the trees. As the maid relieved her of a considerable part of the housework she had time to attend to many of the lighter chores about the farm so that although her husband did the usual amount of field work they were not too busy or too tired in the evening to enjoy the companionship of their family and friends, to read a good book or to go for an outing. These things, I realized made the difference between really living and merely putting in an existence but were only possible for those who could afford to keep hired help.

Then one day when Mrs. Grant was visiting me the talk turned upon finances and I got several surprises. For one thing Mrs. Grant's hens had, due to proper feeding and attention to details, netted a sum almost double the amount which our flock of similar size had brought us. She had raised a splendid flock of turkeys while mine had gradually dwindled for want of regular care until only a few were left. Their butcher's bill and grocer's bill had been proportionately smaller for the size of our families because the garden had been well looked after and had yielded a goodly supply of wholesome and palatable foods during the summer and a large quantity which was stored for winter use.

There were also other savings about which my neighbor told me. She had made her own soap very cheaply at home; she had prolonged the wear of their clothing by giving it the proverbial "stitch in time"; she had mended the footwear with a home cobbling outfit; she had knitted inexpensive and lasting stockings, mittens and sweaters for her family from the wool produced on their own farm and made into yarn at a nearby factory.

All summer I had found comfort in the reflection that although conditions in our home were far from ideal, we would be better off financially owing to saving the maid's wages. Mrs. Grant's talk, however, had plainly proven this to be a mistaken idea.

The experience of that summer, however, was not in vain for it convinced me that "thrifty" is better than "economy" and led me to adopt the latter instead of the former as my future watchword.—BY A FARMER'S WIFE.

Tested Recipes

Vanilla Ice Cream

1½ quarts milk or 1 qt. milk and 1 pt. cream 3 tablespoons cornstarch 2 or 3 eggs 1½ cups sugar 1 to 2 tablespoons vanilla

Bring 1 quart milk to boil. Have ready sugar to which has been added the cornstarch and beaten eggs, adding a little of the milk if necessary to make the mixture smooth. Beat well. Add to the boiling milk and cook one or two minutes until thick and so that the cornstarch will not have a raw taste. Stir constantly so that it will not burn. Remove from fire and add remainder of milk or cream and vanilla. Cool and freeze. Serve plain or with maple syrup, fruit syrup or preserved fruit or hot chocolate sauce.

Hot Chocolate Sauce

This must be made just before serving time. As the ice cream is served, the sauce is poured over it making a sort of icing.

Melt ¼ cup unsweetened chocolate with ¾ cup powdered sugar and ½ cup boiling water, stirring all the time. Cook until of the consistency of molasses. Serve hot.

By adding a dash of butter the flavor of the sauce would be richer.

Hot Chocolate Sauce

(Made with milk)

Put 4 ounces of chocolate with a cup of sugar and ½ cup milk in a

sauce pan. Cook slowly until the chocolate and sugar are melted, then boil until it slightly hardens when dropped in cold water. Turn into sauce boat and serve at once.

A few drops of vanilla added to any mixture containing chocolate or cocoa always accents the chocolate flavor.

Butterscotch Ice Cream

1 quart milk 2 or 3 eggs 1 pint cream 3 tablespoons cornstarch 1½ cups brown sugar 1 tablespoon vanilla

Proceed as with vanilla ice cream, being careful that the brown sugar, cornstarch and eggs are beaten well together. A medium brown sugar is better than the very dark or the very light. Be careful that milk does not boil long or the cream will have a flavor of boiled milk. This is also true of other creams, especially vanilla. I do not know if this is the way the commercial butterscotch cream is made but I merely substituted brown sugar for white and called it butterscotch.

Maple syrup sauce just naturally seems to belong with butterscotch ice cream.

Banana Ice Cream

Make two thirds of the given amount of vanilla cream and when cold add 6 or 8 bananas, mashed smooth.

In making ice cream as in making other desserts, its nutritive value should be considered. Although an excellent cream can be made of whole milk, it will be much richer and better if part cream is used. Although the third egg may be dispensed with, it is better added. The amounts given are sufficient

Smartly Practical

SPORTS DRESS NO. 2601 is the junior's sports mode with a decided feminine influence. It is charming when made up in the colored sports cottons such as pique or muslin or in linen. The pattern cuts in sizes 6, 8, 10, 12 and 14 years. Size 8 requires 2¼ yards of 39-inch material. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Fall Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

New Princess Tub Frock

3242

FROCK PATTERN NO. 3242 with its princess effect is lovely for the housewife who likes style in her housedresses. It is practical as well as attractive. Cotton broadcloth, percale, wool challis and novelty rayon crepes in the lovely prints now obtainable, make charming dresses for the lady while she goes about her home duties. This pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust. Size 36 requires 4½ yards of 39-inch material with 5½ yards of plaiting. PRICE, 15c.

and dismissed the maid, who had been with us since our new baby came.

That summer proved a trying experience for me as well as for my family. The house was untidy, the children neglected, the poultry poorly cared for, the garden unattended. I got behind-hand with my sewing and mending. Meals were hurriedly prepared and poorly served. When we went for an outing it was necessary to take all the children as there was no one to care for them. Getting them ready caused a considerable hurly-burly; looking after the little ones while away from home was also trying. Then on our return there was the extra labor of getting their clothes in good shape and putting them away. I often thought under these circumstances we would

for a two-quart freezer. It can easily be doubled. All measurements are level. MRS. E. M. N., New York.

Spend to Save

How? By ordering a copy of our new Fall and Winter Fashions. It gives the answer to the often asked question, "How does she do it?" For it shows how to dress up to the minute at little expense.

You can save on every dress and

FALL FASHION WORLD

save on the children's clothes too. That means more and better frocks for you and yours.

Order your copy now. Just enclose 12 cents in stamps or coin and mail with your name and address to Fashion Dept., American Agriculturist, 461 Fourth Ave., New York City.

When Doors Sag

WHEN screen doors sag and you get weary of waiting for the men folk to find time to do a "proper job", if able to wield a hammer—as most country women can and do—just look up a piece of wire about seven feet long, a few double-pointed tacks, and a hammer. Place a hatchet or thin board under the bottom of door at sagging corner. Nail one end of wire to this corner, then stretch taut diagonally to the upper corner on the hinged side. Fasten to the center crossbar also. Get some one to hold a stick of wood or a flat-iron on the outside of door, when driving in the tacks.

I fixed a door in this way in about ten minutes, after waiting fully that many weeks for "one of the men" to do it.

The "man of the house" considers it a "crude job", but I figure that when he gets as tired of seeing the wire, as I did of having the flies crawl in, his reaction will be the same as mine—to get busy and fix it.—MRS. S. W. H., Pennsylvania.

Facts About Cancer

A LITTLE illustrated pamphlet intended to give the public the essential facts about cancer is now ready for free distribution by the American Society for the Control of Cancer, 34 East 75th St., New York City. How to recognize early danger signals is the main purpose of the booklet which will be sent upon request to the above address.

Nails and hooks on which damp towels and kitchen cloths are hung should be enameled in a color that will harmonize with the furnishings. Treating hooks and nails in this way will keep them from rusting.

Little Recipes for Little Cooks

by Betty

Lesson Number

Eighteen

Now I Have Some Dandy Summertime Recipes for You

Dear Little Cooks:

Are you cooking lots of things these days? I like to but sometimes I have an awful time cooking because my little brother, who always wants to do everything I do, is such a bother. You see, he wants to stir and taste, too, and really, if he wasn't so cute I would get real cross at him. I guess the little cooks who have baby brothers or sisters know how it is to try to cook when they have that kind of help.

I have just made a jar of pickles and it was so easy and such fun that I want to tell all my little cooks how.

Pretty soon it will be school time again. Seems like vacation just flew by this year, probably 'cause I have been so busy.

I am going to try baking bread again before school begins and see if I can improve. You see, next year I will be old enough to join a 4-H bread club so I want to practice up all I can.

Thank you all for your letters; even though I can't answer them all I do love to get them.

Good luck, little cooks,

—BETTY.

Orange Jelly

I 'spose every little cook has made gelatine with the powders that come all sweetened and flavored and colored, so all you need to do is to add hot water. It surely is easy and quick and good, too. But if you want something extra good and different, try using a plain gelatine and add sugar and fruit juice when you make it.

The fresh fruit juice gives such a good taste. I am giving you a recipe for orange jelly, but I hope some time you will try using other fruit juice that is handy. It might be peach juice mother had left from canning, or grape juice, or cherry or something else, or maybe a mixture of several fruit juices. Use them in place of the orange juice and take just the same amount as the recipe calls for of orange juice.

Small Recipe	Large Recipe (For Eight)
$\frac{1}{4}$ tablespoon gelatine (plain)	2 tablespoons gelatine
1 tablespoon cold water	$\frac{1}{2}$ cup cold water
3 tablespoons boiling water	$\frac{1}{2}$ cups boiling water
2 tablespoons sugar	1 cup sugar
3 tablespoons orange juice	$\frac{1}{2}$ cups orange juice
$\frac{1}{2}$ tablespoon lemon juice	3 tablespoons lemon juice

First, I measure out the gelatine and put it into a bowl. Then I add the cold water and let it stand five minutes or longer. I cut an orange and squeeze out the juice (a lemon squeezer makes it easier). I measure out what I need and put that into another bowl. Then I squeeze out and measure the lemon juice and add that. Now I add sugar, too. By this time the gelatine will be soaked enough and I add the boiling water. Be sure it is boiling! I stir the gelatine and hot water till it seems to be all dissolved. Then I add the juice and sugar from the other bowl.

When it is stirred well, I pour it into a mould, which I always dip in cold water first, or cup and put it into the coolest place I can find. When it is stiff I run a knife around the edge so it will come out and turn it on a small plate. A spoonful of whipped cream can be put on top if you like it.

Another way to get the gelatine out nice is to dip the mould or cup into warm water just a second, first, to loosen it.

Try this orange jelly some time when it seems almost too hot to eat and see if it doesn't bring you an appetite!

Tomato Salad

I take a nice, firm, ripe tomato—not too big and not too small, and I wash and peel it carefully. Then I cut a thin slice from the top or

About Keeping Foods Cool

If we DIDN'T have a place to keep food cool, lots of it would go to waste. Betty always remembers to keep the refrigerator door closed and when she opens it to get milk, fruit or vegetables she takes out only as much as she needs. When it is real warm in the kitchen, milk and cream sour in just a few minutes if allowed to stand on the table instead of being left in the refrigerator. Fruits and vegetables spoil quickly, too. So, it's a good thing for little cooks to remember to put them back in the refrigerator just as soon as possible and never to leave the door open.

stem end, and I take out with a teaspoon the seeds and some of the soft pulp inside. I have to do this gently so as not to break the outside. Then I sprinkle a little salt inside and turn my tomato upside down on a plate and leave it in a cool place while I get the rest of my salad ready.

Last time I gave you a recipe for good vegetable salad dressing and maybe you will have some of that put away in a cool place all ready for salads. But if you haven't and mother hasn't any either, you can just turn to Lesson 18 and find the recipe. It's always handy to have dressing ready in summer because it keeps well and is all cooled.

I take about 2 tablespoons of dressing and 2 tablespoons of thick cream and put them in a bowl and beat with an egg beater.

Next I wash a stalk of celery and dry it and cut it into thin slices. I need 4 tablespoons of celery. I add the celery to the dressing and stir gently.

Now I am ready to stuff my tomato. I fill it up nicely with the mixture and on the very top I stick a bit of crisp green parsley to make it look pretty.

This salad will look nicer if I put it on a lettuce leaf before I serve it. It will taste better if I can put it in a refrigerator or some other cold place for a little while because salads should always be served cold, especially in hot weather.

Oh, yes, I forgot to say that cucumbers can be used instead of celery if you wish.

A Jar of Pickles All Your Own

Lazy Pickles are exactly the right kind for a little cook to try because they are so easy. But, honestly, lots of mothers make them that way when they are too busy to spend much time with pickles.

First, get a clean jar ready and test the cover to be sure it fits tight. Wash enough four-inch

long cucumbers to fill the jar. Dry them and pack them in the jar.

Mix:

$\frac{1}{4}$ cup salt	2 tablespoons ground mustard
$\frac{1}{4}$ cup sugar	1 cup cold water
$\frac{3}{4}$ cups vinegar	

First, I stir the mustard, sugar and salt together well and add the vinegar and stir till smooth, then add the water and stir again. Fill the jar up full with this brine and put on the cover and screw it on tight.

I turn the jar upside down on the kitchen table. The next day I turn it up. I turn it each day for four days, then it can be put down cellar where it is cool and dark till some time in the winter.

Betty's Devil's Food Cake

Little cooks all like chocolate and things made with chocolate. Little cooks seem to use sour cream a good deal so I am sending my very own favorite recipe for devil's food cake using sour cream:

Small Recipe	Large Recipe
$\frac{1}{2}$ egg	2 eggs
$\frac{1}{4}$ cup plus 2 table- spoons sugar	$1\frac{1}{2}$ cups sugar
$\frac{1}{2}$ square chocolate	2 squares chocolate
$\frac{1}{2}$ cup sour cream	1 cup sour cream
$\frac{1}{2}$ tablespoons boiling water	$\frac{1}{2}$ cup boiling water
$\frac{1}{4}$ teaspoon soda	1 teaspoon soda
Pinch of salt	$\frac{1}{4}$ teaspoon salt
$\frac{1}{4}$ teaspoon vanilla	1 teaspoon vanilla
$\frac{1}{4}$ cup plus 2 table- spoons flour	$1\frac{1}{2}$ cups flour

First I put the chocolate to melt just as for the chocolate drop cookies. Then I beat the eggs very lightly with my egg beater. Next I add the sugar and chocolate and stir and beat well with my spoon. Then I add the sour cream.

The soda can be put into the boiling water which I put in next or it can be put into the flour and sifted in with that. I sift the flour just as I always do before measuring it. Then I add salt and soda, if I haven't already put it in the boiling water.

I add the sifted flour a little at a time and beat the cake batter hard each time to break any lumps of flour. I add the vanilla and it is ready to pour in the cake pan which I grease well. This cake should be baked in a slow oven because chocolate burns quite easily.

The seven-minute frosting is so good on this cake. Thick sour cream is best for this cake, but if it is too rich the cake might fall. Ask your mother about the cream; she knows.

The Indian Drum—By William McHarg and Edwin Balmer

It might be the horn of some struggling sailing vessel, which in spite of the storm and the closed season was braving the seas; at the end of each interval of silence, the horn blew twice now; the echo came abeam, passed astern, and was no longer to be heard. How far away its origin had been, Alan could only guess; probably the sailing vessel, away to windward, had not heard the whistle of Number 25 at all.

Alan saw old Burr who, on his way to the wheelhouse, had halted to listen too. For several minutes the old man stood motionless; he came on again and stopped to listen. There had been no sound for quite five minutes now.

"You hear 'em?" Burr's voice quavered in Alan's ear. "You hear 'em?"

"What?" Alan asked.

"The four blasts! You hear 'em now? The four blasts!"

Burr was straining as he listened, and Alan stood still too; no sound came to him but the noise of the storm. "No," he replied. "I don't hear anything. Do you hear them now?"

Burr stood beside him without making reply; the searchlight, which had been pointed abeam, shot its glare forward, and Alan could see Burr's face in the dancing reflection of the flare. The man had never more plainly resembled the picture of Benjamin Corvet; that which had been in the picture, that strange sensation of something haunting him, was upon this man's face, a thousand times intensified; but instead of distorting the features away from all likeness to the picture, it made it grotesquely identical.

And Burr was hearing something—something distinct and terrifying; but he seemed not surprised, but rather satisfied that Alan had not heard. He nodded his head at Alan's denial, and, without reply to Alan's demand, he stood listening. Something bent him forward; he straightened; again the something came; again he straightened. Four times Alan counted the motions. Burr was hearing again the four long blasts of distress! But there was no noise but the gale. "The four blasts!" He recalled old Burr's terror outside the radio cabin. The old man was hearing blasts which were not blown!

He moved on and took the wheel. He was a good wheelsman; the vessel seemed to be steadier on her course and, somehow, to steam easier when the old man steered. His illusions of hearing could do no harm, Alan considered; they were of concern only to Burr and to him.

Alan, relieving the lookout at the bow, stood on watch again. The ferry thrust on alone; in the wireless cabin the flame played steadily. They had been able to get the shore stations again on both sides of the lake and also the *Richardson*. As the ferry had worked northward, the *Richardson* had been working north too, evidently under the impression that the vessel in distress, if it had headway, was moving in that direction. By its position, which the *Richardson* gave, the steamers were about twenty miles apart.

Alan fought to keep his thought all to his duty; they must be now very nearly at the position where the *Richardson* last had heard the four long blasts; searching for a ship or for boats, in that snow, was almost hopeless. With sight even along the searchlight's beam shortened to a few hundred yards, only accident could bring Number 25 up for rescue, only chance could carry the ship where the shouts—or the blasts of distress if the wreck still floated and had steam—would be heard.

Half numbed by the cold, Alan stamped and beat his arms about his body; the swing of the searchlight in the circle about the ship had become long ago monotonous, purely mechanical, like the blowing of the whistle; Alan stared patiently along the beam as it turned through the sector where he watched. They were meeting frequent and heavy floes, and Alan gave warning of these by hails to the bridge;

the wheelsman, "Hard over!" But, though the screws turned full astern, Number 25 steered straight on. The flurry was blowing before the bow again; back through the snow the ice-shrouded shimmer ahead retreated. Alan leaped away and up to the wheelhouse.

Men were struggling there—the skipper, a mate, and old Burr, who had held the wheel. He clung to it yet, as

minutes; and then—that time it was a ship!"

Alan's excitement grew greater; he seized the old man again. "You thought it was the *Miwaka*!" Alan exclaimed. "The *Miwaka*! And you tried to steer through it again."

"The *Miwaka*!" old Burr's lips reiterated the word. "Yes; yes—the *Miwaka*!"

He struggled, writhing with some agony not physical. Alan tried to hold him, but now the old man was beside himself with dismay. He broke away and started aft. The captain's voice recalled Alan to himself, as he was about to follow, and he turned back to the wheelhouse.

The mate was at the wheel. He shouted to the captain about following the other ship; neither of them had seen sign of any one aboard it. "Derelect!" the skipper thought. The mate was swinging Number 25 about to follow and look at the ship again; and the searchlight beam swept back and forth through the snow; the blasts of the steam whistle, which had ceased after the collision, burst out again. As before, no response came from behind the snow. The searchlight picked up the silent ship again; it had settled down deeper now by the bow, Alan saw; the blow from Number 25 had robbed it of its last buoyancy; it was sinking. It dove down, then rose a little—sounds came from it now—sudden, explosive sounds; air pressure within hurled up a hatch; the tops of the cabins blew off, and the stem of the ship slipped down deep again, stopped, then dove without halt or recovery this time, and the stern, upraised with the screw motionless, met the high wash of a wave, and went down with it and disappeared.

No man had shown himself; no shout had been heard; no little boat was seen or signalled.

The second officer, who had gone below to ascertain the damage done to the ferry, came up to report. Two of the compartments, those which had taken the crush of the collision, had flooded instantly; the bulkheads were holding—only leaking a little, the officer declared. Water was coming into a third compartment, that at the stern; the pumps were fighting this water. The shock had sprung seams elsewhere; but if the after compartments did not fill, the pumps might handle the rest.

Suddenness already was coming into the response of Number 25 to the lift of the waves; the ferry rolled less to the right as she came about, beam to the waves, and she dropped away more dully and deeply to the left; the ship was listing to port and the lift of the ice-heaped bow told of settling by the stern. Slowly Number 25 circled about, her engines holding bare headway; the radio, Alan heard, was sending to the *Richardson* and to the shore stations word of the finding and sinking of the ship and of the damage done to Number 25; whether that damage yet was described in the dispatches as disaster, Alan did not know. The steam whistle, which continued to roar, maintained the single, separated blasts of a ship still seaworthy and able to steer and even to give assistance. Alan was at the bow again on lookout duty, ordered to listen and to look for the little boats.

He gave to that duty all his conscious attention; but through his thought, whether he willed it or not, ran a riotous exultation. As he paced from side to side and hailed and answered hails from the bridge, and while he strained for sight and hearing through the gale-swept snow, the leaping pulse within repeated, "I've found him! I've found him!" Alan held no longer possibility of doubt of old Burr's identity with Benjamin Corvet, since the old man had made plain to him that he was

(Continued on Page 13)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the *Miwaka*. Spearman is angered because Constance shows so much interest in the mystery. Alan locates a carferry pilot named Burr who he believes can solve the mystery. Alan gets a job on the carferry.

the bridge answered and when possible the steamer avoided the floes; when it could not do that, it cut through them. The windrowed ice beating and crushing under the bows took strange, distorted, glistening shapes. Now another such shape appeared before them; where the glare dissipated to a bare glow in the swirling snow, he saw a vague shadow. The man moving the searchlight failed to see it, for he swung the beam on. The shadow was so dim, so ghostly, that Alan sought for it again before he hailed; he could see nothing now, yet he was surer, somehow, that he had seen.

"Something dead ahead, sir!" he shouted back to the bridge.

The bridge answered the hail as the searchlight pointed forward again. A gust carried the snow in a fierce flurry which the light failed to pierce; from the flurry suddenly, silently, spar by spar, a shadow emerged—the shadow of a ship. It was a steamer, Alan saw, a long, low-lying old vessel without lights and without smoke from the funnel slanting up just forward of the after deckhouse; it rolled in the trough of the sea. The sides and all the lower works gleamed in ghostly phosphorescence, it was refraction of the searchlight beam from the ice sheathing all the ship, Alan's brain told him; but the sight of that soundless, shimmering ship materializing from behind the screen of snow struck a tremor through him.

"Ship!" he hailed. "Ahead! Dead ahead, sir! Ship!"

The shout of quick commands echoed to him from the bridge. Underfoot he could feel a new tumult of the deck; the engines, instantly stopped, were being set full speed astern. But Number 25, instead of sheering off to right or to left to avoid the collision, steered straight on.

The struggle of the engines against the momentum of the ferry told that others had seen the gleaming ship or, at least, had heard the hail. The skipper's instant decision had been to put to starboard; he had bawled that to

one in a trance, fixed, staring ahead; his arms, stiff, had been holding Number 25 to her course. The skipper struck him and beat him away, while the mate tugged at the wheel. Burr was torn from the wheel now, and he made no resistance to the skipper's blows; but the skipper, in his frenzy, struck him again and knocked him to the deck.

Slowly, steadily, Number 25 was responding to her helm. The bow pointed away, and the beam of the ferry came beside the beam of the silent steamer; they were very close now, so close that the searchlight, which had turned to keep on the other vessel, shot above its shimmering deck and lighted only the spars; and, as the water rose and fell between them, the ships sucked closer. Number 25 shook with an effort; it seemed opposing with all the power of its screws some force fatally drawing it on—opposing with the last resistance before giving away. Then, as the water fell again, the ferry seemed to slip and be drawn toward the other vessel; they mounted, side by side . . . crashed . . . recoiled . . . crashed again. That second crash threw all who had nothing to hold by, flat upon the deck; then Number 25 moved by; astern her now the silent steamer vanished in the snow.

Gongs boomed below; through the new confusion and the cries of men, orders began to become audible. Alan, scrambling to his knees, put an arm under old Burr, half raising him; the form encircled by his arm struggled up. The skipper, who had knocked Burr away from the wheel, ignored him now. The old man, dragging himself up and holding to Alan, was staring with terror at the snow screen behind which the vessel had disappeared. His lips moved.

"It was a ship!" he said; he seemed speaking more to himself than to Alan.

"Yes"; Alan said. "It was a ship; and you thought—"

"It wasn't there!" the wheelsman cried. "It's—it's been there all the time all night, and I'd—I'd steered through it ten times, twenty times, every few

The Indian Drum

(Continued from Page 12)

haunted by the *Miwaka*. Since that night in the house on Astor Street, when Spearman shouted to Alan that name, everything having to do with the secret of Benjamin Corvet's life had led, so far as Alan could follow it, to the *Miwaka*; all the change, which Sherrill described but could not account for, Alan had laid to that. Corvet only could have been so haunted by that ghostly ship, and there had been guilt of some awful sort in the old man's cry. Alan had found the man who had sent him away to Kansas when he was a child, who had supported him there and then, at last, sent for him; who had disappeared at his coming and left him all his possessions and his heritage of disgrace, who had paid blackmail to Luke, and who had sent, last, Captain Stafford's watch and the ring which came with it—the wedding ring.

Alan pulled his hand from his glove and felt in his pocket for the little band of gold. What would that mean to him now; what of that was he to learn? And, as he thought of that, Constance Sherrill came more insistently before him. What was he to learn for her, for his friend and Benjamin Corvet's friend, whom he, Uncle Benny, had warned not to care for Henry Spearman, and then had gone away to leave her to marry him? For she was to marry him, Alan had read.

John Gets His Hens Culled

"JOHN," says my wife the other day, "we don't get more than half as many eggs as we ought to and I want you to get that county agent down here to cull out about half the loafers."

"I don't see no reason for that," I says, "we got lots of room, haven't we? I built that henhouse special to please you and if we go and sell half the hens we'll only be using half the house and tother half will be wasted."

"Well, it will keep till next year, I guess," says she "and I can't see why we should feed a lot of hens that don't pay their way just to keep the house full."

"I should have known enough from past experience to stop arguing right there and like as not Maria would have forgot all about it in a few days, but I had become real friendly with those hens from nursing them all winter and I liked to have 'em around, so I says, "Like as not if we get him he'll take the best hens we got. When we went to that culling demonstration last fall it looked to me as if the hens they sold was the best looking ones in the flock. They kept all the rough and ragged looking ones and sold all them that was nice and white."

"The principal thing I noticed" says Maria tartly, "was that they got just as many eggs after they sold them as they did before. Anyway, if you

would feed our hens something besides corn and oats maybe it wouldn't be necessary to cull so many."

A Hen Knows What's Good for Her

I didn't say nothing more because I could see the outcome plain by this time. I always wonder what hens lived on before they had somebody to sort out the grain into bran and middlins, etc. Anyway, my hens won't eat the blamed stuff that they recommend. They like corn best of anything and they ought to know what's good for them. Besides when I kill a hen for Sunday dinner I like to have some fat on her.

Well, the upshot of it all was that we had the county agent come down. He is a right nice chap, but Maria is mainly the cause of my joinin the Farm Bureau. Never could see myself where I get the money back. He most generally comes out just before meal time on account he likes Maria's cooking and he eats so blamed much that it cuts off all the profit on the advice he gives.

We had the hens all shut up and the county agent brung along a coop that he put up against one of the doors where the hens come out and we drove a few of them at a time into the coop and then caught them and the county agent looked them over. Just like I

A Chance for a Real Holiday

(Continued from Page 3)

recent years who have not been far from this record. Thousands gather around the bleachers to watch this game and at times the situations become very intense. The tournament is held Tuesday and Wednesday of Fair week.

Alexander Legge to Speak

Tuesday, which is Farm and Home Bureau day, will be especially interesting this year for these fine farm organizations have succeeded in securing Alexander Legge, chairman of the Federal Farm Board, to be the chief speaker and guest of honor. To hear this man is well worth a trip of every farmer in the State to Syracuse, for no man in agricultural life of America today holds such a vital position in relation to agriculture as does Mr. Legge. Whether you believe in the Farm Board and what it can do or not, you will want to hear Mr. Legge.

Grange day, which is Wednesday of Fair week, is always an interesting one and will be particularly so this year because of the Grange singing contest. County Pomona Granges have been holding local contests in the different counties all over the State during the summer, the winners to go to Syracuse to take part in the State Grange contest. If you love the old-time songs, and who does not, you will not want to miss hearing these splendid singers render the songs that mother used to sing and love.

The Governor to Be There

On Thursday, Governor's day, the Fair will be visited by Governor Franklin D. Roosevelt. More good farm legislation has been passed since Governor Roosevelt became governor than was ever passed in this State before. Credit for the splendid school, road and other rural legislation is divided between the farm organizations of the State, the State legislature and Governor Roosevelt's Agricultural Advisory Commission, but much encouragement in the securing of this new helpful farm legislation was given by the Governor. We do not know what his subject for his address at the Fair will be, but most of us will want to see and hear him.

There has been some criticism during the past two years because the Fair dates were so early that there was

expected, every time he come to a nice white feathered hen with nice yellow legs like I like to see, he put her in the coop along with what he called the culls and every hen with dirty ruffled feathers he would keep.

"What's that for?" I says. "I like the looks of the culls the best." Says he, "Most folks think the ragged ones is the prettiest after they find that they lay the most eggs."

"Do they?" says I.

"Let's find out," says the county agent. "You got lots of room and if you say so we'll keep both batches separate for a week and see what happens." Marie agreed right away that it would be a good plan so we tried it and I'm blamed if we got more than two eggs a day from the whole fifty that he culled out.

There wasn't much I could say, was there? But every time I go into that henhouse it makes me most sick to see all that room goin' to waste. Besides that Maria is making them hens eat the stuff they call laying mash in spite of the fact that they like corn better. She says she isn't feeding them just for the pleasure the hens get from eating, and so she starves them to it by feeding them less corn and after the fool hens get started they actually act as though they liked it.

It all come about this way. I used to figure hens was a nuisance, anyway, but Maria would have a henhouse, in spite of the fact I told her they wouldn't pay their way. We kept figures just to satisfy her and I proved I was right, but Maria said she would buy the feed if I would let her have the profits and by gum, it's got so now that I have to borrow money from her once in a while to pay for my cow feed.

not a chance to ripen fruit and flowers early enough to make good exhibits. For this and other reasons, the Fair dates this year have been set a week later. This should be pleasing to exhibitors. We never walk through the great hall where these flowers and vegetables are exhibited without a feeling of pride that we are privileged to live in a state that can produce such an abundance and such a variety of products.

Best Cattle Show in Years

Mr. Ackerman writes that the New York State Fair will follow the Columbus State Fair this year so that New York will have the benefit of a circuit which has an appeal with the owners of the big beef herds, horse exhibitors, etc. This circuit includes Columbus, Syracuse, Brockton and Springfield. New York State has been designated as the place for the Regional Jersey Cattle Show so that the Jersey exhibit at the Fair this year should be more than ordinarily good. Mr. Ackerman says, "I look to see the best balanced cattle show in years". This is saying a lot because past records will be hard to beat.

Leading poultrymen of New York know that the State Fair has a record poultry show every year. According to Director Ackerman the poultry exhibits this year will be up to past records.

To those who are interested in the latest developments of farm and home mechanical devices the State Fair always has an especial appeal. I am always interested to see the large number of men, particularly young men standing around in the farm machinery department studying the latest devices for taking drudgery out of the work of the farm and home.

In conclusion it might be said that one gets out of an exhibition of any kind, about what he puts into it. If one goes to the Fair expecting to be bored he will be and how often you hear someone say, "If you have been to the Fair once you never need to go again". Such a person will not profit from an exhibition no matter how good it is. But to those who are interested in seeing what his brother craftsmen have done in the work of the farm or best of all, to those who want to meet old-time friends, no better time can be spent than a day, or several days, at any of the great State Fairs.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

An Artful Salesman

I would like to know what kind of a concern the DeLuxe Art Studio of Chicago is to do business with. Are they on the square?

Here is the proposition they offer. A salesman comes through introducing their work. Since they do not advertise in papers they have an advertising scheme which works as follows: Each person is permitted to draw a card and some cards have value of \$15 and \$30. The others are worthless. In my case my wife drew the \$30 card. This entitled us to a picture which cost \$30 free and the second picture was \$30 but we had to pay \$15 to get it. In other words you could not get any picture until you bought the first one. They gave us both pictures for \$15 which would ordinarily cost \$60. The reduction was due to the fact they advertised this way instead of in newspapers. Of course I would not receive my picture until August 11, 1930. This fellow was just advertising and later a salesman was coming through selling the pictures and I was to let people see my pictures for a sample. Also I was to pay \$5 down and \$10 when my pictures came.

At this point I told the salesman that

Accident Insurance Protects!

The American Agriculturist,
Ithaca, New York.

Gentlemen:—

This is to acknowledge yours of the 24th inst., with draft enclosure in the amount of \$1000.00 to the order of Daisy M. Scott, Administratrix of the Estate of A. Lee Sexsmith.

I wish to express my sincere appreciation for your very prompt and courteous attention to this matter, and to assure you that Mrs. Scott as well as myself are very thankful to you for the efficient and prompt manner in which this matter was handled.

Very truly yours,

(signed) H. William Smith, Attorney, Deposit, New York.

I would not pay a cent or sign my name. He took the card and said I lost my chance. I asked him for time to investigate. He said he would not be in town that long. Then I told him his company was a darn poor concern if I couldn't investigate it. At this he said I did not need give him any money but could pay when pictures came if it was satisfactory. Then he wanted me to sign slip showing I won the card. At this I told him I would sign nothing and if he wanted to give me a receipt he should make it out and put my name in. He agreed and said he was honest and finally he put my name down as having won the prize and agreed to send the picture. As far as I know he did not go anywhere else in town but dug right out.

THE best luck you had, my friend, was when you refused to sign your name to anything. Now, if you do not approve of the pictures when they are delivered, no court in this great land of ours can compel you to accept and pay for them. Perhaps you will want them, although many readers write us that they are sorely disappointed when the enlargements are delivered, only to be told by the salesman that they have signed a legally binding contract. However this may be, we have yet to hear of a case where any picture enlarging company has actually brought legal action to collect.

You can be sure that this agent was giving you no reduction or special price. Everyone gets the same offer and everyone draws the lucky number. By the way did the salesman specify whether it was good or bad luck?

About Returning Unsold Products

Can you give us any information about the North American Industries, Inc., who manufacture the "New Christie Sole"?

THE information we have indicates that the product put out by this company has some merit, although we are unable to say how it would com-

pare with the older and more standard method of repairing shoes. However, when it comes to acting as agent for this company, or any other company, we would like to point out that where an agent agrees to take a considerable amount of the product, and is then unable to sell it, he does not usually find that the company will take back this product and refund the money. At least, before entering into an agency with any company, this matter should be made entirely clear. In other words, agents should know whether or not they will be allowed to return products which they are unable to sell.

Find the Baby! Name the Pony! Pick the House!

SIMPLE, childish puzzles, offering "valuable prizes" for their correct solution are the source of many complaints to the Better Business Bureau. These "catch" schemes are at present flooding the country. Contestants are requested to pick out the baby, the pony or the house which is different from other babies, ponies or houses shown in the puzzle literature.

"Congratulations! Your answer was correct," the contestant is informed by means of a form letter. Whether, or not the answer to the very simple puzzle was correct, the contestant has qualified as a "sucker." He is awarded 995 votes on the 1,000 necessary to win the new automobile, the house and lot or what have you.

To get the remaining points it is only necessary to sell a few subscriptions. Almost impossible conditions are imposed under the guise of philanthropy. Men, women and children have sold subscriptions to all of their relatives and friends and many have paid for hundreds of dollars worth of subscriptions—but the prize always seems to go to the other fellow.—Rochester Better Business Bureau.

Private Detective Agencies

THE increase of farm thievery during the past several years has become serious. Several detective services and agencies are sending their agents through the country offering to give detective service and protection to our readers for a certain specified yearly or monthly sum.

Letters which come to us indicate

One Less "Eye Doctor"

THROUGH the prompt and vigorous action of Anders Olson, who lives in the State of Illinois, Frank J. Beeman, alias "Dr. Avery" will cease posing as an eye doctor, at least temporarily. The eye doctor racket is an old one and we are giving you this story both to commend Mr. Olson's method to you and to warn you because in the past this game has been tried in New York State and, quite possibly, may be tried again.

Very briefly, the scheme works like this: The "doctor", usually with a confederate, visits a resident of some rural section who is rather advanced in age and tells this person that he or she will very soon be blind unless a cataract is removed. The confederate usually tells this story and then remarks that very fortunately there is a famous specialist outside in the car who can remove the cataract without pain or bloodshed by the use of radium. The "operation" is quickly performed and then comes the bill which, because of the supposedly expert service, proves high; in fact, just as much as can possibly be forced from the patient.

It is a despicable game and all too often is successful. It cannot be worked often in the same section because the

that many readers have signed up with such agencies. We suggest to those who have not already done so that they consider the following facts:

First: Detectives in the employ of private agencies living in cities are not likely

Your Thanks Is Our Pay

THIS morning I received my first and only communication from theCo. with a check for \$16.95.

I am writing you at once as it was a pleasant surprise to me. I personally wish to thank you again and again because I feel quite certain all the credit is due you.

Furthermore I wish to say from now on the American Agriculturist has obtained a permanent place in our home. Such favors are not to be forgotten. Again I sincerely thank you

A subscriber.

to understand farm conditions. They may know how to apprehend city criminals. A chicken thief or a fellow who backs up a truck and steals apples and potatoes just as the truck is ready for market offers a different problem.

Second: This is a costly process and sending agents through the country to sell such service is expensive. It is probable that a large percentage of the money they collect goes to pay for this service.

Third: Most of the states in which the AMERICAN AGRICULTURIST circulates have State Troopers who are at your service free of cost and who in our opinion are much more likely to get results than are the employees of a private agency.

A subscriber recently asked our opinion about such a private detective service and we referred the letter to the Harrisburgh State Police and Mr. C. M. Wilhelm Deputy Superintendent replied as follows:

"While we have no direct report on this Agency, we have received many requests for information relative to various agencies who canvass rural communities for the purpose of selling protection, and while there are no doubt many legitimate agencies throughout the Commonwealth, we have no doubt but what there are many such who are unable to fulfill their contracts when such are written at an absurd figure.

We can only advise those who are approached on the subject to read the contract carefully, decide in their own minds whether the firm they intend to deal with is a legitimate and responsible one and whether for the cost outlined they are able to carry on and actually furnish such protection as offered.

"If any of your subscribers have any complaints to make relative to being defrauded by any so-called agency and will make complaints direct to this office, we certainly will be glad to make such investigation of the matter as may be possible."

news travels too fast, but we are continually hearing accounts from various states where it has been worked.

The story of how Mr. Olson met this situation is told in a recent issue of the Prairie Farmer, a Standard Farm Paper. The "doctor" tried this game on Mr. Olson's sister and extracted \$600 which she had carefully saved to pay a doctor's bill. Ten days later "Dr. Avery" again appeared, this time without his confederate and Mr. Olson unceremoniously grabbed him by the coat collar and marched him toward the road. As he loosened his grip to open the gate the "doctor" jumped in his car and attempted to start it. Mr. Olson grabbed him by the leg and pulled him out of the car and his action was followed by a free-for-all fight. A neighbor heard the disturbance and came on the run bringing other neighbors to the rescue. When they arrived the "doctor" had been pounded into submission and the neighbors stood guard while the sheriff was called.

Beeman, or in other words Dr. Avery, will be held for the October grand jury and during the intervening time, investigations will be made to gather evidence from other sections where similar fake operations have been carried on.

FUMES Kill Lice Over-night!

Works While Chickens Roost

"Paint" "Black Leaf 40" on Roosts. Only a paint brush, "Black Leaf 40", and a few minutes' time for lightly "painting" top of roosts, are required to delouse an entire flock. When chickens perch, fumes are released permeating the feathers, killing the lice. No

Montreal—City of Contrasts

Where More Than Half the People Still Speak French

IT is a fairly well established habit of the Madam and I that about once a year we take what we regard as a formal vacation. These happy occasions are by no means prolonged—eight or ten days being the usual limit. Moreover I notice that al-

Jared Van Wagenen, Jr.

most never do we stay away as long or go as far as we originally plan—and I know the reason why. It is the half unconscious pull of home and the wonder if everything is going well. I think we feel a bit like guilty runaways who know we really ought not to be skylarking in such carefree fashion while other people do our work. Our last little adventure was this lovely June and the objective was that bit of the St. Lawrence Valley which three centuries ago was called New France.

I think it was twenty-two years ago—also in June—that we visited Montreal and Quebec and St. Anne de Beaupre and when again we asked the question “where shall we go?” without much discussion we voted to return to the region that held for us such pleasant memories.

Usually we have gone alone—the Madam and I. This year we doubled our pleasure because we had with us two of our daughters, thus making a very comfortable family party.

I am not going to speak of northern New York because in the past I have written of the “North Country”. May I say, however, that we did pause at Dean Cook’s door. I found him, it seemed to me rather happy in his wheel chair in his garden where the

By JARED VAN WAGENEN, JR.

young lettuce and peas and corn stood in neat and orderly rows and where his nephew was gardening under his directions. The Dean tells me he feels better when the weather is fine and warm and he can sit in the sun and see things grow. By the way—he would like to return thanks for the numerous letters he has had from friends—often unknown friends—who have written him.

We lay a night at Canton in the old house once the home of Silas Wright. He seems to me to have been a fine figure and I suppose in his time the best known man of the North Country. Almost all his life he was in political office—Surrogate for St. Lawrence County, Member of Assembly, State Senator, Congressman, United States Senator, Comptroller of New York State and finally Governor during the troublous days of the Anti-Rent War. The traditions that have come down concerning him represent him as a plain man of the people, simple in his tastes and democratic in his re-

lations with others, and it is certain that he showed genuine statesmanship in dealing with the acute problems growing out of the Anti-Rent troubles. His old home is now a tea room and tourist over-night rest. It stands on the main street of the town, a large, severely plain white house—the sort of house that you would expect to have been the residence of a very solid-leading citizen of a century ago. His portrait hangs above the fireplace mantle where it may be seen by all diners. We lay in one of the big upstairs chambers—I think very likely the bedroom of the Master—and I tickled my fancy by mental inquiries if it might not be possible to absorb or soak up a little of the emanations of greatness which may be supposed to still cling to the old home.

While I think about it, may I say a word concerning the State School of Agriculture at Canton? Possibly I am a bit prejudiced in its favor because it happens that I have a daughter teaching there, but leaving that fact aside, I am sure that the school is giving good sound agricultural training and I wonder that their student body does not include more farm boys from the North Country. Boys seeking training for farm life might travel much further and do worse.

* * *

At Constable, north of Malone, I turned aside a few miles to pay my respects to Master Farmer Fallon. I found him doing things in a big way with holdings of some five hundred acres. He is down almost on the Canadian line on the rich clay which makes up this part of the St. Lawrence Valley. It may be an interesting statement that while we drove something more than twelve hundred miles, a considerable part of it in a rather primitive, undeveloped country, we saw more log houses in Franklin County than in all the rest of the trip. We
(Continued on Page 2)

An old French spinning wheel in Quebec. The Canadian Government is encouraging this type of home work and helping to find a market for it.

A four-row cultivator like this, fueled with Socony products, will cover 65 acres a day.

SIXTY-FIVE ACRES A DAY WITH SOCONY

FIFTEEN acres a day with a two-row cultivator pulled by three or four horses; eight acres, with a one-row cultivator and two horses. But sixty-five acres, at 4 miles an hour, with a four-row cultivator, may be covered when the best motor fuel and the proper lubricant are used.

New York and New England acreage farmers have come to recognize that Socony Special plus Ethyl and Socony Aircraft Oil are exactly what they require for this purpose. They know also that:

Mica Axle Grease, made for axle lubrication on wagons and farm machinery, is of the best grease stock and ground mica, that it fills up the pores and crevices of the axle and forms a hard, bright, smooth coating that reduces friction.

Eureka Harness Oil preserves harness and leather. It is pure mineral oil and cannot turn rancid. It does not destroy the stitching since it contains no acid. It penetrates the leather and lasts longer.

Standard Hand Separator Oil is a quick-acting oil adapted to close-fitting bearings. It is free from gum, and is anti-rust and anti-corrosive.

In addition, farmers find it pays to put the following Socony products to work for them: Ruddy Harvester Oil . . . Socony Household Oil . . . Socony Turex Oil (for Diesel and Oil Engines) Socony Motor Oil . . . Aircraft Oil . . . Verdol Summer Spray . . . Socony 990A Motor Oil for Fords . . . Socony Disinfectant . . . Socony Gasoline and Socony Special Gasoline plus Ethyl.

Montreal—City of Contrast

(Continued from Page 1)

crossed the boundary at Trout River north of Malone. If the truth must be told, the larger portion of the really high-class land in this region is a part of Canada rather than the U. S. It seemed to me that the hills and sand and rocks chopped off short just about at the international line. For the next forty or fifty miles the route lies through a splendid and very highly developed agricultural country. I do not want to be reckoned short on patriotism, but I am afraid that nowhere, in our state at least, can I think of a region where the farms seem to be literally polished as they are in this Scotch community. Specifically I noted that there were no hedge rows and to keep a farm entirely free of brush along the fence lines is a mark of good farming that very few men attain.

Despite all the fool jokes about Scotch thrift, it is evident that when it comes to building a barn, he doesn't object to spending his perfectly good money.

It is an agriculture based on animal husbandry—cows, some sheep and an occasional herd of Short Horn steers. As I looked at these almost perfectly level fields, it seemed evident to me that in many cases the drainage problem must be serious. At the same time I make a guess that the patient Scotch industry and enthusiasm that keeps the fences as clean of brush as the center of the fields will not shrink from the toil of laying tile drains. In other and possibly happier days, there was a great deal of tile laid in western New York but this practice is becoming a lost art. It would rapidly revive, however, if only we might have a more prosperous agriculture.

Some distance before reaching Montreal we left behind the Scotch and English communities and ran into French Canada. At the same time the scenery changes—partly because the country is more broken and less fertile, partly because the Frenchman is only an indifferent and primitive farmer. For a number of miles just before reaching Montreal, our way closely skirted the wide, swift and in places foaming reaches of the Lachine rapids. I have seen the St. Lawrence a good many times in different places and always with a sense of wonder and astonishment at the tremendous volume of its sweeping flood. Its drainage basin includes some 440,000 square miles or nearly ten times the area of the whole State of New York. It is estimated by geographers that our five Great Lakes hold one-half of all the fresh water on the globe.

At any rate it is one of the half dozen greatest rivers of the world and in the purity of its waters and its unvarying flow at all seasons, it has no rival. (EDITOR'S NOTE—Think of the water power possibilities here). At Montreal it is spanned by two great bridges—one of them very recently opened being more than two miles long.

Measured by any standards, Montreal is a great and beautiful and busy city. With a population of one million, one hundred thousand it is larger than Detroit, making it the sixth city in North America, the third city in the British Empire and (since sixty-five per cent of its people speak French) the third French speaking city of the world. Also it is easily the second seaport of America and big (although not the very largest) ocean liners dock here a thousand miles from the sea.

To me the one absolutely wonderful fact concerning Montreal is that here is a city twice as big as Buffalo without a single red or green traffic light. Of course, there are traffic cops at the intersections of the main arteries but as a whole traffic regulates itself. To do this requires, on the part of drivers some care and skill but above all a good natured recognition of the rights of the other fellow—a sort of carrying of decent courtesy into street life. To "die maintaining your right of way" may exemplify all the heroic qualities of a well bred bull dog but in the end it is apt to be unprofitable. I might add that I have never deemed myself a bold, high powered automobile Jehu. In fact, I have a suspicion that my family have an even less complimentary opinion of my prowess in this direction.

AMERICAN AGRICULTURIST

A Ride With the Blue Tag Potato Growers

Over Two Hundred Visit Farms and Study Certified Seed Methods

By E. R. EASTMAN

IF anyone ever doubts that it pays to use good seed, he should have been on the Blue Tag potato tour through Central New York valleys on August 4 and 5. This tour was conducted under the auspices of the New York State Co-operative Seed Potato Association, cooperating with the Farm Bureaus of Cortland, Onondaga, Cayuga, Madison and Oneida Counties.

I have been interested in potatoes all of my life, but I have never seen better stands of potatoes than on this trip, nor better evidence that it pays to use good seed. Hundreds of acres of certified potatoes were visited, and in nearly every field the tops, which stood up high and covered the ground, were of a healthy, deep green color, and practically free from disease.

What is certified seed? It is seed that is grown under certain standard specifications, the chief qualification of which is that it must be disease free. In addition to this, each seed association requires its members to meet certain other specifications and qualities in their seed. Each man who grows certified seed is visited by one of the experts of the College of Agriculture from one to several times during the season, and if his crop comes up to all the qualifications, including especially the one that it be free from disease, he is allowed to sell it as certified seed.

The practice of certification is being used with other crops in addition to potatoes. It is a new business, but one that is growing rapidly and is bound to grow as all farmers realize the absolute necessity of buying the highest

possible quality seed for all of their crops.

The pleasure and profit of the trip were greatly increased by the efficient way in which the tour was organized and conducted under the leadership of H. J. Evans, the new secretary of the association, his brother officers, and the Farm Bureau managers of the different counties through which the tour was conducted. Although the trip covered several counties and well over two hundred miles, and included a large number of stops at the different farms, Mr. Evans saw to it that all of the stops were made on schedule and that all of the program was conducted as planned. I have seen a good many such tours largely spoiled by poor organization and management. This one was not.

As I looked back over the crest of the hill and saw the long line of more than half a hundred

automobiles loaded with over two hundred interested potato growers, and as I saw this large group pile out of the cars at every stop, listen to the speeches and make careful examination of the potatoes, I remembered back to the time only a few years ago when it would have been practically impossible to have gotten a group of ten to twenty farmers anywhere out for a crop inspection tour or a field demonstration.

We have come a long way in this business of farming in the last twenty years, and we are destined to make even faster progress in the next twenty years. The future will see fewer farmers but better ones. There are good prospects ahead for the farmer trained for his business in the same way that those in other trades and professions are trained. There is not much hope from now on for the untrained man. As a matter of fact, it has only been in recent years that we have heard anything of this certified seed business. But I have seen enough of it now so that I never would plant an acre of potatoes or grain without using certified seed, if I could get it.

The object of the tour was twofold: First, to show the large delegation from Long Island, who are the largest purchasers of certified seed potatoes, just how their seed is grown; and second, to show the certified seed growers themselves what their brother members in the association are doing.

The tour started promptly on time from the courthouse at
(Continued on Page 6)

Certified seed potato growers studying the potatoes on the farm of H. D. Forward at Camillus, on the recent Blue Tag tour through Central New York valleys. There were over two hundred in the two days' trip, and hundreds of acres of certified seed potatoes were visited. Mr. Forward is a Master Farmer, of the Class of 1929.

Hard Times and New York Farmers

Nothing to Be Over-Pessimistic About in Eastern Agriculture

By DR. C. E. LADD,

Extension Director New York State College of Agriculture

ALL authorities seem to agree in a pessimistic view of the national outlook for agriculture for the next twelve months. Present conditions indicate a surplus production and consequent low prices for each of our great staple crops: wheat, cotton and corn. Some of our eastern farmers are beginning to get pessimistic about eastern farm conditions for the next year before the facts warrant such a conclusion.

It may be well to examine the facts and try to forecast just how poor or prosperous eastern agriculture will be in 1930-1931.

First, as to general conditions affecting agriculture. We have been going through an agricultural depression in the United States for the past ten years. We have recognized it; we are rapidly adjusting our farming to the new conditions. In the midst of these times some farmers have made money.

It is probable that the agricultural depression will continue for some years to come. However, we probably lived through the worst of it in 1920 and 1921 and on through to 1925. During the past decade farmers have greatly increased their efficiency. From 1921 to 1925 the efficiency of farm workers in one dairy region of New York State increased 31 per cent which is about twice as fast as the efficiency of agriculture in the United States increased during the same period.

Very important reorganizations of agriculture have occurred or are under way in many sections of the state, such as, the timothy hay areas, the fruit region, the potato counties, and the cash crop regions. The worst of

the sub-marginal (poor) farms are being eliminated from production. The new state program for reforestation will greatly help this. The whole situation is somewhat confused by the continued business depression in cities and the uncertainty as to its duration.

Dairying Fairly Good

So much for the general picture. Now as to the individual parts of the farm business. The dairy business in New York State has been reasonably profitable for about four years. We have all the time foreseen that this would be followed by a period of lessened prosperity. Milk prices have dropped considerably during the past few

months. The remarkable thing about it, however, is that this drop has been so much less than that occurring for the farm products of other sections. The price of milk is still not too discouraging when we take into account the low price of feed and a lessening cost of labor. Even in the month of June this year the price of New York City milk as paid to farmers was 77 per cent above pre-war.

It is too early to make predictions about the potato crop. The July forecast of 398 million bushels ought to be absorbed at a fair price. Present weather conditions would seem to point towards a smaller crop rather than a larger one. At present there is more optimism than pessimism in the potato prospects for New York.

The outlook for apples is fairly optimistic.

The present indications are that the 1930 commercial crop will be practically the same as the 1929 crop for the nation. New York State apparently has a better crop than other eastern sections while the Shenandoah Valley and Michigan have considerably less. New York ought to have as good a price as in 1929 with many more apples to sell. The crop produces high quality on the farms where good spraying was done.

Poultrymen have had several years of prosperity and have expanded the business rapidly. Low prices have now prevailed for some months and are likely to be somewhat unsatisfactory for some time to come. Grain costs are now very low and those who have a fair volume of business with good efficiency ought not to lose although

(Continued on Page 8)

Do Not Sell Too Easily

THERE are several reasons why we are more than glad to print Dr. Ladd's article for the benefit of American Agriculturist readers. In the first place there are few men in eastern United States who understand the conditions both in the market and on the farm better than Dr. Ladd. He knows what he is talking about. In the second place it is a good time for farmers to keep their feet on the ground and not to get too discouraged or downhearted. We are not attempting to say that the situation is at all rosy because prices for farm products this fall will be none too good.

But on the other hand, we have just completed a journey of several hundred miles in different sections of New York State and we have never seen crops at this time of year looking any better than they do now. There are many exceptions, of course, but in general the yield in New York State crops will be especially good this year. And this is not the case generally throughout America. With several crops our eastern farmers are going to have something to sell while farmers in the whole of America will not have. Conditions may change somewhat between now and the time of the harvest of course, but judging from what we know now, our suggestion is not to be stampeded into selling to the first buyer or for the first low prices that the dealers offer for your products. We agree with Dr. Ladd.

America's Worst Drought

AMERICA is now suffering from the most disastrous drought that the country has ever known. There has been a shortage of rainfall in many sections for nearly a year. The drought is particularly bad in the Central West, the Potomac Valley, and many parts of the South, but practically no section has entirely escaped. It is dry in upstate New York but not yet serious in most sections. We have just returned from a trip of several hundred miles through many different sections of New York State, and we have never seen crops as a whole looking much better than they did at this time, during the last of July and the first of August.

We here in the East have no idea of the disaster that has descended upon thousands of farmers in other sections. We were just talking with an Ohio man who said that sheep and cattle will soon be dying in many central west pastures from lack of both food and water, that livestock can be bought for almost any price, the crying need being to ship it out of the stricken districts while it is still alive. Dairying all through the Central West is hard hit. Apples in many of the fruit sections are falling off the trees, the apple crop in Virginia is reported to be at least cut in half by the drought, and all crop growth has been at a standstill for weeks. The papers estimate a billion dollar loss. The Federal government is busy trying to determine relief measures for the stricken districts.

However, we want to point out that such situations are seldom as bad as they at first seem. Of course, many individual farmers living in the drought areas will be hard hit and our sympathy goes out to them, but speaking for agriculture as a whole, this seeming calamity may be a blessing. Farmers were faced this fall with the rapidly declining markets and ruinously low prices. Because of hard times in the cities, people had stopped buying and surpluses were piling up along every line. The drought is wiping out these surpluses. It already has had an effect on prices, and every farmer knows that there is more money in half a crop at good prices than in a whole crop at poor prices.

If we get rain soon, most New York farmers will have good crops, and as Dr. Ladd so well points out in his article in this issue, the situation in most parts of the East and especially in New York ought not to be too bad. This is especially true of dairying, our chief industry. Production throughout the country has rapidly declined. This will reduce materially the great supplies of butter and other by-products in storage. The hot weather has increased consumption of whole milk. Grain is comparatively cheap and hay in

New York is good. Grain may advance, however, if the drought is as bad as it is now reported. The dairymen's problem is to keep cows from shrinking during the dry season.

Master Farmer Nominees Are of High Calibre

RECENTLY we have had the privilege of visiting a good many men who have been nominated by friends and acquaintances to receive consideration for the Master Farmer award. Without exception the qualifications of every man nominated are very high, showing the good judgment of those who made the nomination.

It is an extremely difficult job for the Board of Judges to select from the large group the few to be finally awarded, but it is certainly good for a farm paper editor to have the privilege of visiting these excellent farms, traveling all over the fields, and getting the latest information and practices from these men who have made good in the business of agriculture.

Better still is the privilege of meeting and knowing these men themselves, for persons are always greater than things, and whenever there are great accomplishments great men are back of them.

Each of these nominees, these successful farmers, was asked if he were to start out in life again would he choose farming as a business. "Would you do it again," we asked, "and do you like the job?" The answer is always, "Yes", which indicates that the possibilities for success and particularly for real happiness for the right kind of men and women are just as great in the country as in the city, and they will be greater still in the future for the trained and organized farmer who likes the business.

Schoolhouses Have a Coat of Paint

TO one who loves the country, and the young folk growing up in it, it is a satisfaction to ride up and down old New York State and note that three-fourths or more of the one-room schoolhouses in the entire state have recently had a new coat of paint or have otherwise been repaired and improved.

All educators know the effect of environment on the mind of a child. Think of the accumulative effect on the coming generation of the recent improvement of the schoolhouses where your children spend a majority of their waking hours.

When we see these schoolhouses, it is also a satisfaction to know that AMERICAN AGRICULTURIST had a small part—in cooperation with the farm organizations, the State Department of Education, and Governor Roosevelt's Agricultural Advisory Commission, of which Henry Morgenthau, Jr., publisher of this paper, is chairman—in proposing and supporting the measures which led to increased State aid for the small schools. This State money made the improvements possible.

Retailers, the War Is Over!

"Many small dealers in food refuse to recognize the fact that we are on a new schedule of prices. The big milk dealers of New York have reduced the retail price. I cannot learn that their example has been generally followed in upstate cities. Bread in most places is as stable as postage stamps, or passenger fares. Very many butcher shops have never found that the war is over. I would have more confidence in using moral suasion to establish 'fair' prices than any other measure of farm relief I can think of. Note that the retailers—not the 'trusts' and the big distributors—are the offenders." —JARED VAN WAGENEN, JR."

EVERY consumer knows how right Mr. Van Wageningen is in these statements. No matter how low the prices are which farmers receive the consumers seldom get the benefit of them. Retail prices are the first to go up and the last to come down. We hear a good deal about the profits and the inefficiencies of the dealers and wholesalers, but, as Mr. VanWageningen says, a lot of the responsibility for high prices rests right on the retailer, and one of the

chief results of the retailers' high prices is the cutting down of consumption by the consumers.

Farmers themselves are large consumers, and if every person who reads this would put up a good kick every time he bought something in the store, the price of which was out of proportion to the wholesale price, such an organized effort might have a decided effect.

Try Some Sweet Clover Pasture

IN visiting nominees for Master Farmers this summer, we have been much impressed with the large number of good farmers who are beginning to use sweet clover for pasture. Every man who has had some experience with it with whom we talked is enthusiastic. Their opinion is that it is not much good as hay, but it is so rank growing that one acre of it is worth about twenty-five acres of ordinarily poor hill pasture.

Think what it means this summer during the drought to have a legume pasture grass like this. Experiments have gone far enough with sweet clover as a pasture so that every dairyman is justified in giving it at least a trial.

Can You Take a City Child for Two Weeks?

SEVERAL times during the hot days this summer we have been in the Grand Central station in New York City and seen fifty to one hundred little children all lined up waiting for a train. Our curiosity being aroused, we got into a visit with one of the men in charge of these groups of children who told us that they were Fresh Air youngsters on their way for a two weeks' vacation on farms.

The New York Tribune, cooperating with many children's Welfare Associations, locates places in the country and raises the money to put thousands of these little poverty-stricken city children out where they can get a breath of fresh air, clear sunshine, and good food. Where is there a more worthy project?

Some of these children go back to the same farms several times because those who take them come to have a real affection for them. We were told that some farm people will take any boy or girl without specification, others want just boys. Some prefer little girls, others even go as far as to specify the color of the eyes of the children that they want to take. One farm family, we were told, always insists on having a boy with red hair.

No one who has never been in a city tenement can realize how terribly hot it is in one of these places at this time of year and especially this year. It is difficult to see how life and health can be maintained. What a change, what a Godsend then, a two weeks' respite in the country must be for these children.

As we watched the happy, expectant little faces, and noted how pinched and unhealthy some of them looked, we wondered how many farm parents appreciated what a blessing it is to have the farm and all its natural environment as the place to rear a family.

If any of our readers would care to take any of these little city folk for a couple of weeks, write us and we will be glad to put you in touch with the proper authorities.

Eastman's Chestnut

AN irritable old sportsman was aroused from his bed at 3 o'clock in the morning by the insistent ringing of his doorbell. On answering he found a seedy drunkard struggling hard to maintain his equilibrium.

"What do you mean by waking me up at this hour?"

"Ish you Mr. Smithers?"

"Yes, yes. What of it?"

"Ish you the gent what advertised for a partner to go lion huntin' to Africa?"

"Yes, I'm the gentlemen. What do you want to know about it?"

"Nothin', 'ceptin' I just wanted tell you that on no condishuns whatever will I go with you."

With Our A.A. Boys and Girls

NEW YORK state's twenty-two thousand five hundred 4-H club members will be represented by twelve delegates at the annual 4-H encampment at Camp Vail on the grounds of the Eastern States Exposition at Springfield, Massachusetts, next fall.

Those who will represent the girls clubs are: Genevieve Melius, Otsego county; Marion Crandall, Onondaga county; Marion Harris, Dutchess county; Eleanor Trudi, Monroe county; Helen Woller, Genesee County; Eleanor Gutowski, Orange county.

The alternate representatives are, in the order named: Jessie Gilbride, Livingston county; Helen Richardson, St. Lawrence county; Frances Langworthy, Madison county; Mary Ostascheki, Chemung county.

"This is a snapshot of myself, my pony 'Dolly' and my cousin Charles Drown and his pet goat. I thought that I would like to see this in your paper."
—Alton L. Drown, Ellenburg Depot, N. Y.

The boys chosen are: Stuart Chamberlain, Otsego county; Francis Oley, Onondaga county; Roscoe Owens, Chenango county; Herbert Smith, Monroe county; Amos Baldwin, Oswego county; Arthur Traver, Rensselaer county.

The alternates are: Leslie Lamb, Genesee county; Howard Hillis, Delaware county; Grant Weaver, Orange county; Henry Jens, Nassau county.

Camp Vail is conducted annually in connection with the Eastern States Ex-

like the pony and nothing would please us more than to tell you that if you did what this company asked you to do, that you would get the pony, but we cannot tell you this because it would not be true.

It seems that the publishers of some papers know how badly little boys and girls want to own a pony and they have worked up a scheme to get them to take subscriptions to their magazine. The puzzle is so easy and so many points are given for its solution that almost every boy and girl believes that all they have to do is to take a few subscriptions and the pony will be sent to them. How hard it is, though, to get the balance of the points.

As a matter of fact, there are only a few ponies and there are thousands of boys and girls eager to own them. As a result, many, many little boys and girls just like you answer the puzzle correctly, receive glowing letters from the publisher saying that the answer was correct, and then work so hard to get subscriptions to the magazine. Many people will subscribe to the paper because they cannot bear the look of disappointment on your face, even though they never expect to read the paper. The publisher knows this. That is why

he prefers to persuade little folks to sell his paper. He also knows that most of them will never receive any pay for the work they do.

Perhaps you have noticed that most reliable publications do not print advertisements showing easy puzzle schemes. Many advertisers are willing to pay us well for it, but we prefer to keep the confidence of our A. A. boys and girls.

We suggest that you forget all about this contest and that you talk over the matter with your father and mother telling them how very much you want to own a pony and telling them that you are willing to work very hard in order to get one. Perhaps they will think of a plan whereby you will be able to work for them and earn some money which you can put in the bank. It may take you a longer time to earn a pony in this way but you will certainly be much more sure of getting him in the end and even though you have to wait a year or two for the pony you will have the satisfaction of knowing that you have earned him yourself.

Everyone can earn the things they want most and we expect you will own a pony before long. However, when anyone offers you something that looks too easy always look for the catch in it just as you did this time.

Tell About Your Pet

ALMOST every farm girl or boy has a pet of some sort. No doubt you have seen the pictures of pet ponies sent in by several of our young readers—and nice pictures they were, too. But it begins to look as if our readers of the Boys and Girls Page have no pets except ponies. This, I am sure, is not true.

But we need proof that it is not true. So if you have a clear picture of your pet dog, cat, calf or anything else, send it in with a letter telling about it.

I know one little six-year-old boy who takes care of pet rabbits and guinea pigs. I know three other children who are very fond of their pet goat, so you see there are other pets if we look far enough. What cute tricks does your pet do? Did you raise him yourself, or how did you get him? And how do you take care of him?

My two cats let themselves in and out the screen door whenever they want to get through. They hook their claws in the wire just enough to swing the door to the point where they can work their heads into the crack, then the rest is easy.

Send your letter and picture of your

pet to the editor of the Boys and Girls Page, American Agriculturist, 461 Fourth Ave., New York City.

How a Farm Boy May Become a Boy Scout

ONE of the most interesting games for American boyhood is the Boy Scout game. Many farm boys in America probably long to be members of this organization after having heard or read about the Boy Scout Program, but for reasons of distance from Troops, they find it difficult to join. It is not necessary for a boy to join a Troop in order to play the great game of Scouting. If distance or some other reason prevents his joining a Troop, he may still become a Scout. Write to the BOY SCOUTS OF AMERICA, Department of Rural Scouting, 2 Park Avenue, New York City, and ask for information on how to become a Lone Scout. A registration blank will be forwarded, together with instructions on how to become a member of the Lone Scout Division, BOY SCOUTS OF AMERICA.

When the applicant for membership in the Scout organization registers, his name is entered on the mailing list of the Lone Scout magazine, a publication sent free of charge to all Lone Scouts, on a monthly basis. This magazine contains news, articles of instruction, and Boy Scout interest, which will be enjoyed by all members of the organization. A Lone Scout is entitled to enter all Local Scout events, and participate in Scout activities on the same basis as do Troop and Patrol Scouts.

After meeting the Tenderfoot requirements, the Scout should try to advance to Second Class rank, as no one will get the spirit of Scouting or enjoy it to the full until he advances along the Boy Scout Trail.

Little Cooks Get Busy

VACATION is the Little Cook's chance to finish all her recipes in the first twelve lessons so as to earn her first year award button with Betty's picture on it. As soon as these recipes have been done satisfactorily, get your mother or other responsible adult to send Betty a note stating that you have done the necessary amount of recipes and are ready for the Award button.

Then go right ahead on the other recipes in the following lessons and be entitled to the certificate at the end of the 24 lessons. It really means something to be a Little Cook. Just read this letter and see what others have done.

DEAR BETTY—I am a member of the "Cheerful Helpers Club" of Wadhams, N. Y., who recently sent you a picture of their cooking group as having received the first year award buttons. We had a large class and paid dues of five cents a week to cover the cost of our material. When the first year's work was com-

Gordon and Erwin Priest of Fairport, New York with their pet calf.

pleted we had nearly eight dollars in our treasury so that shows us that your recipes were very thrifty as well as economical.

Now my mother works in the hay field and I make the meals all alone every day and I am making the recipes for the second year's work. I liked the "Margarets Macaroon's" and "A Puffy Fluffy Omelet" recipes the best.—A cheerful cook, ETHEL A. LOBDELL, Wadhams, N. Y.

Try These On Each Other

1. What is the fruit the robins like best?
2. What was the fruit that caused Eve to sin?
3. What fruit has always been most used for making drinks, formerly wines, now an unfermented drink?
4. What berry has a name that sounds as if it were sad?
5. What berry has a name that sounds as if it were foolish?
6. What berry do you give some one when you tease him (slang)?
7. A common fruit has a fuzzy skin and a large pit; name it.
8. Another common fruit has a large pit but its skin is smooth; what is it?
9. What sour fruit is famous for picnic drinks?
10. The juice of a certain fruit is much used for babies—do you know which one it is?
11. A small fruit has a name that indicates a moving stream; guess once.

How to Learn to Swim

EVERY Scout owes it to himself and to other people to know how to swim. As in the case of Scout's Pace, this fifty-yard test is NOT a speed test, and the Scout may use any stroke that he desires and may also change strokes during the test so long as his

easy and lots of fun.

Step 3: FLOATING. The easiest way to float in the water is to balance yourself like the jelly fish or lily-pod; just pull your feet up. (See illustration). Then by extending your arms straight ahead of you, you'll find you can lie

feet do not touch the bottom at any point along the way.

The "Brink Method" is one of the best by which to learn how to swim. It consists of four steps, as follows:

Step 1: SEEING. Hold breath, and open your eyes under water—you can see easily. (Like the duck—see illustration).

Step 2: BREATHING. Inhale through the mouth ABOVE water, and exhale through the nose UNDER water (like a motorboat). Try this first thing; it's

along the surface like a frog or turtle.

Step 4: MOVE—THEN KEEP GOING. First paddle with the hands—like the windmill, then with the feet, like a paddle-wheel steamer; THEN, both together.—Reprinted by permission from the July issue of "The Lone Scout".

Not As Easy As It Looks

I am a little girl 10 years old and just read an advertisement about getting a pony. I answered the puzzle correctly and they gave me almost enough points to win the pony. I am sending you the papers that they sent me and I would like to know whether or not I should do what they have asked me to do. If I did this would I get the pony?

Dear Little Girl:—We appreciate more than we can tell your confidence in us which led you to write and ask us about getting this pony. We can understand fully how much you would

Paul E. Reed with a big cabbage grown by his dad. Paul belongs to the fifth generation of Reeds that have lived on the Reed farm.

position at Springfield, and is the big round-up for club work in the northeastern states.

Not As Easy As It Looks

Set a UNADILLA Silo on guard over your corn crop!

You can depend on the Unadilla Silo to safeguard you against loss of your coming corn crop under any and all conditions. Should your corn fail to mature, happen to get nipped by unexpected frost or become infested with corn borers, ensile it in a Unadilla. Prime, palatable juicy, nutritious feed will result.

If your crop is threatened by borers by all means ensile it in a Unadilla. The worms will be destroyed and your winter feed saved at one and the same time.

Don't put off this important matter! Order your Unadilla at once and be all set for any emergency! You can't go wrong in doing this because the Unadilla Silo is not only the strongest built but is the easiest of all to set up and use.

We can guarantee at once shipment of any size Silo in either Oregon Fir or Spruce. Material bone dry and the best quality obtainable. Liberal discount for cash on delivery or you can buy on time. Prices promptly quoted. Write at once for big free catalog. Address,

With the A.A. Crop Grower

A Ride With the Blue Tag Potato Grower

(Continued from Page 3)

Cortland, New York, and visits were made during the day to the farms of Bruce Cottrell at Homer, Robert Usher at Tully, Gardner Brothers at Tully, and Pioneer Farm, owned by F. S. Hollenbeck, at Tully. A restful and delightful lunch was served at Skaneateles, on one of the most beautiful lakes in New York, after which Riley Brothers' farm was visited at Sennett. These excellent young farmers are the sons of Frank Riley, secretary of the New York State Grange.

A Premier Potato Grower

The next visit was to Bellmath Farm at Sennett, Earl Croker proprietor. It was especially interesting to me to revisit on this tour the farm of H. D. Forward of Camillus. Mr. Forward is a Master Farmer, Class of 1929, and also holds the title of Premier Potato Grower of the New York State Potato Club. It was interesting to see a combine harvester on Mr. Forward's farm. He bales the wheat straw in the field and gets a good price for it. Here also the College of Agriculture conducts seed potato plot tests to determine the amount of disease prevalent in the seed of different growers. The tests show little disease in New York seed.

The next call was at the farm of Wilcox and Jones at Kirkville, where the hungry and thirsty group was served an afternoon lunch of lemonade and sandwiches. Then the party set out for a big banquet at the Morrisville State School of Agriculture. Here the group also stayed over night.

I never visit Morrisville, in a little basin surrounded by beautiful hills, without thinking what an almost ideal place it is for farm boys and girls to go to school. It is many miles from a railroad or from the largest city, and is one of the few remaining communities that is largely sufficient unto itself.

I do not know when I have attended a banquet where there was more fun than the potato growers had at Morrisville. K. D. Scott ("Scotty"), Farm Bureau agent of Chenango County, and noted far and wide as a song leader, got the boys so wound up with singing that they kept right on when Scotty stopped, accompanying their so-called singing with pounding on the table, whistling, and various other forms of hilarity.

Dean Mann Emphasizes Quality of Life

George Winfield Lamb contributed much to the program in his part as toastmaster. After I had given a short talk, the main speech of the evening was made by Dean A. R. Mann of the State College of Agriculture. Dean Mann emphasized the thought of quality in rural life, first in the lives of the people themselves, and second in all that they do. He said that potato culture depended on three great fundamentals: First, the great advance that had been made in the use of machinery in growing potatoes; second, better knowledge and use of fertilizers; and third, and perhaps most important of all, the increased use of high quality seed.

In merchandising or marketing potatoes, Dean Mann pointed out that growers had a long way to go. "We need fuller knowledge of the adaptation of potatoes to the proper soil and climatic conditions and above all we need more and more knowledge that we may exercise control over growing and marketing conditions."

On the second day of the trip, the visits were made at the farms of Henry Jones of Deansboro, Harry Feuss of Waterville, A. G. Allen of Waterville, and George Winfield Lamb of Hubbardville, where lunch was served. The afternoon was devoted to a program of speaking and demonstrations of potato machinery.

Potato growing still requires a lot of hard work, but how the drudgery of hand labor has been taken out of it in

recent years. It is not so long ago that no farmer thought a potato field was properly taken care of until every hill had been painfully and slowly built up with a hand hoe. And, of course, all planting and digging was done by hand. Each year as one looks over the new potato machinery, he finds several new improvements designed still further to reduce the work and the costs of potato culture.

To give you some idea of the good speaking program during the two days, we can only mention those who made short addresses at the different calls during the tour. In addition to the proprietors of the farms where calls were made, most of whom made short talks, other speakers included: A. G. Allen, president of the Association; H. L. Vaughn, County Agent from Cortland County; Dr. Karl Fernow, chief potato inspector of the State College of Agriculture; Austin Werner, of Calverton, Long Island; Don Ward, County Agent of Onondaga County; Dr. William H. Martin, of the New Jersey Experiment Station; Charles H. Riley, president of the Empire State Potato Club; Charles L. Messer, Jr., County Agent of Cayuga County; Professor Dee Crane, West Virginia potato specialist; Dr. E. V. Hardenburgh, professor of farm crops at Cornell; D. Leo Hayes, County Agent in Madison County; Professor E. B. Tussing, potato expert of Ohio State University; George W. Bush, County Agent of Oneida County; Thomas R. Bennett, potato expert of West Virginia; Professors J. R. Livermore, C. R. Crosby and Charles Chupp of Cornell; George Cushman, Long Island potato grower; and Professor W. I. Myers of Cornell.

Grows Seed for Seed Growers

One of the most interesting calls made during the trip was to the farm of F. S. Hollenbeck. Mr. Hollenbeck is an experimental grower of seed potatoes who develops new strains and grows seed for seed potato growers. Such a man may well be compared to a mining prospector. He follows many leads, unsuccessfully, but once in a great while he finds a new strain or variety that may be better than anything that has been known before. What a fascinating business!

One of the speakers on the trip said that New York potato men know how to grow potatoes but had not made much advance in marketing them. He called attention to the fact that it is possible to buy Idaho potatoes in Long Island villages, in the heart of one of the greatest potato growing sections of the world.

"Eastern growers not only of potatoes but of nearly every other product," he said, "have neglected a golden opportunity. They have had the greatest and best markets in the world right under their very noses and yet have allowed producers living hundreds and thousands of miles away to get possession of these great eastern markets. This job of marketing is the outstanding problem, the big job that lies ahead of you men if you are to stay in the business."

Another impression from this trip is that New York State is capable of growing its own seed potatoes. Why, then, should growers who buy seed go outside of the State to get it? New York seed potato men not only can and must produce a quality equal or exceeding anything grown anywhere else, but more than this, they must organize, grade, advertise, and sell their product in spite of the outside competition.

Answers to Try These On Each Other

1—Cherry. 2—Apple. 3—Grape. 4—Blueberry. 5—Gooseberry. 6—Raspberry. 7—Peach. 8—Plum. 9—Lemon. 10—Orange. 11—Currant.

Your Silo—Ready to Ship at Once

24-hour service. Send in your order today—it's shipped to-morrow: it can be erected, ready to fill within ten days, generally. Our factory has been enlarged and newly equipped—and is on a 24-hour schedule. No waiting. There's still time to send for our representative; there's no time for delay. Corn **MUST** be ensiled this year if the dairyman makes any profit this season.

Are Barn Inspectors Unreasonable?

Our milk was recently shut out of the shipping plant by a city inspector who apparently thought he had to find a lot of fault in order to hold his job. What can we do to get our milk back into the plant? We are about tired of complying with so many fool regulations, anyway.

UNFORTUNATELY it is true that some inspectors "feel their oats" in spite of the fact that they may not know their job as well as they should. On the other hand, dairymen in the east have the best market in the world and if we are to keep it, we must raise the standard of quality. We have no patience with the inspector who does not know his job but so long as he is reasonable we believe in meeting him half way.

We suggest that you correct the conditions to which he objected and ask for another inspection.

Water for Calves

Is it possible to feed a calf too much water? If it is how much water should a calf have at various ages? How often is it wise to water a calf?

WE do not believe there is any danger in giving a calf too much water. Of course, if the calf is watered only at long intervals she may drink too much. We know of a number of successful dairymen who have water buckets in calf pens so that they can drink any time they want it.

Ground Limestone for Cows

Are cows able to assimilate calcium when it is fed to them in the form of ground limestone?

YES, although it appears that certain vitamins are also necessary to enable the cow to use lime. These vitamins are most abundant in pasture grass, therefore it is important to feed plenty of lime when cows are on pasture so they can build up a reserve supply in their bodies.

Raw Rock Phosphate Not Recommended for Cows

Where a mineral source of phosphorus is added to a dairy ration, is raw rock phosphate as satisfactory as superphosphate?

MOST authorities do not recommend raw rock phosphate. Some lots have given good results experimentally, while others seem to contain some harmful substance.

GOOD FEED DOES IT!

LIKE THE OLD STORY OF THE HORSE... when you can bring your cows to water... and make them drink all they should... then you've done something! Something that will show up in your milk pail... something that will show up in your pocketbook!

Water is as important as feed to a cow. Your job is to give her the kind of feed which will make her drink! Purina Dairy Chows! (You'll find Purina Bulky Cow Chow and Purina Bulky-Las the best when grass is dry and short.) Milk is made of much water... and water is cheap!

Purina Dairy Chows contain those things which make your cows want to drink... that means cheap milk. Purina Dairy Chows also contain those things which make the other parts of milk... that means still cheaper milk. Two real jobs... when you find one feed that does both... you're bound to have a bargain! Purina Dairy Chows are feeds your cows always relish... feeds that make them drink... feeds that make cheap milk... feeds that put more money in your pocket! Look over the list of Purina Dairy Chows... you'll find one which just suits you!

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.00	2.80
2 Fluid Cream		1.80
2A Fluid Cream	1.96	
2B Cond. Milk		
Soft Cheese	2.21	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Aug. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final

easier. Summer consumption is always light and the demand is none too good now with the unsatisfactory industrial situation.

Realizing the critical situation the trade is watching the movement of prices very closely, discouraging any sharp advances that may throw the market off balance, thereby causing a lot of damage to producers.

Cheese Gains Another Fraction

	Aug. 8, 1930	Aug. 2, 1930	Aug. 9, 1929
STATE FLATS			
Fresh Fancy	18 1/2-19 1/2	18-19	22 1/2-24 1/2
Fresh Average			
Held Fancy	24	26	24-26
Held Average	23	23	27 1/2-29 1/2

The upward trend that we reported last week developed into fractionally higher prices on Wednesday, August 6. The firm situation in the West forced values up in spite of the attempt on the part of the trade to hold prices down. The West has been dominating the market and when the situation there turns stronger prices were bound to follow suit. Statistically the cheese market is about on par with a year ago and there is no reason why prices should not keep pace. It is beginning to appear that the well known controlling interests in the cheese trade are holding prices down. Retail prices are as high as ever, but the producers are not getting their share. However, this situation is not confined to the cheese trade. Retailers are charging prices all out of proportion to the rates received by the producer. We see no change in the price of bread, although wheat has never been cheaper in a decade. Ice cream sodas still cost 15 and 20 cents, the price established during the war, when sugar, milk and other ingredients were top price. But they forget the war is over. Restaurants still charge 35c for two fried eggs, more than what a farmer gets for a dozen of them.

Eggs Suffer a Set Back

BROWNS			
Hennery	18-19		
NEARBY BROWNS			
Hennery	33-39	34-38	40-46
Gathered	24-32	25-33	34-39

It is amazing how quickly the egg market reacts if a few extra eggs come in on one single day. All during the week ending August 9 with the exception of Wednesday, Aug. 6, the reports were that the receipts were light. That one day however, was enough to set the market back a full cent on Thursday. Friday showed additional shrinkage but instead of the price recovering, values shrunk along with the eggs, to three cents under our closing price last week.

Eggs are still coming from the country showing the effects of heat and accordingly a large portion of the trade has turned to the use of high quality heat free eggs out of storage. These are replacing the general run of current arrivals and naturally the latter are in accumulation. We expect the market on high grade eggs to open a little better on the 11th. However, there is not much hope for relief until we can clear away the accumulations of medium eggs that show shrunken yolks caused by the hot weather.

Live Poultry Outlook Better

	Aug. 8, 1930	Aug. 2, 1930	Aug. 9, 1929
FOWLS			
Colored	20-23	20-22	28-30

DUCKS, Nearby	16-22	16-22	20-26
GESE	12-13	12-13	

The live poultry market looks a little better this week, demand has been more active and there has been a tendency to advance prices. Fowls arriving by express have met excellent demand, and it appears that we may see further advances. Broilers have also been experiencing an active call with fancy Rocks bringing 2c premiums. As the young birds develop into the roasting stage fancy broilers will become scarcer and higher. However, that does not mean that shippers can get careless about the condition of their birds.

There is a spread of 11c per pound in Rocks and 5c a pound in Leghorns. It shows what "finish" means.

Labor Day comes September 1, and it represents the last big week-end holiday of the year. Those who are near summer boarding houses, mountain resorts and roadhouses, should make contacts now to clean up the last frying chickens of the season.

Fruits and Vegetables

Again we urge readers to tune in on the radio market reports coming over WEAf every noon. It is the only way to follow the perishable market.

Western New York is shipping Transparents that bring from \$1.25 to \$1.50 depending on size. Hudson Valley is shipping Duchess, Yellow Transparents and Williams Reds, with prices varying all the way from 50c to \$1.50 depending on variety and quality.

Hudson Valley Bartlett pears have been bringing \$1 to \$1.25. Clapp's Favorite 75c to \$1.50 and Belle's 50c to \$1.

Berries of all kinds arriving from Hudson Valley, Oswego County at widely varying prices.

Hudson Valley peaches have been bringing from 75c to \$2 a bushel depending on size and quality.

Vegetables cover a wide range. The weather has caused a lot of spoilage and prices vary widely.

Hay Prices Higher

Although hay was a little more plentiful during the past week it sold promptly at slightly higher prices. Buyers are preferring old hay and the market on such closed firm. Several cars of new hay arrived early in the week in good condition and sold on the average of \$3 below old hay prices, although a couple of strictly A. No. 1 fresh stock brought the same price as the old. Prices on timothy range from \$18 to \$28, with mixtures averaging about \$2 less.

Meats and Livestock

CATTLE—Steers very slow. 11 loads on sale. Few loads unsold. Common to medium grass steers \$5.50-7.25, 2 loads dry feds \$9.00-10.00. Generally 25c to 50c lower. Some off more. Cows scarce, steady to 25c lower. Common to medium \$4.25-5.50; Low cutters and cutters \$2.00-4.00.

VEALERS—Steady, few choice \$14.00.

LAMBS AND SHEEP—Lambs in moderate supply, mostly 50c lower, slow. Good to choice \$9.00-9.50. Medium \$7.00-8.00. Common \$5.00-6.00. Ewes steady, good to handy weights \$3.50-4.00.

COUNTRY DRESSED CALVES—Daily fresh receipts were light and the market was cleaning up in better shape at the end of the week. The demand was slow, except for a very few extra fancy calves, which continued scarce and sold at a premium over the prices quoted. Small to medium calves met a better demand than heavies. The market closed steady with unchanged prices. Fresh receipts per pound: Choice 13-16c; fair to good heavies 10-11c; small to medium 10-12c.

LIVE RABBITS—Fresh receipts continued light. Demand very slow. Market steady. By the coop 15-20c per pound.

Wool

The wool market is still slow. New York better fleece wool, unwashed, fine, per pound, 21-30c; 1/2 blood 23-29c; 3/4 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

Hard Times and New York Farmers

(Continued from Page 3)

their profits may be smaller than in the very prosperous years just past.

The conclusion seems to be that there is nothing to get very pessimistic about in New York State farming. New York State and Eastern agriculture are likely to be as prosperous or more so than any other section. This is not a time for large expansions or great pessimism. It is rather a time for conservative farming and spending. This is a time to preserve a quiet faith in eastern agriculture as a business and a mode of life.

Taken as a whole New York farmers ought not to lose ground during the next year. Compared with the rest of the nation eastern farmers should be in an enviable position during 1930.

Meanwhile we are making some solid gains of considerable importance in developing a permanent and satisfactory country life.

Some Factors that Will Help

The state has embarked on a program for a rather rapid development of good roads with the ultimate aim of providing a hard surfaced market road outlet for almost every worth while farm business. This will be done without any additional burden of local taxes.

The development of rural electrification is proceeding very fast, faster probably than in any other state.

Educational opportunities for rural children are making rapid improvement, faster probably than at any former time in our history. This includes better rural schools, more Boy's and Girl's Club work and a rapid expansion of agricultural high school teaching. The heaviest burden of the cost of this is borne by the state as it should be.

The tax burden is not getting heavier. Many adjustments of the farm tax burden have been made during the past two years. The state is apparently seriously considering some further readjustments of the burden.

The state has adopted a plan for the purchase of abandoned farm areas, for their withdrawal from agriculture and for their reforestation.

The Farm Bureau system has increased tremendously in membership, in effectiveness of educational program and in the confidence of the people during the past few years. The farm organizations of the state are pulling together in a way that is recognized and remarked in every other section of the country.

All of these are making country life very much more worth while. They are making for a permanent agriculture.

Taken as a whole, we may not pay much on our mortgages during 1930 but we ought to hold even, be able to increase our standard of living a bit and see farm life, as a whole, becoming very much more attractive, both in itself and in comparison with other modes of life.

DIAMOND PICK MEAT AND BONE SCRAP

Added to any mash, whether made at home or purchased ready mixed, is your assurance of good results. If your dealer cannot supply you, we will ship to you direct, freight prepaid to N. Y., N. J., Pa. and Va. only, one 100-lb. bag @ \$3.75, two bags @ \$3.65 each and five bags at \$3.50 each. If not entirely satisfied, money refunded without question. Farm News from New York

The Latest Developments On the Wallabout Market

FOR the past several weeks we have been giving you the latest developments in the Wallabout Market dispute. In case any of you have missed these items, the facts up to date briefly are as follows: Long Island vegetable producers have for years been dissatisfied with conditions on the Wallabout Market in Brooklyn and have repeatedly asked that covers be constructed over the stands to protect the loads from rain, that running water be provided in the market and that activities of speculators be curbed. These speculators, by the way, buy vegetables either from farmers or wherever they can get them cheapest and maintain stands on the market which is primarily designed for a producers' market.

For some time, Commissioner Dwyer of the City Department of Markets, has been working with farmers' committees and speaking at farmers' meetings in order to learn just what they wanted and in doing so he has gained their confidence. Recently he started a system whereby producers would hire their stands on a yearly basis so that they could occupy the same stand each night. At the same time, rates were raised somewhat, not on the suggestion of Mr. Dwyer alone, but through two farmers' committees; one from Suffolk County and one from Nassau County, that worked with Commissioner Dwyer.

For the past several weeks, city papers have been carrying stories to the effect that the farmers were solidly against the new plan and that Commissioner Dwyer was persecuting individuals in his attempt to put over his pet idea. In order to see just what the situation is, the writer went to the Wallabout Market early one morning while farmers were disposing of their loads. After talking with quite a number of them we see no reason to change our belief that the new plan should be given a thorough trial. Almost without exception those men, numbering close to 200, who have secured permanent stands are satisfied with them, and in fact, enthusiastic. There is no mistaking the fact that there is a considerable number, made up principally of the smaller growers, who would prefer to do business under the old plan. By the way, as we announced last week, those opposing the plan secured a temporary injunction restraining the commissioner from putting the new schedule of fees into effect until authorized to do so by the Board of Estimate and Apportionment which will meet in September. For this reason, no more permanent stands are being assigned, but the commissioner is allowing those who have made application for permanent stands to retain posses-

sion of them until a final decision is reached on the matter.

The dissatisfaction among growers seems to hinge mainly on two points; first, a feeling that some of the larger growers have received the best stands and second, a natural feeling that they would prefer to have the old fees remain in force. The rates for transients

Milk Prices Up

THE Dairymen's League Cooperative Association on Aug. 7 announced an increase in milk prices of 37 cents per hundred pounds on Class 1 and 20 cents on Class 2, to become effective on August 11. The Sheffield Producers and the milk dealers also announced similar raises.

In an editorial in our August 9 issue, we stated that the situation demanded an immediate raise in the milk prices and that there should be no hesitation on the part of producers' organizations in putting up prices. Since that statement, the drought conditions in the country have grown worse, and milk consumption has increased, because of hot weather in the city, so the milk industry is to be congratulated for taking prompt action.

Retail prices have also been advanced a cent a quart. Commissioner Shirley W. Wynne of the New York City Health Department states that he has a force of men in readiness to go outside of the New York milk shed to approve new sources of milk should our own farmers be unable to supply enough during the coming short season this fall. Commissioner Wynne also urges consumers through the newspapers to use plenty of milk, stating that even with the increased price it is still a comparatively cheap food.

under the new plan were \$2.00 instead of \$1.00 for a corner stand and \$1.00 instead of .50 a night for an inside stand.

There are stalls for somewhat less than 300 trucks on the market and it is estimated that between 600 and 700 farmers use Wallabout Market at some time during the year. However, there are seldom more than 250 there on one night. It is evident that if everyone should make application for a permanent stand there would not be enough to go around. However, a number have already rented stands to-

gether, one grower using it one night and the other the next. Under a special regulation the stand will be held for its owner until midnight and after that it can be rented to a transient. There is no vital reason, however, why these transients should be required to wait until 12 o'clock before pulling on a stand. They may either learn of some neighbor who owns a stand and is not going to the market that night, they may pull on to a stand with the understanding that they will vacate it if the owner shows up or what would be still better is the plan followed on the Harlem Market where those in charge of the market learn from each farmer whether or not he intends to be on the market the following night. If not, they can rent his stall to a transient as soon as he asks for it.

An old bone of contention on the Wallabout Market is the problem of the food speculator; the man who gets possession of a stall and buys vegetables, sometimes an entire load from a Long Island farmer or sometimes from growers in other sections. He, of course, is not a producer and some farmers feel that he should not be allowed on the market. To be perfectly fair, it is true that there is a divided opinion on this matter, quite a number of farmers feeling that the speculator is an advantage rather than a detriment to the market. It was noticeable on the market that the speculators, who own no trucks, were in the majority of cases, located on corner stands. They had no trucks and quite frequently the produce was piled in the alleyway in a manner which certainly did not help traffic conditions. Many producers who believe that speculators are a desirable feature, believe that they should be segregated into one section of the market.

We understand on good authority that those most strongly opposed to the plan are visiting Long Island vegetable growers and attempting to collect money to continue their legal fight. We believe that Commissioner Dwyer should have the support of Long Island vegetable growers. The new plan which he proposes to put into effect looks to be an improvement. It has the backing of both the Nassau and Suffolk County Farm Bureaus and of the men who have tried out the plan by making application for a permanent stand. It has been said that Commissioner Dwyer is the only City Market Commissioner who has ever been willing to actually go out to farmers' meetings and discuss the problem with them.

American Agriculturist is interested in the ultimate welfare of Long Island vegetable growers. After studying the situation at some length we believe that Commissioner Dwyer is making an honest attempt to improve the Wallabout Market. We understand that the changes he has instituted are merely an opening wedge toward further improvements long asked for by Long Island vegetable growers.

Grange News

By F. J. RILEY

ON Wednesday, Aug. 6th on the farm of Leland Hoskins, situated about 2½ miles west of Auburn on the Genesee Street road will occur the second annual picnic of the Grange, Farm Bureau, Home Bureau, Dairymen's League and 4-H Clubs combined. Last year the first of its kind in Cayuga County proved to be such a success that it seemed wise to continue this eventful day.

Are you going to Rochester for the greatest gathering of rural people ever held in the United States, the 64th annual session of the National Grange? The dates are November 12-21, 1930. There will be three sessions daily, all of keenest interest, with addresses by some of the most prominent leaders in national life. Think of 12,000 Patrons to take the 7th degree on Friday, November 14th in the Masonic Temple. Five classes—perhaps six: the first class at 9:00 A. M. Make your application early. The fee for the seventh degree is \$2.00 and no dues afterwards.

Here's a STOCK SPRAY that Kills and Repels

Preferred by leading dairymen everywhere, Tanglefoot Stock Spray kills and repels flies and other insects—protects cows all day in barn or pasture. It is pleasant to use—never stains, discolors, or gums the hair—and won't burn or blister the hide. Milking and feeding are easier because cows and other animals are unmolested and quiet. You get more and better milk—larger cream checks. Tanglefoot will not taint milk—is powerful, lasts longer, goes farther—works equally well on horses, hogs and other farm animals. Try Tanglefoot. We guarantee you'll like it. Leading dealers everywhere sell this remarkable stock spray. Write for free, interesting booklet.

THE TANGLEFOOT COMPANY
Grand Rapids, Michigan

Listen in on the Tanglefoot program on WLS
Friday evenings, 8:15 Daylight Saving Time,
7:15 Central Standard Time.

Among the Fruit Growers

For the week ending August 2, 1930

Orange Co.—The weather this past week has been clear and warm. Some of the orchards are showing the effects of the continued drought. Greensboro peaches are about all picked. Pears of early varieties like Clapps favorite are being picked. Moores Early grapes are just starting to turn color, especially on real dry locations.

Dutchess Co.—The dry weather is showing its effect on fruits. Early apples such as Dutchess, which are being harvested, did not size up as well as had been expected. Early peaches such as Greensboro and Carman are being harvested. Clapp pears are being picked and the crop is very good.

Ulster Co.—All growing things are drying up all over the county. Unless there is rain in the very near future to relieve the situation, fruit and vegetables will go from bad to worse. Apples have prematurely ripened this season, due to dryness and extreme hot weather. Williams Reds are all of two weeks ahead of their usual schedule. Wherever the growers have either soil-mulched or cover-mulched their bearing trees, such trees are apparently suffering much less than the sod and non-mulched trees. The foliage on Spys and Kings in a few sod orchards is

turning yellow and dropping severely. Clapps Favorite pears were harvested during the week, mostly for the New York City market. In general the Clapps were large and clean and nicely colored. Abundance plums are now being picked, mostly for the roadside stand trade. Early peaches such as Carmans are moving in the local trade.

Clinton Co.—Commercial orchards are in satisfactory condition as regards insect and disease injury.

Onondaga Co.—Continued hot, dry weather has affected all crops. Early Transparent and Red Astrachans are being harvested, and there is a large crop of all early fruit.

Monroe Co.—Cherry picking has been practically completed this week. Greensboro peaches are coming in. Red Astrachans are ripe. Some fairly well colored Dutchess are being picked though they are a long ways from ripe.

Oswego Co.—Most orchards show the need of rain. McIntosh are a light crop while Spies are nearly one-half of the normal crop. Cherry harvest has been completed and growers who need are spraying after-picking spray to the trees.

Whether it is a dairy feed or a mash, for hogs or horses, Arcady Wonder Feeds are the finest you can buy—mixed by special formulas to give your stock and poultry the maximum in feeding. Your dealer carries Arcady Wonder Feeds. See him today or write us direct.

Pickling Time Is At Hand

With Our Variety of Vegetables and Fruits No One Needs to Weary of Any One Pickle

THE making of pickles is a pleasure if one remembers that much of the work can be done while other household tasks are under way, and that it is not necessary to set aside a whole morning as is the case when fruit is to be canned.

Nearly all pickles are made ready by soaking in brine and if at the time recommended for their brine bath, there is no time for completing the work a day or a week more will do them no harm, as an hour's soaking in luke warm water will remove the surplus salt. On the other hand it is sometimes desired to hasten the pickling process and this is easily done by bringing your brine solution almost to boiling temperature and then pouring it over the pickles. An hour in this hot brine is equal to twenty-four hours in a cold solution.

Sometimes there is a question as to just how salt the brine for pickles should be made. Put your pickles in a crock and pour over them enough water to cover. Pour this water off into a separate dish, wash a fresh egg and slip it into the water, then dissolve salt until the egg floats. Remove the egg and pour the brine over your pickles.

Glazed vessels should be used for heating vinegar for pickles. Never be

tempted to use a chipped granite or porcelain basin in making pickles.

Sterilized jars should always be used for pickles, and it is well not to fill them quite full. Leave for twelve hours, heat a small quantity of vinegar, fill jars to the brim and seal.

If bottles are used see that they are well sterilized and that all corks are soaked in hot water. After the bottles

The All Purpose Bag

The all purpose bag is for garden tools, for the postman to deposit the summer mail in, for your knitting, for a damp bathing suit or a dry book. This bag is of apple-green oilcloth outside, lined through out with orange, and bound in dark green stitched on with long running stitches in orange. It is so cut that the bag and handle are in one piece, with the seam at the bag's base. A cut-out posy of orange and dark green glue on for decoration.

M620—Oilcloth bag with materials complete40c

Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

are filled, lay a thickness or two of thin white cloth over the mouth of the bottle, put in the cork, and when cold dip the top in melted paraffine. Always use a few bits of horseradish in pickling vinegar as it not only improves the flavor but acts as a preservative.

Pickling Vinegar

Pickling vinegar is easily made in advance of the time when it is to be used and may be kept in a sterilized jug. A very good one is made of vinegar, tumeric, young onions and spices. In a preserving kettle put one pint of vinegar, one eighth pound of ginger, two tablespoonfuls of mace, one teaspoonful cayenne pepper, two tablespoonfuls mustard seed, one cupful button onion, and three tablespoonfuls of tumeric. Add small amount of salt, and if pickle is to be used with vegetables that have not been given a brine bath increase this when the pickle is made. Simmer vinegar and spices for twenty minutes, add three quarts of vinegar and put in jug for later use.

Olive Oil Pickle

In addition to the vinegar pickles an olive oil pickle is much enjoyed. Fill a jar with sliced, medium-sized cucumbers, having first a layer of pickle and then a sprinkling of salt. Let stand four hours and drain through cheesecloth bag. Chop one cupful of onions, add one-half cupful olive oil, one-half ounce white mustard seeds, one-half ounce black mustard seeds and one-half ounce celery seeds. Put a layer of cucumbers in jar, add a tablespoonful of the onion mixture, and repeat until jar is filled. Cover with cider vinegar, put horse radish leaves over top, put in a weight to keep pickle under vinegar and keep two weeks before using.

Sweet Pickling Mixture

For sweet pickles a vinegar may be prepared and kept in the same way. Use the following ingredients: To one gallon of vinegar add two pounds of brown sugar, two tablespoonfuls each of ground ginger, mustard seeds, celery seeds and allspice, and one tablespoonful each of mace, ground cloves and ground cinnamon. Boil fifteen minutes and put in jug for later use.

A little alum added to water in which pickles are soaked will keep them crisp and a piece no larger than a grain of wheat may be safely added to each quart jar of cucumber pickles.

Among pickles not so well known

as they should be are my three favorites:—

Stuffed Pepper Pickles

Cut the tops from twenty-five green peppers and remove the seeds. Chop one large head of cabbage, and slice four button onions. Cover with a boiling brine, drain, cover with a second hot brine, let stand thirty minutes, drain, cover with cold water and let stand fifteen minutes. Drain and add one teaspoonful celery seeds, one teaspoonful ground mustard, one-half cupful salt and one-half teaspoonful white pepper. Fill the peppers with the mixture, and tie tops on with white twine. Pack in crock, cover with boiling vinegar, and put grape leaves over top as soon as cool. Two smaller heads of cabbage may be used, as amount of filling required depends upon the size of the peppers.

Mint Pickle

Chop one pound ripe apples, one-half pound ripe tomatoes, three large peppers, twelve small onions, drop in boiling vinegar and let stand until cool. About three cupfuls of vinegar are re-

The Jones's Jubilee

ROBERTA SYMMES

What's happened at the Jones's house?

They're acting queer to me—
Such laughin' and such chatterin'
Sounds like a jubilee.

Old Grandpa is amovin' 'round
As active as a flea;
I guess I'm kind of curious
But I gotta go an' see—

Pshaw! all that fuss and big
to-do,
Just 'cause the baby's tooth is
through!

quired. Add two cupfuls granulated sugar, two cupfuls seedless raisins, two teaspoonfuls dry mustard, two teaspoonfuls salt, and one-half cupful chopped mint leaves. Mix thoroughly, pack in pint jars and cover tightly or bring to steaming point, pack in jars and seal. Fine with lamb.

Mexican Pickle

Slice one peck green tomatoes, chop seven medium-sized green onions and ten green peppers, cover with salt and let stand twenty-four hours. Drain through a cheesecloth bag, cover with a weak vinegar and boil fifteen minutes. Drain and add a syrup made of two pounds of sugar, two and one-half quarts of vinegar, one tablespoonful whole cloves, one tablespoonful whole allspice, one-half pound white mustard seed and one stick cinnamon. Cook very slowly for two hours, put in sterilized jars and seal. It is best to put the spices in a cheesecloth bag.

—L. M. T., New York.

An Unusual Handkerchief

WE all are on the lookout for a novelty in the way of a handkerchief, for while it is maligned as "the present you give when you can't think of anything else," a dainty, handmade handkerchief is always an appreciated gift.

This particular one is made from very fine linen, of any size you wish. In the corner is applied a piece of printed georgette, of any shape you wish. It may be a triangle, an irregular bit, or (for a bridge prize) a club or spade. If your wardrobe includes a printed georgette dress, by all means have a handkerchief embellished with a bit of the material, to carry with it.

Aug. 26—Canton, Grammar School, 9 a. m. to 2:30 p. m. Miss Shaver, nurse; Dr. Severance, physician.

Do You Know That—

Rayon undergarments give better service if they are dried lying flat on a bath towel. Rayon becomes weak when wet and is easily damaged by stretching or rough handling.

* * *

Furniture placed parallel or at right angles to the walls gives the room a more restful appearance than when rugs or furniture are on diagonal lines.

* * *

If food looks delicious and tempting when it comes on the table it is rarely necessary to nag or beg children to eat it.

Correction

IN a recent account in our issue of July 12th of the marketing trip undertaken by the home bureau managers and members the name of Mrs. Blanche Wilcox of Oxford, N. Y. was inadvertently omitted. Mrs. Wilcox was a member of the delegation from Chenango County.

The Well-Fitted Slip

3237

The new dresses demand very carefully fitted undergarments and SLIP PAT- TERN NO. 3237 answers that demand admirably. The fitted bodice and skirt with pin-tucks at the waist line for fullness follow the lines of the new frocks. Pattern cuts in sizes 15, 18 years, 36, 38, 40, and 42 inches bust. Size 36 requires 2 3/4 yards of 39-inch material and 3 3/4 yards of 2-inch lace banding, with 3/8 yard of 39-inch contrasting bands. PRICE 15c.

The All-Day Frock

2594

FROCK PATTERN NO. 2594 is very chic for the becoming dresses which smart women wear for all-day affairs. Linen, shantung or pique in the beautiful new colors and patterns would be most suited for such an all-purpose frock. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 2 3/4 yards of 39-inch material with 1 yard of 39-inch contrasting. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Summer Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

Aunt Janet's Corner

Reader Asks "How Should It Be Done?"

1. Is it proper to kiss when meeting a friend or relative or is it sufficient to speak pleasantly? Should ladies shake hands?

Kissing friends or relatives is always a matter of personal taste. Effusive demonstration of affection in public is always poor form but no one objects to such a salute between members of a family or close friends. Except in some foreign countries, a kiss is not a formal salute and should be used only to express real affection. It is perfectly correct for women to shake hands with each other as a hearty hand clasp can show just as much hospitality or affection as a kiss.

2. What is best to address mother-in-law when it does not come natural to say "Mother"?

It is a very usual practice in this country to address one's mother-in-law as "Mother Smith" or "Mother Jones", such title distinguishing her from one's own mother. A little practice at using such a term would soon dispel any self-consciousness about it. It should express mutual good-feeling between wife and mother-in-law. The more formal "Mrs. Smith" or "Mrs. Jones" which is entirely correct seems to express a more distant relationship between the two.

3. If "In-Laws" do not seem to make one happy when in their presence is it proper to continue going to visit them with husband or wife even though one does not enjoy doing so?

This is hardly a question of what is proper to do. It is more a matter of seeking congenial companionship which everybody has a right to have. But every marriage brings together people who must adjust themselves to different conditions, opinions and habits. I always feel sorry for the man or the woman who must give up his or her family and friends because the marriage partner cannot or will not be adapted to the new circumstances. If one tries very hard, a common bond of interest can be found with almost any one; flowers, garden, books, children, recipes, new patterns and so on down the list of every day activities. When that interest is once discovered, all self-consciousness disappears and real friendship develops. Friendship with one's "in-laws" needs to be tended even a little more carefully than with others because of the old tradition about disagreement among them.

4. When one has not been brought up to say Aunt and Uncle is it proper to begin doing so or to continue calling them their given names as before?

Again comes the question of personal preference. Some religious sects never use titles but address every one by his first name, whether he be old or young, relative or not. Custom determines the

use of such things. In your particular case it would seem unnecessary to change such a harmless lifelong habit unless the uncle and aunt had a feeling that perhaps it was not so dignified as the usual "Uncle John" or "Aunt Mary". What we are called really matters little provided the right feeling is back of it all. However, one does not rush familiarly into calling strangers by their first names.—AUNT JANET.

What To Feed Children

"WHAT to Feed the Children" is a most excellent bulletin, containing, as it does, in compact form the main rules for feeding through infancy and childhood. These rules are based upon the latest information as to vitamin and mineral content of foods, be-

"COLONIAL COACH" SAMPLER NO. B5479 comes stamped on good quality, black felt for simple cross-stitch embroidery in colorful shades of worsted embroidery yarn. Stamped felt and worsted yarn for working, \$1.00, frame not included. Size when framed, about 13½x16½ inches. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

sides the well-known principles of regularity and variety in feeding. It shows ignorance on the part of a mother if she boasts "My child eats everything" for the young human body is not adapted to all kinds of food. Right feeding in early life especially will prevent a great many ailments in later life. The bulletin mentioned above is published by the Extension Service of the University of Wisconsin at Madison, Wisconsin and as long as the supply lasts will be furnished to non-residents of that state at five cents per copy.

To Clean Enameled Walls

Further sanitation is assured in both these rooms by washing the walls two or three times a year. Glossy finished walls, such as are usually found in kitchen or bathroom, may be kept shining and bright by the use of the following equipment: water, soap, glue, a sponge, and a piece of soft chamois. The soap, which should be non-alkaline, is first shaved down and dissolved in a quart of boiling water. Then, two ounces of granulated glue are dissolved in a little more than a quart of boiling water. These two mixtures are combined and allowed to stand so that they form a jelly, which is applied to the wall like soap. Washing should begin at the bottom, the work progressing upward. The mixture is finally wiped off with a piece of chamois. Good cleaning preparations for woodwork and walls may also be bought at places where paint materials are obtained.

In kitchens or bathrooms, where the need for perfect sanitation is obvious, enameled woodwork supplies the answer. Well enameled surfaces will withstand grease, steam, and frequent cleansings, neither their sanitary qualities nor coloring being impaired.

—DOROTHY MILLER.

If doughnuts crack in cooking, try a little less baking powder in the recipe.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA WASHES QUICKER—EASIER IN TUB OR MACHINE

Do you use a tub?—Fels-Naptha will save you hard rubbing.

Do you use a washing machine?—Fels-Naptha will save you time and power.

And either way, it will get your clothes so sweetly fresh and bright—so crisply, thoroughly clean—you'll take greater pride than ever in your washes.

Fels-Naptha does such good quick work because every bar brings the aid of two fine cleaners. Soap, the dirt-remover, and naptha, the dirt-loosener. Working hand-in-hand, they give you extra help. Together, they quickly loosen stubborn dirt and wash it away without hard rubbing. And that's why Fels-Naptha is the real bargain in washing value—it brings you not more bars, but more help! It saves YOU!

Fels-Naptha saves your hands, too. That's because it works so quickly you

don't have them in soapy water so long. Try Fels-Naptha. In tub or machine. For soaking or boiling. In hot, lukewarm or even cool water. Use it for household cleaning. But use it—and get extra help! Ask your grocer for Fels-Naptha today. The 10-bar carton is very handy.

SPECIAL OFFER—We'll be glad to send every user of Fels-Naptha Soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-8-16. Fels & Company, Philadelphia, Pa.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

FELS-NAPTHA

Save STEPS and you Save TIME, MONEY, HEALTH —have RUNNING WATER

No task is more complete drudgery for the farm woman than the old-fashioned method of pumping and carrying water. A Hoosier water system banishes this drudgery and waste of time and energy forever. It supplies water under pressure AUTOMATICALLY, DEPENDABLY, ECONOMICALLY, not only for household use, but for every other purpose on the farm.

The Hoosier is built for permanent service. It is simple, rugged, and built of quality materials. And it is protected INSIDE and OUT by a heavy coating of pure zinc, applied by the famous GalVAZink Process.

The Indian Drum—By William McHarg and Edwin Balmer

It was with this that cold terror suddenly closed over him. Would he learn anything now from Benjamin Corvet, though he had found him? Only for an instant—a fleeting instant—had Benjamin Corvet's brain become clear as to the cause of his hallucination; consternation had overwhelmed him then, and he struggled free to attempt to mend the damage he had done.

More serious damage than first reported! The pumps certainly must be losing their fight with the water in the port compartment aft; for the bow steadily was lifting, the stern sinking. The starboard rail too was raised, and the list had become so sharp that water washed the deck abaft the forecasle to port. And the ferry was pointed straight into the gale now; long ago she had ceased to circle and steam slowly in search for boats; she struggled with all her power against the wind and the seas, a desperate insistence throbbing in the thrusts of the engines; for Number 25 was fleeing—fleeing for the western shore. She dared not turn to the nearer eastern shore to expose that shattered stern to the seas.

Four bells beat behind Alan; it was two o'clock. Relief should have come long before; but no one came. He was numbed now; ice from the spray crackled upon his clothing when he moved, and it fell in flakes upon the deck. The stark figure on the bridge was that of the second officer; so the thing which was happening below—the thing which was sending strange, violent, wanton tremors through the ship—was serious enough to call the skipper below, to make him abandon the bridge at this time! The tremors, quite distinct from the steady tremble of the engines and the thudding of the pumps, came again. Alan, feeling them, jerked up and stamped and beat his arms to regain sensation. Some one stumbled toward him from the cabins now, a short figure in a great coat. It was a woman, he saw as she hailed him—the cabin maid.

"I'm taking your place!" she shouted to Alan. "You're wanted—every one's wanted on the car deck! The cars—" The gale and her fright stopped her voice as she struggled for speech, "The cars—the cars are loose!"

CHAPTER XVII

"HE KILLED YOUR FATHER"

ALAN ran aft along the starboard side, catching at the rail as the deck tilted; the sounds within the hull and the tremors following each sound came to him more distinctly as he advanced. Taking the shortest way to the car deck, he turned into the cabins to reach the passenger's companionway. The noises from the car deck, no longer muffled by the cabins, clanged and resounded in terrible tumult; with the clang and rumble of metal, rose shouts and roars of men.

To liberate and throw overboard heavily loaded cars from an endangered ship was so desperate an undertaking and so certain to cost life that men attempted it only in final extremities, when the ship must be lightened at any cost. Alan had never seen the effect of such an attempt, but he had heard of it as the fear which sat always on the hearts of the men who navigate the ferries—the cars loose on a rolling, lurching ship! He was going to that now. Two figures appeared before him, one half supporting, half dragging the other. Alan sprang and offered aid; but the injured man called to him to go on; others needed him. Alan went past them and down the steps to the car deck. Half-way down, the priest whom he had noticed among the passengers stood staring aft, a tense, black figure; beside him other passengers were clinging to the hand-rail and staring down in awestruck fas-

cination. The lowest steps had been crushed back and half upturned; some monstrous, inanimate thing was battering about below; but the space at the foot of the steps was clear at that moment. Alan leaped over the ruin of the steps and down upon the car deck.

A giant iron casting six feet high and yards across and tons in weight, tumbled and ground before him; it was

to the car from which he had uncoupled it.

It was a flat car laden with steel beams. At Corvet's command, the crew ranged themselves beside it with bars. The bow of the ferry rose to some great wave and, with a cry to the men, Corvet pulled the pin. The others thrust with their bars, and the car slid down the sloping track; and Corvet, caught

rear trucks reached the edge, the stern lifted and caught the car in the middle; it balanced, half over the water, half over the deck. Corvet crouched under the car with a crowbar; Alan and two others went with him; they worked the car on until the weight of the end over the water tipped it down; the balance broke, and the car tumbled and dived. Corvet, having cleared another hundred tons, leaped back, calling to the crew.

They followed him again, unquestioning, obedient. Alan followed close to him. It was not pity which stirred him now for Benjamin Corvet; nor was it bitterness; but it certainly was not contempt. Of all the ways in which he had fancied finding Benjamin Corvet, he had never thought of seeing him like this!

It was, probably, only for a flash; but the great quality of leadership which he once had possessed, which Sherrill had described to Alan and which had been destroyed by the threat over him, had returned to him in this desperate emergency which he had created. How much or how little of his own condition Corvet understood, Alan could not tell; it was plain only that he comprehended that he had been the cause of the catastrophe, and in his fierce will to repair it he not only disregarded all risk to himself; he also had summoned up from within him and was spending the last strength of his spirit. But he was spending it in a losing fight.

He got off two more cars; yet the deck only dipped lower, and water washed farther and farther up over the fantail. New avalanches of iron descended as box cars above burst open; monstrous dynamo drums, broad-banded steel wheels and splintered crates of machinery battered about. Men, leaping from before the charging cars, got caught in the murderous melee of iron and steel and wheels; men's shrill cries came amid the scream of metal. Alan, tugging at a crate which had struck down a man, felt aid beside him and, turning, he saw the priest whom he had passed on the stairs. The priest was bruised and bloody; this was not his first effort to aid. Together they lifted an end of the crate; they bent—Alan stepped back, and the priest knelt alone, his lips repeating the prayer for absolution. Screams of men came from behind; and the priest rose and turned. He saw men caught between two wrecks of cars crushing together; there was no moment to reach them; he stood and raised his arms to them, his head thrown back, his voice calling to them, as they died, the words of absolution.

Three more cars at the cost of two more lives the crew cleared, while the sheathing of ice spread over the steel inboard, and dissolution of all the cargo became complete. Cut stone and motor parts, chasses and castings, furniture and beams, swept back and forth, while the cars, burst and splintered, became monstrous missiles hurtling forward, sidewise, aslant, recoiling. Yet men, though scattered singly, tried to stay them by ropes and chains while the water washed higher and higher. Dimly, far away, deafened out by the clangor, the steam whistle of Number 25 was blowing the four long blasts of distress; Alan heard the sound now and then with indifferent wonder. All destruction had come for him to be contained within this car deck; here the ship loosed on itself all elements of annihilation; who could aid it from without? Alan caught the end of a chain which Corvet flung him and, though he knew it was useless, he carried it across from one stanchion to the next. Something, sweeping across the deck, caught him and carried him with it; it brought him before the coupled line of

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The Miwaka with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the Miwaka, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the Miwaka. Spearman is angered because Constance shows so much interest in the mystery. Alan locates a car ferry pilot named Burr who he believes can solve the mystery. Alan gets a job on the car ferry.

this which had swept away the steps; he had seen it, with two others like it, upon a flat car which had been shunted upon one of the tracks on the starboard side of the ferry, one of the tracks on his left now as he faced the stern. He leaped upon and over the great casting, which turned and spun with the motion of the ship as he vaulted it. The car deck was a pitching, swaying slope; the cars nearest him were still upon their tracks, but they tilted and swayed uglily from side to side; the jacks were gone from under them; the next cars already were hurled from the rails, their wheels screaming on the steel deck, clanging and thudding together in their couplings.

Alan ran aft between them. All the crew who could be called from deck and engine room and firehold were struggling at the fantail, under the direction of the captain, to throw off the cars. The mate was working as one of the men, and with him was Benjamin Corvet. The crew already must have loosened and thrown over the stern three cars from the two tracks on the port side; for there was a space vacant; and as the train charged into that space and the men threw themselves upon it, Alan leaped with them.

The leading car—a box car, heavily laden—swayed and shrieked with the pitching of the ship. Corvet sprang between it and the car coupled behind; he drew out the pin from the coupling, and the men with pinch-bars attacked the car to isolate it and force it aft along the track. It moved slowly at first; then leaped its length; sharply with the lift of the deck, it stopped, toppled toward the men who, yelling to one another, scrambled away. The hundred-ton mass swung from side to side; the ship dropped swiftly to starboard, and the stern went down; the car charged, and its aftermost wheels left the deck; it swung about, slewed, and jammed across both port tracks. The men attacked it with dismay; Corvet's shout called them away and rallied them farther back; they ran with him

by some lashing of the beams, came with it. The car crashed into the box car, splintered it, turned it, shoved it, and thrust it over the fantail into the water; the flat car, telescoped into it, was dragged after. Alan leaped upon it and catching at Corvet, freed him and flung him down to the deck, and dropped with him. A cheer rose as the car cleared the fantail, dove, and disappeared.

Alan clambered to his feet. Corvet already was back among the cars again, shouting orders; the mate and the men who had followed him before leaped at his yells. The lurch which had cleared the two cars together had jumped others away from the rails. They hurtled from side to side, splintering against the stanchions which stayed them from crashing across the center line of the ship; rebounding, they battered against the cars on the outer tracks and crushed them against the side of the ship. The wedges, blocks, and chains which had secured them banged about on the deck, useless; the men who tried to control these cars, dodging as they charged, no longer made attempt to secure the wheels. Corvet called them to throw ropes and chains to bind the loads which were letting go; the heavier loads—steel beams, castings, machinery—snapped their lashings, tipped from their flat cars and thundered down the deck. The cars tipped farther, turned over; others balanced back; it was upon their wheels that they charged forward, half riding one another, crashing and demolishing, as the ferry pitched; it was upon their trucks that they tottered and battered from side to side as the deck swayed. Now the stern again descended; a line of cars swept for the fantail. Corvet's cry came to Alan through the screaming of steel and the clangor of destruction. Corvet's cry sent men with bars beside the cars as the fantail dipped into the water; Corvet, again leading his crew, cleared the leader of those madly charging cars and ran it over the stern.

The fore trucks fell and, before the

The Indian Drum

(Continued from Page 12)

trucks which hurtled back and forth where the rails of track three had been. He was hurled before them and rolled over; something cold and heavy pinned him down; and upon him, the car trucks came.

But, before them, something warm and living—a hand and bare arm catching him quickly and pulling at him, tugged him a little farther on. Alan, looking up, saw Corvet beside him; Corvet, unable to move him farther, was crouching down there with him. Alan yelled to him to leap, to twist aside and get out of the way; but Corvet only crouched closer and put his arms over Alan; then the wreckage came upon them, driving them apart. As the movement stopped, Alan still could see Corvet dimly by the glow of the incandescent lamps overhead; the truck separated them. It bore down upon Alan, holding him motionless and, on the other side, it crushed upon Corvet's legs.

He turned over, as far as he could, and spoke to Alan. "You have been saving me, so now I tried to save you," he said simply. "What reason did you have for doing that? Why have you been keeping by me?"

"I'm Alan Conrad of Blue Rapids, Kansas," Alan cried to him. "And you're Benjamin Corvet! You know me; you sent for me! Why did you do that?"

With the A. A. Poultry Farmer

The Mid-Year Poultry Outlook

THE number of chickens on farms on January 1, 1930, was about 6 per cent greater than on January 1, 1929, according to returns covering about 20,000 ordinary farm flocks, secured by the U. S. Department of Agriculture.

The number of layers in farm flocks on July 1 was about 1 per cent greater than on that date last year, but 4 per cent less than in 1928 or 1927, and 1 per cent less than the July 1 average for the years 1925 to 1929, according to returns from crop reporters covering ordinary farm flocks.

On July 1 chicks and young chickens of this year's hatch in ordinary farm flocks numbered about one-half of one per cent less than on July 1, 1929, or on July 1, 1927, but 8 per cent more than in 1928 when hatchings were lower. Reports suggest increased numbers of young stock, but that numbers were not heavier on July 1 in ordinary farm flocks is due to probable reduced hatchings on farms, possible heavier mortality of baby chicks this year, and the tendency of many poultrymen this year to market a larger number of pullets as broilers.

The Feed Situation

On June 15th farm prices of corn and other items making up a poultry ration were 88 per cent of the June 15th average for the years 1923 to 1927, while the farm price for chickens was 89 per cent, and of eggs 85 per cent, of the June 15th average of the same five years. On June 15, therefore, chicken prices were 1 per cent higher than feed prices while egg prices were 6 per cent lower than feed prices, compared with the average relation between the prices of these poultry products and of feed on that date in the years 1923 to 1927.

Egg Production

Egg production per hen by farm flocks this year has been the same or slightly lower than in 1929 and about 2 per cent higher than the 5-year average. Total farm production as indicated by the aggregate of reported layings per farm flock on the first day of each month from January to July, has been about 3 per cent greater than for the same months last year, when layings were about equal to the 5-year average.

Egg receipts at the four principal markets the first half of 1930 were 10,390,000 cases compared with 9,860,000 cases during the same period in 1929, an increase of over 5 per cent.

Storage holdings of case eggs on July 1, 1930, were 10,742,000 cases, an increase of 2,200,000 cases above the holdings on July 1, 1929, and 1,200,000 cases above the 5-year average for that date.

Storage holdings of frozen eggs on July 1, 1930, were 115,000,000 pounds or the equivalent of 3,200,000 cases of shell eggs. This is an increase of over 30,000,000 pounds or 35 per cent above July 1 holdings of frozen eggs in 1929 and a still larger increase above the 5-year average holdings on July 1.

Consumption Has Been Low

Based upon marketings in the four principal terminal markets, the trade output, or apparent consumption of shell eggs for the first half of 1930 was low, when considered in relation to the plentiful supplies and low prices. For the first six months the consumption of eggs in 1930 was apparently by approximately 7½ per cent less than in 1929. This low consumption continued into July, with little indication of any improvement in the immediate future.

Farm egg production during the fall and winter seems likely to be less than last year owing to the present tendency to decrease numbers of layers below numbers last year. It feed should be scarcer, production per hen may be less this fall than last. These factors may be partly offset by the fact that hatchings were earlier, tending to earlier layings from pullets, which usually constitute nearly two-thirds of the laying

flock at the beginning of winter. It seems likely that the number of hens which will be carried over into 1931 will be definitely lower than those carried over into the present season.

The number of pullets saved will also probably be smaller than last year, when price conditions and the general optimism among poultrymen led to the saving of a rather large proportion of pullets even though these birds were less desirable than usual because of lateness.

With fewer hens and less intensive feeding probable the tendency will be toward lower production per hen and lower total production than this year during the period of normal flush production next spring.

Outlook for Egg Prices

In view of the low demand and the ample prospective supply from the heavy storage stocks and from current receipts the price situation appears unfavorable for the coming fall. Peak prices are likely to be below those of last year. The probable decrease in the production of eggs during the winter and next spring should improve the relative price for eggs next spring.

Poultry producers tend to increase their production following years of high prices and to decrease production following years of low prices to an undue extent. It is desirable that a more orderly program of production be followed. Looking forward to next season, a moderate decrease in numbers of layers appears to be justified, but extreme reduction does not appear to be necessary. Prices of poultry and eggs are low, but the prices of other products are also low. It might be as great a mistake to reduce poultry numbers radically now as it was to increase them so rapidly during the past year.

Montreal—City of Contrasts

(Continued from Page 2)

rection but I did manage to negotiate a good many miles of Montreal streets without mishap. You just sound your horn, watch your chance and dodge through.

Lest some recent visitor accuse me of inaccuracy of statement, I will say that perhaps he is thinking of the city of West Mount—a separate municipality of eighteen thousand people entirely surrounded by the greater city. This burg has taken pattern after some other small towns and installed the regulation stop and go signals so that there you may spend just one-half your time waiting for the green.

Judged by our American standards, Montreal is an ancient city although not as old as Quebec. In 1535—seventy-four years before Henry Hudson ever saw the river that bears his name—the French navigator and adventurer Jacques Cartier, entered the mouth of the St. Lawrence, and sailed up it for almost a thousand miles until, he found further progress barred by the rush of the Lachine rapids. He noted Mount Royal, bestowed upon it the name it still bears, landed and took possession of all that country in the name of his Master, Louis XIII of France.

France held the valley of the lower St. Lawrence for more than two hundred years and set upon it the permanent seal of her civilization and institutions. Finally one September day in 1759 upon the bloody field of The Plains of Abraham political control passed to the hands of Britain.

Yet it was no vain or idle boast that christened the land New France. After well toward two centuries of undisputed British sway this region outside of a few large towns remains in language, in manners and in religion almost solidly French.

In the end France has conquered because while the Union Jack flies above the public buildings, yet even in the Courts—after all these years—proclamations are written and English law is still administered in the tongue of France.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

About Correspondence Courses

WE have recently received many inquiries as to the reliability of the Oxford Institute, of Chicago, Ill. The information we have states that this Institute was organized to succeed and eventually to take over the business of the Columbia Institute. The Oxford Institute sells two home study courses at \$49.00 each, one in Business Administration and the other a secretarial course. The courses are sold by agents in small towns, and appeal particularly to high school students. Frequently, we are told, agents secure the names of students and graduates from teachers. Some of our readers have claimed that the agent when approaching the pupil states that the course has been recommended by their teacher, and that inasmuch as the Oxford Institute is anxious to get a pupil in every locality, the course will be given to him at the cost of printing only.

We have no information as to the value of the course, but we do know that less than 10 per cent of all students who ever enroll in correspondence courses of any kind, ever complete the course. In view of these facts, we feel that it is particularly desirable that anyone who is approached by an agent of any correspondence course, consider the matter very carefully before they sign a contract. After a contract is once signed, the student is legally liable for the full cost of the course, whether it is completed or not.

Some correspondence schools guarantee money back if the pupil is not fully satisfied, but naturally they expect the

course to be completed before the student can well say whether or not the course has been satisfactory.

Fraud Order on South American Service Bureau

SEVERAL times in the past we have mentioned various South American Service Bureau schemes whereby someone advertised to give positions in South America. Recently the Post Office Department issued a fraud order against W. B. Gregory, operator of the South American Service Bureau, Detroit, Michigan. Postal inspectors found that Gregory gave the impression that he could secure positions in South America, and that he was taking in about \$6,000 a day from persons who wished to work there. They were unable to find that Gregory had ever secured a single position for any of his applicants. Apparently Gregory was so successful that others have followed in his footsteps. We understand that the same information sent out by these South American bureaus can be secured from the U. S. Department of Commerce at Washington, D. C.

Asthma Sufferers Beware Patent Medicines

What information can you give me about the Fugate Company of Indianapolis, Indiana, who advertise a remedy for asthma?

WE referred this question to the American Medical Association who report to us that because asthma and

hay fever do not immediately threaten life many sufferers get the idea that it is not necessary to go to a physician. As a result, these diseases are particularly suited for manufacturers of patent medicines and quack remedies. They tell us that an analysis has shown that about nine out of every ten patent medicines sold to cure asthma or hay fever contain either potassium iodide, a mixture of arsenic or both. We, therefore, advise that any subscriber suffering from either of these diseases consult a reliable physician rather than to depend upon patent medicines of any sort.

State Troopers Give Fine Service

I gave Mr. _____, of Shiloh, N. J. \$100 for advertising my house for sale. This was to come out of his commission of 5% if he succeeded in selling the place. No advertisement appeared in the paper and the date of the auction sale was postponed. So far as I can learn he has made no effort to sell our place and does not answer our letters. Is there anything you can do to help us get this money back or to secure the sale of this property. His contract with us called for a sign to be placed on the house, an advertisement to be inserted in the paper and the holding of an auction.

WE reported this case to the Department of State Police of the State of New Jersey of which H. Norman Schwarzhopf is Colonel and Superintendent, and received from him a letter assuring us that some of his troopers would investigate the case. In a few days we received a very complete report from H. F. Cox, commanding the Sub-station at Hammondtown, N. J., reporting that the real estate dealer had been interviewed, that he expressed a desire to carry out the contract and stated that if this was not satisfactory to our subscriber he would return the money he received. Needless to say both American Agriculturist and our subscriber greatly appreciate this prompt and courteous service.

"I wish to thank you for your prompt help and success in collecting my claim against..... They sent the order yesterday."

Kalamazoo Stoves
and Ranges approved
by Good Housekeep-
ing Institute

SAVE 1/3 to 1/2 at Factory Prices

New, Free, fresh from the press . . . Kalamazoo's 30th Anniversary Sale Book. Full of surprises—sparkling with color—alive with NEW features! 200 styles and sizes of Quality Stoves, Ranges, and Furnaces—bigger values than ever—Factory Sale Prices that save you 1/3 to 1/2. And a brand NEW Credit Policy—NOW ONLY \$5 DOWN on any Stove or Furnace regardless of price or size. Write for this wonderful NEW FREE Book Now!

New Cabinet Heaters

A wide variety of Cabinet Heaters—the NEWEST styles, in Black and in rich, Walnut Porcelain Enamel finishes. Bargains that will open your eyes. Quality unbeatable. Don't order a Cabinet Heater until you receive this NEW Book and compare Kalamazoo Quality, Terms and Prices with others. Look through the Furnace Section, too. NEW improvements—easiest terms.

Beautiful Colored Ranges

Modern Coal and Wood Ranges, and Combination Coal and Gas Ranges, in glistening, colorful, Porcelain Enamel. (Your choice of 5 beautiful colors—Pearl Gray, Delft Blue, Ivory Tan, Nile Green, Ebony Black). NEW gas stoves, NEW gas ranges, and NEW oil ranges—all in fascinating colors. Also Washing Machines, Refrigerators, Kitchen Cabinets, Vacuum Cleaners and other Household Goods—all at big savings. You simply can't afford to be without this Book—it's the best friend your pocketbook ever had.

750,000 Satisfied Customers

Mail coupon TODAY! This sensational NEW FREE Anniversary Book has more bargains than 20 big stores—a thrill on every page for thrifty families. 750,000 satisfied customers have saved 1/3 to 1/2 by buying direct from the factory. Factory prices are always lowest. There's nothing between you and Kalamazoo but the railroad tracks. Kalamazoo Terms are NOW easier than ever before—some as low as \$3 down, \$3 monthly—and a YEAR TO PAY. No stove or furnace over \$5 down. Kalamazoo gives you 30 days FREE TRIAL in your home, 360 days' Approval Test, a 5-Year Guarantee on materials and workmanship, a \$100,000 Bank Bond Guarantee of satisfaction.

24 Hour Shipments

Kalamazoo is close to you—all stoves and ranges shipped within

24 hours from Kalamazoo, Michigan or factory branch in Utica, New York. Furnaces in 48 hours. No delay. Safe delivery guaranteed.

Modernize Your Home

Where's your pencil? Sign the coupon NOW, and mail today. Modernize your kitchen with a colorful Kalamazoo Range—as easy to clean as a china dish. Brighten your home—lighten your work. All Kalamazoo Ranges are approved by Good Housekeeping Institute.

\$38.25 up. And just think, you can order NOW for only \$5 down.

Free Furnace Plans—Free Service

Send us a rough sketch of the floor plan of your home. We'll furnish you FREE plans—no obligation at all. We'll show you how easy it is to install your own furnace—t h o u s a n d s have. You can save \$40 to \$60 on a Kalamazoo furnace. Exclusive Kalamazoo furnace features are Hot-Blast Firepot, new ring type Radiator, easy shaking Grates, upright Shaker. You can order on the easiest of terms—this NEW Book gives you full information.

30 Years of Quality

You have heard of Kalamazoo Quality for 30 years. Kalamazoo stoves and ranges are built in our big 13 acre factory. Kalamazoo has tremendous buying power—that means purchasing the best raw materials at lowest prices. Big scale production enables us to manufacture efficiently at extremely low cost. By selling direct from factory to you, eliminating entirely all "in-between" profits, you get absolutely rock-bottom factory prices. Understand you buy from a factory—not from a mail order house, a wholesale house or a retail house. You get lowest Factory Prices. Mail coupon TODAY for NEW FREE Book.

Annie Laurie

THIS song was written in 1700 by William Douglas for his sweetheart, Annie Laurie, but was not published till 1832, when it was revised by Lady John Scott. Above is Maxwellton House; center, an early portrait of Annie Laurie; corner, Lady John Scott. See page 19.

Songs that Mother Used to Sing

Make Your 1931 Lime Plans Now

For Application This Summer or Fall On Sod, Stubble or Plowed Ground

THE subject of soil liming has probably had as much discussion as any single farm practice. Every farmer who reads the AMERICAN AGRICULTURIST realizes fully the importance of soil liming in crop production. He knows that:

1. Lime neutralizes the soil acids.
2. Lime makes manures and vegetable matter decay more quickly.
3. Lime (especially the burnt and hydrated forms) makes heavy clay and silt soils looser and more granular, with the result that plowing and tilling are made easier.
4. Lime makes possible the growing of alfalfa and clovers and permits the nitrogen-forming bacteria (in the root nodules) to perform efficiently.
5. Fertilizers and manure produce best results when applied to limed soils.

All of these are strong arguments for liming, but in the final analysis there is only one justifiable reason for using this material,—it pays.

In order to determine what return a farmer may reasonably expect from his dollar invested in lime, the National Lime Association has studied a number of experiments conducted by eleven State Experiment Stations and from these has drawn averages which present a clear picture

TABLE A. Summary of Liming Experiments
Per Acre Basis

Initial Cost of Liming	\$13.61
*Average Cost of Liming per year	3.40
Gain in Crop Value per year	10.26
Gain in Crop Value less liming cost	6.86
Net return from each \$1.00 invested in lime	2.02

*On the basis of one lime application for each four-year rotation.

By H. A. HUSCHKE

of results. The summary (Table A) represents sixty tests on a variety of field crops.

Each dollar invested in soil liming returned 202% on the original investment over a four-year period. This does not take into consideration

TABLE B. Returns from Lime

\$1.00 invested in lime returned a net profit as follows:

Alfalfa	\$3.54	Barley	\$2.31
Clover	3.28	Corn	2.06
Soybean	2.33	Wheat	1.12
Clover & Timothy	2.20	Rye63
Oat & Pea80	Oats82
Oat50	Mangels	8.57

the increased yield from crops raised in the future as a result of an improved soil condition.

Crops vary in their response to lime. Some are extremely critical to acidity, others grow quite well on moderately acid soils. Very few fail to respond enough to pay their share of the lime bill. Table B is taken from the same study summarized above.

The legumes, alfalfa, clover and soybeans run true to form in that they return the biggest liming dividend of any of the hays. Barley, corn, wheat and rye responded very well. Oats, harvested either as hay or grain, showed an increase, but due to its low per unit value, the additional yield was not enough to pay the pro rated share of the liming cost. Mangel Beets like other root crops paid a very substantial return on the investment. It is no longer a question of "Can I afford to lime?", but rather "Can I afford not to lime?"

No matter what branch of agriculture a farmer may be engaged in, his labor income is dependent

to a large degree on the earning power of his soil. For it is the soil that supports his animals or produces the crop which may be sold for cash. Where then can a more intelligent investment be made than in soil improvement? Lime, fertilizers, manure and cover crops have long been an indispensable part of the program of successful, money-making farmers. It will continue to be so, because their use is the basis on which soil fertility can be economically maintained.

However, liming and fertilizing entails extra work which far too often comes during the busy spring planting season. Ordering is put off until the last minute, resulting in late delivery and delayed planting, or the operation may be neglected entirely.

In case of liming there need be no delay. Lime may well be applied in the fall on plowed ground or on sod and stubble before plowing. For best results on the next ensuing crop the former method is preferable. But in the long run the second method is equally effective. This is illustrated by an experiment now running at the Ohio Experiment Station. This test, which is now in its sixteenth year, has produced results as follows on a four-year corn, oats, wheat and clover rotation:

If the lime is plowed under it is best to plow the same depth for several years so that the lime
(Continued on Page 7)

TABLE C. Value of Crop Increases

Time of lime application	Value of increased production (Av. per rotation)
(1) On land plowed for corn	\$22.78
(2) On land plowed for wheat	22.80
(3) On new seeding after wheat harvest ..	21.43
(4) In fall, on sod to be plowed for corn ..	24.45
(5) One fourth the total application on each crop	21.36

Progress of a Great Battle

Letters From Many States Show Big Gains Against TB

A SHORT time ago Henry Morgenthau, Jr., publisher of American Agriculturist, wrote the agricultural departments of several of the eastern states and asked them for brief letters giving their opinion as to the reliability of the tuberculin test for the eradication of TB, and also what progress their states had made in cleaning up this cattle disease.

Every dairyman, whether he has tested or not, will be interested in the following letters which were received in reply.

MAINE

H. M. TUCKER

Chief, Division of Animal Industry

EVERY county in this state is now a modified accredited area. This signifies that by means of the tuberculin test tuberculosis has been reduced to one-half of one per cent. Of course, we have not found this test 100 per cent perfect; no test is. Occasionally, it leaves a badly diseased animal that continues to spread infection, but as we always go back and retest infected herds, that animal is soon detected; and if it does not react it will usually be one that can be singled out by a careful physical examination, and our veterinarians are instructed to condemn on physical examination if they feel it advisable. We also, of course, get a small percentage of cases where no lesions are found on post mortem, but I believe practically all of these are cases in which infection is there but has not become localized sufficiently to be found with the somewhat hurried examination made by the Federal meat inspector.

All of the reactors that are condemned in the state are sent to abattoirs where a Federal meat inspector is in charge and we get a report on his findings. We did, until the state was completely covered, carry on a very intensive and active campaign of test work and the cost, of course, was comparatively heavy, although not nearly as much as in other states where infection was greater. Since the state has become a modified accredited area the ex-

pense of the work has been reduced more than 50 per cent so it has been a financial saving to the state to have this work completed.

In our intensive campaign we encountered very little serious objection. To be explicit, I did not have to summon but two persons into court and these cases were adjusted satisfactorily without any serious trouble. Practically everyone, both cattle owners and the public in general, is very much pleased now that the work has been completed.

NEW HAMPSHIRE

R. W. SMITH

State Veterinarian

I WISH to state that we find the tuberculin test very accurate indeed. There is no test applied by human beings that is infallible. However, we have been told by the best authorities in the land that the tuberculin test is one of the most accurate tests known to science. There is one thing certain—it is the very best that we have and we are eradicating bovine tuberculosis from our livestock by its use.

VERMONT

E. H. JONES

Commissioner of Agriculture

BOVINE tuberculosis eradication has been in progress in Vermont under the accredited herd plan for approximately twelve years and under the area plan for five years. The towns and counties which were the first to secure the testing of a large percentage of their herds under the accredited herd plan were the first ones to embrace the opportunity for complete eradication under the area plan. Compared with the wealthier states, our appropriation has been infinitesimal, but nevertheless since 1925 we have cleaned up fifty townships and have a waiting list of twenty more. The demand for the work has been constantly more than we could supply and the number of towns on the waiting list would be much larger if funds with which to do the work were forthcoming.

While we do not claim that the test is quite 100 per cent reliable, it has been proven beyond ques-

tion that its value in detecting disease is fully equal to that of any other diagnostic agent. Sixty per cent of the cattle in Vermont are now under state and federal supervision and a system like this which has already been adopted by more than half of the dairymen in a conservative state like Vermont may be regarded as absolutely sane, safe and reliable.

MASSACHUSETTS

E. F. RICHARDSON

Director, Division of Animal Industry

I BELIEVE the use of tuberculin for the purpose of detecting the existence of tuberculosis in cattle to be as accurate if not more so than is any test used for the detection of disease.

If the test is properly applied and the results properly interpreted, the result is 94 per cent to 96 per cent correct—post mortem examination of reacting cattle in this State indicating 4 per cent or less of no lesion cases. Of course, the percentage of animals actually affected with tuberculosis which fail to react would be difficult to determine, but from observation I am convinced that the percentage is very small.

Massachusetts has made a wonderful advance in cleaning up the State of tuberculosis during the last year and a half. Over 9,000 reactors were condemned and killed in 1929, thus far over 6,000 in 1930.

Many of the town and city Boards of Health are putting on regulations demanding that milk be from tuberculin tested cows or pasteurized. Milk contractors are requiring milk from tuberculin tested cows for Grade A milk.

NEW YORK

H. B. LEONARD

Inspector in Charge of Tuberculosis Eradication

A REVIEW of the activities of tuberculosis work in New York State for the calendar years 1927, 1928 and 1929 showed that 151,154 reactors were slaughtered from thousands of herds of cattle comprising 2,608,085 head. The efficiency of tuberculin was maintained, in that a percentage of 3.7 of the

What Can Farmers Do with Trespassers?

A Personal Experience and a Suggested Remedy

By E. R. EASTMAN
Editor, American Agriculturist

FOR years American Agriculturist has called attention to one of the most annoying, disagreeable and hard-to-solve problems of country life, that is, trespassing on farm property. We have tried to see both sides of the question, and have pointed out time and again

E. R. Eastman

to our readers the need, from a health and recreation standpoint, of city folks getting out of the city and enjoying the country. We have also stated many times that much of the trouble is due to a small minority of careless or criminally inclined persons who have no respect for property or privileges.

This summer I have had some personal experiences that have brought home harder than ever just what farmers are up against over this trespass situation.

Last year, Mrs. Eastman and I bought a little place of thirty acres near Dryden, New York, not far from Ithaca. The place was formerly a beautiful spot but in recent years has run down. There are several mineral springs, and a creek with wooded banks winding its way down through the property. We expect to restore some of the natural beauty of the place, live there summers, and possibly sometime make it a permanent home.

This little farm has only one drawback. It is over-run with trespassers. People by the carloads come to drink the mineral water, to fish, and particularly to swim. We have no objection to the people obtaining the sulphur and mineral waters, and are glad to have them get it, neither would we object to local farm boys taking an occasional swim—if that were all there was to it.

But every Sunday people have not hesitated to drive their automobiles across the good creek meadow, through the standing hay, until a hard road was formed, nearly ruining the meadow. Using the swimming hole ourselves was entirely out of the question because it was always full of strangers who, with their yelling and honking of automobile horns, removed the one qualifica-

Will he heed the sign? A hunting license does not give the RIGHT to hunt on private property even though it is not posted! If troubled with trespassers read Mr. Eastman's article.

tion which made the place desirable to us, that is, freedom from the noises and rowdies of city life.

Not wishing to shut local rural people out from the use of the creek as a swimming hole, but desiring to stop the automobiles from going into the property, we put a wire fence across the entrance, but were unable to keep it there because every time we put it up it was cut with wire clippers and the cars went in just the same.

Do you blame us for posting the property? Local people are still welcome to the mineral waters but the privileges of the creek are shut off. Here again is a case where, in order to protect ourselves against the disagreeable minority, we were obliged to shut out friends and neighbors except by permission whom we would otherwise be glad to give the privilege of swimming or fishing. The unfortunate part of it is, however, that if the privileges are granted to a few, the undesirables take advantage.

The first week after the property was posted, a young rowdy walked right by me where I was working and passed the no trespass sign, and started for the swimming hole. When I told him the property was posted, he was impudent, and it was not until after I had threatened him with arrest that I was able to get rid of him. I then resolved that the next such person will take a visit to court.

I cite these experiences to show how little regard the general public has for private property in the country. They are typical.

Henry Morgenthau, Jr., publisher of this paper, was just telling me of an experience he had with a trespasser on his farm at Fishkill who pulled a gun on him when Mr. Morgenthau requested him to stop hunting on his property!

(Continued on Page 18)

Some Questions About Paint and Painting

Protect the Surface and Defeat Rot and Rust

"When buying paint for a house how large an area should we figure will be covered by a gallon of paint?"

THE amount of paint you should buy will depend on whether the building is new or old. One authority says that when painting new wood the priming coat will take about one gallon for each 420 square feet, the second coat taking a gallon for each 500 square feet, and if a third coat is added it will require about a gallon for each 720 square feet.

For inside work it is figured that a gallon of varnish will cover 540 square feet and that a gallon of shellac will cover 720 square feet.

* * *

Shellac For Knots

"What can be used on knots so that the paint will not peel off them?"

KNOTS which contain so much resin that the paint will not stick can first be painted with shellac and the first coat of paint can be thinned with turpentine.

* * *

For Concrete

"Is it possible to paint over a new concrete surface without trouble?"

Before painting concrete brush it over with a solution of 4 lbs. of zinc sulphate to a gallon of water.

* * *

For Galvanized Roofing

"How should new galvanized iron roofing be treated before painting?"

FIRST, paint will not stick to new galvanized surfaces. If you wish to paint immediately, dissolve 4 ounces of copper sulphate (blue vitriol) in a gallon of water, apply this solution

with a large brush and allow it to dry thoroughly before painting.

Another method is to wash the galvanized portion with gasoline. This treatment, of course, will not be necessary after the surface has been exposed to the weather for some time.

* * *

Wood Fillers

"Is it practicable to mix your own wood filler?"

WOOD filler can be made by mixing 12 parts of pure boiled linseed oil, six parts of Japan dryer and one part of pure turpentine. Work into the mixture enough silex to make a stiff dough-like mass. This can be thinned with benzine or gasoline to a creamy consistency before it is applied. After it is applied the surface film will have to be removed before varnishing.

* * *

Floor Paint

"We have a quantity of ordinary paint on hand. Will this be satisfactory for use on floors?"

OF course most floors have hard useage but we believe that you will get good results by adding a quart of floor varnish to each gallon of paint. Allow each coat to dry thoroughly before applying the next coat. Forty-eight hours are none too many and seventy-two hours are better. If you are adding more than one coat, the varnish need not be applied except on the final coat.

* * *

Mixing Paint

"What is the best way of mixing paint?"

FIRST, secure a can a little larger than the one containing the paint. Pour into this can all the oil from the top of the paint and then stir what is left with a smooth paddle until it

is of even consistency. Then add about a quart of the oil you have poured off and repeat, pouring the paint back and forth from one can to the other several times.

This ready mixed paint will need to be thinned for a priming coat. One authority suggests adding $\frac{2}{3}$ of a cup of turpentine and $2\frac{2}{3}$ cups of linseed oil to each quart of mixed paint.

* * *

Sticky Varnish

"Why is it that varnish sometimes fails to dry on a hard surface but remains sticky?"

PAINT and varnish are entirely different in their actions. For the best results with varnish the temperature should be around 70 degrees F. and the room should not be too damp. If these conditions exist and the first coat is allowed to stand a week before the second coat is applied you should have no trouble with failure to harden properly.

* * *

Paint Becomes Yellow

"What causes white paint used indoors to become yellow?"

LINSEED oil, of course, is yellow in color but it bleaches out if exposed to the sunlight. When painting inside a minimum amount of linseed oil is generally used. If you want a pure white color it may be advisable to use white enamel.

* * *

Chalky Paint

"What causes paint to become chalky and rub off?"

THE principal cause is the use of too little oil, particularly, on new wood. Linseed oil absorbs oxygen from the air to form a hard film

Vol. 126 August 23, 1930 No. 8

The Drought and Higher Prices

MANY retail dealers in the large cities are using the drought as an excuse materially to advance the prices of most food products. With many fruits and vegetables, the prices have already gone up from twenty-five to thirty-five per cent. With some commodities, these increased prices are justified. Milk, for instance, has been advanced one cent a quart and conditions of American pastures and other cattle feeds more than justify this price advance, the most of which goes directly to the dairyman. Milk will probably have to go even higher before the winter is over.

But in many cases, the quick rise in price of food products is just plain profiteering on the part of the retailer. Farmers have received exceedingly low prices for their fruit and vegetables all the season, but this has made little difference in lower prices to the ultimate consumer. The retailer absorbed all of the profit. Now, the retailer has put the prices still higher, using the drought as an excuse, and before the farmer has realized a cent more from the raise.

One investigator found that the wholesalers and commission men were still selling many products, particularly fruit, like oranges, melons, honeydews, etc., without any recent advance on previous prices. Many of these fruits were coming from outside the drought areas and the supply was not affected. Yet the retailers have advanced the prices materially on these fruits as well as on other products. A Fair Price Committee has been formed by the authorities in New York City to investigate unjust raises.

However, consumers have got to realize that prices of nearly everything that the farmer raises eventually must be advanced materially because of the drought. Livestock products have been hit the worst. Most American pastures are practically gone for the season. Corn is going up by leaps and bounds and is carrying other feed products with it. Prices of all dairy products and of all meats eventually will have to advance because of the shortage. The same is true to a lesser extent for most fruits and vegetables.

Any consumers' Fair Price Committee must bear in mind that the proposition is two-sided, and be fair to the producer as well as the consumer.

Summing this up, we are in full harmony with all efforts to prevent profiteering, using the drought as an excuse, on the part of dealers or retailers, but we are also just as emphatic that

farmers themselves must have prices this fall for their produce that are in line with the losses caused by the drought.

"The Drought May Be a Blessing in Disguise"

THE worst drought in the history of American agriculture is still on at this writing, nearing the middle of August. There have been light local showers in different sections of the East that have freshened up vegetation a bit, but not enough to do any lasting good.

There is still a good chance for most New York State crops, provided we get rain soon. In fact, as we stated last week, the national drought is in some ways a blessing, not of course to many individuals who have been nearly ruined, but to agriculture as a whole because it has taken care of surpluses. Of course, our New York State farmers do not want to profit at the expense of other farmers, but if rain comes before long, New York farmers will be ahead financially because of the drought.

We, in most sections of the East, cannot realize what a calamity this terrible dry spell has been in certain sections. For instance, read the following report of a government investigator:

In fifteen counties in southeastern Kentucky, 50 per cent of the early potato crop is lost, the late potato crop is a total loss, the hay crop is a total loss, 75 per cent of the corn crop is lost, there is no stock feed, pastures are a total loss, there will be no fruit or truck garden produce. Added to these difficulties, is a great water shortage for both men and beasts, with danger of typhoid and other diseases. Unemployment is acute, with practically no work in prospect for the farmer.

The sympathy of farmers everywhere goes out to these stricken folk.

A Good Time to Keep Still

THE man or woman who discourages a young person from seeking more education assumes a responsibility for which he or she should be made to answer sometime.

We have a young friend just graduated from high school who had his plans all made to enter the College of Agriculture this fall. This summer he has been working on farms and one of his employers, finding out that the boy planned to go to college, began "kidding" him and making fun of all education in general and of college education in particular. The result is that the boy has lost his enthusiasm for college and is now undecided as to what he will do.

To be sure, there are some boys or girls for whom a college education would do no good, but who is to judge? Anyway there is no question about this boy. He was a good high school student, comes from a fine family, and his parents have encouraged him to get as much education as he possibly can. Moreover, he is of the silent, retiring type who needs to make the friends and the contacts which are a part of college life.

Young men and women are very impressionable. Their ideals are easily upset, and if we older people cannot say anything to encourage our young friends toward greater achievement, then let us at least keep our mouths shut and say nothing at all.

"Man Proposes, God Disposes"

"In regard to restriction of crop area, we have a practical demonstration, given us by Nature, or Nature's God, of the utter folly of the attempt to regulate the price of farm products. On account of the present drought many farmers in the West are feeding their wheat to their stock unthreshed, thereby possibly solving the surplus wheat problem, for this year.

"Had the recommendation of the Farm Board been followed, and a drastic reduction in the acreage been made, and the present drought materialized, there might have developed a national, if not a world-wide, catastrophe.

"The uncertainty of weather conditions being favorable to the production of crops, renders it necessary to devise some system of pooling, and

storing them, releasing only enough to the trade to stabilize the price, so that the farmer will receive an equitable price for his products.

"Some may object to this scheme as being socialistic; well, socialistic or not, to my mind it is the best in sight."—A Subscriber.

THIS letter states fundamental facts. Experts who study the effect of the weather on crops know that a little more or less than normal rainfall means greater difference in total yields than all of the results that come from cultivation or good care of crops. Our friend ignores two facts, however, the first of which is that this is the worst drought in the memory of man and is not likely to occur again, and second that there is an over-production in ordinary years of most farm products, which results in low prices to farmers.

We cannot count on a drought coming along and cutting down the surplus. Some other way must be found to control it. Possibly our friend's suggestion of some kind of pooling scheme may be the answer, but even then if there is more wheat produced than the people of the world can eat, the only answer is to grow less wheat.

This Community Went on a Cash Basis

THREE crop failures in four years forced the business and professional men of Bloomfield, a community of about 1500 inhabitants in Nebraska, to go on a strict cash basis for all business. Sales were slow at first. Many old customers felt that their pride had been injured. Some went out of the town to trade. But by the third month under the "no credit" plan, most of the people were again trading with the home merchants, with the result that these merchants were able to reduce their prices from ten to fifteen per cent. No one, neither merchant nor consumer, has any desire to return to the old system again.

The credit system for small sales is one of the most unfair schemes of modern business, for the man who pays cash not only pays for his own goods but he pays for the credit to the fellow who does not pay cash. The place to borrow money is at the bank.

Are You Going to the Big Fair?

NO effort is being spared by the New York State Fair authorities to make the exhibition this year the best ever. In going over the announcement and in talking with those who have the plans in hand, we have been especially impressed with the planning and work that are going into the job of making your visit to the State Fair this year both pleasant and profitable.

Have you marked the dates on your calendar? They are September 1 to 6.

Eastman's Chestnut

SOME time ago we had a young lawyer attached to our Service Bureau staff, who had a real sense of humor, and he used to get some fun out of the letters that came in. I remember one that amused him very much.

It seemed that a farmer's cow got loose in the road in the night and an automobile driven by a city man came down the road and hit the cow. The owner of the car refused to settle, and the farmer wrote to our Service Bureau for advice. He said the car owner claimed he was not liable because the cow had no lights on her.

Our young lawyer gave him the advice he wanted, and then concluded his letter as follows:

"I certainly think we should recommend to the Governor and the Legislature that all cows traveling on the highways at night should be properly wired for lighting. Such lights should include a little red one swinging on her tail, and two other lights on her horns. And I'll guarantee if the job were done correctly, the tables would be turned, and it would be the automobilist who would run when he saw the cow coming up the road in the dark, and not the cow!"

How Farmers Get Hurt and Killed

This Piece and the Pictures May Save Your Life

MORE than 90,000 people are killed annually by accident and over 12,000,000 injured. If America were at war and the total number of casualties for any year equalled those that were killed or hurt in accidents in these so-called peaceful times, the newspapers would carry sensational headlines in every issue. Read the reports of accidents following any week end and they sound like the casualty reports of a great battle. Yet we have grown so used to large numbers of people being killed and wounded accidentally that we pay little attention and are indifferent, except when the

accident comes home to ourselves or to someone we love.

Unfortunately, from the farmer's standpoint, farming itself is one of the most dangerous occupations. The dangers from machinery are far worse on the farm than in the city factories, and when the city man is injured he receives free medical attention and compensation while he is laid up. There are few safety devices for the farmer and generally no help for him when he is hurt, unless through his own foresight he has insured himself.

We are indebted to the International Harvester Company for bringing attention to this important subject of dangerous accidents on the farms in a little bulletin called "Farm Hazards", and because of the vital significance of this subject to farmers, we are pointing out through pictures on this page and in this brief discussion some of the more common ways by which farm people are accidentally hurt and killed.

We hope that you will not only glance at these pictures and read this friendly warning, but that also it will be impressed on your mind to the end that you will correct some of the dangers that lurk about your home and buildings, and that you save yourself infinite pain and heartache by "watching your step".

There follow some of the common farm dangers, and as we name them, other causes of accidents will occur to you.

How Many of these Situations Are on Your Place?

Hammer, tools and nails laid on stairs.

No rails to prevent walking into the hole where the steps come up into the loft. (The writer will never forget the experience of falling through one of these holes into the horse stable below).

Stairs with short turns and steps running off to a point.

Small mats or rugs on smooth floors at the head or foot of stairways.

Stairways without railings.

Leaky eave troughs and water spouts that pile ice around doors and steps.

Step ladder on a sidling place with a woman reaching too far.

Standing on the shelf of a step ladder.

Standing on a wobbly box on a chair.

Leaving ladders standing against buildings. Children climb them to play and are injured.

Cleats nailed tightly against the wall for a ladder.

Loose bricks in a chimney.

Dead limbs in the trees in the yard.

Flower pots or other articles left in upstairs windows.

Wedging silo doors crosswise up in the chute to hold them.

Pulleys, hammers, sledges, or any tools left up on timbers where they will fall.

Sledges, hammers or axes not securely wedged to the handles. Thousands have been hurt this way.

A barn bridge with no side railings.

Old, tottery barn buildings or sheds that may come down in a wind. Suppose your child were in it.

Doors that flop in the wind.

Holes in the floor of buildings or bridges, or in the roads in which man or horse may step and break a leg.

The cutter bar of harvester or mower down in the grass.

Nails or spikes sticking up from boards. Who can say how many thousands have been hurt this way?

Rakes hoes or other tools standing so that they may be stepped on, resulting in the handle striking the face or the eye.

Throwing a pitchfork from the mow and then climbing or jumping carelessly down on it.

Walking or working with a sharp instrument in the mouth.

(Women folk take notice) Working with pins or needles in the mouth.

(Again for the ladies) Placing a sharp butcher knife in a drawer with other knives and forks.

Barbed wire left carelessly on the ground.

Chopping where the axe may catch in a clothesline or limb.

Using a wired broken ax helve.

"I Didn't Know It Was Loaded"

And then there is the long list of gun accidents, with that heartbreaking, remorseful cry, "I didn't know it was loaded!" Need we list the fool accidents that happen with guns such as:

Pulling a gun carelessly out of an automobile, muzzle first.

Dragging a gun through a fence.

Leaving guns or revolvers where children can get them.

Allowing children to play with dangerous fireworks.

Careless use of blasting material. You know what often happens when you go back to see why the blast did not go off.

An Auto Is An Old Man With the Scythe

A whole book could be written on the ways people get hurt with automobiles. If we only could remember that a car, weighing from one to several tons traveling from 25 miles up, carries a death dealing momentum, we would treat it with more respect. A fast running automobile is as dangerous as a locomotive. It is killing and injuring thousands every month, and your turn may be next.

The chief cause of car accidents is failure to obey the common rules of the road, which should not be necessary to enumerate.

How Children Get Killed or Hurt

A wagon box seat on a wobbly support.

Baled hay or straw carelessly piled so that it might come down and kill a child playing on it.

Locking children alone in the house. Suppose there was a fire.

An uncovered well or cistern.

(Continued on Page 18)

Flirting with Death—in a closed garage with a running gasoline engine.

Can you imagine anything more fool-hardy than this? Gasoline is in the barrels. He insists on smoking here, so there's grave danger that he will smoke hereafter! Just one spark would blow him to Kingdom Come.

How would you like to run into this in the night, or when you were not looking? Many are hurt every year in just this way.

Ladders like this have caused many an accident. Cheap ladders often come very dear in human limb and life.

Many injuries result annually from carelessness with pitchforks on the farms. One of these forks is in against the mow, tines upward. Suppose someone should slide down the mow on to this fork.

Lanterns in positions like this have burned more farm buildings than lighting.

The American Agriculturist accident insurance policy helped this family, but he disputed the right of way with a train, so there was no help for him.

The proper way to handle a bull. It is probably true that bulls have killed more men than lions have. He may be "gentle as a kitten", but he will bear watching.

Breeding by the Millions » Hatched in Filth
Drenched with Dreadful, Sickening Bacteria

THE FEARFUL

Beware the mosquito's deadly dagger. Penetrates the skin. Inflammation and infection quickly follow. Kill the dreaded mosquito with FLY-TOX. Safe and sure. Stainless. Has pleasant fragrance. Developed at Mellon Institute of Industrial Research by Rex Research Fellowship.

FLY-TOX KILLS THEM ALL

Relief for Animals, too . . .

Spray STOCKAID high in barns and over livestock. Clears the air of flies, mosquitos, spiders and other insects. Mist settles down on backs of livestock and kills biting, sucking, stinging pests. Keeps insects away for hours. STOCKAID is stainless. Will not blister or irritate the skin. Keeps hair nice and glossy. Harmless to people and animals, but fatal to Flies, Mosquitoes, Fleas and Lice.

A.A.'s Western New York Farm and Home Talk

Drought Affects Cities, Too

BY M. C. BURRITT

THE drought is, of course, the outstanding topic of conversation among farmers just now. Not only is it conversation among farmers, but among city folk as well and the newspapers carry almost daily first page

M. C. Burritt

column discussions of the weather and its effects. And properly so for the drought is touching the lives and pocketbooks of all of us. Already the consumer is paying more for his milk as a result of pasture shortage. Millions of dollars have been added to the cost of his bread in the increased price of wheat. The cabbage, vegetables and even the apples he eats will be increased in unit price as a result of insufficient rainfall. It is only in such times of crisis that the average man gets a true conception of the importance of agriculture and of his own dependence on its prosperity or lack of it.

New York State has really been very fortunate in comparison with many other great agricultural states, at least so far. While New York's farm production has been reduced by the drought, the effect is not yet critically serious. We are really near the peak of the crisis right now. What happens in the next week or ten days will really tell the story with most crops. It is very dry. All crops need rain. If they get it in sufficient amount in the next few days the drought loss in western New York will not be serious. If adequate rain does not fall before August 20, and it continues hot the losses will be very heavy. The nearer the crop is to maturity the heavier will be the loss.

Early Crops Escape Damage

Wheat, spring grain, the first cutting of alfalfa and much of the hay crop has been harvested without much, if any, drought loss. The spring grain crop is, in fact, excellent and oat yields especially where the first cutting was made late, and new seedings made this spring have suffered and are still suffering severely. Pastures are dried up and almost useless, and stockmen are already drawing heavily on the winter's feed supply.

As already reported in these columns, the growth of most cultivated crops was unusually satisfactory up to about the middle to latter part of July. There has been practically no rainfall for nearly a month now in a critical period of growth—the making and setting of the fruit or seed, the real crop. The pea crop was made and harvested before this time and was better than in many years. Early planted tomatoes and cabbage almost got by, but dry weather is reducing the size and set. Cabbage has practically stopped growing and heads will be small and tonnage low on the early crop unless rain comes at once. This fact is reflected in a price rise from \$15. to \$25. per ton in the last ten days. The vine growth of tomatoes is excellent but the set and size of fruits is much reduced. And a dry rot which blisters the under side of the small tomatoes particularly on the tops of the vines, apparently caused by the continuous intense heat, has taken a toll which may be as big as 25 per cent. Beans too have reached the critical stage of blossom and set with excellent vine growth, but heat and lack of moisture are causing many brown and falling leaves with an almost certain result of greatly reduced yield, which even immediate rain can only modify rather than entirely prevent.

It is a season in which good cultur-

al practice counts heavily. There are marked differences in the condition of fields. The effects of soil condition, plenty of humus from manure or plant growth turned under, fall or early plowing and frequent early cultivation are seen. Especially is poor soil condition and late plowing apparent.

The fruit crop is in good condition and as yet practically uninjured by the drought. Size of fruit will undoubtedly be somewhat affected. Foliage is luxuriant and deep green in reasonably well cared for orchards presages a better crop next year as well as assuring maturity this year.

May Be Blessing in Disguise

A friend has suggested that this drought may be a blessing in disguise by sharply reducing in spectacular fashion the surpluses which have been holding prices down to such unsatisfactory bases. He points out that it has already removed the milk surplus and that it seems likely to remove the butter surplus. Also that the corn shortage seems likely to create a market for the surplus wheat that has ruined the wheat price. For western New Yorkers it may also be the means of preventing ruinously low cabbage and bean prices. The only trouble with this theory—which of course my friend does not advocate—is that while it may work out on the average, it does not save the individuals whose crops have been lost or help much those whose yields have been greatly reduced. The drought losses are not evenly spread. Only those who have experienced it in some measure can adequately sympathize with those whose season's labors are lost through no fault of their own. And yet without intent or responsibility some dairymen and fruit growers will inevitably profit from the certain slaughter of animals for which there is insufficient feed, and from the much reduced apple crops of southern Illinois and the Shenandoah—Cumberland. Truly, man proposes and God disposes!—Hilton, N. Y., August 10, 1930.

Some Questions About Paint and Painting

(Continued from Page 3)

but if too little oil is used it soaks into the wood leaving only the pigment on the surface.

Blistering

"What causes the blistering or peeling of paint?"

PROBABLY the chief cause is painting when the wood is moist. Painting over oil or grease will also cause blistering and sometimes paint will blister when the hot sun shines on it before it gets dry.

Use of a Drier

"Does the use of a drier with paint do any damage or does the paint last just as well when it is not added?"

PROBABLY a reasonable amount of drier will do no harm but it should not be used to excess because it makes the paint film less durable.

Cleaning Paint Brushes

"How can paint brushes be cleaned when paint has been allowed to harden on them?"

ONE method is to soften the brush by boiling in vinegar. If the brush is valuable enough to make it worth while it may be washed in a paint remover. Brushes should not be allowed to stand in this paint remover too long as this will soften up the bristles.

Progress of a Great Battle

(Continued from Page 2)

animals slaughtered were reported as no visible microscopic lesions found at slaughter.

Such cases must be looked upon as dangerous animals, and were they left in the herd they would sooner or later have become spreaders of tuberculosis. When we realize that a very small minute nodule of tuberculosis may stimulate a reaction, it is not to be wondered that occasionally an animal affected in some isolated part of the carcass when slaughtered escapes the eye of the post mortem operator.

Rhode Island

THOMAS E. ROBINSON

Chief, Bureau of Animal Industry

YOU are advised that in checking up your postmortem reports for the past year, it was found that 96 per cent of all animals condemned as reacting to the intradermic tuberculin test have shown visible lesions of tuberculosis. This certainly is as much as could be reasonably expected of any test.

New Jersey

J. H. MCNEIL

Chief, Bureau of Animal Industry

WE consider the combination of tuberculin tests sufficiently reliable to free herds from tuberculosis, and maintain them in a healthy condition as far as this disease is concerned, provided the owner will follow the rules and regulations prescribed by the Federal and State Bureaus of Animal Industry.

We are working in close cooperation with the Federal Bureau of Animal Industry, and believe the results attained are in conformity with those of the Federal Bureau, as indicated in their miscellaneous publication No. 59, issued by Doctor Mohler in October 1929, and copy of which we are enclosing.

We advise that the work is progressing satisfactorily in the State, and we are very glad to be in a position as a Department of the State organization, to render the dairyman a service that will assist him in maintaining a clean herd, and also meet the requirements of Boards of Health, the Medical Milk

Commissions, and the milk companies requiring that all milk delivered by them must be from animals that are negative to the tuberculin test.

Delaware

RALPH C. WILSON

Secretary, State Board of Agriculture

WE have been conducting the tuberculin testing of cattle in Delaware for the past ten years, and believe that the tuberculin test is entirely reliable. We do not mean, however, that, in all cases, in a very badly infected herd of cattle, every reactor can be found on the initial test; however, by conscientious co-operation of the owner and the veterinarian, and by retesting the herd at proper intervals, tuberculosis can be eradicated.

Make Your 1931 Lime Plans Now

(Continued from Page 2)

is brought to the top again. However, even when applied on sod not all of the material is turned under. In plowing, the furrow slice is set partially on end so that considerable of the lime is near the surface where it can be well mixed into the soil with disc and harrow, for the next crop.

The findings of Ohio Experiment Station (Table C) tend to prove that the important thing about liming is to get it on the soil. Order your supply now and apply it in the late summer and fall when there are slack periods in the farm schedule and when roads and fields are in good condition for hauling and spreading.

How Much Grain for Bulls

How much grain is usually recommended for the herd sire?

THE usual recommendations are between five and ten pounds of grain a day. The herd sire should be fed enough to keep him alert and vigorous, but there is nothing to be gained in keeping him too fat. If he does get too fat cut down the grain and make him exercise.

The Song of the Lazy Farmer

I WANT to go to our state fair and see all them exhibits there. I git a lot of fun to go and see the patent ro'try hoe, the combines and new-fangled plows, machines to draw the milk from cows and cultivate the corn and beans; they keep inventin' new machines to make our work still easier, and help us raise more provender. We used to have to walk to plow, but ev'rything is different now, the man that works upon the land don't have no callous on his hand, he has no bunions on his feet, the callouses are on his seat.

I like to see the livestock, too, that show the things that folks can do by gittin' stock of fancy breed and feedin' 'em on balanced feed. They make a feller wish that he could have livestock like that, by gee, he'd do his chores with lots more pep, there'd be more ginger in his step, the boys would like to stay at hum, if they had stock like that, by gum. I sure enjoy our old state fair and gather many

ideas there, I like to watch the races, too, and visit with old friends and new, I see 'em all in state fair week, and allus stop awhile to speak about the country and the crops, and why our prices allus drops at harvest time, and our belief about the plans of farm relief. Take my advice and comb your hair and go and visit your state fair!

Electricity makes your hens WORK...

and means PROFITS for you

THE electric light required for 50 hens costs about 65 cents per season and returns \$30.00 in increased farm income. For correct hen house lighting, use one 40-watt lamp, with proper reflector, for each 50 hens or each 200 square feet of floor area.

Electricity works for pennies instead of dollars. It pumps water. Fills the silo. Heats the incubator. Runs the dairy machinery. And it cuts hours of labor from the farm wife's working day.

More New York State farms are getting electricity

Niagara Hudson electric service reaches out every year to hundreds of new customers. A third of New York State farms now have electricity, and we are constantly building new lines, so more and more people can enjoy electric helpers.

Reviewing the Latest Eastern Markets

Milk Prices
Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
3 Evap. Cond.		
Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Aug. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.
The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

* * *

July Prices Announced
The Dairymen's League announces the following pool prices for July for 3.5% milk.

Gross	\$2.04
Expenses	.06
Net Pool	1.98
Certificates of Indebtedness	.15
Net Cash Price to Farmers	1.83

	Net Cash	Net Pool
July 1929	2.21	2.36
July 1928	2.13	2.28
July 1927	2.14	2.24

The Sheffield Producers announce the cash price to producers for 3% milk in the 201-210 mile zone, as \$1.92 per hundred (2.13 for 3.5% milk.)

July, 1929 price to Producers,	3% milk 2.37½; 3.70; 2.57½
July 1928 price to Producers,	3% milk, 2.37½; 3.5%; 2.57½
July 1927 price to Producers,	3% milk, 2.30½; 3.5%; 2.50½

Butter

	Aug. 14 1930	Aug. 8, Aug. 16, 1930	Aug. 1929
Higher than extra	40 -40½	38½-39	44 -44½
Extra (92 sc.)	39½-	38	43½-
84-91 score	35 -39	33½-37½	39 -43
Lower Grades	33½-34½	32 -33	38 -38½

There was a steady improvement in the New York butter market throughout the week ending August 16. Even before the Government cold storage holdings for August were announced prices were advancing and when these figures were released, the reduction in storage stocks was even greater than was anticipated. Butter in storage in the U. S. on August 1 was 145,297,000 lbs. compared with 151,621,000 lbs. on August 1, 1929. During July this year, something less than 39,000,000 pounds of butter went into storage, compared to close to 60,000,000 pounds during July 1929. Butter is still about 4c lower than it was last year at this time.

The principal factor in the improvement has been continued hot dry weather resulting in lower production. The advances we have had for the last two weeks have enabled held butter to be taken out of storage. Withdrawals have been exceeding input for the first time since the start of the storage season.

As we go to press, rains are reported from many Eastern sections but the ground is so dry, that even under a lot of rain it will take some time to bring pastures back to normal condition.

Cheese

	Aug. 14, 1930	Aug. 8, Aug. 16, 1930	Aug. 1929
STATE FLATS			
Fresh Fancy	19½-	18½-19½	23 -24½
Fresh Average			
Held Fancy	-26	24 -26	27½-29½
Held Average	23 -	23 -	

The cheese markets have been improving rather steadily since July 25. However, the advances are not unusual for this season of the year, merely following the normal trend of prices, which is upward until October when some decline usually occurs at the end of the grass cheese season. The present prices quoted on twins on the Wisconsin Price Exchange are 3½c below 1929 and 6½c below the figures for 1926 and 1927.

The Government cold storage figures for August 3, recently released, showed cheese in storage in the entire U. S. totalling 88,664,000 pounds as compared with 79,907,000 pounds in 1929. Over a million more pounds of cheese

went into storage this year in July than in July 1929.

Eggs

Selected Extras	34 -41	36-42	48 -51
Average Extras	31 -33	32-35	45 -47
Extra Firsts	26 -29	26-30	37 -42
Firsts	24 -25	24-25	34 -36
Undergrades	22 -23	22-23	33 -
Pullets	27 -28	27-28	33 -39
Pewees	18 -19	18-19	22 -28
NEARBY BROWNS			
Hennery	33 -39	33-39	42 -48
Gathered	25 -32½	24-32	34½-41

At New York eggs are quoted from 1c to 2c lower than they were a week ago, and on the average, are more than 10c below prices for the corresponding period a year ago. The one encouraging factor in the market is a report from the Bureau of Agricultural Economics, U. S. Dept. of Agriculture to the effect that receipts at New York, Boston, Chicago and Philadelphia are considerably lower than they were a week or two ago, and also considerably below those for the corresponding week last year.

Unusually hot weather has lowered quality of receipts and receivers are finding it difficult to fill requirements for top grades. In some cases storage reserves have been used to fill such orders.

DUCKS, Nearby	16-22	16-22	25-35
GESE	10-13	12-13	22-23

Receipts of live poultry since our last report have been a little heavier than the market could absorb readily. The one feature which saved the situation was that cool weather has kept up demand. On August 14, there was a decline of 1c on light fowls although Leghorn fowls were in good demand. Although prices were unchanged on broilers the demand was none too active.

Fowls brought in by express and truck worked out at a fair market. Broilers were in fairly good demand with Rocks and Reds steady and prices advanced 1c on Leghorn broilers.

It is probable that the heavy receipts are due to close culling both of old hens and young stock. In view of the present price situation this is good business on the part of the poultryman though it may put some strain at times on the poultry market.

It is at least time to plan for the improved market which usually comes with the Hebrew holidays. The first of these is the Jewish New Year, September 23 and 24. The best market days being September 17 to 20. Next will come the Day of Atonement, October 7, with the best market days on September 29 and 30.

Fruits & Vegetables

Readers who wish to get up-to-the-minute reports on the fruit and vegetable market are urged to listen in to the regular radio market reports coming over WEAFF each noon.

On August 14, Duchess apples in New York were selling at \$1.00 to \$1.50 for good to fancy and 50c to 90c for lower grades. Transparents ranged from \$1.00 to \$1.75 for best grades and Wealthies sold at from \$1.00 to \$1.50. Mixed varieties ranged from 85c to \$1.50.

Pears brought \$1. to \$1.50 per bushel for Bartlett and 75c to \$1.50 for Clapps. Mixed varieties sold from 50c to \$1.25.

Peaches from the upper Hudson Valley are bringing 50c to 65c per 16 quart basket.

Extra fancy Catskill Cauliflower reached \$3.75, although \$3.50 was the top price for the bulk of the receipts.

The market on lettuce is barely steady with 75c being the top price for New York State stock.

The market on peas is up at this

writing, bringing \$1.50 to \$2.50 per page.

Tomatoes from the Hudson Valley bring 15c to 60c per basket.

Meats & Livestock

On August 14 receipts of country dressed calves were reported light with good demand. Best brought \$16 to \$18; fair to good \$12 to \$15; small to medium \$11 to \$13.

Live rabbits—Receipts were light but demand was small. Best ranged from 15c to 20c per pound.

Cattle—Steers were scarce and selling a little high. Few grassers brought \$7.50 to \$8.10 on August 13. Common to medium cows brought \$4 to \$5.50 with a few at \$6. Low cutters and cutters brought \$2 to \$3.50. Vealers were in light supply. Good to best brought \$10.50 to \$13.50. Mediums brought \$8 to \$10, commons \$6 to \$7.50.

The Sheep Outlook

The U. S. Department of Agriculture's midsummer sheep and wool outlook says: "A considerable reduction in sheep prices both in this country and abroad is likely to take place during the next two or three years. The 1930 lamb crop was about 8 per cent larger than the crop of either of the two preceding years. The increase in the east was 4 per cent and increases in western states 9.5 per cent.

"On the demand side the upward trend in demand for lamb and mutton which prevailed in recent years, did not continue through the first half of 1930 because of unfavorable business conditions and lower prices for other meats."

Present indications point to a world wool crop in 1930 not greatly different from the large clips of recent years. Stocks of wool in five principal southern hemisphere countries on June 1, were about 15 per cent above those of last year.

At the same time, domestic demand for wool has decreased. During the past year, domestic wool prices have fallen 25 to 35 per cent. Since June the drop has been checked and since that time wool prices have been more stable. Wool prices in foreign markets have dropped from 30 to 40 per cent in the last year.

The sheep industry expanded rapidly in recent years. Following other periods of expansions, reductions have often been too drastic. The individual producers should consider carefully the long time outlook for the sheep industry in making plans for next year. It certainly is not a time for expansion, out the man whose business is on a firm foundation should weather the slump in good shape.

Drought more than low temperature is the cause of winter killing of trees, asserts A. L. Ford, extension horticulturist at South Dakota State College. Several barrels of water put around the roots of a tree as late as possible before the final freeze-up will help a lot in pulling a tree through, he says.

"Here's
a helpful reason"

No fussing. No trouble.
Grape-Nuts is ready to
serve, ready-to-eat.

"What a
reason this is!"

Grape-Nuts, specially
baked, is exceptionally
easy to digest.

"An excellent
reason here"

Grape-Nuts, with milk or
cream, is well-balanced,
nourishing—makes the
light breakfast safe.

"I'd clip out
this reason"

Grape-Nuts provides
many needed vital ele-
ments for proper growth
and strength of chil-
dren's bodies.

Taste Grape-Nuts. Relish the tasty
flavor of these golden brown kernels. Each meaty
morsel is oven-crisped to a *crunchy*, nut-like goodness.
And tinged throughout with the ever-so-delicate
sweetness of pure malt sugar.

Sheer deliciousness! That's the chief
reason why Grape-Nuts is a favorite food on mil-
lions of American breakfast tables. *Buy it today for
breakfast tomorrow.*

Grape-Nuts

LOOK! NEW GRAPE-NUTS PACKAGE!

Grape-Nuts now comes in a gay, colorful *new* package.
But the Grape-Nuts in the *new* package is the same de-
licious food so popular for many years. Only the package
has been changed. Look for it on your grocer's shelves.

POSTUM COMPANY, INC., Battle Creek, Michigan. G-S.F.F. 8-30

IT'S WISE TO CHOOSE A SIX

Six-cylinder performance without added cost for gas, oil or upkeep

The swing to the Six in the low-price field grows steadily bigger and more impressive every day. Farm owners especially are rapidly learning that the new Chevrolet not only gives all the advantages of six-cylinder smoothness, power, flexibility and comfort—but does so without added cost for operation or upkeep.

In a recent officially-observed economy run, a Chevrolet six-cylinder Coach won first place, averaging better than twenty miles to the gallon. And no automobile surpasses Chevrolet in oil economy or shows a lower expense for tires. None offers owners the benefits of more efficient service than that available at more than 10,000 authorized Chevrolet service stations, where, on many service and repair operations, the flat-rate charges are the lowest in the automotive industry.

And Chevrolet six-cylinder smoothness saves the entire car from the wear of constant vibration, lowering the cost

The Coach, \$565, f. o. b. factory, Flint, Michigan

of maintenance and assuring a longer-lived automobile. Before you decide on any car in the low-price field, be sure to try out the Chevrolet Six. Learn for yourself what a difference six cylinders make. Note how smoothly and quietly the power flows—how easily Chevrolet climbs steep hills—pulls through mud and sand—maintains top speeds.

Know the advantages of such modern features as Fisher Body—semi-elliptic springs—Lovejoy hydraulic shock absorbers—weatherproof 4-wheel brakes—safety gasoline tank in the rear of the car. Find out the small down payment and easy G.M.A.C. terms available to every Chevrolet buyer.

Then you will realize why more and more motorists everywhere are finding it wise to choose a Chevrolet Six—for economy, for performance, for beauty, for comfort, for safety—for lasting enjoyment and satisfaction!

Game Getters Every One

WHAT style of gun do you like? What kind of game do you hunt? The answer to these questions will tell you which Remington to select. Each one represents the finest in its particular class.

The new Model 29, pump action shotgun, 12 gauge was introduced last year. Its many improvements appealed to sportsmen at once and it is already a popular favorite for both wild fowl and upland shooting. It is famous for its smooth, fast action and graceful appearance.

Those who prefer a 20 gauge find in the Model 17 everything that could be desired—light weight, attractive lines and finish, and the smoothest action ever developed for a repeating shotgun.

The Model 14 Slide Action Repeating Rifle is popular for deer, moose, elk, mountain sheep, bear, and other big game.

Model 25 is smaller, but it will kill a deer. It is the nearest thing to an all-purpose rifle you will find.

The famous .22 caliber Remingtons—Model 24 Autoloader, and Model 12 Slide Action Repeater, are unsurpassed for small game and for killing farm pests.

Every Remington is accurate, well balanced, and beautifully made of the finest materials. You can see these Remingtons at your dealer's. Or, if he hasn't them in stock, ask us for a circular describing the gun you want. Show this to your dealer, point out the gun you have selected, and he can get it for you quickly.

REMINGTON ARMS COMPANY, Inc.

25 Broadway New York City

Remington

The jovial gentleman with the corn-cob pipe is "Old Hunch"—famous exponent of the circuit-clout . . . and P. A. for pipes. He's been rooting for Prince Albert for years!

Right over the fence

YOU CAN always count on Prince Albert to come through. It was a hit from the start and numbers its fans by the million. No use beating about the bush-leagues . . . it's just the greatest pipe-tobacco that ever stepped up to a match for a joy-drive into deep center.

Buy a tidy red tin of good old P. A. Swing back the lid and catch that rich, rare aroma. Pop a load into your pipe and light up. Cool as an umpire deciding: "Strike TWO!" Sweet

as a homer that wins in the ninth. Mellow and mild and long-burning, down to the last sweet drag. That's Prince Albert, Men.

Jimmy-pipe or makin's papers, it's all the same to this double-header. No matter how many innings you play, morning to midnight, you're safe . . . and satisfied . . . with P. A. Team-up with this big-league pennant-cincher, and see what a team-mate it is. The password's "P. A."—don't muff it!

PRINCE ALBERT

—the national joy-smoke!

More tobacco and more pipe-joy. There are TWO full ounces in every tin.

Farm News from New York

August Crop Report Shows Variable Conditions

THE abnormally warm weather of the last half of July, continuing into August, together with deficient rainfall to date (August 12) in most parts of New York State except the northern and northeastern counties, has been unfavorable for some crops, although the exact extent of the damage can only be determined either at harvest time, or after the present drought has run its course. The figures in this report are taken from the state-federal crop report for August, issued from the New York State Department of Agriculture and Markets.

Pastures, Hay, Milk Down

Pastures have suffered especially, the August 1 "condition" being 74 percent, compared with the ten-year average of 84. Last year on August 1, the condition of pastures was 75, and with the prolonged drought of that year declined to 60 on September 1. Pastures are best in the northern counties.

The daily production of milk per cow on farms of crop reporters in New York was 2 percent below the low production last August and 8 percent below the fairly heavy August production two years ago. For the entire United States, there was a drop of about 8 percent, compared with last August.

The seriousness of the pasture shortage is augmented by the fact that the carry-over of old hay was light in New York and the new crop contains less clover and is substantially less in quality than last year. Hay is estimated at 6,114,000 tons, compared with 6,653,000 tons last year and 6,841,000 tons in 1928. When the carry-over is included, hay available for use or sale from each of those crops would be as follows: 1930-6,673,000; 1929-7,500,000 tons; 1928-8,023,000 tons.

Corn Fair In New York

The corn crop, on a substantially increased acreage, gave excellent promise in New York. While it was beginning to suffer from drought in some areas, growth was generally good, the "condition" of 84 being substantially above the average for this date. The national corn crop is about 15 percent below last year.

The oats crop in New York promises the best in several years. Early sowing gave particularly good results, and harvest was under way on August 1 in western New York with good yields. The forecast of 39,168,000 bushels on an increased acreage compared with the very poor crop of 24,626,000 bushels last year and the five-year average of 34,738,000 bushels.

Beans Yield Light on Larger Acreage

Dry beans in New York suffered from root rot and other troubles, as well as dry weather, and promise a rather light yield, although, because of the greatly increased acreage, the prospective crop is 1,560,000 bushels, compared with 1,250,000 bushels last season, and 1,358,000 bushels two years ago. Increased acreages in other areas promise a United States total of 22,024,000 bushels compared with 19,693,000 bushels in 1929.

Potatoes, with exceptionally good crops on Long Island, promise 31,270,000 bushels for the state, if favorable weather prevails, compared with the very light crop of 24,840,000 bushels last season, when the Long Island crop was a near failure. August and early September are critical months in the growth of late potatoes. The national potato crop is estimated at 373,000,000 bushels, compared with 360,000,000 last season and 393,000,000 bushels, the five-year average.

Onions Good

The indicated production of state onions on an increased acreage is 3,040,000 bushels, compared with 3,202,000 last season providing deterioration of prospects does not take place. The total in all the late onion states amounts to 19,261,000 bushels, compared with 18,425,000 bushels last year.

Cabbage is particularly susceptible to drought conditions, although it may also respond unusually well to moisture if it has not been too badly damaged. The Long Island intermediate crop of cab-

bage states expect 289,350 tons, compared with 30,800 tons last year. The up-state Domestic cabbage crop, used for both kraut and shipping, beginning to mature in August is forecast at 98,700

Another Milk Price "Investigation"

GEORGE Brower, district attorney of Kings County, New York City, has started another milk investigation. He objects to the recent one cent a quart raise in the price of milk, claiming that it is unjustified, and has sent a so-called investigator up-state to investigate sources of milk. He also has called in dealers and representatives of milk producers' organizations to question them. As usual, the milk dealers have "passed the buck" to the producers.

We are tired and sick of milk investigations. One of their chief, underlying purposes is to make good city newspaper stories and political capital for politicians. If ever a milk price raise was justified, this one was. Pastures are burned out by the drought and feed prices are climbing daily. We hear a good deal of talk about farm relief in the city papers, but when the farmers try to help themselves through their organizations by raising the price in proportion to their increased costs of production, then that is a different story, and we must have an "investigation".

If the so-called investigation is at all fair, the conclusion must be reached that the raise in price is entirely justified, but in the meantime, all of the hullabaloo does untold damage both to producers and consumers by undoing the work that has been done for years to teach consumers that milk is one of the best foods in the world and is sold at a reasonable price.

tons on an acreage a sixth greater than last season, when the production was 97,200 tons.

Fruit Crops In New York Good

Apples have begun to show the effect of dry weather on weakened trees in New York State, and favorable rains are needed to bring full size to the late varieties. Conditions have been unusually favorable for disease control. Baldwins, the major winter variety, are light. Early varieties are generally heavy, while Greening, McIntosh and most other winter varieties are fair to excellent.

The crop, is made up of more than the usual proportion of summer and fall apples, and less than usual of winter. The August forecast if for a total crop of 24,558,000 bushels, compared with 16,520,000 bushels last year and 26,075,000 bushels, the average for five years. The commercial crop is forecast at 4,768,000 barrels, compared with 3,404,000 barrels last year and 4,588,000 barrels, the five-year average.

R. L. GILLET, Agricultural Statistician.

Water Power Board Named

GOVERNOR Roosevelt has just appointed a board of five members to study the water power possibilities of the St. Lawrence River. We have discussed this proposition at length in previous issues of American Agriculturist. It will be remembered that an argument has prevailed for years between the Republicans and the Democrats as to how the St. Lawrence should be developed, that is, whether the State should assume the responsibility or leave it to private interests. The last Legislature passed a bill authorizing the Governor to appoint a commission to study the different plans with the understanding that the first plan to be investigated and reported up-

on was that of State development and control.

The commission or board appointed by the Governor consists of: Frederick M. Davenport of Clinton, a Republican representative in Congress; Samuel L. Fuller of New York City, banker and Republican; Thomas H. Conway of Plattsburg, formerly Lieutenant-Governor of New York State, a Democrat; Julius Henry Cohen, a Democrat, and Counsel to the New York-New Jersey Port Authority; and Robert M. Haig, listed as an Independent Democrat, of the School of Business of Columbia University. Mr. Haig will act as chairman of the board.

The new commission will meet with Governor Roosevelt on August 30 at Ogdensburg, on the St. Lawrence, for the purpose of making a personal inspection of the river and to start the study. The proposition has great possibilities for every citizen of the State, for the development of the St. Lawrence will increase tremendously the electric power for both the cities and rural districts.

Fruit Growers Take Hudson Valley Tour

HOT, dry weather failed to dampen the enthusiasm of nearly 500 fruit growers attending the annual eastern summer meeting of the New York State Horticultural Society. By 10 o'clock close to 200 cars met at the farm of C. J. Hepworth & Sons, two miles south of Milton in Ulster County, where we saw an orchard set out on unusually rough ground; in fact, many of the holes had been blasted out by dynamite.

Mr. Hepworth remarked, "trees had had always grown on the hills and I figured that apple trees would grow as good as any other." On this farm we also saw a homemade stationary spray outfit.

After lunch we gathered on the lawn on Walter Clark's farm for a speaking program. Short talks were given by the Honorable Millard Davis, president of the Ulster County Farm Bureau, Horace Bowker, president of the American Agricultural Chemical Company and DeWitt C. Wing, editor of the Rural New Yorker. At other stops on the tour, those attending had an opportunity to see a spraying demonstration, the results of a fertilizer experiment and the large cold storage plant of the Hudson River Fruit Exchange.

Governor Roosevelt Greets Long Island Farmers

ATTENDANCE at the annual Long Island Country Life Rally, held at Farmingdale, L. I., on August 7th, exceeded all previous records.

Governor Roosevelt and his party arrived about 4:30 P. M. and was escorted directly to the farm machinery demonstration ground. Here he made a brief trip through all parts of the field showing a keen interest in the work of the various tractors and power farming implements, in spite of the clouds of dust that enveloped them. Then he returned to a grove in the center of the field where the people greeted him with cheers and applause. The Governor was presented by Mr. J. C. Corwith, President of Suffolk Co. Farm Bureau. The Governor made a brief speech commending the work that the Farmingdale Institution is doing and predicted a bright future for the progressive farmer in N. Y. State. He stated that in his opinion the agricultural schools of the state were popular and valuable as indicated by the fact that the attendance at such institutions was growing each year.

The Country Life Rally is held each summer at the agricultural school at Farmingdale and is conducted co-operatively by the following organizations:

Agricultural Department, L. I. R. R.; Long Island Cauliflower Association; Long Island Chamber of Commerce; Long Island Farmer's Club; Long Island Poultry Association; Long Island Research Farm; Nassau County Farm Bureau; Suffolk County Poultry Association; State Institute of Applied Agriculture;

Nassau County Home Bureau; Nassau County 4-H Clubs; Riverhead Agricultural Society; Suffolk County Farm Bureau; Suffolk County Home Bureau; Suffolk County Pomona Grange.

Purina Baby Chick Convention

THE first Purina Baby Chick Convention in New England will be held at the Somerset Hotel, 400 Commonwealth Avenue, Boston Massachusetts, on August 25th and 26th, Monday and Tuesday. Every baby chick producer in New England is invited to attend. This school is expected to bring together 100% of the substantial breeders of the East.

The meeting is being held to secure the latest information on the production of hatchable eggs, incubation, chick merchandising, diseases, chick feeding, and breeding.

The Instruction Staff consists of outstanding men from college ranks and commercial ranks—including Professor J. R. Smyth, Associate Professor, Poultry Husbandry, U. of Maine; Professor Stuart, Professor Poultry, U. of New Hampshire; Professor Bittenbender formerly of Iowa State Dept., now of the Buckeye Incubator Co.; J. I. Taggart of the Service Department, Smith Incubator Co.; Wm. J. Allen, formerly Conn. and New Jersey Poultry Departments, now Service Department, Acetol Products Co. (celloglass); Professor J. C. Graham, head Poultry Department, Amherst, Mass. Professor Roy E. Jones, Extension Specialist, Storrs College, Conn.; M. H. Brightman, chief, Bureau of Markets, State Department of Agr., Rhode Island; Lloyd Hedrich, Mgr., Purina Mills, Buffalo; Herbert Schaeffer, formerly U. of Wisconsin, now research department, Purina Mills; I. W. Ingalls, Adv. Mgr., American Agriculturist.

Address any inquiries to—Meade Summers, Somerset Hotel Boston, Mass.

Would You Like to Learn to Bake Bread Like Mother's?

You Can Do It With This Lesson

Dear Little Cooks:

This time I have something very special. I am going to tell you how I made a loaf of bread, all myself. Not just a little loaf that I teased mother to cut from a little of her dough, but a loaf that I made myself, from the very beginning. Now that it is warm weather, I think it is a good time to tell you.

My! you have no idea how proud you will feel to make a loaf of bread all yourself. It always makes me so happy.

You know bread is one of our best foods and home-made bread is so good, too. It has more taste than that we get from the store I think, don't you?

Mother said I'd better learn to make bread the 4-H way because pretty soon I'll be old enough to join a bread club. I can hardly wait for that! So I'm to give you the 4-H recipe just exactly. Lots of you who are a little older have already tried it, in your club work.

If you follow directions carefully you'll have good bread I know, because mother says thousands of girls all over our country have done it.

I hope you will make a lot of good loaves by this recipe.

*With heaps of love,
BETTY.*

White Bread

(Straight Dough Method)

1 cup liquid (water, or water and milk).	½ compressed yeast cake.
½ teaspoon fat.	(Dissolve in ¼ cup lukewarm water).
2 teaspoons sugar.	3 cups sifted flour (about).
1¼ to 1½ teaspoons salt.	

METHOD: Put sugar and salt into a large bowl, and pour over them the scalded liquid. When the mixture is lukewarm, but not hot enough to kill yeast, add dissolved yeast, and half the flour. Beat thoroughly, add the melted fat, then add the remainder of the flour, or enough to make a soft dough. Beat hard with spoon and turn out on a floured board. Knead until the dough becomes elastic to the touch and will not stick to the board. Place it in a greased bowl, cover tightly with a clean towel and plate, and allow it to rise in a temperature of from 80 to 85 degrees Fahrenheit until it has doubled in size (about 2½ hours). Some bread makers like to put the dough back in the bowl and allow it to rise a second time until it nearly doubles in bulk before placing it in the pans, about 45 minutes. This makes a finer grain in the bread but the flavor is not so good. Knead down and turn dough over. Let stand 15 minutes.

Form into loaves of a size to half fill the pans. Place in oiled pans and allow to rise until it has doubled in bulk. This will bring the top of the dough about even with the edges of the pan. Bake 45 to 50 minutes. The oven temperature should be 425 degrees Fahrenheit for 15 minutes, then lowered to moderate temperature, 380 degrees Fahrenheit.

KNEADING: The purpose of the first kneading is thoroughly to mix in the yeast and to develop the gluten, or elastic part of the flour. To knead the dough, curve fingers over it and with the palm of your hand push the dough forward. Then bring the hands back, repeat this pushing process, turn the dough one-quarter way around, and fold it over. The kneading should be done quickly and lightly until the dough is smooth and elastic and does not stick to the fingers or to the board. Watch mother to see how she does it.

When the dough has been kneaded enough, shape it into a ball and place it upside down in a well greased bowl, then turn it over. This coating of grease will help to keep it from drying and will prevent a crust forming on the dough. The bowl may be covered with a plate, a lid, or a clean towel, and put in a warm place so that the dough will rise.

The temperature for the first rising should be from 80 to 85 degrees Fahrenheit. Too warm a

temperature may cause the dough to rise too quickly and it may sour. The dough should rise until double in size or until a dent is left when it is touched lightly with the finger.

SECOND KNEADING: The purpose of the second kneading is to break the gas bubbles and to mix the gas evenly through the dough. The dough may then be shaped into a loaf. Watch how mother makes a well-shaped loaf. Place the dough on the board and flatten it out with the palms of the hands into an oblong shape.

What Is Good Bread?

Good bread should cut into nice even slices. All the slices in the loaf should look the same. To do that the loaf must be one of good smooth shape, evenly rounded over the top, have no bulges or cracks. Then it looks nicer on the plate and will make better looking sandwiches. The crust should be the same golden brown all over and be from one-eighth to one-fourth inch in thickness. We want the crust crisp and tender, too.

Inside the crust of our slice of bread we like to find a creamy white crumb. Grayish white color, streaks, large holes, coarse grain, soggy places all mean poor bread. We want it nice and springy so that a piece pressed between the fingers will spring back quickly to its first shape. If old or poor yeast is used bread will not have this springy or elastic quality.

We want our bread to have a good taste and smell. A sweet, nut-like taste that is like that you get when you chew wheat kernels into "wheat gum" is what we want. (Did you ever shell out wheat from the bundle and make wheat gum?)

Fold the long sides together and seal by using the palms of the hands. The dough may be flattened again, pulling slightly to elongate it. Then fold the ends as before and seal. Fold first one side to center and seal and then the other side and seal, then roll to finish sealing. The loaf is now ready to be placed in a greased bread pan. Grease the loaf on all sides and cover with oiled paper or a clean cloth for rising.

Good Materials Help Make Good Bread

FLOUR.—Wheat flour contains starch and a substance called gluten. Gluten is elastic when moistened and can be stretched. When we chew wheat until it is like gum it is the gluten that is "gum."

When bread dough is light, it is full of gas bubbles which stretch the gluten, and when it is baked the gluten is stiffened, leaving the bread filled with small holes. Wheat is the only grain that has gluten. Hard wheat has the most gluten and so makes the best bread flour.

YEAST.—Yeast really is a mass of tiny plants, so small we could never guess they were there if we could not see them under the microscope. When these tiny plants have food, like flour, sugar and moisture (water or milk,) and a nice warm place, they grow fast and give off bubbles of gas which fill the dough and make it rise.

We can buy dry yeast or moist compressed yeast. The dry yeast keeps better but the compressed yeast works faster in the dough. The 4-H clubs use compressed yeast mostly because it does make bread rise so fast.

Mother lets me use compressed yeast, too. You see I can hardly wait anyway till I have my nice loaf done.

Good bread can be made of either kind of yeast if it is fresh.

LIQUIDS.—Water, milk or potato water or a mixture of these may be used for bread.

SUGAR AND SALT are used to make the bread taste better.

SHORTENING is used to give flavor and tenderness to bread.

Aunt Janet Reflects On Leadership

The Kind of Community We Live In Is Determined By the Type of Leaders It Has

WE hear much about what makes a good leader. Also, if we live in a small community, we get more or less discussion about the personal qualifications of the leaders we are lucky enough to have. Thankfulness is the very first feeling we ought to have about any person willing to devote time and effort to these jobs, jobs

to ask her to serve in so many capacities—this is no pure case of imagination that I'm quoting, I have seen capable women attempt just these offices and others were willing to accept such sacrifice and consider it nothing out of the way.

The best way to keep a healthy, growing group alive is to have someone always in training for the offices and to pass the responsibility around. It may be a wonderful tribute to a woman to keep her in some office twenty-five years, but it certainly kills the initiative of newer members of the group unless the leader is wise enough to keep them busy on committees. It takes training and experience to develop leaders and the wise leader sees that her group obtain it.

From Ralph S. Adams, former Superintendent of the Department of Country Life of the Board of Home Missions of the Reformed Church, comes a statement of abilities he thinks a good leader should have in addition to the qualities we expect of all good citizens such as honesty, truthfulness, reverence, devotion, cheerfulness, and patience. These abilities are: 1. Ability to fellowship and work with others; 2. Ability to be interested in the thoughts, interests and perplexities of others; 3. Ability to recognize and utilize the abilities of others; 4. Ability to help others analyze their own thoughts and ideas; 5. Ability to pass ideas, enthusiasm and vision on to others; 6. Ability to maintain faith in men; 7. Ability to deputize; 8. Ability to intelligently

supervise; 9. Ability to concentrate upon the matter at hand and to complete a task; 10. Ability as a good listener; 11. Accuracy of observation and ability to remember accurately; 12. Courage of his convictions; 13. Ability to formulate and clearly define objectives and principles and to be unwavering in his pursuit of them; 14. Devotion and loyalty to a cause; 15. Ability to shift his viewpoint and to be open-minded; 16. Ability to forget self and to benefit by criticism; 17. Sense of

logical moment from experience. It should be a nice smooth sauce. If cooked too long it will curdle.

Just before serving this dressing may

Quaint and Smart

2598

Child's Frock Pattern No. 2598 is sweet and quaint with its little puff sleeves and shaped yoke. Dotted dimity with a trim of plain color or plain organdie trimmed with figured is very effective. The pattern comes in sizes 2, 4, and 6 years. Size 4 requires 1 3/4 yds. of 39-inch material with 3 yds. of ribbon and 1 1/2 yds. of edging. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new Fall Catalogues and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

which are plentifully bestowed upon willing workers and refused by those who reserve the right to criticize—and exercise it freely!

Perhaps it will comfort leaders to know that some wise fellow once made this remark, "To avoid criticism, Say nothing, Do nothing, Be nothing." Another one said "A man may be known by the enemies he makes." This is going too far, I think, because the ability to make enemies is sometimes the measure of failing and shows a serious fault in a man's ability as a leader. It is highly necessary, however, that the leader know when "No" is better than "Yes" even though it may bring the displeasure of seemingly imprudent people.

Our rural life is dependent upon our rural leaders, in church, in organizations, in school and failure to develop our own leaders as we go along will be our own undoing. In most small groups it is even more essential that every member be willing to assume leadership of some sort from time to time. The group that looks to one woman for President of Ladies Aid, Superintendent of Primary Department at Sunday School, Lecturer of Grange and Chairman of the Home Bureau, are digging their own grave with their own hand. Furthermore, it is nothing short of imposing on a willing worker

The Popular Plaits

2599

Dress Pattern No. 2599 has the feature of skirt plaits which flare for fullness but do not increase the width of the silhouette. The criss-cross lines of the wrapped bodice also make it desirable for the full figures. The pattern may be had in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 requires 3 3/4 yards of 39-inch material with 1/4 yard of 27-inch contrasting for vestee and 3 3/4 yards of braid. Price, 15c.

Chinese Monogrammed Towels

HERE is a bargain offering on towels. We have excellent quality huck towels, 16 by 30 inches, heavy and with woven borders that we can stamp with any given initial. The monograms are beautiful Chinese letters that embroider quickly and are very effective in the Chinese colors. This is number M319 and if you want as many as six of these we could make a special price of \$1.50 for them. Singly, stamped with any initial they are 30 cents.

M319—Monogrammed Towel, 30 cents Order from Embroidery Dept., American Agriculturist, 461 Fourth Avenue, New York City.

perspective; 18. Disposition to plan and prepare; 19. Ability to put first things first; 20. Ability to overcome and dismiss fear and worry; 21. Ability to self-analysis (honest); 22. Ability to control and discipline emotions.

—AUNT JANET.

A Gift for the Baby

BABY'S many friends sent gifts beautifully embroidered and skillfully knitted. Having no talents along that line, I had to choose something different. So I bought a small glass pitcher, a glass orange reamer, wrapped them prettily and attached a card bearing the following verse;

O, the doctor'll order, maybe,
Daily orange juice for baby,
So I hope that this donation
Helps you with its preparation.

—E. D. Y.

Tested Recipes

When the Cream Sours

MANY delicious dishes may be made with sour cream. Some favorites in our home are:

German Salad

Slice cucumbers very thinly, shred an onion (medium size to one large cucumber), sprinkle lightly with salt and pepper, also 2 tablespoons sugar, 1 to 2 tablespoons vinegar, depending upon the acidity of the cream, and pour over enough thick, slightly sour cream to moisten well. Beat with a fork until well blended and light. Serve immediately. This method is fine using shredded cabbage in place of cucumbers. Beat well and a delicious, fluffy salad is the result.

Dressing for Potato or Cabbage Salad

Assemble in inner pan of your small double boiler:

1 cup sour cream 1 teaspoon mustard
4 teaspoons sugar 1 beaten egg
1 tablespoon flour 1 teaspoon salt

Stir well. When mixture begins to thicken add 3 tablespoons vinegar. This must be taken from fire as soon as flour is cooked. One learns the psycho-

Purse No. B5468 comes stamped on black suedecloth for simple cross-stitch embroidery in worsted yarn which is included in the package. Rayon lining, crinoline foundation, canvas interlining, and genuine hookless slide fastener, are also included. Price \$1.65. Finished size, 7 1/4 by 11 1/2 inches. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

be thinned with cream or may have equal parts of mayonnaise added for variety.

Horseradish Sauce

This is excellent on cold boiled ham. I have best results with evaporated horseradish which I prepare according to directions. Use 1/2 sour cream whipped stiff, 1/4 prepared mustard, 1/4 horseradish, blend.

Fruit Cookies

2 cups brown sugar 1 cup walnut meats chopped fine
1 cup butter 1 teaspoon each soda, cinnamon
2 tablespoons sour cream 1/2 nutmeg grated
2 eggs
2 cups raisins (small or large ones, chopped)
flour to roll

The Indian Drum—By William McHarg and Edwin Balmer

Corvet made no reply to this. Alan, peering at him underneath the truck, could see that his hands were pressed against his face and that his body shook. Whether this was from some new physical pain from the movement of the wreckage, Alan did not know till he lowered his hands after a moment; and now he did not heed Alan or seem even to be aware of him.

"Dear little Connie!" he said aloud. "Dear little Connie! She musn't marry him—not him! That must be seen to. What shall I do, what shall I do?"

Alan worked nearer him. "Why mustn't she marry him?" he cried to Corvet. "Why?" Ben Corvet, tell me! Tell me why!"

From above him, through the clangor of the cars, came the four blasts of the steam whistle. The indifference with which Alan had heard them a few minutes before had changed now to a twinge of terror. When men had been dying about him, in their attempts to save the ship, it had seemed a small thing for him to be crushed or to drown with them and with Benjamin Corvet, whom he had found at last. But Constance! Recollection of her was stirring in Corvet the torture of will to live; in Alan—he struggled and tried to free himself. As well as he could tell by feeling, the weight above him confined but was not crushing him; yet what gain for her if he only saved himself and not Corvet too? He turned back to Corvet.

"She's going to marry him, Ben Corvet!" he called. "They're betrothed; and they're going to be married, she and Henry Spearman!"

"Who are you?" Corvet seemed only with an effort to become conscious of Alan's presence.

"I'm Alan Conrad, whom you used to take care of. I'm from Blue Rapids. You know about me; are you my father, Ben Corvet? Are you my father or what—what are you to me?"

"Your father?" Corvet repeated. "Did he tell you that? He killed your father."

"Killed him? Killed him how?"

"Of course. He killed them all—all. But your father—he shot him; he shot him through the head!"

Alan twinged. Sight of Spearman came before him as he had first seen Spearman, cowering in Corvet's library in terror at an apparition. "And the bullet hole above the eye!" So that was the hole made by the shot Spearman fired which had killed Alan's father—which shot him through the head! Alan peered at Corvet and called to him.

"Father Benitot!" Corvet called in response, not directly in reply to Alan's question, rather in response to what those questions stirred. "Father Benitot!" he appealed. "Father Benitot!"

Some one, drawn by the cry, was moving wreckage near them. A hand and arm with a torn sleeve showed; Alan could not see the rest of the figure, but by the sleeve he recognized that it was the mate.

"Who's caught here?" he called down.

"Benjamin Corvet of Corvet, Sherrill, and Spearman, ship owners of Chicago," Corvet's voice replied deeply, fully; there was authority in it and wonder too—the wonder of a man finding himself in a situation which his recollection cannot explain.

"Ben Corvet!" the mate shouted in surprise; he cried it to the others, those who had followed Corvet and obeyed him during the hour before and had not known why. The mate tried to pull the wreckage aside and make his way to Corvet; but the old man stopped him. "The priest, Father Benitot! Send him to me. I shall never leave here; send Father Benitot!"

The word was passed without the

mate moving away. The mate, after a minute, made no further attempt to free Corvet; that indeed was useless, and Corvet demanded his right of sacrament from the priest who came and crouched under the wreckage beside him.

"Father Benitot!"

"I am not Father Benitot. I am Father Perron of L'Anse."

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The Miwaka with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the Miwaka, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Constance receives a package containing some coins, a wedding ring and a watch that appeared to have been sent her by Corvet. An inscription on the watch leads to the knowledge that it had been given to one Captain Caleb Stafford for a rescue on Lake Erie. Stafford had been captain of the Miwaka. Spearman is angered because Constance shows so much interest in the mystery. Alan locates a carferry pilot named Burr who he believes can solve the mystery. Alan gets a job on the carferry.

"It was to Father Benitot of St. Ignace I should have gone, Father!.."

The priest got a little closer as Corvet spoke, and Alan heard only voices now and then through the sounds of clanging metal and the drum of ice against the hull. The mate and his helpers were working to get him free. They had abandoned all effort to save the ship; it was settling. And with the settling, the movement of the wreckage imprisoning Alan was increasing. This movement made useless the efforts of the mate; it would free Alan of itself in a moment, if it did not kill him; it would free or finish Corvet too. But he, as Alan saw him, was wholly oblivious of that now. His lips moved quietly, firmly; and his eyes were fixed steadily on the eyes of the priest.

CHAPTER XVIII

MR. SPEARMAN GOES NORTH

THE message, in blurred lettering and upon the flimsy tissue paper of a carbon copy—that message which had brought tension to the offices of Corvet, Sherrill, and Spearman and had called Constance Sherrill and her mother downtown where further information could be more quickly obtained—was handed to Constance by a clerk as soon as she entered her father's office. She reread it; it already had been repeated to her over the telephone.

"4:05 A. M. Frankfort Wireless station has received following message from No. 25: 'We have Benjamin Corvet, of Chicago, aboard.'"

"You've received nothing later than this?" she asked.

"Nothing regarding Mr. Corvet, Miss Sherrill," the clerk replied.

"Or regarding—Have you obtained a passenger list?"

"No passenger list was kept, Miss Sherrill."

"The crew?"

"Yes; we have just got the names of the crew." He took another copied sheet from among the pages and handed it to her, and she looked swiftly

down the list of names until she found that of Alan Conrad.

Her eyes filled, blinding her, as she put the paper down, and began to take off her things. She had been clinging determinedly in her thought to the belief that Alan might not have been aboard the ferry. Alan's message, which had sent her father north to meet the ship, had implied plainly that

your position and course; we will stand by,' at the same time making full speed toward last position given by Number 25. At 4:35, no other message having been obtained from Number 25 in the meantime. Manitowoc and Frankfort both picked up the following: 'S. O. S. Are taking water fast. S. O. S. Position probably twenty miles west N. Fox. S. O. S.' The S. O. S. has been repeated, but without further information since."

The report made to Henry ended here. Constance picked up the later messages received in response to orders to transmit to Corvet, Sherrill, and Spearman copies of all signals concerning Number 25 which had been received or sent. She sorted out from them those dated after the hour she just had read:

"4:40, Manitowoc is calling No. 25. No. 26 is putting north to you. Keep in touch."

"4:43, No. 26 is calling No. 25. 'What is your position?'"

"4:50, the *Richardson* is calling No. 25. 'We must be approaching you. Are you giving whistle signals?'"

"4:53, No. 25 is replying to *Richardson*, 'Yes; will continue to signal. Do you hear us?'"

"4:59, Frankfort is calling No. 25. 'What is your condition?'"

"5:04, No. 25 is replying to Frankfort, 'Holding bare headway; stern very low.'"

"5:10, No. 26 is calling No. 25. 'Are you throwing off cars?'"

"5:14, Petoskey is calling Manitowoc, 'We are receiving S. O. S. What is wrong?' Petoskey has not previously been in communication with shore stations or ships."

"5:17, No. 25 is signalling No. 26. 'Are throwing off cars; have cleared eight; work very difficult. We are sinking.'"

"5:20, No. 25 is calling the *Richardson*, 'Watch for small boats. Position doubtful because of snow and changes of course; probably due west N. Fox, twenty or thirty miles.'"

"5:24, No. 26 is calling No. 25. 'Are you abandoning ship?'"

"5:27, No. 25 is replying to No. 26. 'Second boat just getting safely away with passengers; first boat was smashed. Six passengers in second boat two injured of crew, cabin maid, boy and two men.'"

"5:30, Manitowoc and Frankfort are calling No. 25. 'Are you abandoning ship?'"

"5:34, No. 25 is replying to Manitowoc, 'Still trying to clear cars; everything is loose below . . .'"

"5:40, Frankfort is calling Manitowoc, 'Do you get anything now?'"

"5:45, Manitowoc is calling the *Richardson*, 'Do you get anything? Signals have stopped here.'"

"5:48, The *Richardson* is calling Petoskey, 'We get nothing now. Do you?'"

"6:30, Petoskey is calling Manitowoc, 'Signals after becoming indistinct, failed entirely about 5:45, probably by failure of ship's power to supply current. Operator appears to have remained at key. From 5:25 to 5:43 we

received disconnected messages, as follows: 'Have cleared another car. . . they are sticking to it down there . . . engine-room crew is also sticking . . . hell on car deck . . . everything smashed . . . they won't give up . . . sinking now . . . we're going . . . good-by . . . stuck to end . . . all they could . . . know that . . . hand it to them . . . have cleared another car . . . sink . . . S. O. . . Signals then entirely ceased.'"

There was no more than this. Constance let the papers fall back upon the desk and looked to her mother; Mrs. Sherrill loosened her fur collar

(Continued on Page 17)

some one whom Alan believed might be Uncle Benny was on Number 25; she had been fighting, these last few hours, against conviction that therefore Alan must be on the ferry too.

She stood by the desk, as the clerk went out, looking through the papers which he had left with her.

"What do they say?" her mother asked.

Constance caught herself together.

"Wireless signals from No. 25," she read aloud, "were plainly made out at shore stations at Ludington, Manitowoc, and Frankfort until about four o'clock, when—"

"That is, until about six hours ago, Constance."

"Yes, mother, when the signals were interrupted. The steamer *Richardson*, in response to whose signals No. 25

made the change in her course which led to disaster, was in communication until about four o'clock; Frankfort station picked up one message shortly after four and same message was also recorded by Carferry Manitoulin in southern end of lake; subsequently all efforts to call No. 25 failed of response until 4:35 when a message was picked up at once by Manitowoc, Frankfort, and the *Richardson*. Information, therefore, regarding the fate of the ferry up to that hour received at this office (Corvet, Sherrill, and Spearman) consists of the following . . ."

Constance stopped reading aloud and looked rapidly down the sheet and then over the next. What she was reading was the carbon of the report prepared that morning and sent, at his rooms, to Henry, who was not yet down. It did not contain therefore the last that was known; and she read only enough of it to be sure of that.

"After 4:10, to repeated signals to Number 25 from *Richardson* and shore stations—'Are you in danger?' 'Shall we send help?' 'Are you jettisoning cars?' 'What is your position?'—no replies were received. The *Richardson* continued therefore to signal, 'Report

The Indian Drum

(Continued from Page 16)

and sat back, breathing more comfortably. Constance quickly shifted her gaze and, trembling and with head erect, she walked to the window and looked out. The meaning of what she had read was quite clear; her mother was formulating it.

"So they are both lost, Mr. Corvet and his—son," Mrs. Sherrill said quietly.

Constance did not reply, either to refuse or to concur in the conclusion. There was not anything which was meant to be merciless in that conclusion; her mother simply was crediting what probably had occurred. Constance could not in reason refuse to accept it too; yet she was refusing it. She had not realized, until these reports of the wireless messages told her that he was gone, what companionship with Alan had come to mean to her. She had accepted it as always to be existent, somehow—a companionship which might be interrupted often but always to be formed again. It amazed her to find how firm a place he had found in her world of those close to her with whom she must always be intimately concerned.

Her mother arose and came beside her. "May it not be better, Constance, that it has happened this way?"

"Better!" Constance cried. She controlled herself.

(To be Continued Next Week)

HANDY ANDY Says "Here's How"

To Cultivate the Orchard

By Ray Inman

Cultivation in the apple orchard may be safely stopped in July or August

EARLY Cultivation extending up to July helps grow a good crop OF FRUIT

Cultivation after July prevents the fruit taking on color desired by market.

A natural growth of weeds, or cover crop, helps to mature the fruit and maintains organic supply in soil

What Can Farmers Do with Trespassers

Another friend related how a city man went on a farmer's property and actually dug up a beautiful and valuable blue spruce to use as a Christmas tree. The same friend told of a discussion at a meeting where village people were present, in which one woman asked why it was not all right to pick up nuts in a farmer's pasture. Our friend answered the lady by asking her if she thought it was all right for him to come into her husband's store and when the merchant was not looking to pick up and take away merchandise without paying for it. The woman said that that was different. We raise to ask why it is different. Are not property rights just as sacred in the country as they are in the city or village?

Another farmer kept missing sweet corn and after keeping watch he caught a woman prominent in society affairs in the local village red-handed stealing corn. (Yes sir, I used just the right word there—it is *stealing* and

(Continued from Page 3)

nothing else.) When taken to task for it the woman began calling the man names and said that he was lowdown and mean to begrudge her a few ears when he had so much sweet corn!

We could use the letters that have come into this office in recent years on this problem of trespassing and write a whole library on this subject. There is no end to what some trespassers will do, in violating their privileges when they are on farm property.

Some of them actually carry clip-pers to cut wire fences, letting the farmer's cattle out on to the neighbor's property or into his crops. Nothing at all is thought of tramping paths through growing crops. Not a year goes by that a considerable number of cattle and sheep are not carelessly, if not purposely, shot by hunters who, perhaps being discouraged by small game, shoot at something they can hit. Thousands of dollars in fruit and vegetables are stolen from farmers every year.

What Can You Do About It?

But the question for all farmers, particularly those who have lived near the cities and have had sad experiences from unwelcome guests, is, what can you do about it? Probably all of you feel the way I do, that you hate to shut out the good man, the decent chaps who respect their privileges, and the majority of folk are decent. If they are, however, they will come and ask permission before going on the property at all, and when they do, I think they should be given permission, if you can possibly do so, in the form of a written permit. You can have a few of these written or printed with your name signed so that when a man comes to ask all you have to do is get his name and address and then give him his written permit to go on your property.

I have tried to be fair in this matter but have come to the conclusion that unless a person is man or lady enough to ask permission for privileges on your property, he has no business there, and you have the right to take drastic measures to put him off and keep him off.

What are your rights in the matter? These are of two kinds: First, on unposted land, and, second, on posted land.

Unfortunately, the owner of unposted land does not seem to have many rights. He may order a trespasser off or he may sue him for actual damages but on the whole the owner of unposted land is rather helpless. The city or village owner of a bank or store or any other property is not obliged to post his place in order to protect it. How long do you think a trespasser would last wandering around a bank or a private dwelling in a city if he had no business there?

Posting About the only Protection

But with the owner of a farm, it is different. About his only protection is posting his property.

In order to be sure of my facts, I wrote to the Conservation Department as follows:

"What are a farmer's rights in relation to trespassers if his land is unposted? For example, suppose I own land through which a creek flows, my owner-

ship including both banks. In this creek there is a swimming hole that is so well known that the property is overwhelmed with trespassers all of the time, destroying its seclusion and the crops, through which trespassers run their automobiles.

"Just what are my rights in the matter, first, if the land is unposted, and, second, if it is posted?"

"How can I be fair to decent persons, friends and neighbors who would like to use this swimming hole and the creek for fishing purposes without destroying the entire value of the property to ourselves by letting in rowdies and riff-raff who drive cars across the hay and the crops and destroy the peace of the place by shouting and honking of horns all day on Sunday?"

"Do I personally have the right to arrest a trespasser who refuses to get off the property, first, if the land is unposted, and, second, if it is posted? If not, to whom may I appeal; and if the person is arrested, what are my rights and what are his rights in the case?"

Llewellyn Legge, chief of the Division of Fish and Game, answered my letter, giving the following facts:

"As a general proposition, a man owning property who makes no attempt to notify the public that he does not care to have trespassers on his property, has no redress either under the Conservation Law, or, do I think, under the Penal Statute. I am quite sure that unless the owner of property ought to convey to the public the fact that he did not care to have trespassers come on his land, it would not have much effect to warn them verbally.

"Under the Conservation Law, the

warning of the public against trespassing was simplified by the Legislature at its last session. Now all a person has to do is post signs with the simple wording "No Trespassing" forty rods apart around the entire boundary of his lands. Then if there is a trespass, the owner of the property under his constitutional rights, may, himself, arrest the violator and take him before a judge having jurisdiction, file his information and complaint against the trespasser and thereby start the trial of the case.

"To sum up the whole situation, the fact is that no person would have any more right to go on a man's land for the purpose of swimming in some nicely located swimming hole than he would to go on that person's land for the purpose of hunting, if the proper notices were displayed."

As a concluding word, let me say again that American Agriculturist has no desire to increase the bitter feeling that already exists over the trespass problem. I repeat that most of the trouble is due to a few and that the majority of those who love to walk the meadows and woods are good, law-abiding citizens.

The mutual problem of these good people and of farmers is to find a way not to curtail the opportunities for everybody to enjoy country life but at the same time protect the farmer and his property rights. The trouble is serious enough so that there ought to be more conferences between sportsmen's and farmer's organizations in an effort to find a solution, but in the meantime, about the only answer is for the farmer to post his property and then make an example by arrest and prosecution of those who insist on trespassing without permission.

How Farmers Get Hurt and Killed

(Continued from Page 5)

Skating or walking on thin ice.

Improper supervision of the old swimming hole.

Allowing young children to play with sharp-pointed shears or with any other sharp instruments.

Leaving tacks, nails, buttons, safety pins and small things on the floor where small children can pick them up, put them in their mouths, and swallow them.

Leaving poisons and medicines where children can reach them, or unlabeled where anyone may take them by mistake.

Think of the millions that have been injured by pans of hot water being left insecurely where they could be easily tipped off.

Allowing children to ride on the mower or tractor.

Standing on the tread of a manure spreader. Suppose it should be thrown into gear by mistake.

Fire Causes

Holes in stovepipes or chimneys. Clothes too near stovepipe or chimney in the garret.

Drying clothes, shoes or wood in the oven or too near the stove.

Never, o never, pour kerosene on fires.

Dropping matches into wastepaper baskets.

Lamps with small bases so that they are easily upset.

Bonfires too close to dry, shingle roofs.

Hot ashes too near buildings.

Putting damp or partly cured hay or grain into large mows or stacks. Spontaneous combustion may result.

Piling oily rags under work benches or closets.

Matches where children might get at them.

Threshing with no fire screen.

Smoking in bed.

Carelessness with gasoline. It is an explosive and should be treated as such.

Taking chances in electrical storms, such as telephoning, taking shelter under a lone tree, or standing near barbed wire fences.

Electricity Is Dangerous

In these days of electricity, there are a thousand and one ways to get

hurt by it. Like fire, it is a good servant but a bad master. Be sure that all wires are insulated and that all connections are properly made.

Watch out for accidents with ensilage cutters. Many a man has lost his hand or an arm.

Cog wheels, can, and often do, maim for life.

Treat a power belt always with respect. It is dangerous to fool with.

What about buzz saws? Need we more than mention them?

The tractor, that great labor saver, has also through carelessness caused much grief.

Never try to adjust a carburetor while the tractor is moving.

Did you ever climb back on the moving tractor to adjust the disk or plow? If so, you risked your life.

It is dangerous to back a tractor up to machinery while standing on the ground.

Did you ever get down in front of a mowing machine bar in gear, and horses hitched to it? If so, you were more lucky than wise if you are still sound.

Did you ever step into the binder reels to unclog the knives or fix something? It is bad business.

So is reaching into the knotter while the binder is running.

Beware of that old man killer, the threshing machine.

Horses and the various rigs that they draw have been the cause of many an accident.

Did you ever see a man walk out on the tongue between the team? What chance has he if the horses run?

Did you ever leave a team hitched to a mower in the middle of the field? Suppose they ran away.

All of us in unhitching the team have forgotten to loosen the last tug. It often starts a runaway.

A wired-up neck yoke or whistle tree is the cause of accidents, as is also a weak harness.

There are, of course, thousands of other ways of getting hurt on the farm. Space will not permit further listing, nor do we believe it is necessary. But if what we have said here prevents just one accident, the effort has been well worth while.

Summer Poultry Feeding for Profit

By Uncle Charlie

THE hand of the most successful poultryman that I know never quivers when it reaches for the feed in August or September.

He knows that birds left to run at large cannot find enough nutriment to maintain production and soon fall way below a normal summer decline. He has found that summer feeding pays—both in more summer eggs and a better conditioned bird for the fall lay.

B-B Most Productive or Money Back

Birds kept on B-B Vitamized Laying Mash and B-B Scratch Feeds throughout the year maintain the most economical production. Bull Brand Feeds are guaranteed to give you more for your feed dollar or your dealer will return your money.

Not Licensed to Write Insurance

Kindly inform me whether or not the United Automobile Association having offices located in Boston, Mass., Portland, Maine and Bangor, Maine, is an honest concern. We bought automobile insurance from them the first of the month, paying \$7 down and the remainder to be paid in October.

THE Insurance Department of the State of Maine reports to us that the United Automobile Association is not licensed to write insurance in the State of Maine. From what information we have it appears that this is merely one of the many companies that sell memberships and promise to give re-

Check Comes in Handy

I AM pleased to say that these people sent me a check for \$2.00 received this morning.

This is what I call REAL SERVICE. They would pay no attention to my letter asking for a refund on their instrument which I returned some time ago.

bates on gas, oil, accessories, free towing service and under certain conditions to give free legal service in case of accident.

It is peculiar how many of our subscribers get the idea that they are buying auto liability insurance. We, of course, have no way of knowing just what the salesmen for such concerns tell them which creates this impression. At the same time, the heavy correspondence from our readers on this type of association, almost invariably states that they have received no benefits from membership in the association which would repay them the amount it cost.

A number of so-called auto service companies have been closed up through legal action, but this of course, is only after they have collected thousands of dollars from motorists.

Sideshow Advertising

Last fall at the Allentown Fair my mother paid \$5. to a man who was selling medicine for rheumatism. Later she sent another order for \$5.00 to the National Health Laboratory, Brooklyn, N. Y., but has never received the medicine. The Post Office traced the money order and found that it had been cashed.

THERE are several things that might be said regarding this letter. In the first place, reputable physicians never follow the sideshow method of advertising their merits and for that matter we do not remember that any reputable concern which might come under the heading of a manufacturer of patent medicines, follows this method either.

In the second place, we think one's health should be too precious to trifle with in consuming dope which may or may not be harmful. The American Medical Association which maintains a Bureau of Investigation, reports that they have never heard of this concern.

Too Small for a Lawsuit

"Early last winter I sold fifteen bushels of potatoes to Robert Allen of Hartford, N. Y. He bought potatoes from me previously and paid for them, but this time he said he did not have the money but would pay me later. However, he never came back for any more potatoes and I never received pay for the last ones I sold him. I have written to him several times but do not get any satisfaction."

WE have written Mr. Allen twice on this matter, but so far have not had the courtesy of a reply from him and our subscriber reports that up to date he has not received his pay for these potatoes. We usually feel safe in concluding that a debt is just when the debtor refuses to come forward and state his side of the case. The amount, however, is scarcely sufficient to war-

rant legal action and it might be difficult to collect a judgment even though one were secured.

One in Fifty Thousand Win

ALMOST every day we get letters from some of our readers asking that we give them information about some concern which claims to be able to market their movie scenario plots. In the first place, no company producing moving pictures will hardly even consider a scenario written by an amateur. At the same time, only four out of every 100,000 scenarios submitted by both amateurs and professionals ever find their way to the screen. The large majority of moving pictures are taken from novels, stage plays, magazine stories, or are written by trained writers who make this their business. Certainly one is taking a long chance when they consider these facts and then part with their good money to some school that claims to be able to teach you to write for the silver screen.

What Security for Loans?

IF a stranger should come along and ask you to lend him \$1,000 you doubtless would think quite a long time before granting his request. Should he go a little farther and promise to pay it back in a short time and in addition give you \$500 or \$1000 you would probably laugh at him. At the same time this is exactly what is happening, in a little different way, when an agent comes along and tries to sell you stock in some new company to the extent of \$1,000. He is really borrowing your money to put into the company, and your only security is the possibility, or perhaps probability, that the company will be profitable and will pay dividends on their stock. If they do not pay dividends, you have no come-back,

inasmuch as anyone who invests in stocks does so under the supposition that the company will prosper and be able to pay dividends.

Protection at Low Cost

American Agriculturist,
Ithaca, New York.
Dear Sirs:

Your favor enclosing draft for Five Hundred Dollars from the North American Accident Insurance Company of Chicago, Illinois in full payment of claim covering death of Mr. Ernest Stock who was struck by an automobile while walking on the Genesee highway near his home east of Auburn, N. Y., was duly received.

I have had an insurance agency for over twenty-five years and represent twenty of the largest fire and casualty companies yet I do not know that I ever so fully realized what a beneficial institution insurance really is.

A calamity coming to a family so suddenly, so unexpectedly, finding them in no condition to meet the situation, perhaps financially as well as otherwise, the ready cash at once to help meet the necessary and unforeseen expenses seems truly a God-send. It seems hardly possible that for so insignificant a premium that this protection can be furnished.

Mrs. Stock is my sister-in-law and for her I took the matter up with the Company and I appreciate very much

the manner in which they took care of this loss.

Mrs. Stock and family wish to express to the American Agriculturist and to the North American Accident Insurance Company their appreciation and thanks for the prompt payment without discount, the draft being received within a few days after the proof of loss was mailed the Company.

Very truly yours,
(Signed) FRED H. GREGORY,
Skaneateles, N. Y.

We Enjoy These Letters

I certainly wish to thank you for your kindness in finding out particulars in regard to Dr. Bobo who advertised to cure goitre. He was recommended highly to me but I am glad now I asked you first.

* * *

I received a check from the.....R. R. for \$22.50 in settlement of the claim I had against them and I thank you very much for the help and courtesy you have shown for my welfare. Had it not been for you I would never have received the money.

* * *

I thank you for your kindness in sending me a report on the....., and appreciate the service rendered by your Service Dept. Your paper should be in the home of all farmers for it is the farmers' friend.

Songs that Mother Used to Sing Annie Laurie--How It Came to Be Written

By DAVE THOMPSON

Maxwellton's braes are bonnie,
Where early fa's the dew,
And it's there that Annie Laurie
Gie'd me her promise true;
Gie'd me her promise true,
Which ne'er forgot will be;
And for bonnie Annie Laurie
I'd lay me doune and dee.

Her brow is like the snaw drift,
Her throat is like the swan;
Her face it is the fairest
That e'er the sun shone on;
That e'er the sun shone on,
And dark blue is her e'e;
And for bonnie Annie Laurie
I'd lay me doune and dee.

Like dew on the gowan lying
Is the fa'o' her fairy feet;
And like winds in the summer sighing,
Her voice is low and sweet;
Her voice is low and sweet,
And she's a' the world to me;
And for bonnie Annie Laurie
I'd lay me doune and dee.

A LOVER'S tribute to his lady fair—such is the sentiment of the bonnie Scotch song, Annie Laurie. It was written in its original form of two verses about 230 years ago by a soldier of fortune, swordsman, and duellist, by name William Douglas of Fingland, who had been born at Sauquahar Castle about 1672. At the close of the Continental wars about 1700, he found himself at Maxwellton Castle, the home and estate of Sir Richard Laurie, a baronet. Maxwellton comprised 1,810 acres along Cairn Water in Glencairn Parish, Dumfriesshire, Scotland. It is still held by descendants of the Laurie family, and is one of the places to go to when you visit Scotland. Its fame lies not in any accomplishment of a particular member of the family, but because an infatuated lover wrote sentimental verses to the daughter of Sir Richard Laurie—Bonnie Annie Laurie as he so fondly called her in his poem.

The Original Poem

His poem, written for her at the height of their 'love's young dream' differs materially from the song as we now know it. The first verse is much the same, but the second verse has been so completely remodeled that it may be of interest to read it as this gallant soldier of fortune indited it to his lady love:

"She's backit like the peacock,
She's breastit like the swan;
She's jimp about the middle,
Her waist ye well micht span;
Her waist ye well micht span,
And she has a rolling eye;
And for bonnie Annie Laurie
I'll lay me down and die."

That Annie Laurie was a bonnie lass is seen in the painting of her that hangs in Maxwellton Castle. But either her charm for him failed, or she became fascinated in another direction, for William Douglas, stouthearted fighter though he was, never laid him down to die for Bonnie Annie. Instead, in 1706, he married Betty Clerk, daughter of Alexander Clerk of Glendorth. He stopped writing poems, settled down, became the father of four boys and two girls, and died in 1760, at Tweddale, and was buried in the burying ground of his cousin Adam Kennedy of Auchtyfardle. At least, that

Songs that Mother Used to Sing

(Continued from Page 19)

seems to account for him, although one official army record may be that of his death—"Dec. 26, 1753—at Edinburgh, Captain William Douglas, Conductor of Waggon in the Late War." Some historians think that this official record refers to him.

A few years after she had fondly tucked away the verses inscribed to her by her soldier of fortune, Annie Laurie married a neighboring country gentleman, Alexander Fergusson of Craigdarroch, who later represented Glencairn parish in parliament and was quite a substantial gentleman of consequence. To them were born two sons and two daughters.

Annie Laurie was born December 16, 1682, and died May 5, 1764. And it was still another 60 years after her death, or in 1824, that the words written to her personal charm by William Douglas—124 years after she blushed with joy as she read them and tucked them fondly away in her bosom—found their way into print. A relative of the Laurie family, Charles Kirkpatrick Sharpe, found them and included the two verses in a little book of ballads of which he had but 24 copies printed for his friends. A few years later it was reprinted in a collection of poems compiled by Allen Cunningham.

How It was Found

There it might have been buried for all time had it not been for a vivacious young girl who in 1835 went for a visit to her married sister Maggie, Lady Hugh Campbell, who lived in Marchmont. This girl, Alicia Anne Spottiswoode, of a family of Berwickshire whose records go back as far as the year 1296, was a lady of exquisite beauty and accomplishments. She wrote poems of beauty and love, for which she composed tunes, accompanying herself upon the harp as she sang. While staying with her sister Maggie she came upon the verses of the poem 'Annie Laurie' in the Cunningham collection. She worked them over into her own style, refining the second and adding a third, so that the song as we sing it, is really more the work of this poetess than that of the original lover who wrote them. That they have become loved is due to the work of Alicia Anne Spottiswoode, Lady John Scott.

The record of just how she happened to bring the song to life, is told in her own words:

"I made the tune very long ago, to an absurd ballad originally Norwegian, I think, called 'Kenmpie Kaye,' and once, before I was married, I was staying at Marchmont, and fell in with a collection of Allan Cunningham's poems. I took a fancy to the words of Annie Laurie, and thought they would go well with the tune I speak of. I did not quite like the words, however, and I altered the verse, 'She's backit like the peacock', to about as it is now, and made the third verse, 'like the dew on the gowan', myself, only for my own amusement. But as I was singing it, and as Hugh Campbell and my sister Maggie liked it, I accordingly wrote it down for them."

The 'Annie Laurie' of Lady John Scott was first published anonymously in a song collection in the year 1838. Her authorship was first disclosed when she included 'Annie Laurie,' words and music, in a collection of six songs which she contributed for publication and sale for the benefit of the wives and children of the soldiers who were ordered east in the Crimean War in 1854. Among the soldiers of Great Britain during the maneuvers before Sebastopol which resulted in a victory for the British and French armies over the Russians, the song 'Annie Laurie' first became popular.

Lady John Scott died in 1900 at the age of 80 years, and lies in the burying ground of Westruther Kirk.

To the romance of William Douglas and Annie Laurie 230 years ago—and to the refinement of Lady John Scott who nearly 100 years ago, taking the crude verses of the soldier of fortune, changing the first, rewriting the second, and adding a third, set them all to her own melody, our mothers and fathers are indebted to the romantic pleasure they have had in singing "Maxwellton's braes are bonnie," the love song of a century.

Be Ready When the Corn is Ripe

... with McCORMICK-DEERING Equipment

WHEN your corn is ready to cut, depend on the McCormick-Deering Corn Binder to do the heavy job for you in short order. It has years of successful performance back of it. You can have your choice of either a vertical or horizontal binder. The McCormick-

Deering does a clean job whatever the condition of the field. Cutting and carrying to the binding mechanism is positive. The butt adjuster has a wide range of adjustment. The reliable knoter assures binding every bundle. Bundle loaders may be had for both types of binders.

Enclosed-Gear Ensilage Cutter

The improved McCormick-Deering No. 12 Ensilage Cutter has a capacity of 10 to 16 tons per hour. It is the enclosed-gear machine with the one-piece, bridge-type main frame that encloses the flywheel, cutter, transmission, and apron drive. Another feature is the use of slip clutches on the paddle roll, feeding roll, and apron drive, which prevent overfeeding and damage to the machine.

All working parts are in an oil-tight, dust-proof housing and run in a bath of oil. Gears are especially cut and heat-treated. To vary the length of cut on the No. 12 merely shift a lever outside the housing. A selective-gear type of transmission, similar to that in an automobile, controls the speed of the feed table. The large, reinforced boiler plate flywheel with eight steel wings is safe at all working speeds. Other McCormick-Deering Ensilage Cutters are available in capacities ranging from 3 to 25 tons per hour.

The Popular No. 12
McCormick-Deering Ensilage Cutter

Here's the Most Modern Machine for Making Ensilage

The McCormick-Deering Ronning Ensilage Harvester brings to the corn grower the same high degree of economy and efficiency that the harvester-thresher has brought to the grain grower. In one operation it cuts the corn, reduces it to ensilage lengths, and delivers the ensilage to a wagon or truck ready for the silo. A McCormick-Deering Ensilage Blower blows the ensilage into the silo.

The Ensilage-Harvester is power-driven through the power take-off of a McCormick-Deering Tractor. It saves time, labor, and expense making ensilage. The binding, loading, and hauling of stalks are eliminated. The ensilage is made when the corn is at its richest stage. It eliminates the large crews, binder twine, heavy grocery bills, and extra work for women on the farm at silo-filling time. See the McCormick-Deering dealer now about this remarkable machine.

INTERNATIONAL HARVESTER COMPANY

606 So. Michigan Ave. OF AMERICA Chicago, Illinois
(Incorporated)

Branches at Albany, Auburn, Buffalo, Elmira, Ogdensburg, N. Y.; Philadelphia, Pa.; and at other points in the United States.

McCormick-Deering Corn-Harvest Equipment

is ready also to handle your crop by other methods. See our modern Huskers and Shredders, made in 4, 6, 8, and 10-roll sizes. To pick the corn in the field, ask the dealer about the McCormick-Deering Corn Pickers—made in One-Row Tank type and Farmall One and Two-Row Pickers, picking and husking up to 16 acres a day. Write for catalog on any of these machines.

Surplus Sale HOLSTEINS Sept. 27, 1930

Fishkill Farms will offer at their surplus sale of Holsteins, daughters of their two great herd sires, King Piebe 19th, 427880 and Sir May Hengerveld De Kol, 430230. This sale takes place on September 27, 1930.

Farm is at East Fishkill, just off main highway from Fishkill to Pawling.

Silver Threads Among the Gold

THE music of this favorite love song was written by H. P. Danks (above) and the words by Eben E. Rexford (below) when both were young men. The large picture shows Danks' home on 9th Avenue, New York, at the time he wrote the music. This song, which has made a place for itself in so many million hearts, brought the author and the composer \$18. See page 3.

Songs that Mother Used to Sing

All in the day's work with a **FORDSON**

A MAN in Missouri is pleased with the way his improved Fordson turns heavy sod. A wheat farmer of North Dakota tells how his new Fordson helped cut 500 acres of grain this year in record time. Other Fordsons for other farmers are doing a dozen and one different jobs quickly, easily. The following new and modern features explain in part why the improved Fordson makes good at so many farm-power jobs.

The engine can deliver 30 actual horse-power at 1100 r.p.m. at the belt. This provides more than ample power for the pulling and belt-power jobs on the farm. The high-tension magneto with enclosed impulse-starter coupling makes starting easy. The improved Fordson is equipped with hot-spot manifold and carburetor for gasoline. The cooling-system water-pump is driven by a V-type fan belt. The air-washer holds enough water for the day's run.

The filter that separates grit and carbon from the oil on the improved Fordson is easily cleaned—but should it get clogged, oil system will keep right on working. There is no complicated piping to get stopped up! Transmission is fitted with large roller bearings. The transmission brake is sixteen-plate multiple-disc with increased plate-surface.

Gears shift easily from increased clutch release movement. Rear-wheel fenders are standard equipment. Either spade-lugs or angle-cleats are available for drive wheels.

We said at the first that these features would partly explain why farmers like the improved Fordson Tractor. The only way to know *entirely* why they like the improved Fordson is to try one yourself. *Modernize your farm with a Fordson Tractor.*

Wheels are of strong, one-piece construction and mounted on taper roller bearings. Wheels are heavier than formerly. Front spindles, steering-arms, steering connecting-rods are all drop-forged from carbon steel. The front axle is drop-forged of carbon steel and heat treated.

Fenders have been added to the improved Fordson to protect driver from dirt, add weight and balance. These fenders are of heavy gage steel.

And Now Come School Clothes

Every Fall Brings This Interesting Problem to Little and Big

By MRS. GRACE WATKINS HUCKETT,
Household Editor, American Agriculturist

VACATION now stops short and the business of school clothes must be tackled. Fortunately it is not an abrupt change but gradually slides over from summer days and frocks to the sparkling crispness of autumn. This makes it possible to use summer things a little longer while more substantial garments are being collected for cold days that are sure to come. However, if the student goes away to college plans have to

door covering. One mother told me she always dressed the children by the thermometer rather than by her own feelings. In that way she could tell how much to put on. Another mother told me that she noticed her children had fewer colds since she decided to spend the money it took to buy lightweight woolen underwear which seemed very expensive but paid for itself in better health.

The college girl will wear practically the same underwear summer and winter, usually the knit rayon or silk step-ins, bloomers, or panties and vests, but will get the needed warmth from thicker dresses, sweaters and coats.

As for shoes and stockings, how Dad groans over the shoe bill! But no part of the outfit is more important in health and looks than the shoes. Young feet are easily misshapen by poorly fitting shoes and permanent injury may be done. So if sacrifices have to be made, they should come at other points rather than with the shoes. Add to these costume necessities which are common to grade school, high school and college, the item of mittens and gloves and this part of the list is about complete. The other things needed vary according to age and activities indulged in by the student.

Because the college girl needs hers all at once, I give her list first. This is a list recommended by the New York State College of Home Economics which insists that well-chosen clothing is far more important than an extensive wardrobe. Of course where money is no consideration, there is no limit to what a girl may have but elaborateness is out of place for the young girl anyway:

Shoes—1 pair low-heeled school shoes such as oxfords, 1 pair dress shoes, 1 pair evening slippers.

Silk stockings—4 pair for school, 2 pair for best.

Dresses—1 wool and 2 silk for general wear, 2 for afternoon, 2 for evening.

Coats—1 slicker, 1 spring coat, 1 heavy winter coat, 1 sweater or short coat for sports.

Hats—2.

Gloves—2 pairs.

Pajamas or gowns—3.

Underclothing—8 sets.

Purse—1.

The school dresses get the hardest wear and should be chosen with that idea in mind. The present vogue for cotton makes it possible to use it as long as it can be worn comfortably. Silk dresses and at least one wool dress for severe winter weather would then furnish enough variety. If the girl is clever at making dresses, that makes it possible for her to have more. Furthermore, not all the garments on the list would have to be bought every year as some would carry over another season or two.

Most schools furnish a list of necessary clothing as well as articles needed for the student's room, and where one is going away for the first time, this list should be procured.

And now for the younger girl and boy who operate from the home base. The boy is easily disposed of because most of his clothing is bought ready-made these days. For fall days at school, a cap, odd knickers and a sweater are just right, the usual blouse or shirt being used underneath. You know your own boy, so figure how many changes he must have of this outfit. The lumberjack is very popular with boys, often being preferred to sweaters as it is made of woolen cloth or leather and does not catch on every splinter or rough surface. A hat and one suit for better wear is needed, and any mother feels safer if there is a best suit and a second-best. But I know plenty of little boys who get along nicely with one good suit and the odd knicker-sweater arrangement for every day. Helmet and winter coat take care of the extra cold weather needs. One thing more for the little man; choice of color is just as important for the boy as for the girl and an attractive ensemble can be collected for him too, even if it is only in cap, sweater, stockings and knickers. Boys can be taught to appreciate color as well as anybody and school clothes make a good point of departure. Furthermore, matching colors does not take money but time.

As for the little girl, cotton dresses

These Bulletins Will Help

THE following bulletins may be had free from the United States Department of Agriculture at Washington, D. C. as long as the supply lasts:

Bulletin No. 1523—Leather shoes, selection and care.

Leaflet No. 52—Suits for the small boy.

The following leaflets may be obtained for 5c each from the Superintendent of Documents at the United States Department of Agriculture in Washington, D. C.:

Leaflet No. 63—Ensembles for Sunny Days.

Leaflet No. 11—Children's Rompers.

Leaflet No. 26—Dresses for the Little Girl.

The following booklet may be obtained from the American Agriculturist, 461 Fourth Avenue, New York City, for 25c:

How to Make Children's Clothes.

The following bulletins may be obtained free from the Mailing Room of the New York State College of Home Economics, Ithaca, N. Y.:

Bulletin No. E149—Feet and Shoes.

Bulletin No. E150—Children's Clothing.

Bulletin No. E127—Simplifying Home Sewing.

Bulletin No. P492—Organization of the Sewing Center in the Home.

will make up the bulk of her needs along that line except for cold weather. She will have the bloomer or pantie frock which so well answers for underwear and dress too. The motto in selecting children's dresses should be "easy to make, easy to launder and

(Continued on Page 14)

The girls under this classic archway of Hazard Quadrangle Dormitory at Wellesley College, are clad in the simple, becoming dresses that properly go with youth and campus activities.

cover several months and trunks filled accordingly.

And as in all cases where money, labor and time have to be spent, some definite plans get far better results than if the wardrobe, like Topsy, just grows. Even if Johnnie and Mary are right here in the home every day and the stores only a half hour's ride away, the family temper and its pocketbook will fare better if those sweaters are planned for and on hand ready to wear the first cool morning instead of waiting for the cool day to get here first.

Instead of being scared and depressed by facing the fact that certain clothing is needed, why not make out a list of what each child has that can be used and a list of things that have to be made or bought ready-made? This would give an idea of the work to be done and would save a lot of time shopping around, as several errands could be done on one trip, especially if more than one has to be shopped for.

No matter what age the school-goer is, certain things are needed and I put them first because health is involved. Protection against the weather requires some sort of waterproof coat, rubbers or galoshes, and umbrella or rain hat. Too often these needs are put last on the list. Another fundamental that has much to do with health, especially in the number of colds, is the underwear. Where the school room is kept at summer temperature, and many of them are, too heavy underwear is punishment. Yet if a long walk or ride over cold roads is part of the daily program, the body must be protected. So the answer is light underwear, leggings and top coat or extra sweaters to supply the needed out-

Songs that Mother Used to Sing

Silver Threads Among the Gold (See Cover)

By DAVE THOMPSON

Darling, I am growing old,—
Silver threads among the gold,
Shine upon my brow today—
Life is fading fast away;
But, my darling, you will be, will be,
Always young and fair to me;
Yes, my darling, you will be—
Always young and fair to me.

When your hair is silver white,—
And your cheeks no longer bright,
With the roses of the May,

I will kiss your lips and say;
Oh, my darling, mine alone, alone,
You have never older grown.
Yes, my darling, mine alone—
You have never older grown.

Love can never more grow old,
Locks may lose their brown and gold;
Cheeks may fade and hollow grow;
But the hearts that love will know
Never, never winter's frost and chill;
Summer's warmth is in them still.
Never winter's frost and chill,
Summer's warmth is in them still,

Love is always young and fair,
What to it is silver hair,
Faded cheeks or steps grown slow,
To the hearts that beat below.
Since I kissed you, mine alone, alone,
You have never older grown,
Since I kissed you, mine alone,
You have never older grown.

MAGIC words spoken from the heart—"You have never older grown." The denial of the lover-husband that the years of happy life have marked his darling wife with the signs of the burden of age. Hair silver white!
(Continued on Page 14).

School time is soon at hand. Are the children's clothes ready? The accompanying article will give many helpful suggestions.

Vol. 126 August 30, 1930 No. 9

Milk Investigation Unfair to Dairymen and the League

THE politicians' and newspapers' old game of making a political and publicity football out of milk is on again full blast in New York City. On August 11 the Dairyman's League Cooperative Association took the initiative in raising the price of Class 1 milk thirty-seven cents a hundred pounds and twenty cents on Class 2. This was followed by a similar price raise to other dairymen, and the retail price was advanced one cent a quart.

As soon as this became known, the district attorney of Kings County, George Brower, started a milk investigation in an effort to show that the price raises were not justified. The absurdity of this should be realized by anyone who knows that the price of milk to farmers always is advanced at this time of year or a little later. In particular, this year, because of the drought conditions, the increased price was more justified than ever. Pastures are burned out, and feed and other costs of milk production are advancing.

The milk investigation is all the more absurd because, after all the talk about farm relief, when the farmer tries to help himself the politicians and newspapers step in to do all they can to injure his cause.

The Kings County prosecutor, for some reason or other, got out from under and turned the investigation over to the New York State Attorney General Hamilton D. Ward. Referees were appointed to hear the evidence, both on the raise in milk prices and to investigate raises in the prices of other farm products which had come about as a result of the drought. The assistant State attorneys under Mr. Ward are carrying on the investigations, in, what we have been told, a most unfair and prejudiced manner. Officers of the Dairyman's League have been called before District Attorney Brower and stated frankly that the League was responsible for the raise in price to farmers, and that such raise was fully justified. The League also has been accused at the hearings before the referee of unfair trade practices in its wholesale milk business in New York City.

As nearly as we can find out, all the League has been guilty of is trying to hold its own business. Every time the League has purchased a new business in the city the smaller independent dealers have concentrated in using every kind of unfair practice to get the League's business away from it. The newspapers have taken the attitude that eight cents a quart for loose milk is a fair price. This would result in about \$1.50 a hundred for Class 1 milk to farmers. As a matter of

fact, the League has fought to maintain a wholesale price of eleven cents a quart to retailers, and these retailers have sold this loose milk at twelve cents. No evidence has been brought forth to show that loose milk was sold at more than twelve cents a quart to consumers. If any unfairness exists anywhere, it is in the fact that even twelve cents a quart is too low from the farmers' standpoint.

The situation is further complicated by the entrance of Aaron Sapiro, a lawyer known to many New York farmers through his attempts at forming farmers' organizations, most of which have been unsuccessful. He is now reported as being the leader in the organization of the new Harlem and Bronx Dealers' Association, which seems to be the organization which took the place of the one formerly headed by Larry Fay, indicted for nefarious trade practices, and his organization broken up. Mr. Sapiro is apparently an enemy of the Dairyman's League Cooperative Association and is reported to be active in the present investigation against the League.

Newspapers at this writing on August 21 are full of sensational stories giving the consumers the idea that the dairymen and their organizations are profiteers. Consumption is falling off, and it is extremely difficult to maintain the present prices of milk. The wholesale price of loose milk per can in New York City should be \$4.40. The average selling price now, however, is only \$4.00, and if the publicity continues, it will be only \$3.80 by another week. The situation is also affecting the market for and price of bottled milk.

The investigation is also very unfortunate from the consumers' standpoint. Years have been spent teaching the consumers the value of milk and that it is cheap compared to other food products and this sensational publicity undoes this good work.

Every dairyman, whether a member of the Dairyman's League Cooperative Association or not, owes a debt to the League for the courageous way in which it has handled this fight for all dairymen. The Publisher and Editor of AMERICAN AGRICULTURIST urged representatives of the League to put the price up before they did because we knew that it was justified from the farmers' standpoint. The League's only hesitation was in the effect it would have on consumption.

This publication has not hesitated to offer suggestions and criticisms of League policies in former years, but we are for the League in this instance one hundred per cent because throughout the season it has fought to maintain prices of milk to farmers, and it is taking the brunt of the battle at the present time for the whole industry.

The Drought, Overproduction, and Prices

THE New York State crop report of August 1 is, of course, somewhat out of date now.

The drought has done much damage since it was issued so that it is too optimistic. But we are particularly struck with the facts shown by this report that with many crops a much larger acreage was planted this year than before in years, so that had there been no drought, there certainly would have been a great over-production in at least several of New York State's leading crops. Coupled with this is the fact also that consumption of most products is greatly reduced because of hard times in the city. So, taken together, we certainly were headed before the dry weather for a bad fall with exceedingly low prices.

There is the old adage that every cloud has a silver lining. It still seems to us, bad as the drought is, that the silver lining in this instance is almost, if not quite, as big as the cloud and that the drought, by cutting down production, will in many instances result in better prices and more money in hand than the farmers would have enjoyed had there been no dry weather.

To give a few examples, take wheat. Con-

siderable wheat is raised in A. A. territory. This year there was a yield of 5,340,000 bushels compared with 4,448,000 bushels last year. A short time ago wheat was a drug on the market. Now the price is going up every day. The same is true with other grains in all of which, except corn and buckwheat, the New York State farmers' acreage was larger this year than last. Even with buckwheat, our acreage is 7 per cent larger in New York this year than in 1929.

With apples, New York growers this year will have at least a fair crop. The drought has nearly wiped out the apples in Virginia, one of New York's chief competitors. New York also will have an average crop of most other fruits, and indications for prices are good.

On August 1, prospects were for 22 million bushels of beans as compared with 19,693,000 bushels last year and only 17,323,000 bushels for the five-year average. In other words, had there been no drought, there would have been a tremendous over-production of beans.

All of this is small comfort for the man whose crops are ruined entirely by the drought, but the history of agriculture shows that the low production years put more dollars into the farmers' pockets than when there was over-production. Here's hoping that this will be the case this year.

Is there Gambling at Fairs?

ONE of the best laws passed in New York State in a long time was put on the books in 1928 and provided for the elimination of gambling and obscene shows at all fairs. The law reads in part:

"No immoral, lewd, obscene or indecent show or exhibition, and no gambling device or devices, instrument or contrivance in the operation of which bets are laid or wagers made, wheel of fortune, or game of chance, shall be permitted upon the grounds during the annual meeting, fair or exposition of any county agricultural society or town or other agricultural society, and it shall be the duty of the State police to enforce this prohibition. This prohibition shall not be construed to prohibit horse racing, or tests or trials of skill."

The supervision of agricultural fairs was by Section 287 placed under the jurisdiction of the Commissioner of Agriculture and Markets, after consultation with the Dean of the State College of Agriculture at Cornell University. Under that section:

"No disbursement shall be made to any agricultural society * * * if the last preceding fair or exposition * * * shall not have been of a standard worthy, in the opinion of the Commissioner, of State aid, based upon its contribution to the promotion of agriculture and domestic arts."

The State Department of Agriculture and Markets, responsible for the enforcement of this law, reports that during the two years in which this law has been enforced the officials of fairs have cooperated and responded in a very satisfactory manner. While there are still some objectionable features, those who go to the fairs know that there has been a very decided change for the better.

Some reason and judgment must be used in enforcing the law, in deciding what constitutes games of skill and games of chance. For example, doll racks are pretty close to the edge, but considerable skill is needed and probably they are not in the real gambling class with roulette wheels and blanket lotteries, etc. Some of the shows and games that have been brought into rural neighborhoods at county and local fairs in past years have been a disgrace to the authorities who admitted them and a menace to the people, particularly the young men, who went to the fair.

The State is to be commended for its progress in eliminating gambling and indecent shows, but whether you have a good fair or not in this respect is still somewhat a matter of local public opinion.

This is fair time. Our suggestion is that if you find gambling and bad shows at the fair that you attend, you should report the facts with details promptly to the New York State Department of Agriculture and Markets at Albany.

Some Master Farmers of 1929

Brief Biographies Show Why They Are an Honor to Agriculture

IT is an inspiration to visit the farm of a Master Farmer. Good crops and good animals give the first impression, but a visit with the owner of the place reveals personal struggles and accomplishments far more interesting. For the past month, the editors of AMERICAN AGRICULTURIST have been visiting many who have been nominated for the 1930 class of New York

founders of the County Farm Bureau and has served as director of that organization. He was trustee when his district built a modern, two-room schoolhouse. He has served as president of the local cooperative association, as director of a cooperative insurance company and was a founder and director of the Germantown National Bank. He has served his community as town clerk and supervisor and is one of the principal supporters of his church where he is one of two senior officers.

* * *

MORGAN MYERS, Barnerville, Schoharie County.

IF you are interested in fine Ayrshire cattle, we suggest that you call on Master Farmer Morgan Myers of Schoharie County. He and his son who works with him, have thirty-two Ayrshires with an average milk production of better than seven thousand pounds a year.

We visited Mr. Myers' farm during Schoharie Fair Week and found him at the Fair where they were exhibiting quite a number of their herd. Modesty is an outstanding characteristic of a Master Farmer, but Mr. Myers has this virtue to a superlative degree. While he was perfectly willing to show us his farm, he seemed to feel that there were many others more deserving of the honor and when we left he took pains to make it clear that we would be just as welcome to call again even though the judges should omit his name from the list.

The Myers' homestead is in a narrow valley. The house, which is long and low, is surrounded by trees and at the back is a fine lawn. The barn is thoroughly modern and the whole farmstead is clean, neat and attractive.

Donald, the son, is a graduate of the State School of Agriculture and three daughters are graduates of state normal schools. Mr. Myers has been president and treasurer of his Farm Bureau, has held practically all of the offices in his local Grange, is financial secretary of his church and trustee of his local school district.

Our women readers will admit that it might sometimes be embarrassing to show a total stranger through the house in the middle of the forenoon. The fact that Mrs. Myers did this, should convince the most skeptical of her ability as a homemaker.

* * *

HENRY MARQUART, Orchard Park, Erie County.

REALIZING that Mr. Marquart is president of the National Vegetable Growers' Association, president of the Erie County Farm Bureau, President of his local Grange and trustee of the Orchard Park Presbyterian Church, one might be justified in concluding that he finds little time to engage in actual farming. However, in spite of the fact that I arrived unannounced, I found him driving a tractor. In fact he was so covered with dust that I had to look twice before I was sure I had found the right man.

Although small in area, 22½ acres, the farm is large in production, labor and income. Most of the area raises two or three crops of vegetables a year which are trucked to the Buffalo market. Total sales for the year total about \$15,000.

Henry, Jr., nineteen, and Ruth,

fifteen, are learning to accept the responsibilities of life as a matter of course. While Mr. and Mrs. Marquart visited with us in the pleasant, modern farm house, Ruth took entire responsibility for preparing the evening

meal. At that time, Henry, Jr. was away from home, but later we met him at Ithaca where he was just beginning his four-year course in agriculture. When he is home during the summer and when his father is away on business trips, he takes full responsibility for managing the place.

local school district, has served as master of his Grange, director of the County Farm Bureau and vice-president of his local Chamber of Commerce.

Mr. and Mrs. Robens have four

Mr. W. D. Robens with his senior herd sire

In addition to running the farm and assuming the other responsibilities already mentioned, Mr. Marquart finds time to act as a member of the local Boy Scout troop committee. He is either a wonderful actor or else he is thoroughly in love with his job. Mrs. Marquart says that taking care of her family is her job and judging from the results she is as successful at it as Mr. Marquart is as a farmer. Their home is an old, substantial house, set among beautiful trees and furnished inside with every modern convenience.

When one considers the work required to build up a farm business of seventy-five cows and eighty-five young stock on an area of 330 acres, it would be easy to excuse Mr. Robens had he not found the time to interest himself in outside activities. However, he did find the time. At present he is acting as secretary of the New York State Holstein Friesian Association. For seven years he was trustee of his

children: Mrs. Ethel White, whose husband is Herkimer County Farm Bureau Manager; Glenn, who is on the farm with his father; Ward and Mary. When I visited the Robens' farm a new house was being constructed near the old homestead as a home for Glenn and his wife. The casual visitor would see wonderful buildings, fine cattle and excellent crops, but underneath all this is a fine family, and a real service to the surrounding community.

* * *

H. D. FORWARD, Camillus, Onondaga County.

ONE might naturally conclude that a factory worker, thirty-five years of age would be distinctly handicapped should he decide to start out in farming. Because of poor health, Mr. Forward accepted the handicap and in spite of it is now recognized as one of the most efficient farmers in Onondaga County.

The area operated by Mr. Forward and his son is 400 acres and is almost entirely a cash crop proposition. They

Mr. H. D. Forward of Onondaga County

grow close to fifty acres of potatoes, part of which are for certified seed, over one hundred acres of alfalfa and a considerable area of wheat, oats and barley, most of which is sold for seed.

Luck gets far too much credit for success and is too often used as an excuse for failure. We mention this because the Forward family has had

(Continued on Page 8)

Mr. Arthur Boice of Columbia County

State Master Farmers and before the board of judges finally select those who are to be honored, it seems worthwhile to review the accomplishments of the men who were chosen in 1929.

Words are often cold things and it is difficult to do justice to the achievements of these men. When we realize that they were chosen for this honor after a personal inspection of the farm, followed by a searching review of their qualifications by the board of judges, we can well appreciate that they rank high as successful farmers, fathers, homemakers and citizens.

* * *

ARTHUR BOICE, Germantown, Columbia County.

IN speaking of Mr. Boice a friend said: "I like to think of him in that group of men which we call the 'salt of the earth', a real farmer true and tried, of high character and a real friend of his fellows." Any man who gets such a tribute has done far more than accumulate money through efficient farming.

Mr. Boice's chief income comes from apples. When his father owned the farm, livestock and hay were the chief

Mr. Morgan Myers of Schoharie County

enterprises. Mr. Boice's foresight and vision is shown by his consistent efforts to increase their acreage of fruit to its present size of 45 acres. At present a son is working with him, representing the third generation on the farm.

In every community there are a few men who lead in every progressive development. Mr. Boice was one of the

With the A.A. Crop Grower

What the Drought Did to New York Crops

FOLLOWING our custom of giving our readers the latest crop and market information, we are printing on this page telegraphic dispatches from county agents and prominent farmers from nearly every section of New York answering our request for the latest information about the drought and its effect on crops.

It is of course foolish to "kid" oneself by being too optimistic. It is just as bad, or worse, to be over-pessimistic. The writer has traveled many hundreds of miles in recent weeks in nearly every section of New York. There is no question whatever, of course, that the drought has done immense damage. We do not believe it as bad, however, as many farmers think, and we still believe that most New York State farmers will actually be ahead in dollars and cents at the end of the year because of the drought.

Some crops have been ruined. There is no hope for growers of these. Other individual farmers have been badly situated, and particularly unfortunate, but looking back across the history of agriculture there never has been a year of generally low production that farmers did not have more dollars ahead than they did when there was over-production.

Eliminated Surpluses

We believe that the drought was providential because this was a year when consumers had stopped buying and when surpluses were piling up. The Farm Board was able to do nothing. The prices of wheat and other products were going down and down. Along comes the drought, and the situation is reversed. The man who has nothing to sell is out of luck but the man who has half a crop or better will, in our humble opinion, be in better shape than he would if there had been no drought. It is perfectly natural to be pessimistic when one has to sit by and see week after week of dry weather and the crops wilting under your very eyes. The pastures of New York, for example, are gone for this year. On the other hand, the price of milk is up.

It is strange how spotted the drought is in New York and throughout the East. Some sections have had some rain; some have had plenty; others have had scarcely any for many weeks.

Before giving you the dispatches, we want to take this opportunity to express our thanks and appreciation to our friends who so promptly answered with telegrams our request for information. We do this frequently, and those who take the time to reply are rendering a real service to their brother farmers.

The Drought in the Hudson Valley

Columbia County

"No appreciable rain for two months. Ground dry three feet down. Drought has hurt pastures and corn to a considerable extent although recent light showers have

helped pastures. Fruit will be small in size unless good rains come soon."—PAUL JUDSON, former president of the N. Y. S. Horticultural Society.

Dutchess County

"We had on the night of August 14 a rainfall throughout the night that was slow, and most of the water did a world of good to all plant life. It has been the means of saving hundreds of acres of corn, vegetables, late potatoes and the late fruit, but it is very doubtful whether

Loading a truck with cabbage for the Wallabout Farmers' Market in Brooklyn. The picture was taken on the farm of John Boos, a successful vegetable grower at Hicksville, Long Island. Mr. Boos and his son are standing in the foreground.

our pastures will come back to any extent to be worth very much to livestock this fall."—A. L. SHEPHERD, County Agricultural Agent.

Ulster County

"Drought damage quite severe. Pastures hit the hardest. Silage corn hurt severely, especially on higher land. There is considerable dropping of apples due to dry weather. Yield of potatoes also reduced. Damage to vegetable crops serious."—ALBERT KURDT, County Agricultural Agent.

Long Island

Suffolk County

"Early potato crop as good as normal. Late crop normal, in some parts of Long Island; in other sections, crop cut forty per cent. Cauliflower retarded but not seriously injured. Recent light rains will prevent injury to crop for another week. All other crops a minor factor here."—H. R. TALMAGE, Master Farmer.

Delaware County

"Drought conditions serious. Pastures and meadows burned; no afterfeed; green feed lacking; water low; cows shrinking badly. Some feeding next winter's hay. Cauliflower poor. Millet and corn short. Some frost damage. Local showers have helped situation some but rather late."—C. G. BRADT, County Agricultural Agent.

Chenango County

"Drought has undoubtedly caused considerable shrinkage of milk. Pastures badly burned. Second growth of clover and meadows do not amount to much. Frost last week killed corn in some low spots. Cabbage standing still. Potatoes not seriously injured but reduced some."—K. D. SCOTT, County Agricultural Agent.

Tompkins County

"Showers only here. Drought unbroken. Pastures in poor shape. Some permanent injury in corn but most will give fair crop with rain. Fruit O. K. Potatoes not in good shape. Cabbage not permanently

hurt so far. Have consulted County Agent Morse on above."—PROFESSOR PAUL WORK, College of Agriculture.

St. Lawrence County

"St. Lawrence County is favored by exceptionally good crops. Rain interfered with haying early in July but brought on second growth. Clover pastures and corn pastures are normal. Rain would help corn and pastures but nothing is suffering from drought in southern and western New York."—L. H. CLAUS, County Agricultural Agent.

Steuben County

"For the most part our potato vines have not been parched and we have suffered more from the intense heat than from the drought. No growth has been made for the past two or three weeks, and the crop will, of course, be appreciably smaller than it would have been with normal weather. Rains at this time

will be of great help. The most of the country got a shower Friday afternoon and some rain fell during the night."—WILLIAM S. STEMPFLE, County Agricultural Agent.

Western New York

Niagara County

"Pastures very short. Practically all dairymen feeding silage. Not yet seriously injured, but at critical stage. Apples, peaches, prunes and pears will be reduced in size. Cabbage and late potatoes seriously cut. Tomatoes, cucumbers, melons and other market garden crops hurt most, probably thirty to fifty per cent."—L. A. MUCKLE, County Agricultural Agent.

Yates County

"No rain, drought serious. Pasture dried up. All corn, including canning and husking, less than twenty-five per cent crop. Apples suffering. Potatoes, cabbage and beans probably less than forty per cent normal crop."—H. S. Fullager.

Wyoming County

"No rain in four weeks. Dairying seriously affected as pastures are burned up and no after feed. Corn about fifty per cent of crop on account of drought and some frost damage. Potato prospects poorest in history unless we have rains in near future."—JOHN J. HICKEY, secretary, Gainesville Potato Growers' Co-operative Association.

Wayne County

"Have had only light showers. Pastures getting very dry. Yield of silage materially reduced. Fruit crop not generally seriously injured. Dry weather tending to loosen fall apples on trees. Early potatoes on muck generally yielding well. Yield on both lots potatoes and cabbage cut by drought."—M. E. BUCKMAN, County Agricultural Agent.

Monroe County

"Drought causing daily losses in crop yields, which may or may not be made up by price, depending on how soon adequate rains come."—(Continued on Page 14)

More Milk Investigation

POLITICIANS and newspapers of New York City are trying to stir up a rumpus by food and milk price investigations. The State attorney general's office, through the assistant attorney general, William B. Groat, Jr., is conducting two investigations before two different referees, one on general foods and one on milk price conditions.

The claim is that the dealers and, in some cases, the farmers' organizations have advanced the prices of foods unreasonably, using the drought as an excuse. There seems to be some evidence that unscrupulous dealers and retailers have been trying to profiteer, not only since the drought but before, but so much sensational publicity and so many public statements by politicians do more harm than good by decreasing the confidence of the consuming public in good food sold at reasonable prices. This is particularly true of milk.

Any food profiteering should be immediately investigated and stopped, of course, but so far as the farmers and their organizations are concerned, there never was a better reason for increasing the prices of most farm products than right now.

The assistant attorney general states that there is in existence a powerful food combination, both for milk and other products, existing among the dealers in the city to charge exorbitant prices and to force all those out of business who will not conform to the rules of the ring. It is claimed that there has been some attempt to revive the hold of the New York Milk Chain Association, of which Larry Fay was the head. It will be remembered that this association was broken up by the authorities and Fay indicted.

It is claimed also that combinations of dealers have in some cases forced the price of loose milk up four cents a quart. Farmers' prices did not justify even a one cent a quart raise for loose milk.

The newspapers state that Aaron Sapiro, well known to farmers of America as a leader of organization work, is now active in organizing milk dealers. Sapiro told reporters that he is the treasurer of the new Harlem and Bronx Dealers' Association, which seems to be the organization that took the place of the one formerly headed by Fay, which was broken up by the authorities. Mr. Sapiro explains that the new organization, however, is merely a trade practice association.

Some two dozen food and milk dealers testified at the first two hearings held in the attorney general's office and told how they had been coerced into increasing or submitting to increases in prices. Charges were made at these hearings that powerful jobbers' combinations are boosting the price of eggs by violent intimidations of producers, truckmen and retailers and are threatening ruin to one large wholesale house, able and willing to cut egg prices five cents a dozen.

One dealer testified that he had received verbal death threats when he tried to change milk wholesalers after his wholesaler had increased prices. An egg jobber claimed that he had been threatened because he had bought eggs from a certain poultry association which was on the racketeers' blacklist. There was considerable other testimony along the same line.

Dr. Shirley W. Wynne, health commissioner, in a radio address to New York City consumers admonished every housewife to cooperate with the Fair Price Board by, reviving the old-time market basket, and shopping around for her food supplies, by discussing food prices with her neighbors, by paying cash for and carrying her purchases, etc.

Be sure to read the editorial in this issue on these investigations.

A four-row cultivator like this, fueled with Socony products, will cover 65 acres a day.

SIXTY-FIVE ACRES A DAY WITH SOCONY

FIFTEEN acres a day with a two-row cultivator pulled by three or four horses; eight acres, with a one-row cultivator and two horses. But sixty-five acres, at 4 miles an hour, with a four-row cultivator, may be covered when the best motor fuel and the proper lubricant are used.

New York and New England acreage farmers have come to recognize that Socony Special plus Ethyl and Socony Aircraft Oil are exactly what they require for this purpose. They know also that:

Mica Axle Grease, made for axle lubrication on wagons and farm machinery, is of the best grease stock and ground mica, that it fills up the pores and crevices of the axle and forms a hard, bright, smooth coating that reduces friction.

Eureka Harness Oil preserves harness and leather. It is pure mineral oil and cannot turn rancid. It does not destroy the stitching since it contains no acid. It penetrates the leather and lasts longer.

Standard Hand Separator Oil is a quick-acting oil adapted to close-fitting bearings. It is free from gum, and is anti-rust and anti-corrosive.

In addition, farmers find it pays to put the following Socony products to work for them: Ruddy Harvester Oil... Socony Household Oil... Socony Turex Oil (for Diesel and Oil Engines) Socony Motor Oil... Aircraft Oil... Verdol Summer Spray... Socony 990A Motor Oil for Fords... Socony Disinfectant... Socony Gasoline and Socony Special Gasoline plus Ethyl.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.70
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Aug. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Gains Another Half Cent

CREAMERY SALTED	Aug. 23, 1929	Aug. 14, 1930	Aug. 24, 1929
Higher than extra	40 1/2-41	40 -40 1/2	43 1/2-44
Extra (92 sc.)	.40	39 1/2	.43
84-91 score	35 -39 1/2	35 -39	38 1/2-42 1/2
Lower Grades	32 1/2-34 1/2	33 1/2-34 1/2	37 1/2-38

The butter market has gained another half cent following the steady rise. However, as the market came to a close on the 23rd, it appeared that the advance was over for the moment. Business in fresh arrivals has fallen off to a considerable extent, following a heavy swing to storage butter. We do not look for any serious consequences for production is falling off heavily, giving us a strong undertone. Favorable weather has resulted in good consumer demand, said to be above normal for this time of the year.

On August 22, the four leading cities reported 66,434,992 pounds of butter in storage compared with 68,935,134 pounds on hand on the same week day a year ago. From August 15 to August 22 this year, our cold storage holdings in the four principal cities fell off 889,793 pounds compared with a reduction a year ago of 1,488,369 pounds.

The metropolitan dailies are carrying front page stories about the food profiteers and much is said about the dairymen. Our personal opinion is that a lot of the charges that are being thrown about so carelessly are for political consumption. If the city authorities were really sincere in their aim to find who are responsible for high prices in New York they would soon find some interesting facts in cold storage figures, and they would find that the farmers are not in the cold storage

business. This year's cold storage holdings are under those of a year ago, our fresh receipts are under those of a year ago and prices are under those of a year ago, whereas, they should be above those of a year ago, if the law of supply and demand means anything. The facts of the case are that after the produce leaves the hands of the farmer, there is an almost endless line of brokers and handlers taking a profit before it reaches the hands of the consumer.

Cheese Makes Another Gain

STATE FLATS	Aug. 23, 1930	Aug. 14, 1930	Aug. 24, 1929
Fresh Fancy	20 1/2-21	19 1/2	23 -25
Fresh Average			
Held Fancy	24 -26	-26	27 1/2-29 1/2
Held Average	-23	23	-

Western cheese markets have been responsible for another firm week in the cheese market. At the same time production is reported to be shrinking both in the West and in New York, which gives us a real bull market. There are very few fresh New York State fresh cheese coming forward and there are very few available in New York City. As a result the immediate outlook in the cheese market is very encouraging and the trend appears to be upward.

The ten cities making daily reports had on hand on August 21, 19,558,000 pounds of cheese, compared with holdings amounting to 19,903,000 pounds on the same week day last year. From August 14 to August 21, our holdings in the ten cities increased 270,000 pounds, compared with an increase a year ago during the same period of 783,000 pounds.

Taking the above facts into consideration it looks as though our well meaning politicians who claim that farmers are profiteering, are talking through their collective hats. Production and cold storage holdings of cheese are below last year, and it would be expected that prices would be above last year, but they are not. If anybody has a kick it is the producer. If the politicians want to find out who is responsible, why don't they go to some of the big cheese companies and ask a few questions.

Gathered	25-33	25 -32 1/2	35 1/2-44

Cooler weather has been a big help to the egg market. It has been more favorable to the consumption of eggs. Furthermore, it has been responsible for a very noticeable improvement in the quality of eggs, especially from the Eastern territory. The white egg market looks a whole lot better and if our judgment is worth anything we would say that the trend is upward. The market closed on the 23rd in a firm condition with stocks fairly well clear. Pacific Coast eggs have been clearing closely at advancing prices. On top of that, we find our population gradually drifting homeward from the seashore and mountain resorts. Labor Day will soon be here and shortly after that schools will open. Taking all of these things into consideration, business is looking upward.

The cold storage situation is interesting to note. On August 22 the ten cities making daily reports had on hand 5,776,000 cases of eggs, compared with 4,748,000 cases on the same day a year ago. From August 15 to August 22 this year, our holdings were reduced 109,000 cases compared to a reduction the same period last year of 55,000 cases. Reports from producing areas indicate that production is falling off while consumption should be increasing. This would indicate a continued drain on the cold storage holdings, which if the present rate keeps up, would soon put us in a satisfactory position, compared with last year. Consumption of eggs will increase if the city authorities can check the profiteers and racketeers who have the egg distributing business by the throat. In some quarters of New York City the situation is

quite serious. New York has a big job ahead of it if a thorough housecleaning is to be done.

Live Poultry Market Closes Better

The live poultry market had a good windup at the close of the week ending the 23rd. Fowls and broilers gained as the week came to a close. Most of the receipts have been running poor in quality. As a result fancy stock has always sold well, easily commanding a cent premium over freight arrivals. The Labor Day holiday marks the wind up of the big week end holidays and we do not expect much of a market in New York City. Undoubtedly, a lot of stock will be reshipped to resort centers.

Fruits and Vegetables

Apples are rolling down the Hudson Valley by the truck load, including such varieties as Alexander, Duchess, Wealthy, Wolf River, Gravenstein, Twenty Ounce and a lot of mixed stock. It is indeed too bad that there is not some way whereby we could keep this mixed stuff off the market. It does not pay the producer a return on his labor and investment and only helps kill the market on the better lines. Western New York is shipping in Duchess and Yellow Transparents. Prices range anywhere from 50c to \$2. per bushel. Some Wealthies and some extra fancy Wolf Rivers have been bringing the top price.

Grapes from the Hudson Valley have been bringing from 40c to 65c per 12 quart climax basket and from \$1 to \$1.25 per eight basket crate.

Peaches from the Hudson Valley have been bringing from 40c to 75c per 16 quart basket and from 75c to \$2 per six basket carrier, and from \$1 to \$1.25 per bushel.

Cauliflower from the Catskill Mountain district has been bringing anywhere from \$1 to \$3.50 per crate, depending on grade.

Late summer vegetables are rolling in from various parts of A. A. territory and qualities vary widely. Due to the fluctuation in the market we recommend that readers follow the radio reports given at noon daily in order to keep in immediate touch with the market.

Meats and Livestock

CATTLE—Nine loads steers fairly active, steady to strong, few 25c higher. Common to medium grassers \$7.25-8.80; good steers \$9.00. Cows scarce, steady to strong. Few common to medium \$4.50-5.50; low cutters and cutters \$2.00-4.00. Bulls scarce steady; medium grades \$7.00 down.

VEALERS—scarce, steady. Few medium southern \$9.50.

LAMBS—SHEEP—Lambs in moderate supply, fully steady. Good to choice, \$10.00-11.00; medium \$8.00-9.50; common \$6.00-7.50. Ewes steady, good to choice \$3.50-4.50.

COUNTY DRESSED CALVES—Receipts all through the week were light, trading generally was slow, and prices were irregular and somewhat lower than last week. Market was not cleaned up close; prices were barely steady. Fresh receipts per pound: Choice 16-17c; fair to good 13-15c; small to medium 10-14c; lightweights 10-11c.

LIVE RABBITS—Receipts light all through the week. Trading was very slow all through and stock accumulated. Prices were weaker and lower, and very irregular. Per pound by the coop, 10-18c.

Hay Market Easier

The week ending August 23 found the hay market easier to the tune of \$1 per ton. Supplies were heavier at all stations and the demand was slack.

Old hay takes the preference over new by a dollar or two per ton. In spite of the situation however, the market is basically firm. Straight timothy No. 1 brings \$29 with No. 2 at \$27 to \$28, No. 3 \$24 to \$26, with sample hay \$19 to \$20. Mixtures generally run from \$1 to \$2 under the prices for straight timothy. Straw is easier. Rye brings \$15 to \$16 and oat from \$14 to \$15.

Feeds and Grains

FUTURES	Aug. 23, 1930	Aug. 14, 1930	Aug. 24, 1929

34% O.P. Linseed Meal	46.50	54.00

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Wool

The wool market continues slow. New York better fleece wool, unwashed, fine, per pound, 21-30c; 1/2 blood 23-29c; 3/4 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

William S. Teator, Prominent Hudson Valley Apple Grower, Dies

William S. Teator, veteran Hudson Valley fruit grower died at his home in Upper Red Hook, N. Y., on August 19. Mr. Teator was 70 years old and he has been a grower of apples in Dutchess County for approximately fifty years. His prominence as an apple grower was not confined to the Hudson Valley. On the contrary, he was influential in state and national pomological affairs. Mr. Teator was an outstanding exhibitor of fancy fruit and it is said that he carried away more ribbons on his barreled apple exhibits than any grower in the business.

Some Master Farmers of 1929

(Continued from Page 5)

its share of bad breaks. In the first place, Mr. Forward began farming because he felt his health would not permit him to work in the city longer. Then Mrs. Forward has for some time suffered from rheumatism, but her only regret seems to be that it prevents her from doing what she considers her share in the partnership. To make it easier for her, Mr. Forward has supplied every possible labor-saving convenience in the home. To add to their troubles, the younger son suffered an attack of infantile paralysis from which he is not entirely recovered. Because of this Mr. Forward felt that he should not engage in farming work, yet he is so interested in the business that it now seems that he intends to be a farmer.

Young folks often give "no time" as an excuse for failure to prepare lessons. One teacher's reply is, "You have all the time there is." You are inclined to believe she is right because busy folks find time to do things. Mr. Forward has served as director of the County Farm Bureau, master and lecturer of his local Grange, deacon of his church, trustee of his school district and master of his Lodge.

In spite of all these activities, a neighbor says: "Some way that man Forward always seems to be one jump ahead of the rest of us when it comes to getting his farm work done."

Farm News from New York

Apple Grades Changed to Conform to U. S. Grades--County Notes

ANNOUNCEMENT is made by Commissioner Berne A. Pyrke, of the Department of Agriculture and Markets, of changes made in the standards for grading and classifying apples packed or repacked in this state. The grades effective Sept. 1, 1930, are similar to the new federal grades, and are as follows: "N. Y. U. S. Fancy Grade," "N. Y. U. S. No. 1," "N. Y. U. S. Commercial," "N. Y. U. S. Utility," and "Unclassified."

Under the new grades and regulations the requirements for "Fancy," "No. 1," and "Commercial" are the same as for the past three years. "Utility" is the same as the old "U. S. No. 2" except it has another name, and apples in this grade must be hand picked.

The requirements for "Unclassified" are changed in that "culls" are defined and are prohibited, and packers are not permitted to place them in packages marked "Unclassified" except for a tolerance allowance of 15%.

In addition, three combination grades are provided for, as follows: "Combination N. Y. U. S. Fancy and No. 1," "Combination N. Y. U. S. No. 1 and Commercial," "Combination N. Y. U. S. No. 1 and Utility." Packages packed and branded as a combination grade must contain a minimum of 50% of apples of the higher grade in the combination and not more than 10% of the remainder of the apples shall be below the requirements of the lower grade in the combination.

During the early part of September the Department in cooperation with the Extension Department of the New York State College of Agriculture, will hold apple packing demonstrations in the principal apple growing counties of the state.

Barge Canal Used to Irrigate Farms

ON August 18, Governor Franklin D. Roosevelt instructed Colonel Frederick Stuart Greene, Superintendent of Public Works, to permit the use of water in the Barge Canal in sections where livestock and crops are suffering from drought. As a result, five district engineers on the Canals were notified to issue permits to farmers either to pump or siphon water in sufficient amounts to water stock or save crops from burning. At Rochester, the sluice gate was opened one inch, supplying a creek running through Spencerport, with water to relieve the drought in that locality.

Fruit Conditions for the Week Ending Aug. 16

Onondaga County—The continued dry weather has affected all crops in the county. We have had a few showers the past week, but they did not do very much good. Potato fields in the spray rings and those which have been sprayed thoroughly are holding up well, but if there is no rain within the next week or so, the chances are that they will begin to go down. There is not a bit of moisture in the ground and if there is no rain within a short time the crop will not reach marketable size. The young apple trees and those on the shallower soils are showing the effects of dry weather by the leaves turning yellow and dropping off. The general condition in the county is that the fruit will be under-derized this year. Greenings, especially need rain to reach normal size. Spring grains and winter wheat are threshing out to be a good crop in the county this year. The pastures have dried up and the milk production has fallen off. The second cut of alfalfa is very short.

Dutchess County—The continued drought had threatened to cause some damage to fruit if it continued for many more days. Peaches and apples on shallow soil were drying up and foliage showing considerable drooping. An almost continuous rain occurred generally throughout the county from 5 P. M. Thursday August 14, until 2 P. M. Friday. No doubt the rain was of sufficient duration to do the fruit an immense amount of good. Unusually cool weather has caused apples to take on a large amount of color. Just at present it seems that all fall and win-

ter fruit will develop normal size and color. Rochester and Carman peach harvest has begun. Clapp pears are being picked. The Dutchess apple harvest is about over and some growers are starting in on Gravensteins. Sun scald on apples can be found in many orchards on the south side of the trees. In only a very few cases, however, will the damage be of a serious nature.

Argentine Lifts Apple Embargo

GOVERNMENT officials report that Argentina has suspended for the present, its drastic order prohibiting the importation of apples only in prescribed containers, an order which would have practically excluded American apples.

Officials of the Department of Agriculture, protested to the Department of State which negotiated for the suspension of the order. The Argentine government protested that no restriction on the importation of American apples was intended.

Up to the present, all efforts to have Great Britain lift its embargo on all lower grades of American apples have proved unavailing.

Barn Equipment Companies Merge

ANNOUNCEMENT was recently made that the James Manufacturing Company has purchased the Drew Line Company. Both of these companies are manufacturers of building equipment. It is stated that the Drew Line equipment for farm buildings will be manufactured as now catalogued.

The history of the Drew Line goes back to 1898, while the first Jamesway stanchions and stalls were made by D. D. James in 1905.

What Is Our Dog Crop Worth?

A TOTAL of 452,076 is the dog population of New York State outside of greater New York, as shown by the enumeration submitted to the Department of Agriculture and Markets by police departments in cities and enumerators in towns. Before the end of the license year, which will be December 31, it is expected that more than \$1,000,000 will have been paid for license fees for dogs.

As compared to the enumeration made in the summer of 1929 a falling off in

the total number of dogs is recorded. The total at that time was 461,240, but it is pointed out that this enumeration was in the summer when possibly a considerable number of canines are taken to summering places by residents in New York City.

The state's share of the amount paid for licenses for dogs for 1930, thus far, is about \$95,000. The department is now engaged in checking up in the various towns and cities for the purpose of locating unlicensed dogs.

Vegetable Growers See New York and Long Island

ON August 22 and 23, New York State Vegetable growers inspected fruit and vegetable markets in downtown New York and the Wallabout Farmers' Market in Brooklyn. Friday afternoon they visited a number of vegetable farms in Nassau County and spent the night at the State Institute of Applied Agriculture at Farmingdale, Long Island.

On Saturday they went by bus to Suffolk County and visited a number of farms there, including the Vegetable Research Farm of the New York State Experiment Station, located near Riverhead.

We know of no way in which growers can get so complete a picture of the market situation as they can by personally visiting the city markets. Those on the trip indicated that the experience was interesting and valuable to them.

New York State Grange News

By F. J. RILEY

LATEST advices concerning the session of the National Grange to be held at Rochester, New York, next November, indicate the presence in that city during the convention of from 25,000 to 30,000 members of the Order, as large parties are being organized in many sections to travel by automobile or by bus to the Rochester meeting, while special rates for the convention will be announced by all railroads running to Rochester.

Word comes from Pennsylvania, Ohio, New Jersey and other nearby states of large delegations of patrons who are planning to be at the Rochester session. The New England states will also send large quotas. New York has established a new record in Grange activity by dedicating six new Grange halls during the

first twenty-five days of the month of July. All these buildings represent substantial investments and testify to the vigorous character of New York State Grange progress.

Thousands of Grange members and their friends will attend Grange Day exercises at the State Fair in Syracuse, Wednesday, September 3.

Empire Potato Club Conducts Tour

ON August 19 and 20, a large delegation of New York potato growers traveled through western New York on the Empire State Potato Tour. They met the first day of the trip on the farm of Streeter and Cross in Wyoming County and later made stops at the farms of L. A. Toan near Perry and Britt & Call near Batavia.

Talks were given by the following men from the New York State College of Agriculture: C. R. Crosby, Entomologist; B. A. Jennings, Farm Engineer; J. R. Livermore, Plant Breeder and E. V. Hardenburg, Potato Specialist.

On the second day of the trip an interesting demonstration of potato growing machinery was given on the farm of K. C. Livermore at Honeoye Falls.

County Notes

Genesee County—Our drought still continues. Rains are scarcely more than heavy dews. Cloudy skies soon clear up, yet most of the farmers are still smiling. Grain yields are unusually fine and crops have stayed green for the amount of dry weather we have had. The bean weevil is at work and some late potatoes are blighting. Beans have podded very poorly. Buckwheat will be a light crop unless we have some rain very soon. Pastures are drying up and farmers are having to feed their cattle. Wells are low, cows are shrinking badly. Early potatoes are selling for \$1.00 to \$1.10 a bushel. There will be a very little corn for silos and it is drying so that a great many farmers are feeding it to their cattle.—Mrs. R.E.G.

Chautauqua County—This section is suffering from the worst drought in many years. We thought we had a dry season last year. The hay crop was light, oats were a poor crop, pastures were dried up and water short, but conditions are far worst this year. Although the dry spell started earlier in the season last year, the temperature this season for the first sixteen days of August to the present time, averaged 8 degrees above last season and where we had four good rains last year for the same period, this year we have had only three light showers that only moistened the surface of the ground. Potatoes, both early and late, are dying and will not yield over half a crop. Many cabbage fields are a failure. Oats are the only bright spot in the picture as they are a heavy crop on account of our having plenty of moisture up to the fore part of July. Milk has shrunk badly. On account of the low price of milk farmers have not grained their cows heavily—many not at all. I am afraid that although the Dairymen's League have made a liberal raise in price that the milk supply will not make a material increase. It is hard to increase the flow of milk at this season by the use of grain at a profit. And there is practically no green feed. Farmers are not likely to feed heavily into their winter store of hay as it is short anyhow.—A.J.N.

Columbia County—Seven thunder showers within a week, but only one with hail. This also was the only one that caused any damage. The others brought much needed rain. The tennis championship for the county will be decided at the country club August 30 to September 1. August 13, was the coldest August 13 on record in this county. It is a question whether the falling leaves are a sign of the dry spell or a sign of early fall. Wild flowers in vicinity of Kinderhook were the subject at the last meeting of Garden Club of that place. A glider factory at Germantown is to manufacture and also give instructions. Eggs are 40c a dozen; butter 47c a pound; native potatoes 35c a peck; honey, 15c a comb; vinegar 30c gallon.—Mrs. C.F.H.

The Song of the Lazy Farmer

MY NEIGHBOR says a year like this when all the weather's gone amiss, a silo's worth its weight in gold, he says he's got one that will hold a lot of corn, and this here crop that got along without a drop of water till the ears are small, why, he'll make silage of it all. That stuff will make a lot of feed if stored until the day of need in that there silo, it will be salvation for the stock, by gee. This season when the crib is bare, he says a feller should prepare to fill his silo to the brim, he says what silage does for him in years like this, is make the kine fill up the pails, while as for mine, this winter they will all go dry, them cows won't give no milk supply if they ain't fed, an empty bin don't bring no butter money in.

My neighbor's got a good idee, my corn is stunted as can be, and I've been thinkin' what I'd do to bring my cows and cattle through the winter, they have got to eat or they

can't make no milk or meat. A feller surely can't go wrong to have green feed all winter long, my cows would sure appreciate a-havin' feed that's adequate to satisfy their appetite, my neighbor's scheme sure sounds all right. I'll build a silo right away, and though I'm short on grain and hay, with lots of silage I'll git by and not have all my cows go dry!

Fillings for the Lunch Box

Feeding Children Assumes More Importance Than It Once Did

WITH the coming of September, mothers are again faced with the task of filling lunch boxes. This familiar task assumes a much greater importance since it has become a well-known fact that the child who is able to attend school each day is eventually promoted, while the one who is hampered by colds and minor illnesses, frequently due to malnutrition, remains in the same grade for two or more years.

However, the most carefully planned lunch may be unattractive unless it is prepared with a view towards its reaching the school as fresh and tempting as when packed.

Half-pint fruit jars and jelly glasses are useful for carrying sauces, honey, gelatin and puddings. Enamelled custard cups may also be used if a lid of waxed paper is snapped fast with a rubber band. Sandwiches, cookies, etc. require wrappings of waxed paper.

It is of course necessary to include milk with the school lunch, even though it is one of the most difficult foods to carry and often sours in a warm school room. Our rural teacher cooperates with the parents in solving the sour milk problem. A large pan of ice cold water is easily secured from the milk pool of an obliging farm neighbor. The children bring their milk in fruit jars and identify it by tying different colors of thread about the neck of the cans, then "pool" it in the large pan of ice water, thus keeping it cold and fresh even on the hottest days.

After this precaution had been taken, a mother was much surprised to discover that her six-year-old

daughter still refused to drink her milk. As the result of much questioning, she learned that the child was unable to pour her milk from the fruit jar to a glass without spilling it.

LAYETTE SET NO. B5401 contains four pieces, dress, gertrude, cap and bib, stamped on fine quality, white mercerized batiste for simple pastel colored embroidery. One size only, infants to six months. Price \$1.20 for the set, floss included. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

Since she was trying desperately to appear as big as the rest, she preferred going without milk to asking assistance. The next day her mother added straws to the lunch box, not only for her own child but also enough for her to divide among her primary companions, quickly setting the "style" of sipping milk directly from the glass jar.

Some mothers find it helpful to keep a list of the five food groups hanging in a prominent place in the kitchen and insure a well balanced lunch by selecting a food from each group. The farm orchard, garden and dairy supply foods from most of the five groups: 1. fruits and vegetables; 2. meats, eggs, cheese and milk; 3. cereals, potatoes and whole wheat bread; 4. honey, jellies, pudding and other sweets; 5. butter, nuts and other fats. —M. M., N. Y.

There is Money in Raising Dogs

WE live on a sunny farm in Indiana. Life is wonderful in the country! In the spring there are myriads of gay blossoms, the sweet scent of newly turned soil, and the lovely songs of birds. Then, when summer comes, strawberries ripen and tomatoes turn red, while the golden ears of sweet corn grow long. Autumn, like an artist, paints our magnificent beeches with gorgeous colors....The nuts fall, pumpkins ripen and then it is winter. Snow, great piles of it, drifts into the fence corners, blankets the hillsides and bows down the branches of the trees. Everything is covered with that fluffy hoary loveliness and beauty in abundance reigns. Yes, it is simply glorious living in the country but how can one who adores to make money increase the bank-account from an isolated rural route home? And may I add, especially when the one in question is handicapped by crutches?

All my life I have been very fond of dogs. Two years ago, when I saw an advertisement, offering fine, pedigreed collie puppies for sale, I became enthused. After a bit of corresponding, a lovely little golden-coated collie lady was delivered to me. Priscilla, the puppy was just six weeks old. She had an excellent pedigree and gave promise to be a very beautiful dog. I made her a small bed of straw in the corner of the barn, where she was protected from cold drafts. The

training of this little puppy was a source of much pleasure. It was surprising to note the intelligence and obedience she manifested.

When Priscilla was a year old, she was bred to a splendid blue-blooded male and in sixty-three days gave birth to three fluffy collie babies. Last September, Senator James, one of these babies, was awarded first prize both in the Junior Puppy Dog Class and the Novice Class at the Hoosier Kennel Club Show. He is to be placed at stud soon, with a fee of twenty-five dollars, each service.

In August, Priscilla had another little family....this time there were seven robust youngsters. When the puppies were six weeks old I advertised in a local paper. People prefer buying their pets from a private individual, rather than a kennel so the pups sold rapidly. I have made approximately eighty dollars from this last litter.

The scraps from your table, that you now throw away, make excellent dog feed. Buy a puppy of some recognized breed, with good backing and pedigree to prove it. Ladies, you who would like to make money will make it and what is more you'll just have heaps of fun! —M. L. B.

By introducing raw vegetables in the child's diet as sandwich fillings between buttered slices of whole wheat bread, he soon learns to enjoy grated carrots and chopped lettuce, cabbage, or celery.

Charmingly Slender

2634

FROCK PATTERN NO. 2634 is charmingly slender in its effect because of the long lines afforded by the front and back panels, in fact by its every style feature. Printed chiffon, silk crepe, or one of the artificial silk fabrics would make up delightfully in this pattern which cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 requires 4 3/8 yards of 39-inch material with 3/4 yard of 35-inch contrasting. Price, 15c.

Fall Fashions

It may be you are interested in cute dresses for kiddies—

Or for the more sophisticated girl of school age—

Or the Miss who is at business or attends college—

Then, again, it may be the dress of attractive and up-to-date design but suitable for the older, more conservative woman that interests you—

But no matter. So long as it is style and correct for Fall and Winter you will find just what you want in our new Fashion Magazine. And an economical pattern is obtainable for each style to help you save on the new fashions.

Send 12 cents in stamps or coin for our Fashion Magazine. Address Fashion Dept., American Agriculturist, 461 Fourth Ave., New York City.

A Broadcast Bazaar

Variety Adds Spice to the Church Fair

Of course there was to be the usual autumn fair, but this time there must be a different "kink" to it, and what more "up to the minute" one could there be, than the radio idea?

Hence, curiosity-provoking posters announced a Broadcast Bazaar. An amateur artist had sketched a radio station, with sparks radiating from it, while below was printed the verse,—

"We would have you tune in on our Broadcast Bazaar,
So come to our station from near and from far,
Yourself and your pocket-book too are invited,
If you come and tune in, you'll indeed be delighted!"

The various booths were decorated in gay colors, and over each was lettered the station initials, with the explanatory name printed plainly below. The booth attendants wore gay smocks, each bearing the radio insignia on the arm.

Jaunty Jacket

2652

JACKET PATTERN NO. 2652 is as chic as it is practical for the smartly dressed woman. It affords the needed warmth for cool evenings besides adding an attractive color accent to the costume. Wool crepe, Jersey, flannel or basket weave would be suitable for this design which cuts in sizes 14, 16, 18, 20 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 1/4 yards of 39-inch material with 2 yards of 39-inch lining. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new Fall Fashion catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

At some booths microphones had been contrived from round boxes fastened to broomsticks, the former having dollar-size circular holes cut in the side.

The following "stations" were represented. KGT—Kitchen Good Things—cakes, pies, cookies, and other home-made delicacies.

KHM—Kandy, Home Made—proved exceedingly attractive to many "listeners in."

KCT—Kiddies' Clever Toys was devoted to playthings for small folks. while WBH—Women's Beauty Helps supplied articles for the dressing table.

KPC—Kiddies' Pretty Clothes, of course attracted mothers, and KNT—Kitchen Needful Things comprised a variety of useful articles.

Of course everyone had to tune in on something to eat, so WCT offered Waffles, Coffee Too, while WIC—Wholesome Ice Cream, also had its devotees.

A cheery hubbub was created by the

"announcers" at the various booths broadcasting their wares, while during the evening, an excellent concert was given by local talent, the committee chairman acting as announcer, and a

THESE HUGABLE PILLOWS Nos. C411-18 have a great appeal for children. No. 411 is a large grape of orchid with green leaf; No. 412, humpty-dumpty of blue material; No. 413, the pig in rose color; No. 414, is a green rabbit; No. 415, the orange of tangerine color with green leaves; No. 416, is a green teddy bear. Height of teddy is 20 inches and all others measure about 16x20 inches. Material is a good grade fast colored percale. You can make any one design with outline and running stitches and the instructions are stamped on material, telling exactly how to complete pillow and the color of threads required. Any one design can be had for 50c including embroidery floss and can also be had without the floss for only 30c. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

makeshift "microphone" being provided.

Altogether, when the various stations had counted their receipts, they found that the Broadcast Bazaar had been most profitable.—E. D. Y.

Tested Recipes

Tomato Basket Salads

No. 1—Cut cucumber and tomato pulp into pieces and stew until tender. Pass through a sieve and season with white pepper, salt and vinegar. To one cupful of pulp add one tablespoonful of gelatine dissolved in a little water. Let it become stiff, cut into dice and serve in tomato baskets, that is, a tomato with the pulp removed. Place baskets on lettuce leaves and dress with a good salad dressing.

No. 2—Mix equal parts of chopped celery, tomato cubes and chicken. Add chopped nuts mixed with salad dressing. Fill the tomato baskets and serve cold.

No. 3—Boil corn on the cob, cut corn from the cob and mix with mayonnaise dressing. Fill baskets and serve on a bed of lettuce leaves.—E. D., Tenn.

Cold Tomato Catsup

1 peck ripe tomatoes, peel without scalding, chop fine and drain well. 2 cups chopped onions. 2 cups grated horse radish. 3 large red peppers, chopped. 1/4 pound white mustard seed. 1/2 cup salt or to suit taste. 4 cups sugar. 3 pints cider vinegar. 2 teaspoons black pepper. 2 teaspoons cloves (scant). 4 teaspoons cinnamon.

Mix all together, put in cans and seal. Keep in a cool place. This needs no cooking.—M. E. G., N. Y.

This mixture keeps its lovely, fresh flavor and in addition to its regular uses, is very acceptable when combined with salad dressing for variety.

To foster a love for reading in children, comfortable chairs of suitable size and correctly placed reading lights are great helps.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA IS THE REAL WASHDAY BARGAIN

FELS-NAPTHA's clean naptha odor tells you plainly—"Here is extra help for you."

And that's what makes Fels-Naptha the real soap bargain—it brings you not more bars for your money, but more help. The extra help of two active cleaners instead of one.

In Fels-Naptha, good golden soap and plentiful naptha form a sturdy working team. Together, they loosen the most stubborn dirt and wash it away. They get your clothes sweetly clean without hard rubbing. They make your washing quicker, easier—and they help save you, as well as the clothes!

You'll welcome Fels-Naptha's extra help in another way, too—it saves your hands. That's because Fels-Naptha works quickly, and you don't have them in soapy water so long.

In tub or machine; for soaking or boiling; in hot, lukewarm or even cool water, Fels-Naptha works splendidly. The next time you buy soap, be wise—buy the bargain in value. Buy Fels-Naptha and have extra help for all your washing and cleaning.

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-8-30. Fels & Company, Philadelphia, Pa.

The Indian Drum—By William McHarg and Edwin Balmer

It was only what Henry had said to her months ago when Alan had left her in the north in the search which had resulted in the finding of Uncle Benny—"Might it not be better for him not to find out?" Henry, who could hazard more accurately than any one else the nature of that strange secret which Alan now must have "found out," had believed it; her mother, who at least had lived longer in the world than she, also believed it. There came before Constance the vision of Alan's defiance and refusal to accept the stigma suggested in her father's recital to him of his relationship to Mr. Corvet. There came to her sight of him as he had tried to keep her from entering Uncle Benny's house when Luke was there, and then her waiting with him through the long hour and his dismissal of her, his abnegation of their friendship. And at that time his disgrace was indefinite; last night had he learned something worse than he had dreaded?

The words of his telegram took for her more terrible significance for the moment. "Have some one who knew Mr. Corvet well enough to recognize him even if greatly changed meet . . ." Were the broken, incoherent words of the wireless the last that she should hear of him, and of Uncle Benny, after that? "They are sticking to it . . . down there . . . they won't give up . . . sinking . . . they have cleared another car . . . sink . . ." Had it come as the best way for them both?

"The *Richardson* is searching for boats, mother," Constance returned steadily, "and Number 26 must be there too by now."

Her mother looked to the storm. Outside the window which overlooked the lake from two hundred feet above the street, the sleet-like snow was driving ceaselessly; all over the western basin of the great lakes, as Constance knew—over Huron, over Michigan, and Superior—the storm was established. Its continuance and severity had claimed a front-page column in the morning papers. Duluth that morning had reported temperature of eighteen below zero and fierce snow; at Marquette it was fifteen below; there was driving snow at the Soo, at Mackinac, and at all ports along both shores. She pictured little boats, at the last moment, getting away from the ferry, deep-laden with injured and exhausted men; how long might those men live in open boats in a gale and with cold like that? The little clock upon her father's desk marked ten o'clock; they had been nearly five hours in the boats now, those men.

Constance knew that as soon as anything new was heard, it would be brought to her; yet, with a word to her mother, she went from her father's room and down the corridor into the general office. A hush of expectancy held this larger room; the clerks moved silently and spoke to one another in low voices; she recognized in a little group of men gathered in a corner of the room some officers of Corvet, Sherrill, and Spearman's ships. Others among them, whom she did not know were plainly seamen too—men who knew "Ben" Corvet and who, on hearing he was on the ferry, had come in to learn what more was known; the business men and clubmen, friends of Corvet's later life, had not heard it yet. There was a restrained, professional attentiveness among these seamen, as of those in the presence of an event which any day might happen to themselves. They were listening to the clerk who had compiled the report, who was telephoning now, and Constance, waiting, listened too to learn what he

might be hearing. But he put down the receiver as he saw her.

"Nothing more, Miss Sherrill," he reported. "The *Richardson* has wireless-ed that she reached the reported position of the sinking about half-past six o'clock. She is searching but has found nothing."

"She's keeping on searching, though?"

"Yes; of course."

"It's still snowing there?"

"Yes, Miss Sherrill. We've had a

thing about his clean-shaven appearance and the set of his perfectly fitting coat, one which he did not ordinarily wear to business, which seemed studied. He did not rise; only after a moment he recollected that he had not done so and came to his feet. "Good morning Connie," he said. "Come in. What's the news?"

There was something strained and almost menacing in his voice and in his manner which halted her. She in some way—or her presence at that

kind was concerned. Long ago, when he was a young man on the boats, he had drunk a good deal; he had confessed to her once; but he had not done so for years. Since she had known him, he had been among the most careful of her friends; it was for "efficiency" he had said. The drink was simply a part—indeed, only a small part—of the subtle strangeness and peculiarity she marked in him. If he had been drinking now, it was, she knew, no temptation, no capricious return to an old appetite. If not appetite, then it was for the effect—to brace himself. Against what? Against the thing for which he had prepared himself when she came upon him?

As she stared at him, the clerk's voice came to her suddenly over the partition which separated the office from the larger room where the clerk was receiving some message over the telephone. Henry straightened, listened; as the voice stopped, his great finely shaped head sank between his shoulders; he fumbled in his pocket for a cigar, and his big hands shook as he lighted it, without word of excuse to her. A strange feeling came to her that he felt what he dreaded approaching and was no longer conscious of her presence.

She heard footsteps in the larger room coming toward the office door. Henry was in suspense. A rap came at the door. He whitened and took the cigar from his mouth and wet his lips.

"Come in," he summoned.

One of the office girls entered, bringing a white page of paper with three or four lines of purple typewriting upon it which Constance recognized must be a transcript of a message just received.

She started forward at sight of it, forgetting everything else; but he took the paper as though he did not know she was there. He merely held it until the girl had gone out; even then he stood folding and unfolding it, and his eyes did not drop to the sheet.

The girl had said nothing at all but, having seen her, Constance was athrill; the girl had not been a bearer of bad news, that was sure; she brought some sort of good news! Constance, certain of it, moved nearer to Henry to read what he held. He looked down and read.

"What is it, Henry?"

His muscular reaction, as he read, had drawn the sheet away from her; he recovered himself almost instantly and gave the paper to her; but, in that instant, Constance herself was "prepared." She must have deceived herself the instant before! This bulletin must be something dismaying to what had remained of hope.

"8:35 A. M., Manitowoc, Wis.," she read. "The schooner *Anna S. Solwerk* has been sighted making for this port. She is not close enough for communication, but two lifeboats, additional to her own, can be plainly made out. It is believed that she must have picked up survivors of No. 25. She carries no wireless, so is unable to report. Tugs are going out to her."

"Two lifeboats!" Constance cried. "That could mean that they all are saved or nearly all; doesn't it, Henry; doesn't it?"

He had read some other significance in it, she thought, or, from his greater understanding of conditions in the storm, he had been able to hold no hope from what had been reported. That was the only way she could explain to herself as he replied to her; that the word meant to him that men were saved and that therefore it was dismaying to him, could not come to her at once. When it came now, it

(Continued on Page 13)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry, hits a boat because he believes it to be a ghost boat. The cars break loose and the ship is in danger. Burr admits he is Ben Corvet. Constance hears that Alan's boat is lost.

message from your father. He has gone on to Manistique; it's more likely that wreckage or survivors will be brought in there."

The telephone switchboard beside Constance suddenly buzzed, and the operator, plugging in a connection, said: "Yes, sir; at once," and through the partitions of the private office on the other side, a man's heavy tones came to Constance. That was Henry's office and, in timber, the voice was his, but it was so strange in other characteristics of expression that she waited an instant before saying to the clerk,

"Mr. Spearman has come in?"

The clerk hesitated, but the continuance of the tone from the other side of the partition made reply superfluous. "Yes, Miss Sherrill."

"Did you tell him that mother and I were here?"

The clerk considered again before deciding to reply in the affirmative. There evidently was some trouble with the telephone number which Henry had called; the girl at the switchboard was apologizing in frightened panic, and Henry's voice, loud and abusive, came more plainly through the partition. Constance started to give an instruction to the clerk; then, as the abuse burst out again, she changed her plan and went to Henry's door and rapped. Whether no one else rapped in that way or whether he realized that she might have come into the general office, she did not know; but at once his voice was still. He made no answer and no move to open the door; so, after waiting a moment, she turned the knob and went in.

Henry was seated at his desk, facing her, his big hands before him; one of them held the telephone receiver. He lifted it slowly and put it upon the hook beside the transmitter as he watched her with steady, silent, aggressive scrutiny. His face was flushed a little—not much; his hair was carefully brushed, and there was some-

moment—appeared to be definitely disturbing him. It frightened him, she would have thought, except that the idea was a contradiction. Henry frightened? But if he was not, what emotion now controlled him?

The impulse which had brought her into his office went from her. She had not seen nor heard from Henry directly since before Alan's telegram had come late yesterday afternoon; she had heard from her father only that he had informed Henry; that was all.

"I've no news, Henry," she said. "Have you?" She closed the door behind her before moving closer to him. She had not known what he had been doing, since he had heard of Alan's telegram; but she had supposed that he was in some way cooperating with her father, particularly since word had come of the disaster to the ferry.

"How did you happen to be here, Connie?" he asked.

She made no reply but gazed at him, studying him. The agitation which he was trying to conceal was not entirely consequent to her coming in upon him; it had been ruling him before. It had underlain the loudness and abuse of his words which she had overheard. That was no capricious outburst of temper or irritation; it had come from something which had seized and held him in suspense, in dread—in dread; there was no other way to define her impression to herself. When she had opened the door and come in, he had looked up in dread, as though preparing himself for whatever she might announce. Now that the door shut them in alone, he approached her with arms offered. She stepped back, instinctively avoiding his embrace; and he stopped at once, but he had come quite close to her now.

That she had detected faintly the smell of liquor about him was not the whole reason for her drawing back. He was not drunk; he was quite himself so far as any influence of that

The Indian Drum

(Continued from Page 12)

went over her first only in the flash of incredulous question.

"Yes," he said to her. "Yes." And he went out of the room to the outer office. She turned and watched him and then followed to the door. He had gone to the desk of the girl who had brought him the bulletin, and Constance heard his voice, strained and queerly unnatural. "Call Manitowoc on the long distance. Get the harbor master. Get the names of the people that the Solwerk picked up."

He stayed beside the girl while she started to call. "Put them on my wire when you get them," he commanded and turned back to his office. "Keep my wire clear for that."

Constance retreated into the room as he approached. He did not want her there now, she knew; for that reason—if she yet definitely understood no other—she meant to remain. If he asked her to go, she intended to stay; but he did not ask her. He wished her to go away; in every word which he spoke to her, in every moment of their silent waiting, was his desire to escape her; but he dared not—dared not—go about that directly.

The feeling of that flashed over her to her stupefaction. Henry and she were waiting for word of the fate of Uncle Benny and Alan, and waiting opposed! She was no longer doubting it as she watched him; she was trying to understand. The telephone buzzer under his desk sounded; she drew close as he took up his receiver.

"Manitowoc?" he said. "I want to know what you've heard from the Solwerk. . . You hear me? . . . The men the Solwerk picked up. You have the names yet?"

"The Benton?"

"Oh, I understand! All from the Benton. I see! . . . No; never mind their names. How about Number 25? Nothing more heard from them?"

Constance had caught his shoulder while he was speaking and now clung to it. Release—release of strain was going through him; she could feel it, and she heard it in his tones and saw it in his eyes.

HANDY ANDY Says "Here's How"

To Dispose of the Wheat Surplus

By Ray Inman

Wheat at 75¢ per bu. is better livestock feed than corn at 75¢

Wheat has more protein than corn, requiring less tankage when fed to hogs.

Wheat should be coarsely ground to obtain its fullest benefit

THE FEEDLOT MAY THUS BE MADE A PROFITABLE OUTLET FOR PART OF THE SURPLUS CROP.

With the A. A.

Poultry Farmer

Enlarged Livers

"Can you tell me what is the trouble with my hens? They are barred rocks and I have just a small flock. They have laid good all winter but I have been losing a few lately. The hens become lame and their tails droop. They appear to have lame backs but after a few days lameness they droop and become thin and of a yellow or greenish color. The hens are very fat. The sick ones linger for weeks and then I find them dead. I have always kept hens and have always had great success with them but this is new to me.

"I think probably they have had too much corn in their ration. It consists of hominy, wheatfeed, some ground corn and oats and sometimes a mixed scratch grain. I would be very glad to have your advice."—A. S. F., New York.

WHEN the head, including even the comb and wattles of a hen take on a distinctly yellowish cast it is usual to find liver trouble of some kind, often enlarged liver. The yellow color is probably due to bile which has gotten in-

to the blood. This may be a case of jaundice. However, it is not common for such hens to become lame. They may live for weeks, but probably never recover. I would suggest that you feed less grain, and thus encourage a heavier eating of dry mash. This is good warm-weather management anyway. Also it would be a good plan to give the flock a dose of epsom salts, three quarters of a pound to a hundred birds. And then box up 3 or 4 of the sick birds and send them by Express to the New York State Veterinary College, Ithaca, N. Y., with a letter describing losses, symptoms, feeding management, etc.—L. E. Weaver.

How to Feed and Manage Breeders

1. Breeders should not continue in lay longer than November 15.
2. When the birds stop laying and molt, the amount of grain should be increased. It may be hopper fed at this time. Green food and milk should be furnished in abundance.
3. Production should not be encouraged until about one month before eggs are to be saved for hatching.
4. Artificial illumination can be used to advantage just before the hatching season.
5. Cod liver oil should be fed all winter. One pint in each 100 pounds of mash is sufficient.

What the Drought Did to New York Crops

(Continued from Page 6)

quate rain falls, and consumers' buying power. Pastures dry and winter roughage being used early. Cabbage yields low. Beans setting poorly. Little injury to apples by drought, and fruit prospects good."—M. C. BURRITT, A. A. Western New York Editor.

"If the dry weather is terminated now, it is probable that the higher prices in the case of potatoes, cabbage and some other local vegetable crops will probably offset the decreased yield. However, there are a number of crops to which that will not apply. Our bean crop has suffered the worst. We will not have more than a one-third yield. Root rot has done serious damage and the set of beans has been extremely light. The Western New York bean crop does not affect the total crop for this country nor the foreign countries, to any great extent. The silage corn crop with favorable weather has been reduced 25 per cent; probably it will be cut more than that, which will mean increased demands on hay. The second cutting of alfalfa has reduced fully one-third, and there will be no third cutting unless it rains, and a very light one if it rains immediately. There are no pastures left and there is practically no pasture on the fields where the hay has been cut. Many new seedlings which started out well this spring have been killed by the dry weather. A considerable number of growers who had prepared fields to seed alfalfa have not yet sown them.

"Apples are not suffering particularly

except on sandy soils or dry situations where they are beginning to drop. Pears and prunes are dropping considerably.

"The set of potatoes has been seriously affected and the size of those set will be greatly reduced. The crop has probably been cut fully one-third even though we may have favorable weather. Cabbage growers probably will not suffer if we have reasonable weather for the last of the season for their lower yields will probably return more money than the exceptionally high yields which were in prospect.

"Melon, cucumbers and tomatoes are probably suffering the worst among our vegetable crops. They are all important crops in Monroe County. The set of the first two crops is light, vine growth has stopped, the set of tomatoes is light and blossom end rot is damaging half of the fruit in many fields."—EARL D. MERRILL, County Agricultural Agent.

And Now Come School Clothes

(Continued from Page 3)

easy to wear." And it is surprising what attractive little garments can be made under this slogan. Dresses that fold flat for ironing, that have inset yokes instead of attached collars, and have raglan sleeves rather than inset sleeves simplify the mother's problems greatly. At least a half dozen such outfits are needed.

The ever-useful sweater furnishes the warmth for cool mornings and can be removed after things warm up in the middle of the day. A coat of spring weight and one of winter weight complete her list along the line of wraps,

Songs that Mother Used to Sing

(Continued from Page 3)

And what is love's answer? Love is always young and fair! My darling, you will be, always young and fair to me!

What wonder that mothers growing old—mothers with silver in their locks of gold or brown—mothers in the twilight of life—have loved this love song of the ages and of the aged!

In it there is the experience of a life time of happy love. As we sing or read the loving words, it seems that the author writes of the western slope of life, posing a picture of content and happiness against the quiet of the sunset.

Student Author

I was amazed to find that the words of his song were written by a college student, not more than 18 years of age at the time of its composition. While a student at Lawrence University, Appleton, Wisconsin, Eben E. Rexford wrote the words as a poem. He had been writing for a number of years, earning small sums of money for his prose and poems. His parents had come to Outagamie county, Wisconsin when their gifted boy was seven years of age. At an early age it became necessary for him to help maintain the family, and writing being the easiest way he had of earning money, and coming natural to him, he started contributing to a number of magazines, selling his wares at prices far below their worth.

The worth of a poem cannot be appraised. What a poem like "Silver Threads Among the Gold" means in the lives of hundreds of thousands whose mothers have sung it to them in childhood—what measure is there of the comfort it has brought to weary hearts saddened with the approach of age and loss of the bloom of youth? Judged from such standpoint—"Silver Threads Among the Gold" is priceless.

From the standpoint of the author who sells his compositions, a poem is hard to price—some of them always remain priceless, for no publisher or broker will buy them at any price.

Such might have been the case with this poem written by young Rexford; but he did a little better than that with it. It failed to bring him enough money to put him through Lawrence University; but it brought him enough to pay his board bill for one week, at the price college students had to pay in 1867, the year it was written.

He submitted it to a young man who

but lightweight woolen dresses and bloomers, jersey perhaps, are very useful for bitter weather.

The school girl who is older can make use of the present style for separate blouse and skirt as well as separate short jacket worn with dresses. These combinations are very economical and can be made very becoming by giving thought to color combinations. A velveteen or flannel jacket goes with cotton, silk or wool dresses and can be used all the time except for real winter. The pretty, lightweight sweaters are useful too, being considerably used instead of blouse and to wear with light dresses.

The beret for little and big is more popular than ever and is to be had in velvet besides being knit of wool or silk. The clever girl or woman will knit herself several to match different costumes. The newest velvet berets show smart bows low at one side. These berets are fairly simple to make with a pattern.

Any school girl finds it useful to have a kilted skirt and a middie. That is one style which is forever in and can always be used. It may not be as smart as some other styles but it has the advantage of not going out. Another dress which ought to appear on the list of a girl from the littlest to the biggest is the party frock. It does not have to be expensive but the fabric and color should be dainty and becoming.

No special sports outfits are listed here, as baseball or basketball or gymnasium suits. Schools differ so that a general list is impossible. But wherever such suits have to be furnished by the parents, these too need to be added to your list.

had a beginner's reputation as a musical composer, and received the magnificent sum of \$3 in return for it.

And in those days—\$3 was THREE DOLLARS.

What of the composer—Hart Pease Danks? How did he come out on his investment?

Well, he set the words to music, and submitted the whole thing to a publishing house, and was rewarded by receiving the sum of \$15 for the words and music. Thus the music had enhanced the value of the poem five times.

And the publisher? It is said that "Silver Threads" made the publishers a profit of not less than \$25,000.

The author of the words, Eben E. Rexford, lived in Outagamie County, Wisconsin, all his life. He spent most all of his married life in the village of Shiocton. Being a good Democrat he was appointed and served as postmaster while Grover Cleveland was president of the United States. He wrote many poems. But mostly he wrote of gardening and flowers. He became known as a leading floriculturist of the United States. Oldtime readers of Frank Leslie's Magazine, the Independent, Christian Union, Ladies Home Journal, and Wisconsin Agriculturist will well remember reading his articles upon vegetable and flower gardening. He published numerous books in the course of his life. He died at Shiocton in 1916. He had been content with his surroundings and happy in his life spent in growing garden things and writing about them.

And what of the composer of the music? He lived most of his life in Philadelphia, and continued his work as a musician and composer. At the top of many hymns is found the name H. P. Danks. He was a prolific composer, in one year at the height of his activity turning out as many as 88 tunes for church hymns. He was a fine bass singer—singing in concert and in church choirs. None of his other compositions sold as many copies as "Silver Threads Among the Gold." And while his work brought him a living and a competence, it never brought him wealth. He was happy in it to the end of his life which came in 1903, when he was nearly his allotted "three score years and 10." On his piano and his desk were a number of unfinished compositions which he had been working upon when death took him away.

SHERIDAN POULTRY FARMS, Box A, SHERIDAN, PA.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Read and Judge for Yourself

Some time ago an agent representing the Pioneer Oil Company or Pioneer Gasoline Company, whose main office is at 32 Glenwood Avenue, Minneapolis, Minn., called here and induced my husband to sign a slip of paper or I suppose agreement, to take 100 gallons of Log Cabin motor oil and make payment of \$100. for same—cash \$25. and \$10. per month until balance of \$75. is paid—for which Mr. Berger is to receive a certain per cent on every gallon of gas sold after 1939. This last clause is not written in the contract, but is just a verbal agreement. By this time the said company is to have erected a certain number of gasoline stations in various parts of the country. Now what do you think about such a company? Is it all right and would you think I am safe?

WE find the history of the Pioneer Gasoline Company going back to 1926, at which time we understood they had sold \$20,000 worth of stock. The Syracuse Better Business Bureau reports that their efforts to obtain a detailed report from the company have

"I HAVE not sent in my renewal before because I have been waiting for your representative to call for it.

"This territory will average about 90% American Agriculturist readers.

"I have been a reader of your magazine for about 14 years and would be sorry if I could not receive it."—E.M.

not been successful. Letters were sent out to forty-three of the states asking whether application had been made by the Pioneer Company to sell stock. Replies indicated that application had not been made in thirty-two of these states.

In April 1926 the Ohio Division of Securities issued a cease and desist order against the Pioneer Gasoline Company because it is stated they learned that the company had sent through the mail a large amount of promotional literature which, in the estimation of the Ohio Division of Securities, indicated that the promoters were not in good faith.

Application was made with the California Division of Corporations for a broker's license authorizing it to sell its securities in that State, but the application was never completed so that this permit was never given. An application to the Texas Blue Sky Commission for permission to sell \$20,000 of its capital stock was dismissed because the company failed to give information requested by the Texas Blue Sky Commission.

We understand that application has been made by this company for permission to sell stock in Pennsylvania, but that the application has not yet been acted upon. We believe that this information will enable our subscribers to use their judgment as to the advisability of investing in this company.

From their history, it would seem that their activities have been devoted more to the sale of stock than they have been to the building of stations and if such is the case we do not know how to characterize the investment other than as speculative to say the least.

Do Not Ship Produce to Strangers

I shipped M. M. Waldinger one gallon maple syrup and a 10-lb. pail of maple sugar. The price was \$2.50 for the syrup and \$3.00 for the sugar. I sent him two bills but do not get a reply. I am enclosing his order which will give you his address.

THE order for the sugar and syrup was written on the letter-head of the Waldinger Press of New York City. We have written several letters to Mr. Waldinger but so far have had absolutely no reply. This would indicate two things; first, not to ship goods to strangers unless shipped C.O.D. and

second, that it might not be wise to ship anything to this particular party.

When we get absolutely no reply to letters that we write to concerns for our subscribers, we are forced to believe that the debt is a just one but that the debtor does not have any intention of straightening it out.

No Letter—No Goats

Nearly a year ago I sent two dogs to L. W. Brown, White Hall, Md. I was to receive in trade for them a pair of Angora goats and some guinea pigs. I finally received a part of the order but do not seem to get any reply when I write asking about the goats. I am enclosing the last letter in which he promises to send the goats soon. Will you write him to see if you can get a settlement on this claim?

THE letter enclosed by our subscriber from Mr. Brown clearly acknowledged that the goats were due and stated that they would be shipped soon. However, our subscriber has not received them and up to date we have not been able to get any reply to letters we have written to Mr. Brown.

Warns of Lawn Grass Swindle

WHAT he describes as a lawn grass seed swindle is being worked in New York State usually at the expense of factory owners, green keepers for golf courses, and other large property owners, declares M. T. Munn, seed analyst at the Experiment Station at Geneva and the State official charged with the inspection of all seed offered for sale in this State. This supposedly "new" lawn grass, quoted at two dollars per pound and for which great claims are made, is offered under the name of "Herbea mira", but in reality is nothing but common meadow fescue worth a few cents a pound.

"This grass is represented to be most remarkable, making a velvet-like lawn, growing anywhere on any soil, and needing no cutting," says Mr. Munn. "The advertising leaflets and the salesman's talk are very clever, but it is a pure out and out swindle. This same swindle has been perpetrated by one E. E. Miller, in other states, much to the sorrow of property owners who listened to his sale's talk and who saw the fine growth of some kind of grass in boxes or trays which he carries with him."

Too Precious to Trifle With

THE Federal Trade Commission recently issued a cease and desist order against the Clear Sight Spectacle Company. This company advertised free spectacles but in order to obtain a pair it was necessary to sell five pairs to other persons at \$1.00 a pair.

The Federal Trade Commission maintains that under such conditions the glasses are not free. Whether or not they are free it is, in our opinion, extremely inadvisable to wear any spectacles that cost \$1.00 a pair. Eye sight is too precious to trifle with.

Ask Your County Agent

"Would like information as soon as possible in regards to the Union Control Corporation of Coudersport, Penn. who are manufacturing and selling a liquid material called "Ucco" for the extermination of all worms and insects (without lungs) that infest all farm produce and especially potato blight. They guarantee that one application is sufficient for a season. Their agent who is at present working this locality claims that the government officials were using this to exterminate the corn borer in the west and also the Mediterranean Fruit Fly in the south, successfully. This is a great potato section and he guarantees this to kill the wire worms etc. and the blight. To us potato growers this would mean the

greatest material for the purpose and a great saving. I am very anxious to find out if this is as he recommended. No one in our county has ever heard of this not even our Farm Bureau Agent."

WE have mentioned the products of the Union Control Corporation many times in the past but inasmuch as we continue to get letters we continue to mention them. If claims are made as stated by our reader, they are grossly exaggerated. While it is true that the U. S. Department of Agricul-

I RECEIVED a check yesterday for \$2.98 from the ——— Optical Co. so I have you to thank as I certainly would not have received it without your help.

The Service Bureau is worth the price we pay for your paper and we have the paper besides.

MRS. L. W. B.

ture has done some experimental work on the control of insects through chemicals we doubt whether the Department would recommend the use of "Ucco" under practical conditions. We would suggest that our readers refrain from using "Ucco" unless they can get such advice from the U. S. Department of Agriculture or from their County Farm Bureau Agent.

It is our understanding that the use of any chemical in amounts sufficient to control insects in the soil is altogether too experimental to be practical.

Brinkley Denied Use of Radio Station

SOME time ago we mentioned the activities of Dr. John R. Brinkley of Milford, Kansas, who was using the radio to solicit patients for his hospital. Recently, by a 3-to-2 vote the Federal Radio Commission refused to renew the license of Station KFKB of Milford, Kansas, which was the station used by Dr. Brinkley. We understand that the reason back of this refusal was the fact that the station permitted Dr. Brinkley to use its facilities to solicit medical practice.

A NEW \$2000 Farm Machinery Policy

for American Agriculturist Subscribers

The Policy Pays

\$2000 for loss of life while operating a wagon, sleigh, tractor, plow, harrow, disc, land-roller, grain drill, corn planter, potato planter, cultivator, mowing machine, hay rake, hay tedder, reaping or binding machine, bean puller, potato digger, spray rig, hay baler, manure spreader or buzz saw, which is tipped over, broken or otherwise disabled.

\$15.00 for 15 weeks for loss of time while totally disabled as result of injury in accidents as listed above.

Policy also pays death indemnity or weekly indemnity if struck by lightning or in a burning farm building, also if thrown from farm machines.

**This policy is for
American Agriculturist
subscribers only**

Our field representatives will show you a sample policy and take your application.

Sweet and Low

NEVER has there been a song so popular with sleepy children as this loveliest of cradle songs by Tennyson. Tennyson, pictured herewith, was poet laureate of England. Above, Farringford, where he lived when he wrote "Sweet and Low," and Somersby Rectory in Lincolnshire, England, where he was born. Read the story on page 5.

Over 100,000 FARMALL Tractors have already been built. So great a demand means economy in manufacture and lower price.

Price Reduced on FARMALL Tractors!

We have an important piece of news for power farmers throughout the United States—the price of the McCormick-Deering FARMALL has been cut \$50.

We are glad to be able to make such an announcement about the FARMALL at this time because right now the farmer is seriously in need of anything that will help him to cut down his costs of crop production. The reduction in price will be welcomed in every section.

Due to manufacturing economies and anticipated reductions in material costs, we were able to reduce prices on the McCormick-Deering implement lines, effective for the present season.

Recently, by the same process, we lowered the price on the 10-20 McCormick-Deering tractor \$40, and cut the 15-30 tractor price \$75.

Now, to complete our program of reductions, we announce a \$50 cut in the FARMALL price.

These reductions, made during recent months, mean a saving to farmers of millions of dollars.

Branches at Albany, Auburn, Buffalo, Elmira, Ogdensburg, N. Y.; Philadelphia, Pa.; and at 92 other points in the United States

As the original all-purpose tractor the McCormick-Deering FARMALL has won tremendous popularity. More than 100,000 FARMALLS have been built. Already this tractor has created a real revolution in farming. It is the best investment you can make today.

The new price is the lowest ever placed on the FARMALL.

You have probably seen the FARMALL Tractor at work. If not, your McCormick-Deering dealer will demonstrate it at any time, on any job. The FARMALL replaces 6 to 10 horses and 2 to 3 men. It plows 7 to 9 acres a day... double disks 18 to 25 acres... drills up to 45 acres... plants 24 to 46 acres... cultivates 33 to 50 acres and, in later cultivatings, 50 to 65 acres. It handles every farm power job, including row-crop operations. See your dealer now. Put the best tractor power to work—at the new FARMALL price!

If it isn't a McCORMICK-DEERING it isn't a FARMALL

The Empire State Potato Club

By CHARLES H. RILEY, President.

TO raise the standard of efficiency of the potato industry of New York State is the primary objective of this new organization of potato growers. To say that this is a big job would be putting it mildly indeed. The program to accomplish results which will lead to this objective must necessarily be one of education.

Due to the activities of a live membership committee the members now total well over the 200 mark with excellent prospects that this figure will soon be doubled. Needless to say, the leading potato growers are already enrolled.

What Has Been Done

The Club endorses the recommendations of the College for the improvement of the crop. Seven counties are now carrying on definite potato improvement programs through their Farm Bureaus, following these recommendations. Measurable progress is being made in the market quality of the crop. These recommendations include all phases of the crop from plowing the ground through to grading the harvested crop and include such items as adaptability of the soil to the crop, seed treatment, rotation, fertilization, spraying and dusting, cultivation, and the use of labor saving machinery.

The Club has been instrumental in bringing into the state another potato extension specialist. Dr. Ora Smith has recently become a member of the staff of the department of vegetable crops at the College at Ithaca. He comes to us from the University of California where he has recently completed research work on the potato. With Dr. E. V. Hardenburg he will devote his time to extension and experimental work on potatoes at the College.

At its last annual session in Syracuse the Club asked the legislature for a special appropriation to be used for the study of potato insects and diseases. This request was granted and an entomologist and pathologist are now carrying on research work in Wyoming County. When these men complete their work they will have something of value to offer growers for the control of potato insects and diseases.

The Premier Grower Contest

The Premier Grower contest is again one of our major projects. Each contestant must keep accurate cost accounts of his crop. After the crop is harvested each contestant must submit his records to the Farm Management Department at Cornell where they are checked over. The results of these records are summarized and classified. Much valuable information is the result. Upwards of 100 growers are competing this year in the contest. The ten with the highest scoring will be awarded the Premier Grower medals at the next winter convention.

A summer tour in western New York has been planned by a competent committee and will be history before this article is printed.

It is up to the members of the Empire State Potato Club to lead the way in new methods and the use of labor saving machinery as the thousands of growers who contribute annually to the total production of the crop are not informed of the latest developments. Many are producing at a loss. They must adopt new methods which will reduce their cost of production or stop producing.

Yes, the Empire State Potato Club has a real mission to perform. The wonder of it all is that an industry as large as the potato industry in New York had no organized voice until 1928 when the Club was formed.

A new bulletin of interest to fruit growers is number 498, "Protecting Orchard Crops from Diseases and Insects". This bulletin is written by C. R. Crosby, W. D. Mills and W. E. Blauvelt and may be secured as long as the supply lasts by dropping a request to the Office of Publication, College of Agriculture, Ithaca, N. Y.

Farm Buildings Need Fire Protection

How the Law Permits It - Some Difficulties Which Must Be Met

By CHESTER R. WASSON

IN New York, rural areas may legally have fire protection in one of two ways. According to chapter II, paragraph 38, of the New York laws, in any county except Westchester, "Each board of supervisors may, on the written, verified petition of the taxable inhabitants of a proposed fire district outside of an incorporated village or city, and within the county, whose names appear on the last preceding assessment-roll of the town wherein such proposed fire district is located, as owning more than one-half of the taxable real property of such district, or as owning or representing more than one-half of the taxable real property of such district, owned by the residents thereof, establish such district as a fire district. * * * Where such proposed fire district is situated in two or more counties, the board of supervisors in each county in which a part of such fire district is located may, by resolution, * * * direct that when a similar resolution is adopted by the board of supervisors of each of the other counties * * * such fire district shall be * * * legally established."

"— the legal voters * * * may elect not less than three nor more than five residents thereof to be the fire commissioners for a term of five years * * * (or less) * * * (and) a treasurer for a term of three years—". These commissioners may then proceed to bond the district, with the consent of the voters, to buy the necessary apparatus and property, or they may "contract * * * (for fire protection) * * * with a duly established company or companies * * * or with a duly constituted and organized company in an adjoining town or village, or with the authorities of said adjoining town or village for a term

of not more than three years" providing that no company contracted with is unable to furnish "adequate protection". In Westchester County, the provisions are the same except that the requisite petitions require only the signatures of a "majority of the resident taxpayers."

Provisions are also made, under chapter 63: 316-316a, for the establishment by the town board of any town, of a fire district "whose boundaries are the boundaries of the town". Government in this case is by means of three commissioners, each serving for three years, appointed by the town board. Provisions are made, of course, in other parts of the law for the establishment of village and city fire departments, so that it would seem that any portion of the State that wished fire protection and is able to pay for it, might have it.

Laws, however, seldom tell us much of the actual life of people in any given community. Certain natural and social conditions will always limit their operation. Obviously, dirt roads are

impassable to fire apparatus of almost any type at certain times of the year. Then, too, permissive legislation of this character requires energetic action on the part of somebody in the community before it can take effect. Sometimes, usually after a particularly disastrous fire, a community is roused to action, but the leaders get tangled in the legal technicalities incident to the formation of a district and the matter may be dropped. Thus, for one reason or another, many New York communities are without any real protection of any kind. Many others, as we have already learned in a study we have started, would be if certain extra-legal customs had not arisen among the volunteer fire departments that serve the villages of the state so well. These practices, which vary from straight "charity protection" to true co-operation between farm residents of an area and the village that serves it, have apparently arisen, as do most customs, spontaneously. Some farmer's barn catches fire. He remembers that his village has just formed a volunteer fire department and phones in to them. Nobody con-

sults a fire district map and says, "He's not in our fire district". It's a case of "Bill Watkins' barn is on fire, Let's go!" The firemen having saved his house and toolshed, Bill may proceed to do nothing about it, which is what happens in the case of some communities. More usually, he turns over his new barn, when finished, to Hultonville's Volunteer Fire Department for a barn dance, or pays something into the department fund, or both. Eventually, the department may decide it needs a new pumper. Our mythical Hultonville Village Board,

(Continued on Page 19)

What About Farm Fire Protection?

WHEN farm buildings burn where there is no fire protection apparatus available, all the owner can do is to stand and watch buildings, which may represent his life's savings, go up in smoke. On the other hand, we have recently received numerous letters from readers who have been included in rural fire zones and who feel that the condition of the roads to their farms, during a considerable portion of the year, would make it impossible for fire apparatus to reach their buildings in time of need.

The article on this page gives you the provisions under which rural fire protection areas may legally have fire protection. This is a real problem and we are interested to know what is being done to solve it. For the best letter telling what your community has done to control farm fires, American Agriculturist will pay \$3.00. For all other letters printed we will pay \$1.00 each. Letters should not be over 400 words in length and should reach us by October 1.

Feeding Winter Lambs for Profit

Western New York Farmer Tells How From Experience

By GILBERT PROLE

Genesee County Master Farmer

Mr. Gilbert Prole of Stafford, Genesee County, New York, was one of the first class of Master Farmers to be named in New York State. He grows a big acreage of cash crops, but in addition to this he has a reputation of being one of the best lamb feeders in western New York. Because we felt that his experience would be of interest and value to our readers, we asked Mr. Prole to write this story and after some urging by us he consented to give you his experiences.

tracting time which is usually during the spring months.

There is one thing to be avoided if possible in buying feeders in the livestock markets and that is buying speculator lambs (so called). These lambs are bought by the speculator while hungry from not being fed heavily during shipment. They are then filled by over feeding and sold at a lesser price per pound, still showing a profit because of the extra weight put on by over feeding. This practice sometimes injures the physical condition of the lamb so that they never fully recover and thereby causes serious losses to the feeder. The purchase of speculator lambs may be avoided by placing orders with reputable commission firms whom you know will not buy filled lambs. Lambs are usually bought in October or November and weigh from 40 to 60 pounds.

There are two or three methods of feeding practiced. One method is hand feeding where the lambs are confined in small pens. These lambs are fed lightly with hay upon their arrival, the light feedings of hay being continued for a period of four or five days. The lambs are then started on a grain ration, feeding six to eight quarts of

grain per 100 lambs. This amount is fed until all of the lambs eat grain readily. The grain ration is then gradually increased until the lambs are eating about two pounds per lamb per day, this amount being fed in two feedings. Care must be taken not to overfeed at any time and everything should be kept strictly fresh and clean.

Another method of hand feeding practiced by some lamb feeders is to let the lambs run in large flocks rather than divide them up in small pens. The lambs are driven outside the barn at feeding time while the feed is being placed in troughs. The lambs are then returned to the barn to feed. With this method of feeding the lambs get a little more exercise and fresh air.

Self feeding is practiced by some feeders. In this method the feeder lambs are fed a bulky grain ration in self feeders. The ration is then

(Continued on Page 18)

A prime lamb. It pays to grow this kind.

A cull lamb. The kind that cuts the profits.

Vol. 126 September 6, 1930 No. 10

What Makes Hard Times?

RECENTLY there were gathered for two weeks of conferences at the New York State College agricultural economists from all over the world and from many of our own states. In this group were many of the soundest and most farseeing thinkers in agricultural work and they were gathered to thresh out the different points of views on many of the modern farmer's leading problems. Incidentally, one of the recognized leaders of these great men is Dr. G. F. Warren of our own State College.

Probably the problem or question that received most attention during the meeting was: "What causes hard times?" On this, opinion among the learned doctors was sharply divided. One group said that hard times were caused by the law of supply and demand and that all of our economic troubles right now were due to overproduction.

Sharply disagreeing with this theory another group of economists claimed that the varying standards of gold caused the hard times. "How," they asked, "can there be any stability in the markets when your yardstick (gold) is thirty-six inches long at one time, forty-eight inches at another time, and then back to twenty-four inches at another?"

That is what happens with gold. Buy a farm and agree to pay for it ten years from now. You are to pay, say \$5,000, but because gold values vary in what they will buy from time to time you may have to pay in reality \$6,000 or \$4,000 for your farm at the end of the ten years measured in actual products, all depending on the purchasing power of the dollar at that time. What happened to retired farmers or others trying to live on small savings during the war? The real value of the income was cut in half because it would buy only half as much as before the war. The law of supply and demand had nothing to do with it. The value of gold (the yardstick) had decreased because there was plenty of gold. Now gold is becoming scarce again, is more valuable, and prices are coming down.

But the other fellows who say the trouble is caused by overproduction (the law of supply and demand) are right, too. Both are right. If you produce more food than can be sold, agriculture will have hard times as sure as the sun rises. Away with the fellow who shouts that there is no overproduction in the world at large. Maybe there is not, but what good does it do the American farmer with dollar wheat or apples rotting on the ground if China or some other far off country does need wheat or apples, when there is no way of transporting our products to those

countries or getting paid for them if they are transported?

So far as the American farmer is concerned, there is overproduction in many products, there are too many farmers and too much poor land in cultivation, all fool theories to the contrary.

Out with Them!

RUSSIAN communists in America have a policy of debauching city children by placing them in camps in the summer time in rural districts, teaching them revolutionary principles and to revile and hate their own country.

Such a camp has been established this summer in Van Etten in Chemung County, New York, not far from Ithaca. Some seventy-odd children have been in the camp several weeks under the instruction of communist teachers. The whole rural community, in fact all good citizens in the county, have been much excited and concerned over what was going on. A week or so ago, two of the women teachers were offered by local citizens an American flag to be flown over the camp. It is reported that the women reviled the flag and spit upon it. It was then with difficulty that the local authorities saved them from mob violence.

On August 16, Justice of the Peace William Westbrook of Van Etten sentenced them each to pay a fine of \$50 and to serve three months in Monroe County penitentiary. A hearing on an appeal was scheduled for August 26. Justice Westbrook has been receiving anonymous letters favoring a repeal of this sentence, some of which were described as more "nasty" than threatening. The Justice did exactly right, and we hope sentence is sustained.

It is high time that this sort of tearing down of American institutions should be stopped. It is time to call a halt. Every communist and agitator against the principles of American government should promptly be tried and if found guilty, deported. What we have today cost too much and came too hard to be trifled with. If these agitators do not like this country and the principles upon which it is built, let them go somewhere else—and let us help them on their way with all the energy possible.

More About the Milk Investigation

ON August 11, the price of bottled milk in New York City was increased one cent a quart following wholesale increases of thirty-seven cents a hundred pounds for Class 1 and twenty cents for Class 2 milk. Mr. George Royce, of the State Department of Agriculture and Markets, tells us that the week following this increase receipts of milk and cream in New York City fell off 40,000 cans. Last year, figures for the corresponding week show that receipts fell off only 13,000 cans.

If ever an increase in the price of milk was justified, it was justified this summer. Why was the reaction to this increase in the form of decreased consumption so great this summer?

In our opinion, unfair newspaper publicity is the answer. In the first place, papers came out with big headlines indicating that the increase in price was not justified. The District Attorney of Kings County started an investigation which was finally taken over by the New York State Attorney General's office. About the same time, retail prices for loose milk increased even more than one cent a quart. They had been altogether too low, and producers have no objection to an investigation to show whether cut-throat competition between wholesale loose milk dealers can be controlled.

Widespread publicity has also been given to the activities of Aaron Sapiro interpreted in some quarters as an attempt to discredit the Dairymen's League Cooperative Association. The latest move is a complaint filed with the Federal Trade Commission by the Harlem and Bronx Milk Dealers' Association with which Mr. Sapiro is prominently associated. This complaint asks for an order from the Federal Trade Commission to compel the Dairymen's League to de-

sist from what they term "unfair competition in the sale of loose milk." The New York Herald Tribune in reporting this says, "Mr. Sapiro's association numbers thirty-one independent wholesalers, many of them now under indictment as associates of Larry Fay and the old New York Milk Chain Association."

Previous to the filing of this complaint, a letter from Mr. Sapiro had been received by Attorney General Hamilton Ward, suggesting forty-nine lines of questioning to be followed in connection with the Attorney General's milk inquiry and attempting, we understand, to fasten responsibility for the recent increase in the loose milk price on the Dairymen's League. The newspapers have also carried stories reporting that Mr. Sapiro has suggested to the Federal Farm Board that they cancel the \$4,000,000 loan made by them to the Dairymen's League.

How can such publicity, tending to impress New York City consumers with the idea that they are being swindled, have any other effect than to reduce consumption? Why all this unfair publicity injuring both producers and consumers, when similar raises in other years were accepted as a matter of course? The Dairymen's League Cooperative Association is withholding comment until called upon officially to state their case. In the meantime consumers should remember that milk, at present prices, is a cheap food. Producers can do nothing better than to give those fighting for their interests their fullest support.

—H. L. C.

Silo Filling Time

SILLO-FILLING time is just around the corner and dairymen are asking whether or not it is necessary to tramp silage in order to get a good product. The best information we can get on this subject indicates that where corn is cut into the silo at just the right stage, that is, when it is not too dry or frosted, the silage will come out in excellent condition even though no tramping is done.

We are still a little doubtful of the advisability of trying this plan when the corn is over-ripe, where it has been cut for some time before the silo is filled or where it has been frosted.

Dairymen seem to be having an unusual amount of trouble with moldy silage for the past year or two. We understand that there is only one thing that can cause this, namely, air pockets in the silage. Tramping is no guarantee that air pockets will not develop. If you put someone in the silo, skip the fellow who is likely to do his tramping all in one spot. Uneven tramping is just as likely to cause air pockets to develop as no tramping at all.

Incidentally, if silo-filling extends over two or three days, you should use caution in entering the silo in the morning. The fermentation of the corn develops carbon dioxide and this, being heavier than air, settles to the bottom. Numerous reports have come to us in past years telling of men who have been suffocated in this way. The safe thing to do is to run the blower a few minutes before anyone enters.

Eastman's Chestnut

A PARSON up in the mountains of Virginia was so distressed by the moonshining and the bootlegging and the drinking among his flock that he preached a sermon against liquor.

"I wish there wasn't no liquor on the earth," he declared. "I have wrote a letter to the president of this here country asking him to give me a permit to seize all the stills and get into all the warehouses and gather up all the fruit jars filled with the tur'ble stuff. When I get that permit I'm going to knock all the whisky barrels in the heat and empty all the whisky kegs and bust all the whisky jars, and I'm going to pour all that liquor in the river, and on Christmas morning you-all will see that river flowing red with liquor. That's all I got to say. Let the choir sing now."

The choir leader stepped forward, cleared his throat and said:

"Let's all sing 'Shall we gather at the river'

The Cost of Cooling Milk

A Comparison of Ice and Electricity---Sweet Clover for Pasture

DAIRYMEN all over the New York Milk Shed are showing great interest in the use of electricity for cooling milk and the number of electric outfits is increasing rapidly. To a certain extent this is due to the ease of cooling milk by electricity, but another reason is the fact that milk which is delivered to the plant after 8 o'clock for grade A, or 9 o'clock for grade B, must be cooled to 50 degrees for grade A and 60 degrees for grade B. Milk can be cooled more rapidly by the use of an electric device than it can by the use of ice.

In the June issue of Farm Economics, a publication put out by the Department of Agriculture Economics and Farm Management of the New York State College of Agriculture, Professor Bucknam gives the results of a survey of a number of farms in New York State that have been using electrical cooling plants. One hundred and thirteen dairy farms were visited, one hundred and one of which were using electrical milk cooling devices. Twelve were using ice.

The average cost of the entire installation of an electrical cooling device, including tank, cooling unit and additional wiring averaged \$566.67 per farm, or \$74.96 per can capacity. The figures available indicated that it requires between 0.8 of a kilowatt-hour and 1.3 kilowatt-hour of electricity per can of milk cooled. If electricity can be purchased at 4c per kilowatt-hour, this would give a cost per can of 6.3c for operation and a total cost for both operation and overhead of 11.4c per can of milk cooled.

In studying the cost of cooling milk with ice, it was found that the average cost per ton of stored ice was \$1.99 and that it cost 13.7 cents per can to cool milk with ice. Of course, less than one-third of the cost of the stored ice was cash cost whereas the costs for electrical cooling was practically all cash costs.

Where an electrical milk cooling device is used, it is commonly recommended that the tank be insulated. In 71 farm built tanks only one had absolutely no insulation. Of course insulation also saves where ice is used, but inasmuch as the cash costs involved are less, an insulated tank is much less common when ice is used.

Sweet Clover for Pasture

EIGHTEEN acres of sweet clover have furnished abundant pasture for fifty head of cattle at the Cornell University farm this season, reports Professor E. S. Savage of the department of animal husbandry. In March the clover had heaved so that much of it appeared to lay right out on the ground and it seemed doubtful if it would grow at all.

On May 21, twenty-five cows in milk were put on eight acres of the sweet clover and were barely able to keep it down until about July. On the remaining ten acres all of the university beef cattle were turned in at the same time. The beef cattle and calves were equivalent to about twenty-five dairy cows.

The beef cattle were removed the first week in July and the dairy cows are now being alternated on the two fields. Professor Savage predicts that there is plenty of pasture on the eighteen acres to last the twenty-five cows until the first of October.

What has been your experience with sweet clover pasture?

Twenty-four Years of Alfalfa

ROBERT HUNTER whose two hundred acre farm borders the state road between Monroe and Chester, believes that the best way to keep his farm up and expenses down is to raise alfalfa.

He made his first planting of alfalfa back in 1905 and has been making plantings ever since because he knows it pays. He does not believe in curing

it so dry that all the leaves drop off from constant turning it over but just enough to keep it from spoiling.

He keeps thirty-eight head of cattle and does the work of the place himself, with the help of his boys who are all in school. "But they are fine boys to help in the summer. They worked so good in haying that I thought they had earned a vacation and I gave them each a couple of weeks at Asbury Park.

Mr. Hunter believes in special side lines of interest for farmers as well as for business and professional men. His is horses, particularly the fast kind. And, of course, living in Orange County he has plenty of chances to go to horse races. He still raises colts though he says there is no money in it. He breaks them in himself—"boys are all for automobiles these days". For a little real excitement he has a six-year old pacer that he sometimes drives in the races at Orangeburg.

This shows that raising alfalfa does not take all the vacation time out of the summer. "Some folks", said Mr. Hunter, "say that they will never raise it, because it makes haying last all summer and you never get done. But who wouldn't be glad to do that extra work a couple of months in the year when it helps a man to cut down his feed bills the year round and keep up his farm at the same time."—D. C. H.

Ground Wheat for Livestock

THE advisability of feeding wheat to livestock is a question which often confronts livestock feeders when the prices of corn and wheat are close together. E. T. Robbins, extension specialist at the Illinois Experiment Station, reports that coarsely ground wheat is worth as much or more as the same weight of shelled corn for hogs. When wheat is 75 cents a bushel

and can be ground for 5 cents or less, it will pay to feed wheat instead of 75-cent corn. Cheaper corn, however, would likely be a more economical feed.

Wheat in the dairy ration will give an equal bargain with corn and oats, when wheat sells at 90 cents and a fifty-fifty mixture of the latter at \$1.46 per hundred pounds. When wheat is 70 or 80 cents, the respective corresponding values of the mixture are \$1.14 and \$1.30 per hundred. For dairy cattle, ground wheat if fed alone, will usually be sticky and difficult to masticate, but when mixed with corn and oats this difficulty is not noticeable.

Ordinary farm feed mills may be used to crack or grind wheat. For hogs, specialists point out that only cracking the kernels is preferable. For the dairy ration mixture grinding is usually desirable, although fine grinding is not necessary.

Songs That Mother Used to Sing - Sweet and Low

By DAVE THOMPSON

CRADLE songs that mother used to sing! Sleepytime songs that brought the sand man to baby's eyes. Songs repeated and repeated, growing softer and softer, until the tired head lay still on mother's breast and, on tiptoe she crossed the room to the cradle by the fire-place, cooing the words, oh, so softly as she gently rocked the cradle for that brief minute to see whether or not her darling was in the fairyland of nod. Gentle, softly flowing words—

"Sleep, my little one; sleep my pretty one, sleep."

It has been called the loveliest cradle song in the English language. It should be beautiful in poetic thought and measure and sweet in melody, for it combines the poetic beauty of Alfred Tennyson, poet laureate of England with the soothing swing of Sir Joseph Hanby, one of England's most noted composers of religious music. It belongs to Tennyson—his are the words. He used soft, sweet words to paint a picture so beautiful that it captured the fancy of the great composer who has given the world many of its best loved hymn tunes, and he set it to music.

The picture of the song is that of a mother in her little cottage on Brit-

ain's rugged coast, singing her little one to sleep, the while she thinks of the return of its father far off at sea. Her constant prayer—her continued reassurance to herself that he is safe and will return—although many there be who have gone down to the sea leaving their child in its mother's arms to grow up with never a remembrance of its father—and pretty pictures of the sea in its quiet moods—all these the poet Tennyson put into these two short verses.

"Sweet and low, sweet and low,
Wind of the western sea,
Low, low, breathe and blow,
Wind of the western sea!
Over the rolling waters go,
Come from the dying moon, and
blow,
Blow him again to me;
While my little one, while my
pretty one, sleeps.

Sleep and rest, sleep and rest,
Father will come to thee soon;
Rest, rest, on mother's breast,
Father will come to thee soon;
Father will come to his babe in the
nest,
Silver sails all out of the west
Under the silver moon;
Sleep, my little one, sleep my
pretty one, sleep.

Who better than Alfred Tennyson should know the technic—if it may be called that—of rocking the baby to sleep? He was one of a family of 12 children—sons and daughters of Dr. Tennyson, the country clergyman who

Do You Agree?

WE are wondering how many of our readers find the "Songs That Mother Used to Sing" as interesting as the writer of the following:

"We were much disappointed in not finding any old song in the August 16 issue of your paper. Please do not leave them out. They are so different from anything the other farm papers use and something I have always wanted to collect and paste in scrapbooks. Please let us have a lot of them.—A.M.M."

Unless many of our readers find this series enjoyable, we are planning to discontinue it soon. If you wish the series or a similar one to continue, write and tell us.

lived in Somersby rectory in Lincolnshire, England. There, on the 6th of August, 1809, the future poet laureate of England was born. One of the oldest of the family, it is without question that he early helped to care for the babies in the family, for in later years after his father's death when he was still a young man, he acted as the head of the family.

It is also likely that the little Tennyson children were sung to sleep by mother and the rest of the family, including the good rector himself, by little poems of their own writing, for all of the family scribbled poetry in their early childhood. It was a household where rhyming and verse making came naturally. Ten of the 12 Tennyson children lived to be more than 70 years of age, and of these, three, Frederick, Charles, and Alfred became poets of distinction.

During the 14 years from the time when Alfred Tennyson had met Emily Sellwood, a friend of his own dearest friend Arthur Hallam, and his sister-in-law through the marriage of his brother Charles to her sister, until 1850 then the turn in his fortunes were such as to permit him to establish a home to which he could bring his bride. He had written her, except during a portion of the time when her parents forbade continued correspondence with an improvident poet who could not earn enough to set up house-keeping. When he had "The Princess" under revision, he wrote two versions of the song "Sweet and Low" and sent them to Emily Sellwood for choice. Thinking the one we now know more musical in its flow and more song-like, she chose it.

The Greatest Temple

By DR. J. W. HOLLAND
The A. A. Philosopher

Dr. John W. Holland

I HAVE just visited St. Patrick's Cathedral and the Cathedral of St. John the Divine, in New York City.

Evidently the temple building mood is coming over America. The next two or three centuries may witness the erection of greater Churches than have yet been built upon the earth.

The greatest temple is the temple of the human body. It is vastly more sacred than any pile of adorned stone. As I came out of one of the above mentioned Cathedrals, I saw a horde of dirty-faced little children playing on the sidewalks.

I thought of the line in the Bible, "Know ye not that ye are the temple of God?" How cheaply we consider human life. Let a motorist run over a child and we say, "It is too bad." Let the same man take a hammer and chip a piece of marble from a temple altar, and we stand aghast at the vandalism. Our body temples are

entitled to the greatest reverence. The feeling of awe and respect that comes over us when we enter a great cathedral should be in our hearts when we think of the sacred uses and beauty of the human body.

Temples are usually kept clean. A dirty temple is unthinkable. It is less inspiring than a pig sty. Science is teaching us how to keep our bodies clean. Someone said that "cleanliness is next to godliness." It can be as certainly said that "there can be no true godliness without cleanliness." Health and holiness are both included in spiritual wholeness.

The high altar of the body temple is the Mind. When we allow salacious thought to occupy our minds we are defiling the most beautiful thing that God has made. One day during my early boyhood on the farm, a man told a filthy story to a group of us boys. Another man said to him, "If you had any respect for your own mind, or the minds of those boys you would never say a thing like that." Many years have passed since that day, but I have always been glad that that foul minded man was rebuked.

They who do not RESPECT their own bodies can never truly RESPECT anything.

Get More Eggs with Less Money *by feeding* **FUL-O-PEP**

POUULTY raisers everywhere have proved to their complete satisfaction that Quaker Ful-O-Pep Egg Mash improves egg quality, increases egg production and at the same time lowers feed costs.

The reason lies in the large amount of pure fresh OATMEAL in scientific combination with other grains into which is blended molasses, cod liver meal and essential proteins, carbohydrates, minerals.

Ful-O-Pep Egg Mash assures you more eggs, bigger eggs, better eggs, and better flocks, just as its companion feed, Quaker Ful-O-Pep Growing Mash, makes your young chicks grow into big, vigorous eager-to-lay pullets and choice meat birds. Ful-O-Pep Scratch Grains are second to none in giving heat and energy, supplementing Ful-O-Pep Mash, and in meeting the birds' natural instinct to scratch for their food. The Ful-O-Pep "50-50 combination," half Growing Mash and half Egg Mash, is exactly what you want to bring your hens quickly and safely through the molting season.

Your Quaker dealer has all these wonderful feeds ready for immediate delivery. See him today.

A.A.'s Western New York Farm and Home Talk

Rain at Last

BY M. C. BURRITT

AS we sat around the fireplace in the cool of the evening and listened to the patter of the rain on the porch roof and heard it pouring in the empty cistern we had something of the feeling which a starving man must have

when at last he gets food. Even this is not a heavy rain and will soon disappear in the parched ground. But it came gently and steadily all the afternoon and evening of August 23—the first since early July. The official Weather Bureau records show less than an inch of rainfall at Rochester during

M. C. Burritt

July as compared with a mean July rainfall of 3.08 inches and only .13 of an inch from August 1 to 22, as compared with a normal of 2.84 inches for August. No wonder it is dry!

This welcome moisture is too late for many crops. Pastures have long been bare and feedless and cannot be restored in any measure before late fall. Second cuttings of alfalfa amount to little. Rain cannot now affect the losses from dryrot in tomatoes which are probably more than 25 per cent, nor make a yield of sweet corn which local canners report is so small that it will not pay to harvest and can it. The small yields of early cabbage are in part offset by the good price. Late cabbage, tomatoes, from now on, cauliflower and similar late crops will be greatly benefited and perhaps saved. Cucumbers have not yielded more than half a crop. The roughages for feed will be short. Everything possible is being cut and saved for feed. Apples are generally small and it is doubtful how much these late rains will increase size.

Early Apples Cheap—Good Prospects for Late Varieties

Fruit prices are very unsatisfactory at the start of the season. Duchess apples have practically all gone to the canners at not to exceed seventy-five cents a hundred weight and some as low as fifty cents. They have been a drug on the local market. I do not feel, however, that this is any criterion for the other varieties, as the total crop is little, if any, larger than last year and as our competing areas east of the Mississippi are particularly short and hard hit with the drought. Canners are buying quite freely at \$1.25 per hundred weight for early and mid-season varieties like Wealthy and Greening and \$1.50 for Twenty-Ounce and Baldwin down to two and a quarter inches with the ciders out. They are insisting on rather better quality than usual and are buying the better cared for orchards where they can.

The inquiry for apples is good. There are more buyers in western New York than in many years, which is probably

due to small crops in Virginia and Michigan. They are not offering more than \$1.25 per bushel for Wealthy and Twenty-Ounce, A grade packed, and this price seems too low to growers many of whom are inclined to store at these prices. The quality is generally good except for size. It is a little early yet to tell just where the fall market will settle down. The uncertain factor is consumer buying power. The crop is certainly not a large one.

The Pear Crop and Prices

Bartlett pear harvest has begun. The crop is a big one though the fruits are small. The prevailing price is one and a quarter cents per pound, down to two inches. There will be considerable packing and storing at these prices as they only mean two cents a pound or \$1.25 per bushel out of storage to break even. Only No. 1 pears are being bought at these prices.

Prices of nearly everything on the public market are quite unsatisfactory and discouraging to growers. Plums are bringing only 30 cents per basket as compared with 90 cents last year.

Threshing is well along now and yields of spring grain have been excellent running from 50 to as high as 80 bushels per acre. Wheat yields are also rather better than expected from the poor stands, being from 10 or 12 bushels per acre up to 25 and 30 bushels with an occasional 40 bushel yield reported. The winter's supply of grain will be better than that of roughage in western New York. Corn is very short and drying up. Some has been put into silos already. Beans are ripening due to dry weather and expected yields will be low.—Hilton, N. Y., August 24, 1930.

Cost of Thinning Apples

What is the average cost of thinning apples?—P. W., New York.

SOME figures kept by the West Virginia Experiment Station charged labor at 20c an hour, found that it averaged to cost 21.8c per tree to thin twenty-one year old Ben Davis trees. Tests as to effect on yield show that moderate thinning does not decrease the total yield. On the other hand, it increases the average size of the apples, reduces breakage of tops and handling costs at market time. There has been some idea that thinning will insure annual bearing, but so far as we know there is no experimental evidence to back up this idea.

Plowing Orchards in the Fall

Where a cover crop is used on apples can it be plowed under in the fall without danger of injury to the trees?

THERE, of course, is more danger of washing of the soil where the cover crop is plowed under. There will be considerable danger of winter injury to the roots if the cover crop is plowed away from the trees but not much if it is plowed towards the trees.

"I don't think it's as good as the old one."—LIFE.

12,000,000 shoppers know *where to find the* **LOWEST PRICES** **IN 10 YEARS...**

Sears, Roebuck and Co.—The World's Largest Store—presents the new "Thrift Book of a Nation." From cover to cover it tells a story of value without precedent.

Lowest Prices in 10 Years is not a slogan. It is a promise. And lowest prices are here coupled with the most advanced merchandise to be offered this season.

Smart Style at a Low Cost

If you are interested in wearing apparel, you will find this new catalog abreast of the times. Not alone that, but you will learn Sears-Roebuck buys for less and sells for less. You and your family can have more and better clothing if you will use this Thrift Book.

Economy for Your Home

Here we have exerted the full force of our buying and engineering ability to bring you all of the better things for the home at prices we alone can offer.

Whenever you are going to buy for your home, look in your Sears catalog first.

46,000 Articles—Every One Bargain Priced—The Largest Variety of Merchandise Offered by Any Store

Whatever you want for yourself, your family, your home, your car, your shop, your farm will be found here in this new "Thrift Book of a Nation" for Fall 1930.

Use it often. Compare prices. Compare quality. Remember, we guarantee satisfaction and we guarantee a saving—on every purchase.

SEND FOR THIS FREE BOOK

This new catalog, with its 1,000 pages of new merchandise, all at the lowest prices in ten years, is yours for the asking. Whether you intend buying from Sears or not, you will want this book to know what prices you should pay. You do not obligate yourself in any way in filling in the coupon. The book is free. Reviewing the Latest Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
3 Evap. Cond.		
Milk Powder		
Hard Cheese	1.95	1.75
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Sept. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%. The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Market Fairly Steady

CREAMERY SALTED	Aug. 29, 1930	Aug. 23, 1930	Aug. 30, 1929
Higher than extra	40 1/2-41	40 1/2-41	44 1/2-45
Extra (92 cc.)	40	40	44
84-91 score	35 -39 1/2	35 -39 1/2	39 -43 1/2
Lower Grades	32 1/2-34 1/2	32 1/2-34 1/2	38 -38 1/2

The butter market was fairly steady during the last week in August. Early in the week there was enough strength to send prices to 40 1/2c on creamery extras. The advance was a little too severe for the trade and prices settled back to 40c. There has been good buying on the part of the regular distributors, which has been clearing current arrivals fairly well. Receipts are very moderate for this time of the year but whatever shortage there is in the fresh make is being offset largely by the free use of storage butter. Reports from some sections state that recent heavy rains have improved conditions for production somewhat. However, as yet there is no increase to speak of. It is hard to imagine a few rains bringing burned pastures back to life in so short a time.

Cold storage holdings are being reduced and we are now well below 1929 figures. There are some who freely predict that by the time fall comes round we are going to be far short of the 1929 figures. If this develops, the outlook is most favorable for the man whose milk check is determined by the price of butter. As our friend "Andy" would say: "It looks as though the repression is over."

Cheese Makes Another Gain

STATE FLATS	Aug. 29, 1930	Aug. 23, 1930	Aug. 30, 1929
Fresh Fancy	21	21 1/2-21	23 1/2-25 1/2
Fresh Average			
Held Fancy	24	24 -26	27 1/2-29 1/2
Held Average			23

The upward trend that we predicted last week has developed and prices are up another half cent. The market on fresh cheese is very firm, with a fair volume of business taking place. Primary markets report rapidly advancing prices, which lead us to believe that the upward trend will continue. It is expected that the September 1 government reports on cold storage holdings will show that our present reserve is approximately the same as or less than it was a year ago. This should give us an advancing market.

Egg Prices Gain

NEARBY WHITE	Aug. 29, 1930	Aug. 23, 1930	Aug. 30, 1929
Hennery			
Selected Extras	39.46	36.43	51.58
Average Extras	35.38	33.35	48.50
Extra Firsts	28.33	27.31	41.47
Firsts	26.27	25.26	37.40
Undergrades	24.25	23.24	35.36
Pullets	28.30	27.29	33.40
Pewees	19.21	18.19	23.30
NEARBY BROWNS			
Hennery	36.44	34.41	46.52
Gathered	31.35	25.33	36.45

* Prices include premiums.

The egg market is at last beginning to show signs of life. There has been a

good call for all lines of browns and some lines of whites have been scarce. Mixed colors are not moving so well. The leading brands of Pacific Coast whites are experiencing active inquiry, one particular brand going out at a premium. It is reported that some fancy lots of nearbys are losing out in the business due to the fact that they do not come up to official weights. Shippers should realize that competition in the egg business today is keen and unless they give the trade what the other fellow is giving it they are going to lose business. Opportunity was knocking at the door of the nearby producer the last week in August, but in a lot of cases Opportunity passed on to the store of the Pacific Coast egg producers.

School starts next week and we look for a shortage of fancy eggs to develop. Dealers have been holding the prices down in spite of an expected shortage, due to the fact that in a great many of the fancy nearbys, technical inspection is not satisfied due to light weight.

The consumption of eggs appears to be more satisfactory than we have been lead to believe by some authorities. During the week ending August 23 the Producers' Price Current states "The trade output of eggs for New York, Metropolitan District, for the week ending August 23 was 144,381 cases compared to 138,255 cases the previous week and 132,447 cases average weekly output for August 1929."

Live Poultry Market Irregular

DUCKS, Nearby			
	20-23	18-23	22-27
GESE			
	15-16	12-13	

Just before the Labor Day holiday the live poultry market experienced a set back due to the warm weather that settled over the Metropolitan district. Colored fowls coming in by express sold slowly, while Leghorn fowls held fairly steady. Very few Leghorns brought better than 18c, and only the fanciest reached 19c. The broiler market was irregular, being based more on quality than experienced better trade than anything else. The market as a whole was irregular, some stores experienced better trade than others on the same class of goods. Prospects for good weather over the Labor Day holiday led dealers to expect fairly satisfactory clearances.

Feeds and Grains

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hay Slightly Easier

Hay prices eased off \$1 per ton this week which is usually the case for the end of the month, when buying is a little dull. At the same time receipts have been quite liberal. Buyers are becoming less critical of age of hay but are looking for the better grades. Straight timothy No. 1 generally brings \$28 in large bales. With each successive grade from \$1 to \$2 lower. Mixtures have been bringing \$1 under the prices of straight timothy.

Meats and Livestock

CATTLE—Steers 25-50c higher; medium

\$8.60-9.50. Cows scarce, steady; common to medium \$5.00-6.00, low cutters and cutters \$2.50-4.50.

VEALERS—Scarce, about steady, few good to choice \$12.00-14.00.

HOGS—Heavyweights steady \$10.25-10.50.

LAMBS—Steady. Good to choice \$9.50-10.25, mediums \$7.50-9.50, common \$6.50-7.00.

COUNTRY DRESSED CALVES—Receipts all through the week were light to moderate. Trading generally was slow and prices were irregular, but about the same as last week. Market was not cleaned up at close; prices were barely steady. Fresh receipts per pound: Choice 16-17c; to good 13-15c; small to medium 10-14c; lightweights 10-14c.

Nitro Express Loads will outshoot any other make of long range load on the market.

Put more pep in the old scatter gun

THE other fellows shot first and never touched a feather. Mr. Duck seemed to be safely headed for parts unknown. You thought he was out of range but you took a chance. Some shot! He hit the water with a splash—a clean kill. That's what happens time after time when you're shooting Remington Nitro Express Game Loads. They put more pep in your shotgun. For long shots at all kinds of game they're supreme. They outshoot any long range, heavy load on the market.

All Remington Game Loads are loaded by an entirely new method—guaranteeing uniform results. The powder is not measured by grains or drams, by weight or bulk, but by accurate tests which determine uniform velocity, pressure, penetration and pattern, a special load for each class of game. The shooter is assured of more clean kills per shot fired than with other loads.

Your dealer has Remington Nitro Express Shells and the other Remington Game Loads. They'll improve your shooting.

REMINGTON ARMS COMPANY, Inc.
Originators of Kleanbore Ammunition.
25 Broadway New York City

Kleanbore Cartridges in rim fire and center fire sizes have brought a new standard of accuracy to rifle shooting on the range and in the woods. They protect the barrel from rust, corrosion, pitting and leading. You owe this protection to your rifle.

Remington

A FAMOUS NAME

A FINER CAR

Preferred . . YES!

. . . because it costs so little
and gives so much in years of service

PONTIAC BIG SIX

The 2-Door Sedan • Body by Fisher

There is a well-known preference among farmers for the Pontiac Big Six. It becomes more and more marked every season. And the explanation is that Pontiac gives so much in fine performance and years of service.

Despite its remarkably low price, the Pontiac Big Six gives real big car performance. Its 60-horsepower engine—the largest in any low-priced six—takes you swiftly, smoothly, comfortably over any road. Hour after hour—at peak speed, up long, hard hills, through deep mud, clinging sand—the tougher the assignment, the quicker Pontiac proves what a thoroughly fine car it is.

Among the many reasons for its long life and dependability is the fact that with its moderate engine speed Pontiac's engine

is required to make fewer revolutions per mile of travel. The oil flow is under high pressure and absolutely positive. Crankcase ventilation helps to prevent the dilution of oil. The crankshaft is counter-weighted and equipped with the Harmonic Balancer for greater smoothness.

The Pontiac Big Six offers you bodies by Fisher with the extra safety and durability made possible by their hardwood-and-steel construction. It has Lovejoy Hydraulic Shock Absorbers, the non-glare windshield, improved steering, enclosed four-wheel brakes and other exceptional advantages. Ask your dealer about them. . . . Available in seven distinctive body types. All prices f. o. b. Pontiac, Michigan, plus delivery charges. . . . Oakland Motor Car Company.

Write for an interesting booklet which describes the design of the Pontiac Big Six with its many important improvements.

\$745

Remember . . . you can buy a Pontiac on special G. M. A. C. terms offered to farm buyers exclusively with payments at convenient intervals.

New York Farm News

State Potato Growers Hold Record Tour

By E. V. HARDENBURG, Ithaca, N. Y.

POTATO tours and summer field days are no longer novelties in the program to foster a more profitable and satisfying agriculture in New York State. But all records for interest and attendance were broken on August 19 and 20, when between 3,500 and 4,000 people participated in the tour and field day sponsored by the Empire State Potato Club.

Starting at the farm of Streeter and Cross at Pike in southern Wyoming County, the crowd numbered about 300 growers. Streeter and Cross are growers of certified seed, who this year have an extensive Farm Bureau demonstration under the direction of C. F. Taylor of Cornell. Dr. M. F. Barrus of Cornell discussed the essentials of good spraying at this first stop. The growers next visited the farm of F. R. Walkley at Castile, where they saw evidence of modern methods of tillage and spraying by Mr. Walkley on a 47-acre field of Russet Rural. About an hour was spent at the farm of Louis A. Toan of Perry, one of New York's premier potato growers. Here the growers were much interested in a spraying demonstration in which Mr. Toan is using an engine-driven, 8-row, 400-pound pressure sprayer. Mr. Toan has one of the few large, modern bank storages, the capacity being 11,000 bushels. E. V. Hardenburg of Cornell discussed the essentials of good storage, both in relation to construction and management.

The first stop after lunch was made at the farm of Britt and Call near Stafford. These growers have over 100 acres of Rural potatoes this year. Mr. Britt, a former county agent, told the growers some of his experiences in large-scale production. George W. Lamb, formerly manager of the State Seed Potato Association, pointed out the tremendous possibilities in machine farming today which was not possible nor economical twenty years ago. Professor C. R. Crosby and Dr. J. R. Livermore, both of Cornell, were speakers at the farm of Eugene Merriam at Elba. Perhaps the most interesting part of the tour on August 19 was the stop at the farm of Porter and Bonney of Elba. These men represent the premier potato growers of 1929, their test acreage last year averaging 565 bushels per acre. This year, in spite of droughty conditions, Porter and Bonney expect to break all potato yield records for New York State.

About 350 growers sat down to banquet in the dining hall of the Genesee County fair grounds at Batavia on the evening of the 19th. The fair ground orchestra, with "Daddy" Pease of Ontario County to lead the singing, kept the crowd in excellent humor throughout the banquet.

Potato Machinery Day Breaks All Records

A committee, of which Earl Merrill of Rochester was chairman, left out no details necessary for the 100 per cent successful machinery demonstration at the farm of K. C. Livermore at Honeoye Falls on August 20. The crowd began to assemble from all corners of the state as early as 8 o'clock, and by 2 P. M. numbered, by actual count, over 3,500 people. State troopers were in attendance to safeguard traffic at the four corners. Over 80 potato machines were demonstrated by 20 manufacturers in the course of the day. A well-timed schedule of demonstrations, beginning with plowing in the morning and the digging of the crop in late afternoon, kept the growers constantly interested and in motion following the different machines. Surely there was as little lost motion and wasted effort as could be in accommodating so large a group. An electric amplifier, stationed in the middle of the demonstration field, kept the entire group informed of every detail. At the beginning of each demonstration speakers briefly discussed the essentials and the latest recommendations concerning the practice about to be demonstrated.

Eats were provided by four local granges at conveniently located tents. A one-hour speaking program following the lunch hour provided one of the most interesting spectacles of the day. The electric amplifier having been moved to a depression in the natural amphitheater, in this case a cow pasture, over 3,000 people made themselves comfortable on the

arc of soil surrounding the speakers' platform.

If one could sum up in a few words the big lessons of this epochal potato day, the summary would have to include emphasis on deep plowing, deep fitting, earlier and deeper planting, more level cultivation, frequent early-season use of the weeder, a minimum of interrow tillage, and the use of wide-sweep, time-saving implements throughout. The trend is toward large-scale, low unit-cost of production. In the words of Professor Riley, we now have power and power unlimited. It remains for the grower and his scientific advisors to so direct this power that it will best and most economically serve those who apply it in every phase of the industry. August 20th will be long remembered by the potato growers of New York.

New York Grange News

THE officers of the New York State Grange left Syracuse, New York on Tuesday morning, August 12 at 7 a. m. by special bus, chartered for the trip to five northern counties of the state, for the purpose of conferring the sixth degree of the Order, in preparation for the seventh degree at Rochester, November 14, when the National Grange will meet there in annual session. The first stop was at Canton, St. Lawrence County, where 504 candidates were in waiting and initiated in full form. On Wednesday, August 13, the officers continued their trip to Malone, Franklin County, where out of twelve Granges in the county, 205 received the sixth degree that evening. Continuing the trip on Thursday a. m. to Plattsburg, by way of Paul Smiths, Saranac Lake and Lake Placid, which is one of the most beautiful drives through the north woods, we found 473 candidates awaiting our arrival that evening. This class was furnished by Clinton and Essex counties combined.

Retracing our trip on Friday to Saranac Lake, then to Gouverneur and Antwerp, where we had lunch, we arrived at Beaver Falls, Lewis County, at 2 p. m. a distance of 194 miles, where that evening 265 received the mysteries of the sixth degree. At this place the officers were entertained over night by members of the Order, through the thoughtfulness of genial State Lecturer Miss Elizabeth Arthur. On Saturday morning, August 16, we journeyed to Adams, Jefferson County, where 239 received the degree. At each of the towns visited from one to two hundred visitors were present to witness this beautiful degree. The courts and decorations were all prepared in advance by members in the counties visited. Our first sight on entering these towns were banners overhanging the streets reading, "Welcome Grangers". Among prominent people initiated were a mayor, a banker, an assemblyman and an assembly woman.

* * *

Brother O. M. Wixon of Elmira, one of our oldest as well as best known members in the State, fell recently while unloading wheat in his barn and fractured a number of ribs. We all hope for his speedy recovery.

New York County Notes

Sullivan County—We have had several much needed rains. All welcomed it. Much seeding is dried out and must be reseeded. Potatoes have a promise of a good crop, corn looks well, oats are better than they have been in years. Most summer guests have returned to their homes and the rush is over. Butter is only 35c; feed is on a raise, eggs are making a slow raise, fowls and broilers are very low. —P.E.R.

Cattaraugus County—The County, like the state and nation, has suffered terribly from the drought. Pastures, corn and late potatoes being the hardest hit. August 23 brought a slight drizzle which ended in a rain early Sunday which it is hoped will help ensilage corn and late potatoes.

The unemployment situation is still relieved by road construction and farmers are having to feed hay and grain to live stock which is sure to cause a shortage before the winter season is over.—M.M.S.

The Safety Responsibility Law Has Teeth

During the first six months of this year, the Commissioner of Motor Vehicles **SUSPENDED 561 LICENSES** on account of failure to satisfy judgments.

And in **7697** cases, proof of financial responsibility was required.

Aunt Janet's Contest Letters

Should Farm Women Buy Canned Goods and Baked Foods? See What Readers Say About It

First Prize Letter

CERTAINLY a farm woman should use bakery stuff and canned goods if she wants to. Hampered as she is even today by distance from stores, scores of extra duties of which the city woman knows nothing, lack of conveniences, lack of good fuel, surely she needs to buy if anyone does!

She cannot duplicate the health breads or many of the wholesome foods on the market today. Even good cooks have many failures, but seldom one reaches the counter. Bread, doughnuts, canned preserves and sauces can

drudge. And I say the farm wife is justified in having some time for herself. Happiness is a right and it is impossible without time and rest.—M. Mc. F., Vt.

* * *

Second Prize Letter

I want to express myself on the subject, "Should a Farm Woman Use Canned Stuff and Baked Goods (store bought)? My answer is "Certainly".

I have six children (the oldest eleven and the youngest ten months.) besides my husband and father to do for.

I used to bake all our bread and one year I canned over three hundred quarts of various things. No more! I am not able to, and it doesn't always pay.

One year father went to a neighbor's and bought peaches at a very reasonable price. After we had them canned we figured the price of the peaches, sugar and jars and found we could

I prefer my own canned corn and string beans. There are no cobs or strings in them. When my children get grown a bit and I have my health, I expect to can some. But never will I can peaches and many other things. I shall always try to use common sense and think whether what I am canning is really much better or cheaper than

by using surplus vegetables, you can put up a better but (because of fuel cost) not cheaper product than you can buy. Tomatoes and fruits can be put up very cheaply and cost much less than store goods. Of course a woman must use common sense. It is far cheaper to buy canned goods than pay a big doctor bill as my ambitious neighbor did after a canning "spree".

To buy or not to buy, the wise answer depends on circumstances.—Mrs. H. R. B., N. Y.

The Roly Poly Circus Quilt

THIS illustration shows the Roly Poly Circus Quilt in miniature. In actual size each block is 9 inches square and the 20 set together "sash-work" as shown here, make a quilt just the right size for a child's quilt.

Each block shows one circus animal, and the 20 are on hot iron transfer patterns ready to be transferred to

squares of white muslin or other material. Then each one is easily embroidered in simple outline stitch, and the blocks set together to make the quilt. The same patterns can be used singly for pillow tops, wall borders, curtains, etc.

The 20 hot-iron transfer patterns with complete instructions for making, and a list of blocks will be mailed postpaid on receipt of 50 cents. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., N.Y.C.

buying the same thing already canned.

I may bake more some time, but in the hot weather I don't think it is right to use our energy and dispositions that way. It is better to have a sweet disposition, serve what we do serve with a smile and enjoy it with the rest than work until you are exhausted and overheated and so cross that you can't speak decent or enjoy your meal with the rest.

"Them's my sentiments."

Mrs. C. A. D., Mass.

* * *

Third Prize Letter

That depends. No farm woman should feel bound by tradition to do her own canning and baking if so doing interferes with her larger job as home-maker. She should carefully consider the value of her time when deciding what is economical.

"Store" canned and baked goods are generally of dependable quality. True—bakery products do not equal good home-baking but they are clean, wholesome, and far more digestible than the soggy efforts of a poor cook. A poor cook punishes herself and family needlessly. She should buy bread and spend her time more profitably raising poultry or doing other work at which she is more skillful. She will be money ahead.

Even the best cook would be wise to buy bread at times (for instance—threshing time) and any woman who is wearing herself out raising a large family, or helping outside, should ease her burden by cutting down on baking and canning. As to cost—store bread is about as cheap as home-made. (Large loaf costs seven cents at local stores). You can bake cookies, pies, cakes, cheaper, than you can buy provided you are a good cook. The family preference for home-baking must be considered also. About canned goods,

Child Needs Ample Breakfast

SKIMPY breakfasts make a morning very long for school children, but heavy indigestible ones are just as bad. Here is a "right" breakfast: fruit or fruit juice, orange, tomato juice cocktail, stewed prunes or applesauce; well-cooked cereal with top milk or soft cooked egg; whole wheat toast buttered and a cup of milk. The older, more vigorous children may have both the cereal and the soft-cooked egg. Doughnuts, fried foods, pancakes and rich sweets are not the best foods for starting the day right. Plenty of time should be allowed for the children to eat without being hurried.

The Fashionable Bolero

FROCK PATTERN NO. 2626 with its bolero is in high favor with French fashionists. Every detail of the design is delightfully smart and youthful. It would be very effective in silk or featherweight woolen with the blouse of contrasting silk. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 3/8 yards of 39-inch material with 1 1/2 yards of 39-inch contrasting. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Fall Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

Beret No. B7091 is one of the most popular head coverings for the fall and winter, as no wardrobe is complete without a beret. Floss comes in colors, white, rose, delft blue, jade green or tan. A crochet hook and instructions for making are also included in the package with the wool. Price per package \$1.00. If the brushed-wool effect is desired a teazle brush is needed. This is 25c extra. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., N. Y. C.

be purchased as cheaply as they can be made at home.

Farming should be an occupation as separate from the home as any other and should yield an income sufficient to permit a standard of living equal to that of the merchant's family. Is not the landowner entitled to something? Farm wives have baked desperately, canned frantically, and what has it amounted to? Perhaps farmers would solve their problems quicker with less help from wives.

Some farm relief would come from more homemaking and less housekeeping. Pleasant restful homes mean more young people on the farm and a clearer thinking farmer outside.

Overworked women should remember that successful people use their heads. There must be rest and leisure for these heads. Then the wife can devote her time and thought to a money-making enterprise if she desires. Or if not, to her home, family and community. Farmer Husband will enjoy a pleasant companion better than a tired

Smart Schoolgirl Frock

FROCK PATTERN NO. 2659 shows a chic design for girls of the ages of 6, 8, 10 and 12 years. The scalloped closing of the front and the Peter Pan collar give an original touch while the kilted skirt front add grace and comfort. Novelty cotton materials in fall coloring would make up very smartly in this design. Pattern size 8 requires 2 1/4 yards of 39-inch material with 1/2 yard of 35-inch contrasting. PRICE 15c.

have bought the same amount already canned and sweetened cheaper, and we hadn't figured our time, fuel, aching backs, etc.

We have everbearing strawberries which bear from about July 1st to freeze up. I do the picking. By the time I have picked those eleven rows I am in no condition to hull, wash and can them besides my other work. We use all we want on the table and the rest go straight to the store. My husband thinks I ought to can them, and there are a great many other things he would like to have me can, but when he starts thinking out loud, I say "Now see here, young man, you stay right here and look after these children, do the cooking and housework and baby's washing everyday, as I do, go out and pick those berries yourself and see where you come out." He always grins and says, "I suppose so, honey, but it seems an awful shame." And that ends it until the next time.

The Indian Drum—By William McHarg and Edwin Balmer

"The steamer Number 25 rammed proves to have been the *Benton*," he told her. "The men are all from her. They had abandoned her in the small boats, and the *Solwerk* picked them up before the ferry found her."

He was not asking her to congratulate him upon the relief he felt; he had not so far forgotten himself as that. But it was plain to her that he was congratulating himself; it had been fear that he was feeling before—fear, she was beginning to understand, that those on the ferry had been saved. She shrank a little away from him. Benjamin Corvet had not been a friend of Henry's—they had quarreled; Uncle Benny had caused trouble; but nothing which she had understood could explain fear on Henry's part lest Uncle Benny should be found safe. Henry had not welcomed Alan; but now Henry was hoping that Alan was dead. Henry's words to her in the north, after Alan had seen her there, iterated themselves to her: "I told that fellow Conrad not to keep stirring up these matters about Ben Corvet. . . . Conrad doesn't know what he'll turn up; I don't know either. But it's not going to be anything pleasant. . . ." Only a few minutes ago she had still thought of these words as spoken only for Alan's sake and for Uncle Benny's; now she could not think of them so. This fear of news from the north could not be for their sake; it was for Henry's own. Had all the warnings been for Henry's sake too?

Horror and amazement flowed in upon her with her realization of this in the man she had promised to marry; and he seemed now to appreciate the effect he was producing upon her. He tried obviously to pull himself together; he could not do that fully; yet he managed a manner assertive of his right over her.

"Connie," he cried to her, "Connie!"

She drew back from him as he approached her; she was not yet consciously denying his right. What was controlling him, what might underlie his hope that they were dead, she could not guess; she could not think or reason about that now; what she felt was only overwhelming desire to be away from him where she could think connectedly. For an instant she stared at him, all her body tense; then, as she turned and went out, he followed her, again calling her name. But, seeing the seamen in the larger office, he stopped, and she understood he was not willing to urge himself upon her in their presence.

She crossed the office swiftly; in the corridor she stopped to compose herself before she met her mother. She heard Henry's voice speaking to one of the clerks, and flushed hotly with horror. Could she be certain of anything about him now? Could she be certain even that news which came through these employees of his would not be kept from her or only so much given her as would serve Henry's purpose and enable him to conceal from her the reason for his fear? She pushed the door open.

"I'm willing to go home now, mother, if you wish," she said steadily.

Her mother arose at once. "There is no more news, Constance?"

"No; a schooner has picked up the crew of the ship the ferry rammed; that is all."

She followed her mother, but stopped in the anteroom beside the desk of her father's private secretary.

"You are going to be here all day, Miss Bennet?" she asked.

"Yes, Miss Sherrill."

"Will you please try to see personally all messages which come to Corvet, Sherrill and Spearman, or to Mr. Spearman about the men from Number

25, and telephone them to me yourself?"

"Certainly, Miss Sherrill."

When they had gone down to the street and were in the car, Constance leaned back, closing her eyes; she feared her mother might wish to talk with her. The afternoon papers were already out with news of the loss of the ferry; Mrs. Sherrill stopped the car and bought one, but Constance looked at it only enough to make sure that the reporters had been able to dis-

as soon as he could. As he got out of the car, shaking the snowflakes from his great fur coat and from his cap, looking up at the house before he came in and not knowing that he was observed, she saw something very like triumph in his manner. Her pulses stopped, then raced, at that; triumph for him! That meant, if he brought news, it was good news for him; it must be then, bad news for her.

She waited in the room where she was. She heard him in the hall, taking

She saw Henry stiffen. "Yes," she said swiftly. "They say the Drum began sounding last night, and that at first it sounded for only two lives; it's kept on beating, but still is beating only for four. There were thirty-nine on the ferry—seven passengers and thirty-two crew. Twelve have been saved now; so until the Drum raises the beats to twenty-seven there is still a chance that some one will be saved."

Henry made no answer; his hand fumbled purposelessly with the lapels of his coat, and his bloodshot eyes wandered uncertainly. Constance watched him with wonder at the effect of what she had told. When she had asked him once about the Drum, he had professed the same scepticism which she had; but he had not held it; at least he was not holding it now. The news of the Drum had shaken him from his triumph over Alan and Uncle Benny and over her. It had shaken him so that, though he remained with her some minutes more, he seemed to have forgotten the purpose of reconciliation with her which had brought him to the house. When a telephone call took her out of the room, she returned to find him gone to the dining-room; she heard a decanter clink there against a glass. He did not return to her again, but she heard him go. The entrance door closed after him, and the sound of his starting motor came. Then alarm, stronger even than that she had felt during the morning, rushed upon her.

She dined, or made a pretence of dining, with her mother at seven. Her mother's voice went on and on about trifles, and Constance did not try to pay attention. Her thought was following Henry with ever sharpening apprehension. She called the office in mid-evening; it would be open, she knew, for messages regarding Uncle Benny and Alan would be expected there. A clerk answered; no other news had been received; she then asked Henry's whereabouts.

"Mr. Spearman went north late this afternoon, Miss Sherrill," the clerk informed her.

"North? Where?"

"We are to communicate with him this evening to Grand Rapids; after that, to Petoskey."

Constance could hear her own heart beat. Why had Henry gone, she wondered; not, certainly, to aid the search. He had gone to—hinder it?

CHAPTER XIX

THE WATCH UPON THE BEACH

CONSTANCE went up to her own rooms; she could hear her mother speaking, in a room on the same floor, to one of the maids; but for her present anxiety, her mother offered no help and could not even be consulted. Nor could any message she might send to her father explain the situation to him. She was throbbing with determination and action, as she found her purse and counted the money in it. She never in her life had gone alone upon an extended journey, much less been alone upon a train over night. If she spoke of such a thing now, she would be prevented; no occasion for it would be recognized; she would not be allowed to go, even if "properly accompanied." She could not, therefore, risk taking a handbag from the house; so she thrust night-dress and toilet articles into her muff and the roomy pocket of her fur coat. She descended to the door of the house and, unobserved, let herself out noiselessly on to the carriage drive. She gained the street and turned westward at the first corner to a street car which would take her to the railway station.

There was a train to the north every

(Continued on Page 17)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan.

cover nothing more than she already knew; the newspaper reference to Henry was only as to the partner of the great Chicago ship owner, Benjamin Corvet, who might be lost with the ship.

She called Miss Bennet as soon as she reached home; but nothing more had been received. Toward three o'clock, Miss Bennet called her, but only to report that the office had heard again from Mr. Sherrill. He had wired that he was going on from Manistique and would cross the Straits from St. Ignace; messages from him were to be addressed to Petoskey. He had given no suggestion that he had news; and there was no other report except that vessels were still continuing the search for survivors, because the Indian Drum, which had been beating, was beating "short," causing the superstitious to be certain that, though some of the men from Number 25 were lost, some yet survived.

Constance thrilled as she heard that. She did not believe in the Drum; at least she had never thought she had really believed in it; she had only stirred to the idea of its being true. But if the Drum was beating, she was glad it was beating short. It was serving, at least, to keep the lake men more alert. She wondered what part the report of the Drum might have played in her father's movements. None, probably; for he, of course, did not believe in the Drum. His move was plainly dictated by the fact that, with the western gale, drift from the ferry would be toward the eastern shore.

A little later, as Constance stood at the window, gazing out at the snow upon the lake, she drew back suddenly out of sight from the street, as she saw Henry's roadster appear out of the storm and stop before the house.

She had been apprehensively certain that he would come to her some time during the day; he had been too fully aware of the effect he made upon her not to attempt to remove that effect

off his coat and speaking to the servant, and he appeared then at the door. The strain he was under had not lessened, she could see; or rather, if she could trust her feeling at sight of him, it had lessened only slightly, and at the same time his power to resist it had been lessening too. His hands and even his body shook; but his head was thrust forward, and he stared at her aggressively, and, plainly, he had determined in advance to act toward her as though their relationship had not been disturbed.

"I thought you'd want to know, Connie," he said, "so I came straight out. The Richardson's picked up one of the boats from the ferry."

"Uncle Benny and Alan Conrad were not in it," she returned; the triumph she had seen in him had told her that.

"No; it was the first boat put off by the ferry, with the passengers and cabin maid and some injured men of the crew."

"Were they—alive?" her voice hushed tensely.

"Yes; that is, they were able to revive them all; but it didn't seem possible to the Richardson's officers that any one could be revived who had been exposed much longer than that; so the Richardson's give up the search, and some of the other ships that were searching have given up too, and gone on their course."

"When did you hear that, Henry? I was just speaking with the office."

"A few minutes ago; a news wire got it before any one else; it didn't come through the office."

"I see; how many were in the boat?"

"Twelve, Connie."

"Then all the vessels up there won't give up yet!"

"Why not?"

"I was just talking with Miss Bennet, Henry; she's heard again from the other end of the lake. The people up there say the Drum is beating, but it's beating short still!"

"Short!"

The Indian Drum

(Continued on Opposite Page)

evening; it was not she knew, such a train as ran in the resort season, and she was not certain of the exact time of its departure; but she would be in time for it. The manner of buying a railway ticket and of engaging a berth were unknown to her—there had been servants always to do these things—but she watched others and did as they did. On the train, the berths had been made up; people were going to bed behind some of the curtains. She procured a telegraph blank and wrote a message to her mother, telling her that she had gone north to join her father. When the train had started, she gave the message to the porter, directing him to send it from the first large town at which they stopped.

She left the light burning in its little niche at the head of the berth; she had no expectation that she could sleep; shut in by the green curtains, she drew the covers up about her and stared upward at the paneled face of the berth overhead. Then new frightened distrust of the man she had been about to marry flowed in upon her and became all her thought.

She had not promised Uncle Benny that she would not marry Henry; her promise had been that she would not engage herself to that marriage until she had seen Uncle Benny again. Uncle Benny's own act—his disappearance—had prevented her from seeing him; for that reason she had broken her promise; and, from its breaking, something terrifying, threatening to herself had come. She had been amazed at what she had seen in Henry; but she was appreciating now that, strangely, in her thought of him there was no sense of loss to herself. Her feeling of loss, of something gone from her which could not be replaced, was for Alan. She had had admiration for Henry, pride in him; had she mistaken what was merely admiration for love? She had been about to marry him; had it been only his difference from the other men she knew that had made her do that? Unconsciously to herself, had she been growing to love Alan?

(To be Continued Next Week)

HANDY ANDY Says "Here's How"

To Handle Dynamite

By Ray Inman

Don't try to re-work or use old explosives.

BUT OLD EXPLOSIVES AREN'T A TOTAL LOSS. SEVERAL THINGS CAN BE DONE WITH THEM. FOR INSTANCE:

Dynamite THAT HAS GONE BAD IS DANGEROUS TO WORK WITH

Don't try to dry it out in a stove, it is dangerous.

IF YOU HAVE MUCH OF IT, CONSULT EITHER THE FIRM THAT MADE IT OR YOUR AGRICULTURAL COLLEGE

Poultry Farmer

Will Your Pullets Lay This Fall ?

THE important problem in flock replacement at this time of year is the conditioning of pullets for best fall and winter production.

The aim of the poultryman should be to get his birds in good weight BEFORE they begin to lay. In other words, they should be well matured. Maturity should be measured by weight rather than by age. We think that Leghorn pullets should weigh from 3 1/4 to 3 1/2 pounds when they begin to lay. Plymouth Rocks, Reds and Wyandottes should weigh one pound more than the Leghorns. In comparing weights of birds, one must make due allowance for strain, as there is considerable variation within a breed.

How To Do It

A good method of securing maximum weight is to feed hard grain three times a day without making any change in the mash formula. Some poultrymen believe that the amount of meat scrap should be lowered or removed from the mash mixture entirely. The disadvantage of this method is the change in the nutritive ratio resulting in improper growth. A change in formula affects all birds which use the feed, while a change in amounts of hard grain will affect only those birds which have a craving for carbohydrates and fats and therefore eat more hard grain. Undoubtedly, the best and most economical hard grain formula is corn only, although at the present prices of wheat we believe that it is a very economical feed.

After the birds begin to lay there is little that can be done to fatten them. The wise plan will be to get all the eggs possible before the pullets go into a moult, which seems to be unavoidable with early hatched birds, particularly where no lights are used.

It seems to be a mistaken idea that one can slow up production at one season of the year with the expectation of making up for lost time at some other season.

Our advice is to get eggs in September, October, and November, the months of highest prices.

A Clean House For Clean Pullets

PULLETS should be housed before laying starts. The adjustment to conditions in the laying house may upset production when birds are housed after they start laying. Pullets which have been laying eggs out on the ground are likely to lay on the floor in the laying house, a habit which tends to encourage vent picking and cannibalism.

In selecting pullets for housing, those which are of the same degree of physical maturity should be quartered together. Pullets should not be placed in any house which has been used by older stock until the house has been thoroughly cleaned. The job of cleaning aims to remove and destroy sources of infection. The following working plan is suggested:

1. Remove nests, feeding and watering utensils and other portable equipment, for cleaning, disinfecting and sunning outside the house.

2. SWEEP, SCRAPE, and SCRUB the floor, walls, and ceiling until the place is CLEAN. The handiest tool for scrubbing is an old broom. Hot water with some lye will hasten the job of getting off the dirt. If possible, run a hose into the building and make a real job of cleaning.

3. Paint roosts and supports with carbolineum, red mite paint or creosote.

4. Spray thoroughly with some good disinfectant. One of the standard coal tar products, used as directed by the manufacturer, or a solution of lye, one pound to 25 gallons of water, is recommended. If a sprayer is not available, apply disinfectant with a scrubbing

brush. Remember that time spent in spraying is wasted if organisms are protected by layers of dust or caked-on dirt.—LOCKE JONES.

Avoiding Enteritis

I would appreciate information about the caution to use to avoid trouble from enteritis. Will germs from last year be carried over to this year in the soil and brooder houses? I plan to use new ground for their pasture this coming year.

ENTERITIS is just another name for chronic coccidiosis. Your brooder house and ground is probably infested. Clean the house by a thorough scrubbing with a hot lye solution. When it is well dried drench the floor and walls with an iodine disinfectant. Move it to new ground where no chicks or hens have ranged for at least two years. And then feed plenty of milk while your chicks are growing.—L. E. Weaver.

Feeding Winter Lambs for Profit

(Continued from Page 3)

gradually changed to a heavier ration as the lambs become accustomed to the grain. This method has the advantage of requiring less labor as well as putting on faster gains.

Some lambs are bought earlier in the season than October or November and are started on fall pasture. They are then finished in the barns by one of the above methods. Lambs should at all times have plenty of fresh air and water. Lambs do not suffer from the cold but they do suffer from warm, impure air. To avoid this we aim to clean the manure from the barn at least once a month and keep the barn well ventilated at all times. Under all of the above methods of feeding it should be the aim, if possible, to finish lambs before they weigh more than 85 pounds.

Some feeders who have marketed by February or March, lambs bought during the fall months, put in a second lot of lambs to be marketed in April or May. All lambs carried after April 1 are usually sheared after which the lambs put on weight much faster. There is one advantage in feeding 2 lots of lambs and that is if the selling price is low on the first lot it is usually enough better on the second lot to more than offset any losses. We have records of the costs and selling prices of the lambs since 1905 and we have never known this to fail until this year. I believe financially this has been the poorest lamb feeding year we have had, although a few early-fed lambs showed a profit.

Most of the lambs in this county are marketed on the Buffalo livestock market by consigning them to a commission firm. The packers and local butchers who buy these lambs from the commission firms want lambs that will dress a good percentage. These packers and local butchers will pay for the lambs according to the reputation the feeder has made for the dressing percentage and quality of his lambs.

Some times a good profit is made by selling half finished lambs but we feel the best method is to finish lambs before marketing. It surely is for your reputation with the killers and over a period of years will probably prove the most profitable.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

How License and Bond Protects You

WE have frequently pointed out that our subscribers who ship farm produce to licensed and bonded commission men have some protection in case the dealer fails. During the fiscal year ending June 30, the New York State Department of Agriculture and Markets licensed 633 New York State commission men. During the year, fourteen of these failed, seven of them owing money to consignors. Two hundred and forty-nine verified claims were made to the Department and nearly \$10,000 was paid to producers who had shipped produce to these men. Had they not been bonded by the State, it is doubtful if any of this \$10,000 would have been received by shippers.

At the same time, the Department adjusted claims amounting to over \$6,000 against commission men without resorting to bonds. The State Department publishes a list of licensed and bonded commission men and during the year they distributed 4,000 of these lists to shippers. Subscribers may get one of these lists by writing to the Service Bureau of American Agriculturist, 461 Fourth Avenue, New York, N. Y.

Subscriber Gives Picture Enlarging Experience

THE International Studio about which a letter appeared in your columns recently has more than a counterpart in the DeLuxe Art Studio, 225 North Green Street, Chicago, Illinois, for they send an adjuster for the company along with the collector to start suit at once against any one who does not pay for their very inferior grade of work. Otherwise their tactics are identical. Their lottery drawing is very suavely called a vote, which is just to decide in which home

in the community specimens of their work shall be left. They are so reliable that neither their advertising salesmen or collectors are allowed to go into the field alone and according to the collector who called on me there are 1500 of these salesmen in the United States. Their tactics certainly need airing and I am glad if my experience can save some one else from such entanglements.

It is high time the rural population had some protection against such swindlers, as the cities do in their Chambers of Commerce.—Subscriber

Two Pennies for Bait

Can you help me collect money for eggs I shipped to a man in Wilton, Connecticut? He wrote some time ago saying that he had a selected private trade for strictly fresh eggs and that he could use from five to six cases a week. He promised us 2c more than the New York market on the day of shipment. I sent him a case and he said they were nice but did not send the money."

OFFERING a premium above the market price is an old game to induce producers to ship eggs. We have been unable to get any reply from the fellow who bought these eggs so as a last hope we appealed to the State Department of Agriculture. We realize that they cannot be expected to act as a collection agency but they very kindly consented to see what they could do in this case. We trust they will be successful, but up to date our subscriber is still waiting for his money.

Hold Them Until Called for

I WAS reading article in American Agriculturist a week or so ago about the complaint of one of the readers regarding the Betty Philips Christmas Cards. I too was sent a dozen of Bet-

ty Philips cards, which were sent at the request of a friend, and for me to please forward \$1 for same. I did not sent the dollar, as I believe in the saying "It's a good fellow who pays for what he orders". If these friends wanted you to have the cards why didn't they send the dollar? I believe if Betty Philips and a few other such companies lose out a few times on such schemes they will be more particular to whom they send their ware, without people ordering same.

Thanks to the American Agriculturist for helping their readers on such frauds.—Subscriber.

Refund Promised but Not Sent

A LONG about the first of the year a subscriber asked our help regarding the settlement of the sum of \$40.00 against the Keith Publishing House of Long Branch, New Jersey. This concern, we understand, is operated by Clifton Keith and publishes music.

After writing several letters we secured a reply on April 23rd containing a paragraph which read as follows: "This matter has been delayed on account of illness of Mr. Keith, but is now having the proper attention. Mr. is entitled to a certain refund and will receive the same as soon as possible. There has been a delay in settling, due to severe business troubles and we will write Mr. today and explain just what the delay is and when to expect the adjustment."

Sometime later in checking through our correspondence we realized that our subscriber had not written us saying that he had received a check for \$40.00, so we wrote him asking whether the check had been received. In reply he says:

"I have not as yet received the \$40.00 that they owe me so I did not answer your first letter. I wish that you would try them again as I think that they are trying to put me off as long as they can."

Unfortunately, we are unable to give our subscriber much encouragement as to the possibility for settling this claim, inasmuch as it has now been about seven months since we first called it to their attention.

Farm Buildings Need Fire Protection

(Continued from Page 3)

however, may decide that it would cost a little more than the village can afford, and perhaps rightly. The fire chief may think of the various Bill Watkins and ask them for their support. Bill and his neighbors, being good citizens, will probably pledge what they can afford and the village gets its truck. This does not take care of the matter of maintenance. As any fire chief can tell you, hose of the quality it pays to buy costs about \$1.00 a foot, and it is not unusual for a section to be destroyed during the course of a fire. Chemicals, and gasoline for the truck also cost something. Sometimes this is met by a donation of \$25. or so, per rural trip, by the insurance company, which realizes this protection is worth something to them. More often, the expense is not met in any one definite way. Herein lies the difficulty. If these various arrangements were satisfactory to everyone concerned, there would be no trouble. Few communities, however, have reached as satisfactory a solution as has Lowville, New York. Here, the village agreed to maintain and man the fire truck if the farmers in the area around would buy the truck. A subscription campaign was launched and enough money was raised to buy a truck.

Whether or not the Lowville solution is the best, we do not know. At present, we do not have on hand data on the experience of enough communities to make any valid generalization. Due to the technical difficulties of putting them into operation, the present laws are apparently not being used to a very great extent. Doubt, however, is expressed as to the need of further laws. Custom, being more flexible, may eventually develop, if adequately guided by experience and the experience of others, to fill the need.

Fatal Accident Brings Insurance Check

In 1929 Mrs. Marguerite Shear of Wellsville, Allegany County, New York, took out a limited travel accident insurance policy number 7423140 in the North American Accident Insurance Company. Jack Gaffney, a Syracuse student, working as an American Agriculturist subscription agent sold her this policy.

On July 3, 1930, Mrs. Shear failed to see an Erie Railroad train or misjudged the distance, her car was completely demolished and she was killed. On August 14, American Agriculturist received and forwarded to George Shear, administrator of the estate, a check for \$1,000., a fac-simile of which is reproduced below. Our sympathy goes to the family in their loss, but we trust that the check will prove helpful.

NO PROTEST This draft will not be honored unless Policy No. 7423140 signed by the North American Accident Insurance Company is attached.	Claim No. R-49289	N. Y.	Check No.

CONQUER Poultry Lice

**SAVES TROUBLE
SAVES TIME
SAVES EXPENSE**

Ridding your flock of lice is no longer a difficult, tiresome job. Just "paint" "Black Leaf 40" on top of the roosts, to delouse your entire flock over night. Only a small paint brush, "Black Leaf 40", and a few minutes' time, are required. When chickens perch, fumes are slowly released that permeate the feathers, killing the lice. "Black Leaf 40" is endorsed by Experiment Stations. The \$1.25 package "paints" 100 feet of roost. If your dealer cannot supply you, order direct.

Tobacco By-Products & Chemical Corp.

One Day Behind Prison Bars

Impressions from a Visit to Sing Sing

By E. R. EASTMAN

WHAT are we going to do with the rapidly increasing number of persons whom, for one reason or other, the State has to care for? The cities, the State, and the Federal government are constantly increasing appropriations for new hospitals and prisons, yet the new facilities cannot anywhere near keep up with the demand.

E. R. Eastman

During the past year there have been several terrible prison riots, one reason being, it is claimed, that they have been over-crowded. Public interest in the problem is intense because both from a social and the dollars' and cents' standpoint, the increasing number of those who have to be cared for by society affects the interests of all of us.

Farm people are especially interested in the problem, so a couple of weeks ago I obtained permission from the State authorities to go to Sing Sing prison and make as full a study as could be done in one day of conditions in that oldest of New York's prisons, in order to get information for readers of AMERICAN AGRICULTURIST.

In the language of the underworld in New York City, going to Sing Sing is called "a trip up the river." On about the only rainy day we have had this summer, I took a trip from New York City, some twenty miles "up the river" to the beautiful little village of Ossining on the banks of the Hudson where Sing Sing is located. Riding on the train I looked out of the window at the historic Hudson and the beautiful Palisades beyond and tried to imagine myself a convict on the last ride, possibly forever, at least for many years, with all my hopes behind and with despair ahead.

Getting off the train, I took a taxi through the rain to the main entrance of Sing Sing and, knocking at the gates, asked for permission to enter. A guard asked me through the bars what I wanted, and when I told him I had an appointment with Warden Lawes, the

great steel gates swung open, then closed, and locked behind me.

I was in Sing Sing.

Again it did not take much imagination to understand something of the despair that must enter a man's heart when he sees all of his world with its joys—but not its sorrows—closed behind him with the banging and locking of those great gates.

The morning was spent visiting with the officers of the prison and in studying the prison records. These records of who goes to prison and why I found to be extremely interesting—and changed many of my previous ideas.

For example, I had thought for years that the average age of criminals was being reduced, that is, that there were more boys convicted of crime. The facts are just the opposite, at least so far as the Sing Sing statistics go. The average age of the inmates in this prison for the prison year 1928 to 1929 was 29 years and 3 months.

Ten years ago, it was 27 years and 3 months, or two years younger.

Another set of figures that interested me was the relation between education and crime. It is about what would be expected, that is, the great majority have little education; 3 per cent are college graduates, many of them convicted of crimes of violence committed in hot temper; 15½ per cent have had some high school education; all of the rest had less; 8.7 per cent cannot read or write English.

Sixty-two per cent, or a little more than half of Sing Sing inmates were employed at the time they committed crime.

Another surprising fact was that only 21.8 per cent were convicted by trial, while 78.2 per cent confessed, an indication perhaps that our trial system is falling down—too many lawyers, too many technicalities.

A student of social problems now studying in this country but a resident of India, who went through the prison with me, stated the well known fact that American justice is very inefficient, as compared with England's system, which gets a large percentage of the criminals, and summarily convicts them.

As you might suppose, the percentage of criminals in Sing Sing of foreign blood is extremely high. Out of the records of 1,098 men, only 229 inmates of Sing Sing were of native American parentage; 55 were of mixed parentage; and 567 had foreign parents; 157 were aliens, and 98 naturalized aliens. Ten were from the territories and possessions.

Of the foreigners, according to the records, Russia contributed the most inmates to Sing Sing, with Italy second.

What about the effect of the church on criminals? The figures do not mean a thing, for nearly every inmate gives some church preference in his life history. I asked an officer when he took us into the chapel if the men came regularly to church. He said: "A lot of them do. It's just the way the man is brought up. If he has been taught to go to church in his youth, old habits assert themselves in prison."

The big prison chapel is so divided
(Continued on Page 2)

So near and yet so far. He listens to the outside world, but sees it not. The slow passing of the days and the years are checked off on the calendar by his bed.

In good grain, with the proper gasoline, this one-man outfit will kick out 50 to 60 bundles a minute.

... at Harvest Time, too — SOCONY is an able "Farmhand"

NEW YORK and New England farmers, with an eye to efficiency combined with economy, use Socony Special Gasoline *plus* Ethyl and the lubricant, Socony Motor Oil. They have learned that the use of these products keeps engines cool, reduces repair bills to the minimum.

They know also that they can get better results at less cost from:

Mica Axle Grease made for axle lubrication on wagons and farm machinery. Made of the best grease stock and ground mica, it fills the pores and crevices in the axle and forms a hard, bright, smooth coating that reduces friction.

Socony Disinfectant for general disinfecting in stables and barns. It is a concentrated coal-tar product, more than twice as strong as carbolic acid as a destroyer of disease germs, and it is non-poisonous, non-corrosive and non-caustic.

Socony Motor Oil provides a smooth, efficient, dependable lubricant for your tractor, truck, and passenger car motors.

Moreover, we make many more products for use on the farm. How many of them are serving you?

Prairie Harvester Oil ... Eureka Harness Oil ... Standard Hand Separator Oil ... Socony Turex Oil (for Diesel and Oil Engines) ... Socony 990-A Motor Oil for Model A Fords ... Parawax ... Socony Lubricate (Household) Oil ... Socony Leather Dressing ... Veedol Summer Tree Spray Oil ... Socony Banner Gasoline and Socony Special Gasoline *plus* Ethyl.

One Day Behind Prison Bars

(Continued from Page 1)

that three separate services may be held at the same time, so that men of different faith may worship at one time. Very able preachers go to the prison frequently to preach, in addition to the regular chaplains.

Are criminals married or single? Out of 1098 individuals from which records were taken at Sing Sing, 573 are single, 388 married, 84 separated, and 15 divorced; 188 have no children and 337 have children.

After I had studied and copied some of the records for your benefit, I was introduced to a Sergeant of the Guard, B. Fieseler, a courteous, kindly and intelligent gentleman who had been caring for and guarding prisoners for a lifetime. He spent most of the afternoon taking two or three of us in the party into nearly every nook and corner of the great prison, covering some twenty-three acres, answered our questions, and discussed prison policies and problems with us.

Guards Do Not Strike Prisoners

I pause to say that should I or any of my friends ever be so unfortunate as to run afoul of the law, I should hope that my guards would be as kindly and as philosophical as Mr. Fieseler proved himself to be. Instead of hardening him and drying up the milk of human kindness a lifetime contact with prison inmates had the same effect on this guard as the seamy side of life and suffering has on most old doctors.

Mr. Fieseler told us that no guard is permitted to strike a prisoner in Sing Sing except on great provocation and in self defense. No guard is allowed to carry a revolver or other weapon within the walls of the prison. This, however, is mostly for the guard's own defense, for if he should lose the revolver and it should fall into the hands of the inmates, disaster might follow. This, of course, does not apply to the guards in their round towers on the walls who are heavily armed with machine guns. Great searchlights blaze all night from these walls, making everything as light as day.

One of the most pathetic places in the entire prison, and one that depressed and saddened me was the large visitor's room which we entered first. Prisoners are allowed to have visitors five times a week, and each visit may be an hour in length. The visitor is carefully searched on entering and leaving, and then he enters this big room and the prisoner whom he wishes to see is sent for. They are allowed to sit together in semi-privacy with no bars between them.

Here I saw dozens of families reunited for a brief and pathetic hour. Old mothers sat with arms across the shoulders of wayward sons. Fathers, bowed by grief and the years, sat next to their prisoner sons, while little brothers or sisters held their hands. The large room hummed with conversation.

The Horror of Homesickness

Passing from here we went down long stone halls with big steel doors carefully guarded, which the guards unlocked to let us in and locked again after we had passed. In fact, it is impossible to go far anywhere in Sing Sing without passing through locked doors.

When we came out into the prison yard, we climbed the hill to the new section of the prison. Going up this little hill, we followed a path and a short flight of stairs outdoors. On the bank were growing some spearmint and other fragrant herbs, the smell of which reminded me of pastures and cornfields of my boyhood. I thought of the terrible homesickness that must overpower some of these men to whom the aroma of these plants also brought memories of far off and happier days. Sergeant Fieseler told us that homesickness was perhaps the worst illness of many prison inmates. One can easily understand how this is so.

Sing Sing has a new hospital where
(Continued on Page 18)

Poultry, Prosperity and Peace

Sixty Nations Join in the 1930 Congress at London

By L. E. WEAVER

A. A. Poultry Editor

BACK in my home town we once had a lively debate on the subject of "which is more important, the hen or the egg."

The "hen" side won the debate by referring to the Bible; if the egg had been more important, they pointed out, then Noah would have taken merely an egg into the ark instead of the hen and the rooster.

And I'm sure if that hen could have looked into the future as far as London-in-1930 her triumphant cackle would have drowned the sounds of all the other beasts in the ark.

She would have seen the flags of sixty nations flying

in her honor. She would have witnessed acres and acres of floor space devoted to poultry exhibits; she would have seen thousands of her best descendants on display under one huge glass roof, London's famous Crystal Palace.

And her proudest thought of all would have been this: that all these nationalities, Americans, Australians, Africans, Chinese and the rest, were taking another step towards world peace and understanding because of their direct interest in her, the Hen.

A Glorified Fair

No wonder, then, that the first thing I saw as I stepped out of the train in the London station was an enthusiastic poster directing me to the "Crystal Palace and the great World's Poultry Congress. Vast exhibitions, scientific discussions, musical concerts and fireworks display in the evenings."

In twenty minutes I was there. Now I have attended many a poultry meeting; one a day for

the past ten years, I should say. But never in my life have I seen such an immense throng at one, nor such a tremendously staged spectacle based on the poultry industry.

I had faintly imagined it would be like a glorified county fair. It was . . . ever so faintly and ever so glorified.

Picture the fair grounds with all their exhibition buildings under one roof: then add to this all the livestock barns and the merry-go-round, the side-shows and the hot-dog stands, still under the one great roof. And realize that this roof, towering like a huge dome into the sky, is entirely made of glass.

Exhibits from Many Nations

The Crystal Palace, I later discovered, was built years ago for a world's fair. The city of London purchased it and now uses it purposely for such large-scale exhibitions as the Poultry Congress. When my hens begin to lay golden eggs I'll build one for each state in the Union . . . it is such an ideal exhibition hall.

The entire entrance wing of it was devoted to the exhibit of chickens and water fowl. A chorus from thousands of cackling throats greeted each visitor the instant he stepped inside the Palace.

It seemed happily home-like to be with the familiar Single Combed White Leghorns again. They outnumbered the other varieties and were in the exhibits of nearly every country. They showed an amazing uniformity, the African White Leghorn and the Dutch White Leghorn and the other White Leghorns looking precisely the same as the most popular bird in American poultry flocks. All of the fowls were displayed

in regulation exhibition coops, grouped and labeled according to countries.

As an American I was naturally gratified to notice the prominent place occupied by three of our outstanding breeds, the Rhode Island Reds, Barred Plymouth Rocks and White Wyandottes. However, these did not show the same similarity that prevailed among the White Leghorns. I saw many new varieties of fowls which we never find in the United States and others which are very rare.

There were dozens of varieties quite alien to American chicken yards.

Italy had about fifteen varieties which were different from ours, but which still resembled either Leghorns or Anconas. Germany's Empire Whites looked a great deal like our Rhode Island Whites; and Germany had a breed called Nakthahns, a rather naked looking bird with a bald head and neck and white plumage on the body. This country also showed two unusual varieties of Wyandottes, barred and blue laced, the latter with red feathers edged in blue. Germany had a large hen on display, called the Rhinelander, which has a rose comb and lays white eggs.

The Netherlands played up their two best laying breeds, the Barnevelders and Welsummers. Both of these are splendid layers of exceptionally large, and very brown eggs.

East India's Runner Ducks contrasted considerably with our current version of them. They were perky little fowls, smaller, slimmer, and more erect in their carriage.

Industrial Exhibits Attract Crowds

Fascinating as these demonstrations of poultry were, the throngs crowded heaviest around the industrial exhibits. All of these exhibits showed the development of the poultry industry

(Continued on Page 19)

Time for Fall Whitewashing

How a Power Sprayer Saves Time and Money

By BERT GITTINS

IN many dairy sections where whitewashing the barn is a twice-a-year job, the old long handled brush is giving way to pressure sprayers. Whether the outfit used is large or small and whether it belongs to the farmer himself, to a man who does custom whitewashing or to a cooperative organization, the pressure sprayer affects an important saving of time and labor.

Whitewashing has been made almost a pleasure for Northern Ohio farmers through the use of power outfits which sweep dirt and cobwebs from sills, walls and ceilings of their barns and at the same time leave a fresh, uniform coat of whitewash. Two power sprayers mounted on ordinary motor trucks and owned by the Ohio Farmers' Cooperative Milk Association make this whitewashing service available to more than 6,000 dairymen.

A member of the association who wishes to whitewash his barn by the new quick and inexpensive method puts in his request for service at one of the association offices. His name is placed on the schedule of one of the trucks and he is notified when the sprayer will be at his place. Strict requirements of the central offices of the association assure members that truck, sprayer and operators will be on time with few exceptions.

Two men go with each truck and spray rig. They drive up to the door of the barn, dump a bag of "ammunition" which they carry with them into the mixing tank, and start the job. Because

of the high pressure, windows are removed from the building before the truck comes and loose boards are nailed solid. In about an hour's time the powerful streams of whitewash will have cleaned and whitened every bit of surface and penetrated every crack and crevice. The barn will be made clean and sanitary with no hard and disagreeable labor and at less expense than any one farmer could do his own work individually.

The charge for this whitewashing service of the Ohio association is just large enough to cover operating expenses, amounting to only three or four dollars for an ordinary barn. The venture has proved very satisfactory and has

enabled milk producers in the Cleveland territory to meet the stringent regulations of the Cleveland Board of Health.

A milk distributing company at Morenci, Michigan, owns a power sprayer which is available to any of its producers who wish to whitewash and disinfect their barns. This same company also supplies many producers in that territory with hand sprayers for individual use.

Men in some dairy sections are making custom whitewashing a business, handling the jobs of farmers in their communities at reasonable prices. Fred Kuhnke of Clintonville, Wisconsin, who has a power sprayer mounted on a four wheeled, a rubber-tired trailer, whitewashes an average of about three barns a day for his neighbors. He believes that similar whitewashing outfits could be made profitable in other dairy sections.

Most ordinary orchard sprayers can be used for whitewashing or applying cold water paints without extra or special equipment. The rate and thickness of application can be regulated by the type of nozzle used. In cattle barns where there is no objection to some of the solution falling on the floor and where fast work is of considerable advantage, it is common practice to use the "Bordeaux" nozzle, that ordinarily employed in the application of Bordeaux Mixture to fruit trees. Nozzles which throw a finer, more mist-like spray are sometimes preferred if it is

(Continued on Page 17)

Ready for a quick job of whitewashing. One man sprays on whitewash with the "gun" while the other takes care of the mixing.

A Record Fair

NEW YORK had the best State Fair in its history this year. Commissioner Byrne A. Pyrke of the New York State Department of Agriculture and Markets, Director Dan Ackerman and all their able associates are to be commended and congratulated for putting on a fair that is a credit to the agriculture of New York State.

The Fair has been improving constantly in recent years because the management is making a real effort to get away from too much carnival and midway and to emphasize agriculture. Let the cities put on the carnivals. They are all right in their place but a farm fair should be a farm fair and the big attendance and interest this year show that the new policy of the State Fair Management is appreciated.

Probably the outstanding feature at Syracuse this year is the new boys' and girls' building. No one can see these hundreds of selected young people from the farms of New York State and their exhibits without a feeling of confidence in the future of agriculture. The banquet and program of the Spelling Bee Contestants and Young Farmers' Clubs held on Tuesday evening of Fair week was one of the most inspiring occasions it has ever been our privilege to attend.

We wish space permitted description of all the good features this year. Some more news and comment on different features appear in other places in this issue and more will appear in our next issue.

Particular mention should be made of the exhibits and contests in the Farm Museum founded largely through the efforts of the New York State Agricultural Society. Here the arts and practices of farm folk of other days are revived. If you want to see some real horse shoe pitching, you should have seen the A. A., Farm Bureau Tournament. Mention should be made of the Farm Bureau exhibits, the splendid cattle and livestock show, the creditable dairy exhibits, the Home Bureau and Household Arts show, the beautiful flowers. In short it was a good fair—in our opinion the best ever.

Watch Potato Prices

LONG ISLAND growers are wondering what keeps potato prices down. Digging is progressing rapidly. The casual traveler along the road sees, at frequent intervals, a cloud of dust and, if he watches patiently, a team or a tractor and a digger emerging from the midst of it.

More Cobblers, we are told, left Long Island

in the past week or two than ever travelled out in the same length of time. It may seem that this is the answer to the price—and perhaps it is—temporarily. The Cobbler crop, which practically matured before dry weather, was good, but the late crop is going to be short. The vines of Green Mountains along the north shore have been practically dead for several weeks. Other potato growing sections have also had their share of dry weather.

A few growers, we are told, are storing Cobblers believing that the price is bound to rise. This feeling is based on a belief that recent rains were not greatly beneficial to late potatoes. It is pointed out that once the soil becomes thoroughly dry it takes more than a shower or several showers to thoroughly soak it up again. One friend who always studies the situation carefully, predicts that the final potato crop will total less than the crop harvested last year. At any rate, the situation deserves the closest watching by every A. A. reader who grows potatoes in any appreciable quantity. A few cents more a bushel adds just as much to your profits as cutting production costs an equal amount.

To Hear or Not to Hear

DURING the recent tour of the Empire State Potato Club an electric amplifier was used to enable a crowd of 3,500 people to hear talks given on the farm of K. C. Livermore at Honeoye Falls. We have no proof that this is the first time this has occurred, but it is the first time it has been called to our attention in New York State.

The farm tour idea has had a remarkable growth during the past few years and one of the problems of those responsible for their success has been to arrange demonstrations and talks so that all present could hear. In fact, this has not always been done. Too frequently on tours attended by the writer, a few interested people have gathered around the speaker and while they may have been perfectly satisfied with the information they received, the remainder of those attending heard nothing. We predict that the use of an electric amplifier at such times will become a standard practice for the larger farm tours in the future.

A "World Farm Board"

AT the recent International Conference of Agricultural Economists at the New York State College of Agriculture, Mr. E. E. Geldenheys of South Africa, made a suggestion toward forming what might be termed a "world farm board." "If cooperation is a sound principle for farmers who grow a certain agricultural commodity locally or nationally, as indicated by the policies adopted by various governments, why," he asks, "is the principle not applicable to producers internationally?"

To most of us such a proposition looks visionary. Who can say, however, that such an organization would not prove helpful or that we may not live to see it come to pass?—H. L. C.

Look to Your Local Markets!

A RECENT trip through Washington and Saratoga Counties impressed us with the advantages enjoyed by growers who have good local markets. One friend, whose farm we visited, told us that practically his entire output of apples, pears, plums, cherries and potatoes was sold on local farmers' markets. The proprietor of the farm, so far as he is able, grades everything himself and buyers have learned that they can depend upon the quality of his stuff. His son does the actual selling and says that he can recognize the produce, which on rare instances, is packed by hired help.

The important point of the whole matter, however, is that the returns secured are usually better than he could get on the New York City market. We too often think of New York as being the biggest, and therefore the best market

for farm produce. As a matter of fact, produce shipped to New York meets the stiffest kind of competition. Produce from all over the United States and from every foreign country comes here in vast amounts every day.

A lot of fruits and vegetables are shipped from New York City to supply surrounding territory. Home-grown stuff in this section enjoys an advantage of quality and lack of transportation charges. We believe that there are many producers now shipping to New York City who could well afford to give more thought to supplying their local markets with first-class stuff.

—H. L. C.

Tractors or Horses—Or Both?

DURING the past decade the number of tractors used on farms has steadily increased.

Many predict the time will soon come when horseless farms will be all the style and all farm work will be done by gasoline power. Others mourn the tendency to throw the faithful horse into the discard and predict that our four-footed friends will stage a strong comeback.

While the controversy between the "pro horse" and "pro tractor" factions continues, manufacturers go right along improving the design and efficiency of farm tractors. The fact that they are being purchased in increasing numbers indicates that at least under many conditions they are a profitable investment. What has been your experience? Do you still use horse power and if so, why? Or, do you do all your work with tractors? If you keep both horses and tractors, what work do you do with horses, what with tractors and how have you worked out the problem of getting the most efficient results from both?

For the best personal experience letter on this subject, AMERICAN AGRICULTURIST will pay \$3.00 and will pay \$1.00 each for all others published. To be considered, letters must be received in the A. A. office not later than October 15.

Workmen Drink Milk Instead of Beer

"I am not a prohibitionist but I do think if we have a change to modification the dairy farmer will suffer more than anyone else. Where a bottle of milk is used now in many places and homes it will be a bottle of beer. I think it would be the greatest calamity the dairy business ever experienced.—C. I. P., New York."

WE have often noticed this fact at lunch time on the streets of New York when gangs of workmen on various construction jobs eat their lunch. As the above writer points out, there was a time when the majority of these workmen always drank beer, and now we notice most of them bring a bottle of milk. The effect on the dairy industry is obvious.

Eastman's Chestnut

THERE are a lot of good stories about ministers. Here is one a friend recently sent me about a good dominie who dropped his teeth overboard while canoeing. While he and his friend were wondering how to get them back, a colored gent appeared on the shore, and being told of their dilemma, the darky asked if they had had chicken for their lunch.

"Yes," said the minister, "I had chicken."

"Well," said the colored gent, "If there is any left, go to the house and get it, and tie the chicken on a string and lower it in the water where you dropped your teeth."

This was done and when the string was pulled out of the water, lo and behold, there were the teeth clapped on the chicken on the end of the line.

"I thought so," said Mose. "No preacher's teeth could refuse chicken!"

* * *

Speaking of "store teeth", did you ever hear of the Scotchman who carried his wife's false teeth around in his pocket so that she could not eat between meals.

Horseshoe Pitching Prize Goes to Cayuga Co.

Pitching Records Broken in Eighth Annual New York State Fair Contest

THE new American Agriculturist-Farm Bureau-State Fair champion horseshoe pitcher of the State of New York is Paul Pickard of Auburn, who was sent to compete for this honor by the County of Cayuga. Last year Pickard won the sixth prize of \$5.00 but this year he carried off the first prize of \$50. and the championship gold medal, in a most exciting finish when he won from Ray Moore of Canton, St. Lawrence County after they had tied for the highest honors and played off the tie in one 50 point game. Pickard made 50 points, 23 ringers, 3 double ringers in pitching 54 shoes in this game, while Moore made 38 points, 19 ringers, 5 double ringers.

The second prize of \$40 was awarded to Moore; third prize of \$30. to Murray Beardsley, Trumansburg, Tompkins County; fourth prize of \$20. to Fay Ackerman, Constableville, Lewis County; fifth prize of \$10. to Ernest Bowen Oakfield, Genesee County; sixth prize of \$5. to John Kauzlarich, Rome, Oneida County and seventh prize of \$5. to Harry Peckham, Prattsville, Greene County. The prizes were handed to each winner by Henry Morgenthau, Jr., publisher of American Agriculturist, as the large crowd cheered the different lucky contestants.

At about half past ten Tuesday morning, September second, thirty-six men who had won the right to represent their different counties in the eighth annual American Agriculturist-Farm Bureau horseshoe pitching tournament at State Fair in Syracuse, began pitching fifty shoes. It had been decided because of the large number of counties represented, that all the entrants except sixteen would be eliminated from further play as it would be impossible for all to pitch a round robin match and complete the tournament in the two days allotted for finishing the meet. The result of this pitching of fifty shoes is printed herewith.

Last year 82 points, 20 ringers, 3 double ringers or 40 per cent was the highest number made by any player and the one who stood sixteenth made 63 points, 14 ringers, 1 double ringer. This year Paul Pickard of Auburn representing Cayuga County had the honor of making the highest record with fifty shoes—85 points, 23 ringers, 3 double ringers or .46 per cent. It was necessary for Simeon Daugherty of Scottsville, Monroe County to make 65 points, 16 ringers, 3 double ringers in order to qualify as the sixteenth man and have the right to represent his county in the preliminary round robin. Daugherty and Dishan tied on number of points but Daugherty won the place because he had the most ringers. This was according to the agreement that had been made before the tournament began. Last year the sixteenth man made only 63 points, 14 ringers, 2 double ringers. This shows that the skill of the entrants has materially increased since the tournament of 1929. This year the player making 63 points stood nineteenth in the list.

More counties were represented this year than ever before except in 1927 when 39 counties sent contestants. If Max Morley of Oswego, Oswego County and Chester Hotaling of Fultonham, Schoharie County whose names had been sent in as representatives from these counties, had come, the entrants this year would have been only one less than the highest record in 1927. There are 57 counties in the state outside of Greater New York City, each one of which should send a contestant next year.

Some of the players this year told the writer that they had been practicing on sand courts and had formed the bad habit of pitching a little short of the peg and depending on sliding

By D. D. COTTRELL

Secretary of the National Horseshoe Pitchers Association

their shoes on. This they were not able to do on the State Fair fine clay courts as the shoes will not slide but will stay where they strike. In order to become a proficient player practicing should be done on clay courts—the clay being

liminaries and the finals will be published in the American Agriculturist together with a detailed description of the best games and a list of the records made by each contestant. All things considered this is by far the best of

Those Who Qualified

Those who played in the qualifying round, each pitching 50 shoes with the following results:

Place	Name	Address	County	Points	Ringers	Double Ringers	Per Cent
1	Paul Pickard, Auburn		Cayuga	85	23	3	.460
2	Foster Bult, East Palmyra		Wayne	85	21	2	.420
3	C. W. Judd, Kenwood		Madison	85	21	5	.400

36	Ernest Cotton, Little Falls		Herkimer	23	2	0	.040

kept at about the consistency of soft putty.

Should the American Agriculturist-Farm Bureau tournament continue to grow in popularity as it has been doing and probably will continue to do, it will be necessary each year to hold elimination contests to qualify for the preliminary round robin. The writer therefore renews his suggestion of last year that all prospective contestants install clay courts and practice pitching fifty shoes for points so that they will be familiar with this kind of play.

Next week a full report of the pre-

the eight annual tournaments held since they began in 1923.

Boy Scouts Start "Younger Boys" Program

THOSE who are familiar with the wonderful work done by the Boy Scouts of America will be glad to know that a program has been officially started for the four million boys of the United States between nine and twelve years of age, or in other words, those who are just a little too young

to become Boy Scouts. After several years of discussion and experimentation, the first official group of these younger boys has just been chartered in Brooklyn. Under the name of Cub Pack, the activities will be offered to these younger boys suited to their age.

Posting Property Along Streams

I would like to know how I should post my land if I own land next to a river. Where owners on both sides of the river which is navigable post the land, is it possible to stop fishing in the stream? Is it possible to stop fishing in the stream if both sides of the land are posted and the stream is non-navigable? Does the posting of a sign along the banks of a river prohibit trespassers on the banks of the river?—R. T., New York.

WE referred this letter to the Conservation Commission at Albany, New York, who replied as follows:

"We would advise you that all of your questions are ones of private fishing rights, and this Department does not undertake to officially advise you in reference to the same."

"Section 361 of Part Eleven of the Conservation Law in part provides that where the outer boundary of private parks or private lands runs along or under any waters, the nearest shore or banks within the park or private lands shall be deemed the boundary for the purpose of posting such notices or signboards. Therefore, in our opinion where the owner of a bed of a stream, whether navigable or otherwise desires to prohibit persons from hunting or fishing on such premises he may place the notices along the nearest shore or bank of the streams. Of course, where the owner of the bed of the stream posts the same pursuant to the provisions of Part Eleven of the Conservation Law it would be unlawful for any person to hunt or fish on the stream, but, if it were a navigable stream it is our opinion that he could not prohibit persons from passing up and down the stream in a boat. Of course, a person owning lands or a person who had leased the hunting and fishing rights of lands wherein a stream passed through such lands could not prohibit persons from trespassing on the stream for the purpose of hunting or fishing, unless he owned or had leased the fishing rights or the bed of the stream. Therefore, you will see your questions depend entirely upon the title of the ownership of the bed of the stream, and to get definite information in reference to this matter, we would suggest that you consult an attorney.

Love My Dog

THE farmer who keeps his dog within bounds does not like to have his premises run over by a lot of property destroying animals of his neighbors or people passing. The old saying "Love me, love my dog," is not quoted as frequently as in former days. Lawns, and flower and vegetable gardens are not fenced and dogs can do a great deal of damage.

A farmer who was much bothered by the dogs of his patrons while running a roadside market provided himself with a chain which he fastened to a post. When people came, bringing their dogs and thinking to give them a little exercise while they looked around or made purchases, he first secured the dog to this post out of the way of his wares. Some folks objected and drove away in a huff, but the majority saw that no one wants to buy unclean products, and that even a well behaved dog is out of place where food is on sale. Many families passing saw this clever plan and put it in use at their homes where visitors persisted in letting dogs run wild. A dog tied to a post is harmless, but one running at large over lawns and gardens is a pest.—H.R.

The Song of the Lazy Farmer

MY NEIGHBOR'S work-Ming in the sun to get all his fall plowing done, he says if you have got to plow there ain't no time as good as now. When land is turned up in the fall the weeds don't stand no chance at all, when fall rains come they all will sprout, then when they git half grown, about, the frost will come and nip 'em dead; next year we'll raise a crop instead of weeds, I'll say, it ain't no joke to have them weeds grow up and choke the life right out the crop you grow, you've got to kill them weeds off so the crop can have a chance, that's why it pays to kill them weeds off by fall plowin'. so it pays to toil a-plowin' up your stubble soil.

My Neighbor's plan is pretty good, if it wan't so blamed hot I would git out myself upon the plow and git my soil turned over now.

But when the sun's rays shine and beat down on that iron gang plow seat it gits so hot that when you sit yourself down onto it, it ain't so pleasant, I'm afraid, as my old rocker in the shade. Fall plowin' is cool weather work, and though I ain't no hand to shirk, I'd rather sit around and not be out there plowin' when it's hot. My weeds may not git killed this fall, but when spring comes I'll disc 'em all and if my corn ain't quite so clean when I have plowed it in between the rows, the weeds will have to grow, this August plowin' isn't so blamed pleasant, I would rather rest until the sun sets in the west!

With the A. A.
DAIRYMAN

For Better Herd Sires

MUCH has been said and written during the past few years about good sires though the actual figures on the situation are rather startling and are likely to make the average dairyman wonder how any progress has been made.

The actual situation as taken from several New York State townships, believed to be average, is as follows: Over one-half of all bulls owned in these townships are grade and scrub bulls; about 45 per cent are purebred, but only 15 per cent of these purebred bulls are registered and only 3 bulls out of every 100 used are from cows of known producing ability.

Dairymen in 23 townships, located in 12 counties, are cooperating to stage what is called a better sires program. Over 300 dairymen have expressed a desire to get better herd sires and Professor Brownell of the New York State College of Agriculture, is interested in helping to supply this want by locating good purebred bull calves from dams that have made at least 400 pounds of fat in a dairy improvement association.

The following are the counties and towns where the better sires program has been adopted: Otsego county has seven townships, Cattaraugus and Delaware counties each have three townships, Oneida two townships, Chautauqua, Lewis, Onondaga, Saratoga, Ulster, Chenango, Tioga, and Cortland with one township each.

Michigan Practically Free of Bovine TB

ON August 1, the State of Michigan was officially designated as the third state to become a modified accredited area, signifying that its cattle are practically free from bovine tuberculosis. This announcement followed closely the dismissal of legal action brought by E. S. Townsend of Ionia County, questioning the validity of the law authorizing the tuberculin test. Judge Royal A. Hawley's decision sustained the right of public authorities to test, condemn, appraise and slaughter privately owned cattle in the campaign to eradicate bovine tuberculosis. The two other modified accredited states are North Carolina, accredited in October, 1928 and Maine, accredited in March, 1929.

Some Reasons for Raising Heifers

Good cows can be bought, but don't forget that there are 50 or more common cows for sale for every good cow that is for sale.

A good dairyman usually doesn't sell his best cows nor heifers from his best cows.

Here are the cows that are apt to be for sale:

- The old cow.
- The tubercular cow.
- The cow that aborted.
- The irregular breeder.
- The kicker.
- The hard milker.
- The poor producer.

Here are seven good reasons why we should raise our own cows. Besides, we can raise good cows cheaper than we can buy them.

Salt in Silage Not Necessary

Will you please tell me if it is good to salt corn in a silo? I have a silo 14'x30'. Will you please tell me how much salt to use if it is good?—A. C., New York.

I DO not think it is necessary or desirable to salt corn in the silo. I do not see any use in it and I do not think that it would improve the silage any.—E. S. Savage.

BARGAIN DAY!

PURINA DAIRY CHOWS

LETTERING WORDS on his store window...telling the world about his bargain...is the man at The Store With the Checkerboard Sign! Perhaps this very day a Checkerboard carload of Purina Dairy Chows has rolled into town and he's offering the bargain to you!

The bargain of going directly to this car to get your winter's supply of feed with cash...to save hauling charges...warehouse charges...credit charges...items that are fair to add to the price of feed when your feed is delivered from the store on a charge account. But a bigger bargain than the price per ton is in store for you...it's the milk per ton! There's where your big bargain lies.

More milk per ton is the real story of Purina Dairy Chows...the real bargain that's in store for you...not only today...tomorrow...but any day you happen into town! These are the days when you're thinking about winter feed...thinking about bargains! Think of Purina Dairy Chows when you're ready to haul home your winter feed! Next spring you'll say it's the biggest bargain you ever laid on the barn floor! Look over the list of Purina Dairy Chows...you'll find one which just suits you!

Firestone Dealers Give You More

OF COURSE you would rather buy your tires and accessories from your local dealer, provided you get equal or better value. He is interested in you and your community.

Firestone, in cooperation with over 24,000 dealers, has taken advantage of the low prices of rubber and cotton—cut manufacturing costs, sales and distributing costs, and profits per tire, and has brought out a new line of quality tires which offer the car owner lower prices and greater values than ever before offered in the history of the rubber industry.

It has been necessary to operate the Firestone Factories twenty-four hours a day, six days a week during August to fill orders for these tires. We want to take the mystery out of tire buying and have furnished our dealers with actual sections, not only of our tires but of others. Call on him and examine them for yourself.

Firestone Workers are Stockholders

Everyone of the 15,000 workers in the great Firestone Factories is a stockholder in the company. They back the quality of their product with their savings. The name "Firestone" is the pledge of the manufacturer and the worker that the tire you buy is the best you can obtain for the price you pay.

DOUBLE GUARANTEE

Every tire we make bears the "Firestone" name which is your protection, and carries the dealer's and our unlimited guarantee. The dealer's service helps you get all the miles out of your tires built in at the factory.

QUIT WORK ON TIME WITH RAPID-FLO FILTER DISKS

Here's the fastest efficient filter disk you've ever seen—Rapid-Flo, the disk that lets you quit work on time. Rapid-Flo's average speed is less than 5 minutes to filter a 40-quart can of milk.

Be rid of delays and overtime caused by poky, old-fashioned filter disks—install Rapid-Flo today and you'll be able to filter every can you ship and quit work on time. Made of pure, long-staple cotton by Johnson & Johnson, world's largest converters of cotton for hygienic uses.

You'll like the Rapid-Flo sanitary steel cabinet, too, which keeps your disk supply protected, yet handy for instant use. Ask your dealer about Rapid-Flo Filter Disks, and the handy

Steel Disk Cabinet, shown at left. Now on sale everywhere.

Reviewing the Latest Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Soft Cheese	2.41	
	Evap. Cond. Milk Powder		
4	Hard Cheese	1.95	1.75
	Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Sept. 1920 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Butter Suffers Slight Decline

CREAMERY SALTED	Sept. 5, 1930	Aug. 29, 1930	Sept. 6, 1929
Higher than extra	40	40 1/2	45 1/2
Extra (92 sc.)	39 1/2	40	45
84-91 score	34 1/2	35	39 1/2
Lower Grades	32	32 1/2	38

When the butter market opened on September 2, values appeared to hold fairly well. On Wednesday, September 3, however, the bears gained control and succeeded in cutting the price of creamery extras 1/4 of a cent. There was a good deal of fresh butter available and the lack of sufficient buying support was another factor that strongly favored the bear attack. There was some recovery on the 4th and some of the lost confidence was restored. The market was full steady on the 5th. However the market closed with some soft spots showing up. Receivers were free sellers.

Consumptive demand has been holding up better than a year ago which tends to refute the claim that the industrial situation is curtailing consumer demand. Consequently it looks as though the butter trade were trying to depress prices in the face of diminished supply. On the

first of September the four largest cities had approximately 4,000,000 pounds less in cold storage than they had at the same time a year ago. Furthermore, from August 22 to August 29 there were withdrawn from cold storage in the four principal cities 1,083,640 pounds of butter whereas during the same period a year ago cold storage holdings in the same cities gained almost one-half million pounds.

No Change in Cheese

STATE FLATS	Sept. 5, 1930	Aug. 29, 1930	Sept. 6, 1929
Fresh Fancy	20 1/2-21 1/2	21	23 1/2-25 1/2
Fresh Average			
Held Fancy	24	26	27 1/2-29 1/2
Held Average			

There has been no change in the cheese market since last report. There is some cheese available at 20 1/2 cents although the average of the market is still around 21 cents, some specials bringing 1/2 cent premium. If anything, production appears to be lighter which holds primary market costs fully on par with local asking prices. As a result the market holds firm.

On the first of September the ten cities making daily reports had approximately a million pounds less cheese than they had a year ago. Once more we ask why it is that prices are from 3 to 5 cents under those of a year ago where we have less reserves on hand. From August 21 to August 28 cold storage holdings in the ten cities were reduced 86,000 pounds while during the same period a year ago holdings increased 556,000 pounds.

Eggs Trend Upward

NEARBY WHITE	Sept. 5, 1930	Aug. 29, 1930	Sept. 6, 1929
Hennery			
Selected Extras	41-49	39-46	51-58
Average Extras	36-40	35-38	48-50
Extra Firsts	29-34	28-33	41-47
Firsts	27-28	26-27	37-40
Undergrades	25-26	24-25	35-36
Pullets	28-32	28-30	33-40
Pewees	19-22	19-21	23-30
NEARBY BROWNS			
Hennery	36-44	36-44	46-52
Gathered	27-35	31-35	36-45

Slowly but surely egg prices are climbing upward but they are far from what they were a year ago. As August came to a close the ten principal cities had about a million cases of eggs in excess of their holdings at the same time last year. However, we can get some consolation when we consider that from August 22 to August 29 about twice as many eggs were withdrawn from storage as were taken out during the same period a year ago. If that rate of consumption can be maintained it will not be long before holdings will be within reason and prices will again come back into their own.

Nearby white eggs have been in light supply and have been holding slow but steady gains. Western eggs, on the other hand, have met more or less resistance following the slight price advance.

Cooler weather had a favorable effect upon the live poultry market, stimulating consumer demand and firming up the market throughout. Fowls especially favored the seller. There had not been enough Leghorns to satisfy the trade needs and colored fowls have been doing exceptionally well. Some fancy Leghorn fowls brought premiums above the prices quoted. Young roasting chickens sold fairly well although they did not enjoy the same exclusive attention as did fowls.

We call the reader's attention to the price of turkeys. Turkeys have been quoted around twenty-five cents but are now showing some advance. Early advices from the large turkey producing areas indicate that this year's crop will not be any larger than that of last year and there are many who freely predict that turkeys are going to be scarcer.

HEBREW HOLIDAYS

The Hebrew Holiday season will soon be celebrated and shippers should plan early that their birds shall arrive in the best possible condition. September 23 and 24 is the Jewish New Year; the best market days the 19th and 20th. Fat fowls,

turkeys and ducks will be most in demand. The Day of Atonement is celebrated on October 2; the best market days September 29 and 30. All prime stock is in demand especially spring chickens and roosters. The Feast of Tabernacles is on October 7 and 8; best market days the 3rd and 4th. Fat fowls, ducks and fat geese most in demand.

Prove it! Prove it! ..it does act twice

1ST ACTION

2ND ACTION

TEST CALUMET'S DOUBLE-ACTION THIS WAY

Naturally, when baking, you can't see how Calumet's Double-Action works inside the dough or batter to make it rise. But, by making this simple demonstration with Calumet Baking Powder and water in a glass, you can see clearly how Calumet acts *twice* to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, half filling the glass. This is Calumet's *first* action—the action that Calumet specially

provides to take place in the mixing bowl when you add liquid to your dry ingredients.

After the mixture has entirely stopped rising, stand the glass in a pan of *hot* water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's *second* action—the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's *Double-Action* which protects your baking from failure.

Millions of women know Calumet's **DOUBLE-ACTION** makes better baking

THEY know—the millions of women who praise Calumet, *The Double-Acting Baking Powder*. They have seen for themselves that Calumet's marvelous double-action brings new perfection to baking! New confidence of success! New pride in everything they bake.

Enjoy this great satisfaction of turning out one baking triumph after another. Let Calumet's Double-Action make your biscuits lighter, fluffier than ever before—your cakes more delicate, more delicious.

Calumet's *first* action begins in the mixing bowl. It starts the leavening. Then,

in the oven, the *second* action begins. It continues the leavening. Up! . . . up! . . . it keeps raising the batter and holds it high and light. Your cake bakes beautifully, even though you may not be able to regulate your oven temperature with utmost accuracy . . . Another delightful advantage—Calumet's perfectly controlled leavening action permits you to store cake batters until you are ready to bake them. Batter, poured into the baking pans, covered with a damp cloth and waxed paper, may be kept in the refrigerator for several days without loss in quality. Think of the convenience!

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action or in the amount that should be used. And not all will give you equally fine results in your baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action—*Double-Action*, your assurance of baking success. That is why Calumet is *the largest-selling baking powder in the world to-day*.

Get a can of Calumet and try the recipe given here. Notice how little Calumet it calls for. The usual Calumet proportion is even less—only *one* level teaspoon to a cup of sifted flour. A splendid economy which the perfect efficiency of Calumet's leavening action makes possible.

FREE—New Baking Book! You'll find recipes for all the good things shown on this page in the new Calumet Baking Book. A wonderful collection of novel cakes and quick breads. Mail coupon—**TO-DAY!**

PLUM ROLLS . . . AFTERNOON TEA BISCUITS . . . PATTY'S BIRTHDAY CAKE . . . RAISIN BREAD

PLUM ROLLS

- 1½ cups sifted flour
- 2 teaspoons Calumet Baking Powder
- ½ teaspoon salt
- 2 tablespoons butter or other shortening
- ½ cup milk (about)
- 1 can (2 cups) plums, seeded and drained

Sift flour once, measure, add baking powder and salt, and sift again. Cut in shortening. Add milk gradually until soft dough is formed. Roll ¼ inch thick on slightly floured board. Cover with plums. Roll in long roll, pressing edges together. Cut into 1½-inch slices. Place in greased pan and pour plum sauce (made from plum juice and water, thickened and sweetened) over them. Bake in hot oven (425° F.) 30 minutes, basting often. Serve hot, with sauce poured around them.

DODGE BROTHERS

SIXES AND EIGHTS

UPHOLDING EVERY TRADITION OF DODGE DEPENDABILITY

Over all kinds of roads in all kinds of weather, the Dodge Six performs dependably. » » It has power, smoothness and rugged strength for the hard service farm-

owners demand. Matching the sturdy chassis is a Mono-Piece Steel Body . . . exceptionally roomy, silent, safe—the strongest body construction known to

the industry today. » » Brakes are weather-proof internal hydraulics . . . always equalized, always dependable, always positive.

In this six, Dodge Brothers give the farmer a bigger value today than ever before—

for this modern, roomy, capable car is the lowest-priced six that Dodge Brothers have ever offered.

DODGE SIX
\$ 835
AND UP, F.O.B. FACTORY

The WIRES you never see . . .

The convenience and economy of electricity, your home servant, depend largely on the electric wires behind your walls. Only when the wiring is well planned—providing for handy wall switches and plenty of outlets—can you take full advantage of electric lights, floor lamps, irons, fans, and all the labor-saving appliances. *Electric service can go only as far as the wires that carry it.*

When the home and farm buildings are first wired—or when the wiring is extended—keep in mind that it doesn't pay to scrimp. Adequate, well-planned

wiring costs little and soon pays for itself in the added comfort and saving of time and work.

The G-E Wiring System has been designed by experts to provide the greatest convenience and safety. Only materials of the highest quality are used. It permits the most economical and satisfactory use of MAZDA lamps and electric fans, vacuum cleaners and refrigerators, Hotpoint ranges and heating appliances, and every other electric device. And it brings you running water in the house and the dairy. Ask your power company about the G-E Wiring System.

THE HOOD DEERFOOT

A waterproof, service boot as trim and neat as a custom built leather field boot • •

AROUND the farm—on your hunting trips—when you go into town, wear the Hood Deerfoot and your feet will be warm and dry no matter what the weather is. And they'll look as well and be as comfortable as in a pair of expensive leather boots.

The Deerfoot is made of the highest grade rubber stock with heavy grey tire tread soles. Warmly lined with a fleecy knit fabric. Slim and trim in appearance and with all the style of a custom built shoe. The ideal boot for all sorts of rough going and for wear in mud, water and through wet brush and stubble.

There's only one real Deerfoot—the Hood. You can easily identify the genuine by the Hood Arrow on the back of the boot.

Hood makes a complete line of boots, arctics and rubbers for every member of the family and for all work and dress occasions. Ask for them by name—Hood.

THE HOOD DEERFOOT—A waterproof service boot, trim and neat, and comfortable as a custom-built leather field boot.

Farm News from New York

Governor Roosevelt and Chairman Legge Discuss Farm Problems

MORE than 150 farm leaders and Syracuse business men met on Wednesday night of state fair week, as dinner guests of J. D. Barnum, Publisher of the Post Standard, to hear Governor Franklin D. Roosevelt and Alexander Legge, Chairman of the Federal Farm Board, discuss farm and state problems. The Barnum dinner has become one of the big outstanding affairs of the year, and the guests were unanimously agreed that the program this year was the best ever.

After commending the efforts and work of the Federal Board headed by Mr. Legge, Governor Roosevelt stated some of the results which have been accomplished for agriculture by the New York State government during the past two years and suggested a program whereby the state could be of still further help to its farmers.

The Governor briefly reviewed the new road and rural school legislation, telling how the state had made it possible for rural people to have much better schools and roads at a greatly reduced local tax rate. He said that recent legislation had taken about thirty million dollars a year of taxation off the localities and placed it on the state itself, thus tremendously relieving the farmers' tax burden. "No mean accomplishment" said the speaker.

Teamwork Brought Results

The Governor gave a large amount of the credit for these splendid results for farmers to the teamwork that had prevailed among the farm organizations, the Agricultural Advisory Commission, the Legislature and the executive departments of the state.

After outlining the accomplishments for farmers of the past two years, the Governor continued: "It would be easy, in view of these definite achievements, to rest on our oars. I am convinced, however, that the goal of agricultural achievement in this state is something far higher. We seek to make living conditions on the farms of the state at least the equal of the best living conditions in any community within our state, and that means that the social development of farm life and the yearly earnings of farm families must be made to equal the conditions and the earnings of the skilled artisans in industrial pursuits.

"As I see it, the next logical steps are these:

"Strike out boldly to reduce the present exorbitant spread between what the farmer receives for his produce and what the consumer pays for the same produce. (He quoted prices as of August 20, 1930, in New York City, to show the wide difference between wholesale and retail prices of livestock and truck products).

High Spread between Producer and Consumer

"Now it is interesting to note that in all these cases, the spread between

the wholesale price and the retail price in 1930 averages nearly double what it was in August, 1929. That is something for us to think about, both farmers and city dwellers. One thing is very certain, and that is that the farmers of the state are neither profiteering nor getting rich on what they are receiving at this time, or for a generation past, for their produce.

"Therefore, the next two definite steps are the working out of better terminal facilities in the cities, and secondly, a wholly new system of city markets. These two essentials are the key of modern food distribution and it is time to put them both on an up-to-date business basis.

"Hand in hand with city markets and terminal facilities goes one subject which relates more directly to the farmer himself, and that is the bettering of the existing grading of all kinds of farm produce. Why fool ourselves when we know definitely that in many lines of fruit and produce other states are sending to market a more uniform and higher quality pack than we ourselves are doing?"

Milk Price Raise Justified

Members of the audience representing dairymen were intensely interested in what the Governor said regarding the present milk situation and the sensational so-called milk investigations in progress in New York City. The Governor said, "Any activities of government officials which will force farmers to sell their products below the cost of production or which lessen public confidence in milk as a food are wrong and do irreparable damage."

"If it is true," he said, "that severe drought and other adverse conditions to our dairy farmers justify a raise in the price of milk in order to enable them to make both ends meet, it is wrong for public authorities to try the case in the newspapers first and investigate afterwards." In this connection Governor Roosevelt commended the Dairymen's League for its efforts to obtain living prices of milk for its farmers, and also stated that he was for the principle of maintaining the New York milk and cream shed intact.

Chairman Legge Stresses Better Marketing

Alexander Legge, Chairman of the Federal Farm Board, won the hearts of his audience by his review of the agricultural situation and his common-sense suggestions of remedies for farm problems. The theme of his address was better marketing of farm products through farm organizations. The speaker stated that he had spent forty years of his life in the manufacturing business and that he thought his company had been successful chiefly because it had studied its costs and tried to reduce them, but more especially because it put great emphasis on the market for its products

and tried to fit the supply to the demand.

"There are six and one-half million farms in the United States," said Mr. Legge, "all individual factories, all working independently to solve the problems individually. The farmers' marketing is always one-sided. Costs are never figured in. Always the farmer must ask the question when he sells—what will you give?"

"Two American crops," said the speaker, "are always in the surplus class—wheat and cotton. The sooner American wheat farmers cut down their acreage and stop trying to export wheat from this country, the happier wheat farmers will be. World wheat production is way ahead of consumption."

Chairman Legge then reviewed some of the accomplishments of the Farm Board since its organization, along the line of assisting farmers to help themselves through regional and national organizations, like the National Grain Corporation, the National Wool Marketing Association, etc. He especially commended the good work of the Dairymen's League Cooperative Association and that of the G. L. F. Exchange. Both of these organizations have received loans from the Federal Farm Board.

New York Farmers Do Cooperate

Charles Wilson, member of the Federal Farm Board from New York, made a short but effective speech, pointing out that New York State farmers did cooperate and were quite well organized. "There are," said Mr. Wilson, 172 co-operative associations in New York, having 133,000 members."

Another short speech that was received with applause by the audience was that of National Grange Master Taber. Mr. Taber's theme was the increase of farm taxation and the need of finding a remedy to take this tax burden off from the backs of the farmers.

The toastmaster of the evening was H. E. Babcock, Manager of the G. L. F. Exchange. It is a real job to say just the right thing in the right way and not say too much as a toastmaster on such an occasion, and all agreed that Mr. Babcock met these qualifications ideally.

It was also the consensus of opinion that Publisher Barnum renders a real service to the agriculture of the state with this annual dinner.

For Prospective Farm Buyers

RECENTLY an information bureau to serve as a clearing house for agricultural information for prospective farm buyers, was established in the New York City office of the State Department of Agriculture and Markets.

Mr. George Royce, who for years operated a St. Lawrence County farm and who is thoroughly familiar with New York State farm conditions, has been designated by Dr. A. E. Albercht to have charge of this work. At the meeting at which such a move was discussed, it was brought out that nothing should be done to increase agricultural production in New York State or to increase the number of New York State farmers at the present time. However, there will inevitably be some changes in farm ownership and it was suggested that there was perhaps a duty on the part of the state to prevent if possible, the location on farms of individuals who have no capacity for making success there. It may also be possible to prevent the location of the right kind of an individual on the wrong kind of a farm.

In our August 9 issue on page 5, was an article explaining the savings to New York State agriculture because higher freight rates recently authorized by the Interstate Commerce Commission are not to be applied to certain farm products. In the last sentence of the item was a statement that the savings to New York State agriculture would be \$25,000. annually. This obviously was a misprint as the amount should have been \$25,000,000.

Fishkill Farms Surplus Auction Sale of Registered Holsteins

September 27, 1930

1 P. M., Daylight Saving Time

Cows and Bred Heifers

Fishkill Sadie Vale Colantha Inka (Ear tag 34)
A daughter of Dutchland Colantha Sir Inka. As a junior 3 year old she made a class B record of 16,926 pounds milk and 733 pounds butter. Bred March 19th to Fishkill Sir May Hengerveld DeKol.

Fishkill Triumph Inka DeKol (Ear tag 75)
As a senior 2 year old she made a class C record of 10,901 pounds milk and 491 pounds butter. Bred March 20 to Fishkill Sir May Hengerveld DeKol.

Fishkill Lady Inka Hengerveld (Ear tag 70)
At 2 years, 9 months, 29 days she made 12,521 pounds milk and 550.17 pounds butter (class C). Bred February 18 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Belle DeKol (Ear tag 99)
As a junior 2 year old she made a class C record of 11,220 pounds milk and 500.9 pounds butter. Bred June 4 to Fishkill Colantha Dichter Piebe.

Fishkill Avon Artis DeKol (Ear tag 116)
A daughter of Hengerveld Homestead DeKol 4th. Bred December 19 to King Piebe 19th.

Fishkill May Dolly DeKol (Ear tag 170)
Has just completed a semi-official test which has not been reported as yet. Bred March 3 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Hengerveld (Ear tag 198)
A daughter of Fishkill Sir May Hengerveld DeKol. Freshened August 27, 1930.

Fishkill Hero Colantha May (Ear tag 229)
A daughter of Fishkill Sir May Hengerveld DeKol. Bred Feb. 1, 1930 to King Piebe 19th.

Fishkill Hengerveld May (Ear tag 231)
Daughter of Fishkill Sir May Hengerveld DeKol. Bred March 16, to King Piebe 19th.

Fishkill Piebe Gloria (Ear tag 241)
A daughter of King Piebe 19th. Bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Colantha Belle Piebe (Ear tag 246)
A daughter of King Piebe 19th and bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Colantha Rachel Piebe (Ear tag 248)
A daughter of King Piebe 19th. Bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Liliith Colantha DeKol (Ear tag 108)
A daughter of Hengerveld Homestead DeKol 4th. Bred July 5 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Pontiac DeKol (Ear tag 115)
As a senior 2 year old made class C record of 10,252 pounds milk and 453 pounds butter. Bred in May to Fishkill Sir May Hengerveld DeKol.

Fishkill Hilda Hengerveld (Ear tag 230)
A daughter of Fishkill Sir May Hengerveld DeKol. Bred to King Piebe 19th and expected to freshen just before the sale.

Fishkill Inka Piebe (Ear tag 244)
A daughter of King Piebe 19th. Bred to Fishkill Colantha Dichter Piebe.

Bulls

Fishkill Colantha Dichter Piebe (Ear tag 258)
Born March 28, 1929. A son of the great King Piebe 19th from families famous in show ring and production records. His dam is Fishkill Dichter Colantha Inka, who made as a 4 year old a 7 day record of 30.85 lb. butter and 748.6 pounds milk, and 365 day record of 819.32 pounds butter and 19,266 pounds milk.

Ear Tag 292
Born July 9, 1930. A son of King Piebe 19th.

Ear Tag 294
Born August 6, 1930. A son of King Piebe 19th, out of Fishkill Inka Dichter DeKol (9,255 pounds milk 436 pounds butter as junior 2 year old) a full sister to a world record cow.

Ear Tag 297
Born Sept. 4, 1930. A son of Fishkill Sir May Hengerveld DeKol, and out of Fishkill Fayne Colantha Inka (class C record of 16,607 pounds milk and 689 pounds butter at 3 years and 1 month, a New York State record).

Every cow guaranteed in calf at time of sale except those recently fresh. **Herd Federal Accredited.**

Dairymen's League Certificates will be accepted.

The Latest About the Milk Investigation

NEWs of the investigation into New York City Milk prices has been shoved off the front page of the city papers and in fact, almost entirely out of the papers. In spite of all the unfair publicity given to the situation, the investigation so far as milk is concerned has narrowed down to one question only, namely, is there a combination in restraint of trade in the city milk business?

It is our understanding that the investigation into the food situation will continue, but in all probability the milk situation will not receive much further attention. In fact, it appears that about everyone who has studied the situation at all impartially is agreeing that the raise in price was entirely justified.

Several interesting points were brought out during last week's hearing. H. E. Babcock of Ithaca, testifying on production costs, said that producers in the New York milk shed because of the drought have been buying more dairy concentrates this summer than they did a year ago and that following the announcement of a price increase sales immediately jumped indicating that pro-

duction will be maintained this fall at a higher level than it would have been had prices remained as they were early in the summer. Right now by the way, milk production per dairy is several pounds below figures for the same week last year, but to offset that there are more dairies available to supply the New York milk shed. Then too, consumption is not what it was a year ago so it seems probable that with the increase in price and consequent heavier feeding, enough milk will be produced in the milk shed to supply New York City this fall.

Fred Sexauer, president of the Dairymen's League when asked at the hearing last week, whether there was any evidence of a combination in restraint of trade, replied that in his opinion there was such evidence. When asked for his reasons for such an answer, he replied that in his opinion if the Harlem and Bronx Milk Dealers' Association, which has been commonly referred to in the papers as Aaron Sapiro's association, were allowed to continue along the lines on which it appears to be operating, it might constitute a combination in restraint of trade.

The Telephone helped in Rebuilding the Church

A Bell System Advertisement

NEAR Springville, Ind., there is a farmer's wife who found her telephone a great help in organizing the many affairs held to raise the money for rebuilding a church. She and the other members of the Ladies' Aid Society served dinners at public sales, sold quilts and a variety of household articles to people living about the countryside. In all of these activities the telephone proved to be an invaluable aid in making arrangements, keeping the members of the organization in touch with one another, and getting together the money to erect a modern, \$8000 church.

The telephone also proves its value in making profitable sales of livestock, grain, fruit and vegetables through co-operative associations or local markets. It is always at hand to make business and social engagements, run errands, order farm and household supplies or summon help in times of fire, accident or sickness.

The modern farm home has a telephone that serves well, rain or shine.

More Contest Letters Give Readers' Opinions

WHY shouldn't a farm woman use canned stuff and baked goods (store bought) if she finds it more convenient or economical? In that, as well as in other matters, her common sense, state of health, and condition of the family purse should rule. Why not strike the happy medium, can and bake what seems wise and buy the rest?

I do not consider it practical to pay exorbitant prices for fruits, etc., for canning. That which one has at home or can buy reasonably may be canned

will take more of them out of a can. Many of my reasons for canning also apply to baking. Home baking is cheaper and healthier. Home baking is not composed of substitutes, only pure ingredients are used. Many of them are derived right from the farm.

Home canning and baking assure the family a varied, healthful diet the year round. In such homes the bottles on the top shelves of the medicine cabinet are conspicuous by their absence. Canning and baking are work but a real home-maker has a vision of her job and after all, it's the health and happiness of her family that lies nearest her heart.—MRS. C. F., New York.

PURSE NO. B5469 comes stamped on canvas for embroidery in simple stitches with a silky wool and rayon floss. The background is a rich tan color, edged with brown while the flowers are pretty and colorful. The package includes stamped canvas, wool and rayon floss, rayon lining, interlining and a hookless slide fastener. Size finished is 7x10 1/4 inches. Price for package, \$1.50. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

and be, I believe, more satisfactory than the ready-canned product. With a good garden, vegetables such as corn, tomatoes, beets, etc., may be canned in quantities and cost almost nothing.

As for meat, what could be nicer than one's own canned meat, especially beef and chicken? Large amounts of chicken may be canned in the fall and quantities of beef in winter. One can usually get help from other members of the family or, if not, hire help when doing these big jobs. However nice these home canned meats are, we would not wish to do without the commercially canned salmon or dried beef, once in a while.

Few of us could afford to use much of jellies, jams or pickles if we had to buy them, but the cost of the home made ones is not great.

As to baked stuff—if one lives where she can conveniently get fresh baker's bread each day, why use one's own time, strength and fuel to make it, especially in summer? I never make raised bread, cookies or doughnuts in summer. I do make my pies, cakes and soft breads.

However, women owe it to themselves and their families to keep fit, so if one finds that buying part of their baked goods and canned stuff makes for greater comfort and happiness, why not buy them?—MRS. R. W. H., New York.

Why I Can and Bake

Just a handful of red and blue tags but what a lot they mean! They mean I won first and second premium on canning at our County Fair. They also mean a check, and a new tweed suit to wear when we pitch tent next week at Syracuse. They also represent home grown products canned right.

Why can? Here's a few of my reasons. There's a "heap o' living" in the garden. Canning distributes this heap of living throughout the year. Canning saves food which otherwise would be wasted. It saves feed. When milk is high I can veal. I cull and can unprofitable poultry. Canning saves and distributes labor. Time, fuel and labor are saved by cooking twenty meals of swiss chard at one time rather than cooking twenty separate meals of swiss chard.

Canning prepares me for busy seasons, unexpected men or company. Canning reduces the grocery bill and is a direct source of income. My prize winning jellies and jams help sell any surplus I have. Canning gives me fresh meat in hot weather, greens, fruits and vegetables in winter. Last year my little girl took part of her vitamins out of a bottle, this year she

To Apply for Old-Age Relief

SINCE the recent article in American Agriculturist concerning the new law about old age relief, we have had numerous inquiries from people as to where and to whom application should be made.

Application for relief should be made after September 1st to the city or county commissioner of Public Welfare of the city or county in which the applicant lives at any time. The relief will not be granted until after January 1, 1931. All blanks, etc., necessary for making the application may be obtained from the commissioner and either he, or a member of his staff, will assist in filling out the application if help is needed. A lawyer is not necessary.

Each case varies somewhat from others, so the Commissioner investigates all the facts, then determines the amount to be paid to the applicant. The investigation requires some time but it is expected that no one would have to wait longer than 30 days to get a ruling on his case. A man or woman must be seventy years old before eligible for the old-age relief voted by the State of New York.

Cities required by law to furnish such relief are New York, Kingston, Oswego, Newburgh, and Poughkeepsie. All other cases should apply to their County Public Welfare Commissioner.

Quilt Blocks of Rare Beauty

Cross stitches are predominating in designs Nos. C501-503-510-511, while No. C506 is a pretty basket design made with lazy-daisy and outline stitches and No. C508 is a bunch of roses made with outline stitches. If friendship quilt is desired the cone shaped spaces of design No. C501 can be used to advantage for placing the names of friends. They are stamped on fine quality white embroidery cloth, size 18x18 inches. Quilt 90x90 inches requires twelve stamped white blocks and 3 1/2 yards of colored star cloth for contrasting blocks in rose, blue, lavender or tangerine. Stamped blocks are 15c each if ordered singly; 1/2 dozen 60c; one dozen \$1.00. Price for 3 1/2 yards of colored material is \$1.65 or \$2.65 for all of the material to make blocks for entire quilt. State color and design numbers wanted. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

Fall in Flower Gardens

Bright Weather Makes These Jobs a Real Joy

WHEN fall days come the home flower gardener has to take thought—and action—if she would have her full quota of bloom next season. Certain flowers need early fall transplanting in order to get some roots established before freezing. Peonies, irises, and the hardy lilies belong in this class.

Other perennial flowers which bloom in early summer will get a better start if divided and re-set now, that is, provided their plants are large enough to divide. Delphinium, columbine, phlox, the various daisies, calliopsis, dianthus and other common perennials should be thus divided before frost. Late flowering perennials such as chrysanthemum or aster are best divided in early spring.

For spring flowers, bulbs have to be planted before freezing weather. October is the ideal time. Tulips, narcissi, jonquils, hyacinths, croci, scilla and snowdrops are the commonest varieties. Plant to twice their own depth is the rule for all these bulbs.

Tender roots and bulbs which cannot withstand severe cold have to be removed and stored in a dry place. Dahlias, cannas and gladioli are dug after blooming is finished and before freezing. Cut tops back to 4 or 6 inches in length, air a few hours and pack both dahlias and cannas, stems down, in dry sand or sawdust to prevent shriveling. The gladioli do not shrivel so badly but must not either freeze or be overheated.

Many annuals which usually disappear with the first frost would bright-

en a sunny window in the house for weeks to come if they are potted and taken in. I have seen petunias, geraniums and stocks blooming in midwinter which had spent the previous summer in the garden.

After the ground is frozen, a mulch of dry clean straw, leaves or strawy manure, four to six inches thick, will protect the plants from injury which would result from alternate freezing and thawing. This mulch is left on until after April when hard freezes are not likely to occur. Then the heavier part is removed, leaving the finer ma-

Of French Inspiration

LITTLE GIRL'S FROCK PATTERN NO. 2657 is a cunning design of French inspiration. The brief bodice is terminated in a deep point in front with the skirt showing an inverted plait just below the point. The boyish collar and the little show of bloomers underneath the hem give an effect of trim smartness very satisfying to little maids of 2, 4 and 6 years. Size 4 requires 2½ yards of 39-inch material with ¾ yard of 35-inch contrasting and 1½ yards of dark binding with 1½ yards of light binding. PATTERN PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Fall Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

terial to be forked in to improve the soil.

The dormant season also provides an excellent opportunity for pruning and transplanting shrubs. Flowering shrubs, as lilacs, which bloom on their terminals should not be winter-pruned, however, or the bloom would be lost. From the time when leaves turn color, around September 20, until the ground freezes, about November 10, transplanting can be done very successfully.

Roses may be set then too, although experiments at the Cornell rose garden have proved that spring is somewhat more satisfactory for them. But on the farm, spring brings so many jobs that anything which can be done safely in the fall had best be done then.

By painting one side of a black wooden darning needle white, you will find it much easier to darn dark hose by placing the white side beneath the hole. For light hose, use the black side.

Moulded Bodice

FROCK PATTERN NO. 2636 gives the moulded, semi-princess effect necessary in the new styles. The flaring skirt and becoming collar and cuffs are further style accents. Printed crepe silk with plain for contrast makes a lovely combination. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust measure. Size 16 requires 3¾ yards of 39 inch material with ¾ yard of 35-inch contrasting. PATTERN PRICE, 15c.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA SAVES YOUR CLOTHES—YOUR HANDS—AND YOU

FELS-NAPTHA brings you good golden soap and plenty of naptha, working together to loosen stubborn dirt—quicker, easier. It gets things clean—without hard rubbing. It saves your clothes. It saves your hands. It saves YOU!

And that's why millions say Fels-Naptha is the real washday bargain. It brings you not more bars but more help—extra help!

Do your next washing with Fels-Naptha and discover this extra help for yourself. Take the wrapper from a golden bar and you'll smell the dirt-loosening naptha—plenty there! Feel the velvety smooth bar—and you'll know the soap is unusually good.

With these two fine active cleaners, working hand-in-hand, you're bound to get extra help. Extra help that gets your clothes delightfully sweet and

clean with less effort on your part. Try Fels-Naptha in tub or machine; in hot, lukewarm or even cool water; and whether you soak or boil your clothes. Try it for easier household cleaning. Get a few bars—or the handy ten-bar carton—at your grocer's today.

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-9-13 Fels & Company, Philadelphia, Pa.

The Indian Drum—By William McHarg and Edwin Balmer

Constance could not, as yet, place Henry's part in the strange circumstances which had begun to reveal themselves with Alan's coming to Chicago; but Henry's hope that Uncle Benny and Alan were dead was beginning to make that clearer. She lay without voluntary movement in her berth, but her bosom was shaking with the thoughts which came to her.

Twenty years before, some dreadful event had altered Uncle Benny's life; his wife had known—or had learned—enough of that event so that she had left him. It had seemed to Constance and her father, therefore, that it must have been some intimate and private event. They had been confirmed in believing this, when Uncle Benny, in madness or in fear, had gone away, leaving everything he possessed to Alan Conrad. But Alan's probable relationship to Uncle Benny had not been explanation; she saw now that it had even been misleading. For a purely private event in Uncle Benny's life—even terrible scandal—could not make Henry fear, could not bring terror of consequences to himself. That could be only if Henry was involved in some peculiar and intimate way with what had happened to Uncle Benny. If he feared Uncle Benny's being found alive and feared Alan's being found alive too, now that Alan had discovered Uncle Benny, it was because he dreaded explanation of his own connection with what had taken place.

Constance raised her window shade slightly and looked out. It was still snowing; the train was running swiftly among low sand hills, snow-covered, and only dimly visible through snow and dark. A deep-toned steady roar came to her above the noises of the train. The lake! Out there Alan and Uncle Benny were fighting, still struggling perhaps, against bitter cold and ice and rushing water for their lives. She must not think of that!

Uncle Benny had withdrawn himself from men; he had ceased to be active in his business and delegated it to others. This change had been strangely advantageous to Henry. Henry had been hardly more than a common seaman then. He had been a mate—the mate on one of Uncle Benny's ships. Quite suddenly he had become Uncle Benny's partner. Henry had explained this to her by saying that Uncle Benny had felt madness coming on him and had selected him as the one to take charge. But Uncle Benny had not trusted Henry; he had been suspicious of him; he had quarreled with him. How strange, then, that Uncle Benny should have advanced and given way to a man whom he could not trust!

It was strange, too, that if—as Henry had said—their quarrels had been about the business, Uncle Benny had allowed Henry to remain in control.

Their quarrels had culminated on the day that Uncle Benny went away. Afterward Uncle Benny had come to her and warned her not to marry Henry; then he had sent for Alan. There had been purpose in these acts of Uncle Benny's; had they meant that Uncle Benny had been on the verge of making explanation—that explanation which Henry feared—and that he had been prevented? Her father had thought this; at least, he had thought that Uncle Benny must have left some explanation in his house. He had told Alan that, and had given Alan the key to the house so that he could find it. Alan had gone to the house—

In the house Alan had found some one who had mistaken him for a ghost, a man who had cried out at sight of him something about a ship—about the *Miwaka*, the ship of whose loss no

one had known anything except by the sounding of the Drum. What had the man been doing in the house? Had he too been looking for the explanation—the explanation that Henry feared? Alan had described the man to her; that description had not had meaning for her before; but now remembering that description she could think of Henry as the only one who could have been in that house! Henry had fought with Alan there! Afterwards, when Alan had been attacked

rible discovery. If she could take one more step forward in her thought, it would make her understand it all. But she could not yet take that step.

In the morning, at Traverse City—where she got a cup of coffee and some toast in the station eating house—she had to change to a day coach. It had grown still more bitterly cold; the wind which swept the long brick-paved platform of the station was arctic; and even through the double windows of the day coach she could feel its chill.

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north.

upon the street, had Henry anything to do with that?

Henry had lied to her about being in Duluth the night he had fought with Alan; he had not told her the true cause of his quarrels with Uncle Benny; he had wished her to believe that Uncle Benny was dead when the wedding ring and watch came to her—the watch which had been Captain Stafford's of the *Miwaka*! Henry had urged her to marry him at once. Was that because he wished the security that her father—and she—must give her husband when they learned the revelation which Alan or Uncle Benny might bring?

If so, then that revelation had to do with the *Miwaka*. It was of the *Miwaka* that Henry had cried out to Alan in the house; they were the names of the next of kin of those on the *Miwaka* that Uncle Benny had kept. That was beginning to explain to her something of the effect on Henry of the report that the Drum was telling that some on Ferry Number 25 were alive, and why he had hurried north because of that. The Drum—so superstition had said—had beat the roll of those who died with the *Miwaka*; had beaten for all but one! No one of those who accepted the superstition had ever been able to explain that; but Henry could! He knew something more about the *Miwaka* than others knew. He had encountered the *Miwaka* somehow or encountered some one saved from the *Miwaka*; he knew, then, that the Drum had beaten correctly for the *Miwaka*, that one was spared as the Drum had told! Who had that one been? Alan? And was he now among those for whom the Drum had not yet beat?

She recalled that, on the day when the *Miwaka* was lost, Henry and Uncle Benny had been upon the lake in a tug. Afterwards Uncle Benny had grown rich; Henry had attained advancement and wealth. Her reasoning had brought her to the verge of a ter-

The points of Grand Traverse Bay were frozen across; frozen across too was Torch Lake; to north of that, ice, snow-covered, through which frozen rushes protruded, marked the long chain of little lakes known as the "Intermediates." The little towns and villages, and the rolling fields with their leafless trees or blackened stumps, lay under drifts. It had stopped snowing, however, and she found relief in that; searchers upon the lake could see small boats now—if there were still small boats to be seen.

To the people in her Pullman, the destruction of the ferry had been only a news item competing for interest with other news on the front pages of their newspapers; but to these people in the day coach, it was an intimate and absorbing thing. They spoke by name of the crew as of persons whom they knew. A white lifeboat, one man told her, had been seen south of Beaver Island; another said there had been two boats. They had been far off from shore, but, according to the report cabled from Beaver, there had appeared to be men in them; the men—her informant's voice hushed slightly—had not been rowing. Constance shuddered. She had heard of things like that on the quick-freezing fresh water of the lakes—small boats adrift crowded with men sitting upright in them, ice-coated frozen, lifeless!

Petoskey, with its great hotels closed and boarded up, and its curio shops closed and locked, was blocked with snow. She went from the train directly to the telegraph office. If Henry was in Petoskey, they would know at that office where he could be found; he would be keeping in touch with them. The operator in charge of the office knew her, and his manner became still more deferential when she asked after Henry.

Mr. Spearman, the man said, had been at the office early in the day; there had been no messages for him;

he had left instructions that any which came were to be forwarded to him through the men who, under his direction, were patrolling the shore for twenty miles north of Little Traverse, watching for boats. The operator added to the report she had heard upon the train. One lifeboat and perhaps two had been seen by a farmer who had been on the ice to the south of Beaver; the second boat had been far to the south and west of the first one; tugs were cruising there now; it had been many hours, however, after the farmer had seen the boats before he had been able to get word to the town at the north end of the island—St. James—so that the news could be cabled to the mainland. Fishermen and seamen, therefore, regarded it as more likely, from the direction and violence of the gale, that the boats, if they continued to float, would be drifted upon the mainland than that they would be found by the tugs.

Constance asked after her father. Mr. Sherrill and Mr. Spearman, the operator told her, had been in communication that morning; Mr. Sherrill had not come to Petoskey; he had taken charge of the watch along the shore at its north end. It was possible that the boats might drift in there; but men of experience considered it more probable that the boats would drift farther south where Mr. Spearman was in charge.

Constance crossed the frozen edges of the bay by sledge to Harbor Point. The driver mentioned Henry with admiration and with pride in his acquaintance with him; it brought vividly to her the recollection that Henry's rise in life was a matter of personal congratulation to these people as lending luster to the neighborhood and to themselves. Henry's influence here was far greater than her own or her father's; if she were to move against Henry or show him distrust, she must work alone; she could enlist no aid from these.

And her distrust now had deepened to terrible dread. She had not been able before this to form any definite idea of how Henry could threaten Alan and Uncle Benny; she had imagined only vague interference and obstruction of the search for them; she had not foreseen that he could so readily assume charge of the search and direct, or misdirect, it.

At the Point she discharged the sledge and went on foot to the house of the caretaker who had charge of the Sherrill cottage during the winter. Getting the keys from him, she let herself into the house. The electric light had been cut off, and the house was darkened by shutters, but she found a lamp and lit it. Going to her room, she unpacked a heavy sweater and woolen cap and short fur coat—winter things which were left there against use when they opened the house sometimes out of season—and put them on. Then she went down and found her snowshoes. Stopping at the telephone, she called long distance and asked them to locate Mr. Sherrill, if possible and instruct him to move south along the shore with whomever he had with him. She went out then, and fastened on her snowshoes.

It had grown late. The early December dusk—the second dusk since little boats had put off from Number 25—darkened the snow-locked land. The wind from the west cut like a knife, even through her fur coat. The pine trees moaned and bent, with loud whistlings of the wind among their needles; the leafless elms and maples crashed their limbs together; above the clamor of all other sounds, the roaring of the lake came to her, the

The Indian Drum

(Continued from Page 16)

booming of the waves against the ice, the shatter of floe on floe. No snow had fallen for a few hours, and the sky was even clearing; ragged clouds scurried before the wind and, opening, showed the moon.

Constance hurried westward and then north, following the bend of the shore. The figure of a man—one of the shore patrols—pacing the ice hummocks of the beach and staring out upon the lake, appeared vaguely in the dusk when she had gone about two miles. He seemed surprised at seeing a girl, but less surprised when he had recognized her. Mr. Spearman, he told her, was to the north of them upon the beach somewhere, he did not know how far; he could not leave his post to accompany her, but he assured her that there were men stationed all along the shore. She came, indeed, three quarters of a mile farther on, to a second man; about an equal distance beyond, she found a third, but passed him and went on.

Her legs ached now with the unaccustomed travel upon snowshoes; the cold, which had been only a piercing

chill at first, was stopping feeling, almost stopping thought. When clouds covered the moon, complete darkness came; she could go forward only slowly then or must stop and wait; but the intervals of moonlight were growing longer and increasing in frequency. As the sky cleared, she went forward quickly for many minutes at a time, straining her gaze westward over the tumbling water and the floes. It came to her with terrifying apprehension that she must have advanced at least three miles since she had seen the last patrol; she could not have passed any one in the moonlight without seeing him, and in the dark intervals she had advanced so little that she could not have missed one that way either.

She tried to go faster as she realized this; but now travel had become more difficult. There was no longer any beach. High, precipitous bluffs, which she recognized as marking Seven Mile Point, descended here directly to the hummocked ice along the water's edge. She fell many times, traveling upon these hummocks; there were strange, treacherous places between the hummocks where, except for her snowshoes, she would have broken through. Her skirt was torn; she lost one of her gloves and could not stop to look for it; she fell again and sharp ice cut her ungloved hand and blood froze upon her finger tips. She did not heed any of these things.

She was horrified to find that she was growing weak, and that her senses were becoming confused. She mistook at times floating ice, metallic under the moonlight, for boats; her heart beat fast then while she scrambled part way up the bluff to gain better sight and so ascertained her mistake.

(To be Continued Next Week)

Time for Fall Whitewashing

(Continued from Page 3)

objectionable to have the whitewash run on the walls or drip from the ceiling.

Power sprayers owned by "rings" of fruit growers for orchard use are especially adapted to farm building whitewashing and cold water painting. Smaller, hand operated sprayers, useful in every garden and on every livestock farm, are also called into service at whitewashing time by individual farmers. The object in either case is the same; to save time, labor and expense and to make the dairy barn or other buildings clean and sanitary.

HANDY ANDY Says "Here's How"

To Keep Your Feet Comfortable

By Ray Inman

Comfortable FEET
MEAN MORE TO A HOUSE-
WIFE THAN QUANTITIES OF
LABOR SAVING EQUIPMENT.

WHAT TYPE OF FOOT HAVE YOU?
CONSULT THIS CHART AND CHECK UP ON YOUR FEET.

I. THE OUTRIGGERS.
THESE FEET AREN'T SO BIG—THEY JUST SCATTER. HAVE A TENDENCY TO RUN IN ALL DIRECTIONS AT ONCE, DUE TO PATENTED UNIVERSAL ANKLE JOINTS.

III. THE AIRDALES.
DISTINGUISHED FOR LONG LINES AND AMPLE STANDING ROOM. A GREAT HELP TO DANCING PARTNERS.—SO EASY TO RIDE UPON. (RUMBLE SEAT EXTRA)

II. THE STRAIGHT EIGHTS.
THESE FEET GIVE A MUCH GREATER MILEAGE AT LOWER GASOLINE CONSUMPTION. (GROUNDGRIPPER TOES AND WIRE WHEELS, EXTRA).

IV. THE 90° V'S.
A CUSTOM BUILT JOB, WITH SYNCHRO-MESH TOES. DESIGNED FOR CRISS-CROSS COUNTRY TRAVELING.

III. HEAVY DUTY BALLOONS.
HEAVY TREAD FOOT FOR TRUCK BODIES. GUARANTEED NOT TO SKID OR BLOW OUT AT HIGH SPEED (THEY AREN'T GEARED FOR HIGH SPEED).

DETAIL SHOWING HIGH AND LOW GEAR ON A FOOT

1. Shoes should be comfortable when first tried on.
2. Cheap shoes are poor economy.

I CAN'T SEE WHY THESE SHOES AREN'T COMFORTABLE! — I PAID \$12 FOR THEM

TWELVE DOLLARS! — GOSH! — IT MAKES ME UNCOMFORTABLE JUST TO THINK ABOUT IT!

3. Bathe feet with soap and hot water every night.
4. Rinse them with cold water every morning.

but NEVER LEAVE SOAP ON THE FLOOR —

— IT MAY MEAN A LOT OF EXTRA FOOT WORK!

5. Put on fresh, clean, stockings every morning, if you have to wash a pair every night to do it.

WELL, IF YE GOTTA WASH YER FEET EVERY NIGHT, AN' YER SOCKS EVERY NIGHT, WHY TH' SAM HILL DONT YE LEAVE YER SOCKS RIGHT ON YER FEET AN' WASH 'EM BOTH AT ONCE? THEN YE'D NEVER HAVET' BOTHER CHANGIN' YER SOCKS

inman

One Day Behind Prison Bars

(Continued from Page 2)

the inmates receive better care and service than many an outside citizen. There are a splendid staff of doctors, up-to-the-minute laboratories and operating rooms, and comfortable wards for the sick. When a prisoner becomes ill, he is immediately taken off the prison diet and given food as good as offered by any hospital.

One might expect the death rate in a large prison where nearly 2,000 men are confined to be exceedingly high, but such is not the case with Sing Sing. The death rate during the year

in lock step before they broke formation to pass each into his little den. Down this hall in front of these cells there is a depression two or three inches deep, worn into the stone floor by the shuffling feet of prisoners for more than a hundred years. Rather tragic to think about.

The Daily Schedule

The men get up at 6:30, have breakfast at seven, walk in the yard or exercise in some way until eight, and then are employed in various capaci-

The old prison stripes, by the way, have been eliminated. Prisoners wear cheap gray trousers and a blouse or shirt open at the neck. I believe I was told that they have two shirts, one the prison gray and one of a lighter color, or white, which they may put on when they have visitors or on Sunday.

One of the last places we visited was the execution room of the death house. No visitors are ever permitted in where the condemned men are kept. I sat in the death chair while the guard dramatically explained in some detail just how men are put to death. It was a gruesome and depressing experience, and I was interested to know that both the warden and Sergeant Fieseler, and in fact nearly everybody who has anything to do directly with executions, are decidedly against capital punishment. It is their claim that it does no good. Who can say whether they are right or wrong? What do you think? Some say it prevents murder because of fear of the penalty. Others claim there is not so much murder where capital punishment has been eliminated.

Directly from the death chamber we came to a little open garden with a large birdhouse in the center. Here flowers bloom and birds sing. We were told that the place had been made by an inmate, a famous, educated man, confined for life for killing his wife. He had behaved himself while in prison and therefore was given the opportunity of forgetting some of his troubles by creating this garden. Sergeant Fieseler said that he had been interested to see men in their cells which faced out on this garden stand at their little grated windows by the hour watching the birds in this garden. Possibly this may be because these birds were to them a symbol of something vital which they had lost—freedom.

Escape Practically Hopeless

Looking out from either the business offices or almost any of the cells into the yards of the great Sing Sing plant, you can always see the silent, watchful guards in the towers and on the walls, constant reminders to the men of where they are. These guards are armed with machine guns and our sergeant stated that not long ago some prisoners had attempted to scale

Before leaving, I stood before one of the grated windows looking out across the Hudson. It was raining, and the hills beyond were shrouded in mist, giving one an understanding of the feeling of hopelessness of the nearly 2,000 men who view that scene behind grated windows every day. For them, even when the sun shines, they are gray days, gray river, gray walls and gray men.

I passed out, and the gates clanged behind me. I was not sorry to leave.

Most Criminals Are Mentally Deficient

In conclusion, there are two or three decided impressions that I would like to pass on to you. One of them is that so far as my observation of the men at Sing Sing went, it was my opinion that the great majority are deficient mentally. The modern term of "moron" properly describes them. They are "sick in the head". When I expressed this to Sergeant Fieseler, he said, "Absolutely. How could any man, for instance, be anything but a fool to try to steal a few hundred dollars? What is that compared to these hopeless years?"

Another outstanding impression is that which I have already mentioned, the kindly, constructive policy used in the care of prisoners at Sing Sing. When men do not obey the rules, they are not struck or fed on bread and water, but they are confined and all privileges are taken away. There can be no visitors, no recreation, no writing or receiving of letters, and in most cases, we were told, this policy works very well.

But since making my visit, I have also been told by a man who is familiar with prison policies in this State that such a policy of kindness may not work in every prison because Warden Lawes immediately weeds out the incorrigibles and the "bad actors" and has them sent to other prisons.

I would not say that there was any coddling at Sing Sing, but I would say if a man does not care about the disgrace, he might fear less a winter spent in this prison than, say on the park benches of New York City. The modern prison policy is toward kindness and reformation rather than punishment. Warden Lawes is the leading exponent of this policy. He has some radical ideas, one of which is

Sing Sing has a regular school system with a principal and regular teaching faculty. All prisoners who will, have an opportunity for study and improving themselves. This is in line with the new prison policy to reform rather than to punish.

—Photo by Ewing Galloway

1928-1929 was only 2.26 per cent. Ten years ago it was 6.33 per cent.

The new prison and cell blocks at Sing Sing are, I should say, the last word in modern prison construction. There is plenty of sunshine, light and air and the cells, while small, are fairly comfortable. They are equipped with cots, and to find whether or not they were comfortable, I lay down on one. I have slept in worse beds. Each room has an electric light and a small table; it is wired for radio earphones, and there are toilet facilities.

When we passed out of this modern building down into the old Sing Sing prison, erected more than one hundred years ago, we found an entirely different story. The cells are exceedingly small, and light is admitted only from a little grating in the iron door, opening on the long hall. Until recently it has been necessary to put more than one man into these places, where a farmer would not think of shutting up a dog.

The guard told us that when he came to Sing Sing it was customary to put three men into one of these stalls and when they were confined there for days at a time they often came out raving crazy.

These little dens open into a long hall. For more than a century it has been customary to march the men in after supper. Here years ago they used to stand and shuffle before the cells

ties in the prison industries until four o'clock, with an hour off for dinner at noon. At four o'clock there is another hour for exercise and recreation, including baseball, then comes supper, after which they are locked in their cells. Prisoners may attend movies once a week and there is a good prison library for reading. Lights go out at 10:30.

This schedule may not be exactly accurate, but it is, as I remember, what the guard told to me.

The diet is exceedingly plain, but there is plenty of it and it is wholesome. For breakfast, for example, there are bread and coffee with milk and a cooked cereal. Visitors are allowed to bring their relatives some additional to their diet and the man may spend a small sum also to help out in the diet.

Until recently, the men were allowed 1½ cents a day as payment for their work. This has been considerably increased and is now on a scale depending on a man's ability. If he is a skilled laborer, he earns more than those unskilled. Part of this extra money may be spent by the man while in prison, but a large part of it must be saved and is given to the prisoner when he is discharged.

Nearly all of the labor of maintaining the prison and preparing and serving the food is done by the inmates. In addition to this, there are regular established factories inside of the grounds where the men work at almost every trade. During the prison year 1928-1929, prison-made products were sold from Sing Sing amounting to \$637,636.36. On this there was a money profit to the prison, or in other words to the State, of \$90,378.29. The work of the prisoners is not only limited by what can be sold, but by the fact that labor unions frown upon the sale of prison-made products.

The total cost of operating Sing Sing prison in 1924-1925 was \$527,089.90. Last year this had increased to \$738,488.85. The average expenditure per inmate per day last year was \$1.14, including everything. Of this, the food per person cost 21.6 cents and clothing cost 8.3 cents. Allowance for food has recently been increased to about 26 cent per person per day.

Here is where society keeps those who trespass against its laws. Some of the hundreds of prison cells at Sing Sing.

—Photo by Ewing Galloway

the wall but were picked off by the guns. Few or no successful escapes ever made from Sing Sing. I was impressed with the futility of trying.

One of our party asked the sergeant what happened in the ballgames when the ball was knocked over the wall. "Well," he said with a grin, "I'll tell you what does not happen—no inmate ever goes after it!"

Sing Sing is said to have a good ball team and outside teams are allowed to come in and play with them occasionally. We were told that the prison players make it a point to be extremely courteous to their visitors.

that 40 per cent of all prisoners in penal institutions should be paroled and sent home as soon as positions can be found for them, 30 per cent should be held another two years, and then paroled. Of the remaining, the majority are incorrigible and should be kept in for life and segregated from the "chance" criminals.

"Sentences," said the warden, "should be entirely under the control of a parole board."

The New York State prison policy is headed a little toward some of Warden Lawes' ideas. Only time will tell whether or not he is right.

The Service Bureau

A Department Devoted to the Interests, Welfare
and Protection of A. A. Readers

H. F. Windmann Co. Bankrupt

A NUMBER of subscribers have asked us to collect for produce shipped to H. F. Windmann. We find that the company filed a petition of bankruptcy on August 16, owing something like \$6,000 to shippers. Inasmuch as the Windmann Company was licensed and bonded, it appears that shippers will recover something like 50 per cent of his indebtedness to them. We understand that the State Department of Agriculture and Markets is sending out claim blanks to be filled out and verified by shippers. If Mr. Windmann owes you

tions when he violates traffic laws or when he has an accident. It also states that accessories will be furnished at a discount and that emergency road service will be given to members at the expense of the North American Automobile Club. However the contract states that the help is given only to the extent of \$10 for towing and states that the club will not be liable for either labor or parts put on the car.

The contract also provides that the club may cancel the contract at once upon notice sent to the member but they do not give any provision which allows a member to cancel.

Under the contract our subscriber will not be able to get a refund of the \$10 for repairs performed on the road. As we have stated so many times in the past, a rather heavy correspondence from readers indicates that few of them have found that they have secured value from such a contract to pay them for the cost of it.

Get Work Before You Pay

We have just received a letter from C. F. Mayer of Chicago, indicating that I can get a fine position in a good lo-

cation if I will send them \$5 for a full year. I read their ad in our daily paper saying that they want men at once to earn from \$35 to \$100 a week in the United States or South America.

If we understand C. F. Mayer's letter correctly he agrees to mail out a record of an applicant to 100 large employers each week for an entire year

Good Evidence

THIS acknowledged receipt of draft on the North American Accident Insurance Company for \$60 in payment of my claim on accident of May 3rd.

I thank you very much for your attention in this matter and cannot help but recommend your paper and insurance attached to it, to anyone whom I think might be interested.

Yours truly,
C. L. Meech,
Jordan, N. Y.

if necessary. He does not guarantee to get anyone a job and from the experience we have had with similar concerns they are more interested in getting the \$5 than in securing positions for their clients.

An investigation of a similar concern developed the fact that they could not definitely point to any person who had secured a position through them. Most employment agencies are willing to furnish the job first and then take their commission.

Poultry, Prosperity and Peace

(Continued from Page 3)

within the different nations represented. Our neighbor to the north, Canada, had the largest one and the most outstanding. It featured the R. O. P. work and the standardization of poultry products and the quality of them.

Privately, I was rather proud of our United States government's exhibit. It was not the largest by any means, nor the most elaborate. It had a scientific dignity. It was clear-cut and understandable.

The center of attraction was a large, animated model of a hen's "insides". As the visitors watched it, they saw the food enter her mouth, become ground up and changed in the crop, sorted in the intestines and sent out in the blood stream to repair the body and build up the egg.

This vivid exhibit, with a phonograph explaining each step in the process, could teach one more in five minutes than text-books do in several hours.

Free Movies

Another interesting fact I noticed in the moving pictures. These pictures were continuous from 10 A. M. until 6 P. M. with free admission. They were about poultry, of course. My national pride had another boost when I found out that fully half the films shown were supplied by our country.

Scotland showed how eggs and dressed fowl are carefully prepared there, all having the government mark on them denoting their quality and uniformity. Especially interesting was the feather-picking machine Scotland had. It looked like a cross between a vacuum sweeper and a mowing machine section grinder. A fairly small affair that did only the rough picking. The pin feathers still had to be taken out by hand.

I was astonished at the exhibit of the Irish Free State! It showed an increase of 38% in the number and value of poultry products in five years! Obviously, poultry is the most important branch of agriculture in that country. Even the Irish potato is way behind now.

It pleased me to hear Scotland give credit for their improved poultry and turkeys to the use of male birds from America. Largely to their advanced methods of government supervision, however, goes the credit for increased egg and poultry sales.

We can learn a lesson here! While our New York better egg law has had all sorts of rough sledding, these British countries with far more restrictive laws are pushing ahead at a great

rate and capturing the export trade. The Pacific Coast, with its quality and volume, has done the same thing right under our noses, snatching a good part of the eastern trade in the eastern markets.

A Real Grading Law

We hesitated to approve better-egg laws...and the Pacific states began to get our markets. We are still hesitating...and the British countries are seizing the world markets.

And I heard only praise from the Irish and Scotch poultrymen for the restrictive laws which have enabled them to do this. They said not one word against the law which makes each poultryman have to get a license before he can sell any eggs. Then, if the eggs don't come up to snuff, the inspector can revoke his license. Any bad eggs, or any slipping of the little eggs into a shipment marked with a higher grading, and pouf! away with his license. And he must stamp the date of laying on each egg.

We easily lead in certain poultry manufacturing lines. This was clearly evidenced by the American incubators on display. Smith, Buckeye, Petersime, Jamesway, Robbins, Candee, and one large feed concern, Quaker Oats, all had exhibits which showed that the United States heads the world in these particular fields.

Grading Eggs

Where we lag behind particularly is in egg grading machines. I saw at least five different types, all apparently doing the job to perfection. Each was of foreign manufacture.

Prominent among the other displays were brooding devices. Battery brooders and poultry buildings of all types and sizes. The best selling brooder house in England has a floor of narrow slats giving much the same effect as our woven wire floors. They use them the year around for mature hens, but our winters are too severe for that.

While the birds and the exhibits and the concerts and the fireworks attracted the crowds and took up the space, the real work of the Congress went on in the conference rooms. Here occurred the discussions which will produce still further improvements in the next Congress; here was the melting pot for the wise hints from all nations; here the men from the poultry research laboratories of the world met, compared notes, gave their best and got other's best to take back to their countries.

The Key to Cleaner Milk

The work of producing clean milk is greatly simplified when the dairy barn floor is concrete.

Better still, a concrete floor in your dairy barn saves labor, lowering your producing cost.

Modernize Your Barn Now!

You can build a concrete floor yourself. Once laid, it is permanent, odor- and-vermin proof, and easily kept clean.

A postcard will bring complete information.

ABSORBINE

Absorbine is the *dependable* liniment when gashes, bruises, threaten lay-ups. Fast to ease inflammation and guard against infection, it's a quick healing aid. Muscles and tendons strained by pulling, too, respond to this 38-year-old liniment. No blisters—no lost hair—horse can work. A real economy. All druggists—\$2.50 a bottle. W. F. Young, Inc., 579 Lyman St., Springfield, Mass.

Worth a Lot

I AM writing to you stating that the check for the case of eggs I shipped.....which you have been collecting for me arrived yesterday.

I cannot express my feelings to you people for helping me get this check and I'm sure if it had not been for you I never would have received it.

I thank the American Agriculturist many times and I'm sure if there is anything I can do to get this paper more subscribers I'll do it for such a paper is worth a lot to a farmer.

money and you did not receive such a blank, write either to New York State Department of Agriculture and Markets, Albany, N. Y., or to American Agriculturist, asking for a claim blank. This case looks like another good argument for increasing the size of the Bond required of Commission Merchants.

Investigate First

Last spring a young man representing himself as one of three Richer Brothers at Tupper Lake, N. Y., called at my home and said he would like to buy eggs from us. I delivered one case of eggs and received a good price for them. I delivered three cases at a store where they picked them up soon after that and have never received any returns or heard anything about them. The store where they picked up the eggs says that they know nothing about the reliability of this company. I also asked a friend who lives near Tupper Lake and he says that he never heard of any such dealer. Do you suppose there is any way in which you can get payment for this claim?

ABOUT a year ago we received a complaint from a subscriber against this same firm and succeeded in getting a settlement. However, at the present time our letter to Richer Brothers at Tupper Lake remains unanswered. A friend who lives in Franklin County reports to us that there is no such firm listed in the Tupper Lake Telephone Directory and that a man who lives in Tupper Lake has never heard of this concern. On the face of it, it would seem that this is a case where a promise of a little higher return has resulted in a loss because the shipper did not investigate before he shipped the eggs to them. We, of course, do not know whether the buyer definitely intended to defraud or whether business went bad and they were unable to pay. Whichever may be the case, our subscriber is out to the extent of three cases of eggs.

*For each day's work
on a farm* **The Ford Truck gives good service**

THE Ford 1½-ton truck is strongly built of fine materials, with parts of simple and rugged design. The extensive use of special steels and fine steel forgings, and the use of more than twenty anti-friction ball and roller bearings, all contribute to the long life and reliability which it offers.

The Ford truck will give you service that is faithful, tireless, and profitable . . . and it can do all of your hauling at remarkably low cost.

A number of features increase the usefulness of the Ford truck, adding as well to its capable performance and rugged strength. Among them is a large-

sized opening provided in the transmission to accommodate a power take-off mounting. Thus the engine can furnish power for winches or other equipment mounted on the truck.

Other features are the spiral bevel gear rear axle with straddle mounted pinion; the option of two gear ratios; the large brakes; four speed transmission; heavy front axle and spring. Dual rear wheels are available at small additional cost.

Bodies are strong, of good appearance, and have ample loading-space. Go to your nearest Ford dealer today, and let him show you how economically the Ford truck can serve your purposes.

AMERICA

SAMUEL FRANCIS SMITH

First sung in Park Street Church, Boston, July 4, 1832

America

HERE we have the picture of Samuel Francis Smith, author of America, and the Park Street Church in Boston where the song was first sung. America was written at the close of a dismal day and laid away, forgotten, until it was brought out for a July 4th celebration. Story on page 2.

International's "Seven-for-One" Record

is proof of remarkable value

(Above) The New 3-ton Model A-5 International Speed Truck

In 10 years International Truck production has increased 700 per cent, while the total truck production of the industry has increased only 100 per cent. Such an increase from a small beginning would not be important—it is necessary that you bear this in mind also:

Ten years ago International Harvester was already a highly successful truck builder of 15 years' experience. Even then it was one of the leaders of the industry, with a production of thousands of trucks per year. Since that time International has multiplied seven times as fast as the industry has multiplied.

The march of the Company toward a dominant position in truck building is the best possible evidence of the value of International Trucks. Keep this popularity in mind when you buy a truck. It means that here are trucks ready for years of good economical service. You will find farmers everywhere enthusiastic about the Six-Speed Special and the other Internationals. Write for detailed information.

Songs that Mother Used to Sing America

By DAVE THOMPSON

THE hymn, "My country, 'tis of thee," written on a sudden impulse on a dull February afternoon, and tucked away in a portfolio with so little thought of its worth or significance that the author saw it but once before it was first publicly sung some five months later, has become a national anthem. It brought him no fortune; but how fortunate for us that this young theological student with a gift for hymn writing closed a gray day with the outpouring of patriotic devotion which we sing when the leader of the meeting—any meeting—says—

"We will now rise and sing the first verse of 'America'."

Its author, Samuel Francis Smith, after finishing his course at Andover Theological Seminary in 1832, spent a year in Boston in editorial work, then was ordained pastor of the First Baptist Church, Waterville, Maine, at the beginning of the year, 1834. He also became professor of modern languages at Waterville College, and during the year 1841 taught all the Greek classes. In 1842 he became pastor of the First Baptist Church at Newton Centre, Massachusetts. At the same time, he appears as the editor of the Christian Review, a quarterly publication of the church. For 12½ years he was pastor of the church, and then for the following 15 years, devoted his energies to editorial work in connection with church publications.

He was employed by the selectmen to write a history of Newton Centre, which he did with a considerable amount of care, giving details of events from which we can gain a few pictures of him during his life. After closing his pastorate of the First Baptist Church in 1844, he preached as a supply in the Second Baptist Church from May, 1856, until near the close of the Civil War.

How It Came to be Written

Dr. Samuel Francis Smith wrote for those who wished a record of how he came to write the words of the National Hymn, "America":

"The hymn of 'My country, 'tis of thee,' was written in February, 1832. As I was turning over the leaves of several books of music, chiefly for churches and schools, the words being in the German language, the music, which I found later to be 'God Save the King,' impressed me favorably. I noticed at a glance that the German words were patriotic. But without attempt to translate or imitate them, I was led on the impulse of the moment to write the hymn now styled 'America,' which was the work of a brief period of time at the close of a dismal winter afternoon. I did not design it for a national hymn, nor did I think it would gain such notoriety. I dropped the manuscript into my portfolio, and thought no more of it for months. I had, however, once seen it, and gave a copy of it to Lowell Mason, with the music from the German pamphlet; and much to my surprise, on the succeeding Fourth of July, he brought it out on the occasion of a Sunday School celebration in Park Street Church, Boston."

Lowell Mason was the noted music master of Boston in 1832 and choir-master of Park Street Church, famous in the young United States as the home of fine singing.

Thus briefly we have the story of how the national hymn came to be written. A young theological student, with a gift of composition which he used effectively throughout a long and active life, wrote it at the close of a dull winter's day, just 98 years ago. As we sing it today, it came from his pen—hardly a word or mark has been changed. He handed it, without evident comment or concern, to the man who was working with him on a book of songs for children.

“Ringer” Record Broken at Syracuse

Summaries of Horseshoe Pitching Contest That Brought Crown to Cayuga

By D. D. COTTRELL

Secretary of the National Horseshoe Pitchers Association

THE enthusiasm was so great during the pitching of the finals in the American Agriculturist—Farm Bureau—State Fair horseshoe pitching tournament that spectators crowded from the bleachers on to the courts so that they had to be kept back, frequently with difficulty, so the players could have suitable room to pitch their games. Spectators were often heard to say that they never saw such good pitching before and that they did not know that it was possible to control a shoe so as to make ringers with such frequent regularity. The horseshoe game has become so popular that doctors, lawyers, preachers and numerous other professional and business men have become horseshoe pitching fans and devotees of the sport. The daily papers report that this game is one of the favorites of President Hoover and his guests on his week end visits to his summer camp in the mountains in western Virginia.

As 36 counties had sent men to compete in this tournament and on account of the time limit of two days to complete the match, it was necessary to decide on some method of elimination of the contestants down to a number that could play off the games before Wednesday night. It therefore was decided to have each man pitch 50 shoes and the 16 men making the highest number of points would then play a round robin of 25-point games. The result of this elimination was given in the story published in the AMERICAN AGRICULTURIST last week.

In Table A published herewith the results of the play of the 16 highest men are given. You will note that Ackerman and Peckham tied for the sixth place but it had been agreed that in case of ties except for the Championship, the highest number of points should control. This put Ackerman in the sixth place with 315 points and gave Peckham seventh place. As Ackerman had a chance to play in the finals he was successful in moving up to the fourth place and winning the \$20. prize. The other places in which there were ties were also decided by the greatest number of points. One of the peculiar things is that the average percentage of ringers to shoes pitched for all players in the preliminaries last year was .311 while this year it was .312 or only one point more than last year. It is also noted that six of the sixteen men in the preliminaries—Beardsley, Pickard,

Peckham, Bowen, Judd and Daugherty—were winners in their county contests this year again and Beardsley and Pickard again won the right to enter the finals. Pickard won the championship and the \$50. prize while he only stood sixth in the finals last year. Beardsley won the fifth prize of \$10. last year but this year moved up to the third place and won the \$30 prize. None of the other four men in the finals were in the competition last year, although each of their counties were represented by other men.

From left to right: Paul Pickard of Cayuga County, first prize winner; Ray Moore of St. Lawrence County, second prize; Murray Beardsley of Tompkins County, third prize; Fay Ackerman of Lewis County, fourth prize; Ernest Bowen of Genesee County, fifth prize; John Kauzlarich of Oneida County, sixth prize.

The men in the finals last year made a better average ringer percentage as a whole than they did this year as you will note from the totals given in the Finals Table B, but they were not so evenly matched. This year five out of the six men in the finals were in ties. Two tied for the first place and the Championship and three tied for the third, fourth and fifth place in games won and lost.

Because of the agreement that points should control in the awarding of the prizes except for the Championship, Beardsley was given the third prize of \$30. as he had one point more than Ackerman who lost \$10. in prize money for this one point. But Ackerman won the third prize of \$20. as he was three points ahead of Bowen who

had to be satisfied with the \$10 prize. Pickard being tied for the Championship played off the tie in one 50-point game. In the preliminaries Pickard had won from Moore with 25 points 12 ringers, 2 double ringers while Moore made only 10 points, 9 ringers and no double ringers, each pitching 40 shoes. In the finals, however, Moore took revenge on Pickard winning from him with 50 points, 34 ringers, 8 double ringers while Pickard was able only to get 45 points, 33 ringers, 6 double ringers, each pitching 76

ning. Moore was not able again to get ahead of Pickard and the game ended in the twenty-seventh inning with Pickard 50 points, 23 ringers, 5 double ringers to 38 points, 19 ringers, 5 double ringers for Moore.

As soon as the records could be compiled and verified, Mr. Earl Flansburg, Assistant County Agent Leader was introduced to the crowd by Mr. E. R. Eastman, Editor of the AMERICAN AGRICULTURIST. Mr. Flansburg spoke briefly of the work of the Farm Bureau and the horseshoe pitching tournament that had been made possible at the State Fair by the cooperation of the three organizations that had worked for the past seven years to make these meets the great success that they have been. He then introduced Mr. Henry Morgenthau, Jr. who with well chosen words presented to each of the winners the prize money, as the writer read the record of the tournament made by each.

The game of horseshoes is one of the great sports in nearly every county, town and hamlet throughout the Empire State and is rapidly becoming one of the leading sports in cities where courts are being installed in a great many parks. The sport is being fostered in different schools and local and city tournaments are being held. No small part of the popularity of the game is due to the efforts of the AMERICAN AGRICULTURIST, the Farm Bureaus of the State and the assistance of the State Fair which for a number of years has paid the round trip car fare of each contestant from his home to Syracuse. In addition to this the Fair has now eight fine clay courts on which the tournament is played.

The writer of this wishes to express his great appreciation to Mr. James Hunter, Marlboro, Ulster county, Mr. H. Poll, Gainesville, Wyoming county, Mr. L. H. Taylor, Gainesville, Wyoming county and Mr. Henry Poelma, Albion, Orleans county who acted as judges and did what they could to make the tournament a success. Also to Mr. Earl Hummel, Albany, who this year, as he has before, helped the writer in keeping the records. Mr. G. E. Snyder who for the whole time that the tournaments have been held has so efficiently seen that the courts were in good order and has called off the games as they were to be played is entitled to the thanks of every one that was connected with the meet.

Vol. 126 September 20, 1930 No. 12

Get the Facts Before You Ship

WITHOUT trying to analyze the causes for it, let us say that there have been a number of failures among commission houses and other buyers of farm produce in the City of New York this fall. For this reason, our readers should exercise even more than their usual care in choosing a firm to handle their produce.

The State Department of Agriculture and Markets has just published an up-to-date list of licensed and bonded commission men doing business in New York State and we will be glad to furnish a copy of it to any reader. Unfortunately, perhaps, not every licensed and bonded commission man has the same degree of financial responsibility. On at least two occasions in the past year licensed dealers have failed, owing shippers about twice the amount of the bond required by the state to protect shippers.

In addition to furnishing you the list already mentioned, we will gladly report, so far as we are able to get the information, on the financial reliability of any concern buying farm produce.

If you are now shipping to a man who returns a fair price promptly, stick to him by all means. Buyers with little or no financial backing, however, are constantly soliciting our readers for shipments. Check up on them first and you will not be sorry later.

Get What Your Produce Is Worth

EARLY apples in A. A. territory have been sold for low prices. This, however, is no sign that the late crop will not bring a good price. All available figures indicate that, while the entire United States crop of apples is relatively small, the yield in New York and several other northeastern states will be good. In view of this situation, we suggest that our readers go slow about disposing of winter varieties to the first buyer that makes an offer. While we always hesitate when it comes to giving definite advice of this sort, it looks to us as though winter apples should bring fair prices.

Potato growers are watching the situation as a cat watches a mouse. Unofficial reports state that blight has hit the Maine crop and that the middle west is already buying eastern potatoes. It is freely predicted that the September 1, crop report when released, will show a big reduction as compared with the August 1 estimate. Potato prices on Long Island are already up a little and it is freely predicted that they will go still higher.

It is not improbable that our readers will be well paid for the time they spend reading crop and market reports this fall. Again we say "Do not be in too big a hurry to sell."

Drink More Milk

THE New York City Department of Health under the direction of Commissioner Wynne, will conduct a campaign stressing the importance of milk as a food and urging both adults and children to drink four glasses of milk a day.

Cards, prepared by the Department will be carried on all city delivery wagons of milk companies belonging to the milk conference Board, the two largest of which are undoubtedly Borden and Sheffields.

We are thoroughly in favor of such a plan. Milk is an essential food and a cheap food. We cannot help wondering, though, if such a campaign might not have been more helpful at the start of the flush period, rather than at the time of short production in the fall.

Young Farmer, Train Yourself for Your Work

MORE has been said and written about solving the farmer's problems than any other one subject we know. The suggested solutions differ as widely as white does from black or north does from south yet they all finally buck up against one fact, namely that nobody pays a man more for his work than he asks for it. In farming it work this way. A product is scarce and prices go up. Immediately everyone raises more and the price drops. Too many are anxious to get the better price and too many are willing to produce for the lower price.

Several remedies are at work but too slowly. Some quit farming and get a job but many know only how to run a farm and others will not live in the city. Still others do a better job of farming than they used to do and get better returns for their work. A few men are perfectly satisfied with farming so long as they get plenty to eat and a comfortable place to sleep. They make bad competitors for the man who sees so reason why he should not dress as well, have as fine a home and send his children as far in school as his city brother does.

Does this sound pessimistic? We do not mean it so. After all city folks have their troubles. Many are walking the streets this fall hoping and praying for a job and those who have jobs find that the bills just about equal the income, just as they do in the country.

There is one point, though, on which we have strong convictions, namely that any young fellow who plans to be a farmer is exceedingly shortsighted unless he takes every possible opportunity to increase his knowledge of farming. Methods are changing rapidly and we must keep up with them if we expect to stay in the race.

—H. L. C.

Wheat As a Feed for Livestock

WHEAT usually sells for considerably more than corn. Due to a heavy wheat crop and severe dry-weather damage to corn the situation is reversed and corn is now worth more than wheat. Many dairymen and other livestock owners naturally want to know how far they can go in substituting wheat for corn. Feeding wheat to livestock will not only cheapen the ration but should also help to get rid of a part of the troublesome wheat surplus.

The College Feed Conference Board, made up of professors from various state colleges of agriculture feel, in view of the fact that at present an excellent grade of grinding wheat can be bought for \$10 per ton less than corn, that New York milk shed farmers should take advantage of this unusual situation. Rations were approved by them which contain from 5 to 15 per cent of ground wheat. They state that there is no reason why wheat could not be safely used to the extent

of 25 per cent when it is economical to do so.

Wheat has in it 1602 pounds of total digestible nutrients to the ton, and corn of good feeding value has 1600 pounds. Therefore, it is seen that there is the same feeding value pound for pound from an energy standpoint. Practically all of the present crop of wheat is analyzing over 14 per cent protein and in some cases as high as 18 per cent. Corn contains an average of about 10 per cent. Therefore, wheat is a more economical source of protein under the present circumstances.

This country normally consumes easily, about 2,600,000,000 bushels of corn. According to many private crop reporters, the present crop will not exceed 2,000,000,000 bushels which, if true, means a shortage of 600,000,000 bushels. The Board feels that very liberal substitution of wheat and barley for corn must go on or the present crop will not go around and before next spring corn will go to an unreasonably high price.

We All Get Our Share of Trouble

ONE of the questions in the Master Farmer Questionnaire or work sheet, which is sent each year to be filled out by everyone nominated for Master Farmer, is; Have you had any bad luck in the last ten years, such as prolonged sickness in the family, losses by fire, storm, or disease in your herd, etc.? If so, state fully.

In the several hundred replies which have been received in the last three years from Master Farmer nominees, there is scarcely one that has not reported some sickness or loss, or other misfortune. Sometimes when there seems to be no end of sickness or trouble in a family, Father or Mother wonders why they are so especially afflicted and why they seem to have all of the bad luck.

The answer is, they do not. No one travels through this world without trouble. No man and woman can marry and raise a family without a certain proportion of disaster in one form or another, and the older one grows and the more he observes life and the people around him, the surer he is of this fact.

If, then, we can realize this truth early in life and know that much trouble must be expected, the easier it should be to square one's shoulders, and take a deep breath, in order to bear the burden as well and as bravely as possible. Trouble is a part of this job of living, and wise indeed is the person who knows how to be happy in spite of it.

A New Food Combination

A MINNESOTA concern is off with a new food product backed by a lot of advertising which has possibilities. It is a new spread for bread, consisting of a delicious combination of good, high quality butter and honey. Both products are excellent, deserving greater use, so here is hoping that the combination has a big sale.

Eastman's Chestnut

IT seems that a minister in a small town who was poorly paid decided to take drastic steps in order to get money. Accordingly, the next Sunday morning he spoke thus from the pulpit.

"Brethren, I have to live the same as you. In order to live I must have money. So, in the future I must have more money than I have had in the past.

"The morning offering will now be received, but before we do so I have one thing more to say.

"I have seen a certain man in this audience flirting with another man's wife, and unless I find a five dollar bill in the collection I am going to announce that man's name from this pulpit."

The collection was taken and when the minister counted the money he found nineteen five-dollar bills, and one two-dollar bill, to which was pinned the following note:

"This is all the money I have with me, but I will give you the other three dollars tomorrow."

Our Boys and Girls at the State Fair

SIX hundred young farmers with the State Spelling Bee champions as guests, sat down together at the banquet held at the Syracuse Hotel on September 2nd, during the State Fair Week, as a part of the program of young farmers sponsored by the State Fair. This banquet program was the culminating event held at the close of two days of competition and activity carried on at the Fair Grounds.

A special feature of the program was the awarding of the Empire Farmer degrees to be given by the Association of Young Farmers of New York. Seventeen young men of the Association shared in the honor of receiving these degrees. Two of these Empire Farmers, William Rothfuss of Webster and Olin Spencer of Homer were selected to represent the New York Association of Young Farmers at the annual meeting of Future Farmers of America which will be held at Kansas City in November. The other holders of the Empire Farmer degree

Pherson, Secretary of the New York Horticulturist Society, were awarded the honorary degrees of Empire Farmer in appreciation of their outstanding interest in the work and welfare of the Association of Young Farmers of New York. Loy Pickney of Webster, representing the Association, conferred this degree upon the candidates and presented them with the golden key as its insignia.

The program also included the presentation of awards and certificates to the State spelling champions, the presentation of awards in the judging contests in livestock and farm produce as a part of the activities of Department L and the annual prize speaking contest among members of the Young Farmers Association.

During the time between courses, Howard Curtis of the State School of Agriculture at Cobleskill, welded the spirit of the group through his leadership in conducting group singing. After the awards to the State Spelling Bee

plaque to the team from Sodus who were winners in judging potatoes. Roy McPherson, representing the State Horticulturist Society, awarded a plaque to the winning team from Horseheads in fruit judging. Fred Sexauer, representing the Dairy-men's League, awarded a cup to the team from Portville for leadership in judging dairy cattle. The sweepstakes prize in the form of a handsome plaque was awarded by Commissioner Pryke to the team from Chautauqua for the high score in judging all events.

Mr. Weaver then named the team in dairy cattle judging which will represent New York State at the National Dairy show at St. Louis. This team was chosen for their high score in judging dairy cattle. Members include Roy Murphy, Marcellus; William Paterson, Newark Valley and Milton Hislop, Chazy. A team in poultry judging was also named because of their high scores to represent the State in that event at the National

Dairy show. The team includes Stephen Hubbell, Odessa; John Gleason, Chautauqua and Stanton Livermore,

The dairy judging team which will go to St. Louis. Front row, William Paterson, Newark Valley; Roy Murphy, Marcellus; Milton Hislop, Chazy. Standing, Raymond Jansen, Teacher of Agriculture, Marcellus.

Dryden. Raymond Jansen, teacher of agriculture at Marcellus, will accompany the dairy and poultry teams to St. Louis.

Holders of the 1930 Empire Farmer Degree: Back row, left to right, Willis Montana, Donald Kirby, Robert Ames, David Wilcox, Grath McGregor, Edwin Keech, Barton Dawley. Middle row, Elton Hall, Clifford Bower, Louis Dorn, Olin Spencer, William Rothfuss, William Allen, William Stewart. Front row, Nattie Eastman, Bruce Mack, Raymond Austin.

which is the third and highest degree of membership in the New York Association, were William Allen, Marathon; Donald Kirby, Trumansburg; David Wilcox, Fulton; Ross Ames, Endicott; Bruce Mack, Dryden; Clifford Bower, Trumansburg; William Stewart, Dryden; Berton Dawley, Forestville; Elton Hall, Forestville; Raymond Austin, Fulton; Nattie Eastman, Portville; Elwin Keech, Hammondsport; Garth McGregor, Endicott; Louis Dorn, Boonville and Willis Montana, Wolcott.

These awards and the golden key insignia emblematical of the degree as awarded, are a fitting recognition of school study and achievement in the high school program of agricultural education in preparing for farming. The seventeen young men were selected from among the nominations made and only those who were found to meet the high standards of scholarship, leadership, business ability and ability to carry out improved practices in raising crops and livestock which are prescribed in the constitution of the Association of Young Farmers of New York. The high standards which are set make it worthy of being the coveted emblem which it is in the Association.

To E. R. Eastman, editor of American Agriculturist and to Roy P. Mc-

were made this group withdrew to attend further activities at the Fair grounds and the group of young farmers closed in around the speakers table to listen to the prize speaking contest. The contestants included Harold Thompson, Albion; Edward Donderweiz, Bath; Melvin Hall, Forestville; Leon Whittemore, Madison and William Rothfuss, Webster. The judges awarded first prize to Melvin Hall with his subject, "The Future Farmers are on their way" and second prize to Harold Thompson. This achievement entitles Melvin Hall to represent New York State young farmers in a regional speaking contest at Springfield, Massachusetts. The winner of this latter contest will compete with three other contestants at Kansas City in November for National honors.

Commissioner Berne A. Pryke who acted as toastmaster for the evening, then gave W. J. Weaver, Superintendent of Department L charge of the meeting for the purpose of making the awards in the judging competitions. Mr. Weaver introduced Mr. Akin of the New York State Horse Breeders Association, who presented a cup to the team from Marathon who were winners in judging horses. H. J. Evans representing the New York State Potato Growers' Association presented a

With the 4-H Clubs at Syracuse

THIS year, when the 4-H delegates, leaders and livestock exhibitors arrived at the State Fair, those who had been there before could hardly believe what they saw—the new building. It was a pleasant surprise to find such a beautiful building in which to stay, rather than the old ramshackle exhibit and sleeping quarters of previous years.

The ground floor of the building is divided into exhibit space and cafeteria, with the superintendent's office, hospital, library and lounging room for the boys and girls at the one end. The second floor of the building consists of dormitories for both boys and girls, and such equipment as it contained—a laundry for the girls, and showers with real hot water, such as has never been known before to club members at previous state fair camps.

While Camp Pryke affords an opportunity for the delegates to see the various exhibits at the State Fair, a leader training school was conducted during the week at which time training was given in essentials of 4-H club programs in both agriculture and home economics. Training was also given in singing and song leading.

The evening programs were somewhat varied. On Monday evening there was a camp fire. On Tuesday, the boys and girls were given free seats in the grand stand and viewed the fire works and other events. Wednesday, the Indians in the Indian village entertained the group with Indian songs and dances while Chief Andrew Gibson of the Onondagas, dedicated the new building in true Indian style. Other

representatives spoke of the feeling aroused among the Indians when their lacrosse grounds were taken over for the new building. However, on second consideration for the boys and girls of the state, they decided they would be glad to dedicate these grounds for this purpose, particularly since new lacrosse grounds are being planned for next year.

Perhaps the most important event, from the standpoint of the boys and girls, was the dedication of the new building by Governor Roosevelt on Thursday morning. The Governor viewed the exhibits, made a brief address and stressed the fact that any investment made in the training of youth is a favorable asset to the state. Mrs. Roosevelt paid a second visit to the building in the afternoon when the 4-H girls served tea.

The event of the week as far as 4-H club members were concerned, was the banquet served in the new building under somewhat trying conditions, but everyone agreed that it was a happy evening. In addition to this, various musical and other numbers by 4-H club members and the usual awarding of special prizes took place.

The livestock exhibits were the largest in the history of the 4-H department. There were 318 head of dairy cattle, 88 sheep and 34 swine. The winners of the breed champions were: Holsteins: Charles Bump of Washington County; Jerseys: John Luchsinger of Onondaga County; Guernseys: Olin Phillips, Chenango County; Ayrshires: Wendall Wicks, Jefferson County;

Speeded up and HOLD IT!

Step on it! It's action you want now—action that will bring those pullets into steady egg production in time to capture the high price egg market. Speed 'em up and hold them to continued high production—that's the pace that makes profits jump.

Larro Egg Mash and Scratch Grains gets 'em laying in short order—without forcing them, too. Larro means business—it's always uniform—day after day, it's always the same. That's why it steps your birds up to a steady, continuous laying rate and holds them there.

Start your pullets on Larro Egg Mash and Scratch grains Now. This means High Gear production and greater year round profits. See your Larro Dealer at once for your requirements.

Larro Is Complete

Larro is a complete egg mash—there are no extras to buy such as greens, semi-solid butter-milk, minerals, etc. It contains everything necessary in just the right proportion to make you the greatest profit over feed cost.

A.A.'s Western New York Farm and Home Talk

Some Thoughts on Market Conditions

PRICES and the demand for most farm crops continue to be unsatisfactory to farmers. These prices are lower than in several years and the movement to market is slow and uncertain. Cabbage, for instance, has

M. C. Burritt

sold as low as six dollars, and seventy-five cents per bushel is the usual offer for the early varieties of apples, U. S. No. 1. This situation appears to be due primarily to reduced consumer buying power coupled with uncertainty as to the future. Much of the difficulty, though not all of it by any means, is psychological. Buyers appear to be afraid to buy, especially for the future because they are fearful of what may happen to prices.

It is a vicious circle. Work grows slack and men are laid off. These men can buy only the minimum of necessities. This cuts down the sales of the retailer and makes him cautious and conservative. His orders from the wholesaler are smaller, and confined to a smaller range of things. The latter cannot then buy as freely from the manufacturer who is compelled to reduce his output because he cannot sell as much. So he lays off workmen and the vicious circle begins again. It is a strange phenomenon. There are just as many people who must eat and eat as much as usual. And there is plenty of money in the country. In fact, savings' bank deposits have increased during the past year.

Investigations Often Harmful

As unemployment increases in the cities there is complaint of the high cost of living and accusations of profiteering are freely made. The politicians, ever watchful for a popular issue, begin investigations which aside from some education of the public, accomplish nothing and often do much harm and injustice. In these circumstances one of the most difficult things for people to understand is that about two-thirds of the price which the consumer pays is added to the food cost after it leaves the producer—the package, the freight and cartage, the commission, the wholesaling and finally the retailing. Thus six cent milk at the farm becomes eighteen cent milk on the consumer's doorstep, and one cents apples on the farm become five cent apples on the fruit stand. Thus the farm price is often not a very important factor in the final price.

Another condition hard for the average citizen to understand is the effect of the rising price of gold. As the gold price rises the price of other commodities decline. That is, it takes more milk and apples to buy the same amount of gold. In this period of deflation farm prices drop rapidly while the prices of things that farmers buy drop more slowly because of fixed factors like rents and wages. In June food sold by our farmers brought 36 per cent above prewar prices, but costs of distribution were 91 per cent above prewar prices.

Supply Warrants Higher Prices

I have emphasized these economic factors because I believe they are the dominant ones in our present situation rather than supply and demand. Based on the supply alone the prices of most crops should be higher. The potential consumptive demand is there. Under present conditions farmers cannot be governed altogether by the prospective supply in relation to normal demand. The supply of a given crop might warrant holding for a higher

price, when the general situation does not.

The stimulus of the light rain—a little more than one inch—of two weeks ago, has passed and things seem as dry as ever again. Early cabbage was helped some but yields were very light. Tomato and cucumber growth was also stimulated considerably. But dry rot continues in tomatoes, especially on higher ground and in the dryer places and losses from this unusual cause will range from 50 to 75 per cent of the crop with no corresponding increase in price as most of the crop is contracted to canners at a fixed price. One large grower's yield estimated by the contracting canner at 18 tons per acre in early July is now estimated at 4 tons per acre. The cause of this dry rot is said to be a drawing back of moisture from the tomato by the growing vine which is unable to get sufficient moisture from the soil.

Apples Move Slowly

The apple movement is very slow with comparatively little buying outside of the canners and dryers, Alexanders are especially slow. Gravensteins are hard to sell at any price. Wealthy prices range from 90c to \$1.10 for A grade 2½ inch fruit. A few Twenty-Ounce are beginning to move, although they are really too green to ship. The main crop of Wealthies will be picked this coming week (September 8-13). At present prices, many of them will go into storage.

Bean harvest has already begun. Dry weather ripened the crop early by causing the leaves to dry up and fall. The yield can hardly average more than 10 or 12 bushels per acre. It seems to me that there is much less plowing for wheat than usual and the acreage will be small as the crop has been very unprofitable recently.—Hilton, N. Y., September 7, 1930.

With the 4-H Clubs at Syracuse

(Continued from Page 5)

Shorthorns: Oscar Jansen, Ulster County; and Brown Swiss: James Harkness, Delaware County.

The showmanship contest was keener than ever. The winners were as follows: Holsteins: Bernard Casper, Chemung County; Jerseys: James Fischer, St. Lawrence County; Guernseys: Donald Sheldon, Dutchess County; Ayrshires: Clinton Stimson, Tioga County and Brown Swiss: James Harkness of Delaware County.

The grand champion showman of them all was Donald Sheldon of Dutchess County.

Twenty-six counties with a total of 78 contestants entered the stock judging contest held on Monday of the Fair. The winners in this contest were as follows: 1st, Walter Brockway of Delaware County; 2nd, Walter Miller of Albany County; 3rd, Fred Legge of Yates; 4th, Francis Oley of Onondaga County. These 4-H boys will represent the state at the dairy judging contest held at the National Dairy Show in St. Louis in October. The four high county teams were as follows: 1st, Delaware; 2nd, Onondaga; 3rd, Monroe and 4th, Ulster. Three dairy demonstration teams competed for the trip to St. Louis, which was awarded to Otsego County.

The total attendance of club people in camp was 602 of which 172 were special delegates, club agents and chaperones the remainder being livestock exhibitors.

Galvanized screen of one-fourth or one-half inch mesh, obtainable in rolls 18 inches wide, makes the best tree protector. Made large enough the protectors will last several years. Hog rings make good fasteners.

With the A. A. DAIRYMAN

These Two Sires Paid Handsome Profits

FIVE hundred dollars extra income yearly per farm has resulted from the work of each of two dairy bulls in southern New Jersey. Their daughters were much better than their dams and these latter were good. How often is heard the statement, "I made a mistake when I sold that bull to the butcher!" Imagine then the joy and satisfaction that comes to the dairyman who builds a safety bull pen, continues to retain a bull on which he has pinned his faith and finds that the first half dozen milking daughters prove to be remarkable cows. This is the recent experience of Lester Harris of Salem County and Edward Phillips of Cape May County.

Daughters 26% Better than Their Dams

In this testing year recently ended, Mr. Harris had the highest herd average in the Salem No. 1 Herd Improvement Association. His Holstein herd sire, King Ormsby Pontiac Cagnes was largely responsible for the splendid average of 10,237 lbs. of milk and 395.1 lbs. of fat because all but one of the 8 daughters of this sire each produced over 350 lbs. of fat as two year olds, their average production being 26% higher in milk than their dams at the same age. Two years ago Mr. Harris' herd average was 300 lbs. of fat. This bull's prepotency for high fat test is a common subject of conversation by the dairymen of this section of the state. The characteristic test for Holstein milk is 3.4% fat. Each of these daughters tested better than 3.8% and their average this past year was 3.91%. The herd test for the 13 purebred Holsteins was 3.85. When the records of the daughters and their dams are changed to mature equivalents, the daughters average 15,263 lbs. of milk and 595.7 lbs. of fat, the dams 12,119 lbs. of milk and 439 lbs. of fat. All cows in the herd were milked twice daily.

Mr. Harris is now in a position to plan his future breeding program constructively. Not wishing to inbreed he has exchanged this sire for a splendidly bred one owned by a bull association in a neighboring county. In two or three years he will bring his proved sire back to linebreed on the granddaughters. The bull association referred to is equipped with modern bull pens and the Harris bull will be managed in a way that will be conducive to his potency and longevity.

Old Bull May be Safely Kept

The other bull that has put his owner's herd at the top of the list of herd averages of the Salem-Cumberland-Cape May Association is Blanchette's Admiral, a Guernsey bull that was owned by Edward Phillips. Mr. Phillips' herd average was 10,266 lbs. of milk and 490.5 lbs. of fat. The mature equivalent records of 5 daughters of this bull averaged 12,156 lbs. of milk and 595 lbs. of fat and their dams' mature average was 9761 lbs. of milk and 463 lbs. of fat, an increase of 24.5% in milk and 28.5% in fat. These records were made on twice a day milking.

This sire's life history affords an object lesson of value. Mr. Phillips thought well of this sire's breeding and the type of his heifer calves, but not wishing to inbreed he sold him to an institution in an adjacent county. He felt certain he could re-purchase him if the records of a few of the first freshening daughters proved him to be a success. Imagine Mr. Phillips' surprise when several of the daughters each milked 40 lbs. a day as two-year-olds on twice a day milking. An effort was made to buy back this sensational sire but the story of his achievements had spread to his new owner who re-

... at Harvest Time, too— SOCONY is an able "Farmhand"

NEW YORK and New England farmers, with an eye to efficiency combined with economy, use Socony Special Gasoline *plus* Ethyl and the lubricant, Socony Motor Oil. They have learned that the use of these products keeps engines cool, reduces repair bills to the minimum.

They know also that they can get better results at less cost from:

Mica Axle Grease made for axle lubrication on wagons and farm machinery. Made of the best grease stock and ground mica, it fills the pores and crevices in the axle and forms a hard, bright, smooth coating that reduces friction.

Socony Disinfectant for general disinfecting in stables and barns. It is a concentrated coal-tar product, more than twice as strong as carbolic acid as a destroyer of disease germs, and it is non-poisonous, non-corrosive and non-caustic.

Socony Motor Oil provides a smooth, efficient, dependable lubricant for your tractor, truck, and passenger car motors.

Moreover, we make many more products for use on the farm. How many of them are serving you?

Prairie Harvester Oil ... Eureka Harness Oil ... Standard Hand Separator Oil ... Socony Turex Oil (for Diesel and Oil Engines) ... Socony 990-A Motor Oil for Model A Fords ... Parawax ... Socony Lubricate (Household) Oil ... Socony Leather Dressing ... Veedol Summer Tree Spray Oil ... Socony Banner Gasoline and Socony Special Gasoline *plus* Ethyl.

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
	Soft Cheese	2.41	
3	Evap. Cond. Milk Powder		
	Hard Cheese	1.95	1.75
4	Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Sept. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

* * *

August Prices Announced

The Dairymen's League announces the following pool prices for August for 3.5% milk.

Gross	\$2.40
Expenses	.06
Net Pool	2.34
Certificates of Indebtedness	.10
Net Cash Price to Farmers	2.24

	Net Pool	Net Cash
August 1929	2.57	2.42
August 1928	2.63	2.53
August 1927	2.42	2.32
August 1926	2.36	2.26

The Sheffield Producers announce the cash price to producers for 3% milk in the 201-210 mile zone, as \$2.24 per hundred (\$2.44 for 3.5% milk.)

	Price to Producers	3% Milk	3.5% Milk
August 1929		2.56	2.76
August 1928		2.60	2.80
August 1927		2.44	2.64
August 1926		2.37	2.57

Butter Market Turns Upward

CREAMERY SALTED	Sept. 12, 1930	Sept. 5, 1930	Sept. 13, 1929
Higher than extra	40 1/2-41	40	40 1/2-46 1/2-47
Extra (92 sc.)	-40	-39 1/2	-46
84-91 score	34	34 1/2-39	40
Lower Grades	32	33 1/2-34	38 1/2-39 1/2

Rather unexpected firmness developed toward the close of the week ending September 13. The soft spots that we reported last week continued to develop to the extent that on September 8 and 9 creamery extras were selling at 39c. On

the 10th an improved demand from the buying element and a more favorable statistical situation started prices on the upgrade, recovering not only all of the lost ground but actually showing a gain.

Reports from producing areas in the central West especially Minnesota and parts of Iowa indicate quite sharp falling off in the make. This apparent shrinkage gives a fairly firm undercurrent to the market in spite of the occasional periods of uneasiness. At the present prices there is money in selling butter out of cold storage. That is why receivers are reluctant to force up the price of fresh goods, in order to avoid an increase in the amount of butter taken out of storage. The present out-of-storage movement is about twice as heavy this year as it was a year ago. On September 5 the four cities reported 64,850,474 pounds of butter on hand compared with 69,125,574 pounds held on the same week day a year ago.

Cheese Market Unchanged

STATE FLATS	Sept. 12, 1930	Sept. 5, 1930	Sept. 13, 1929
Fresh Fancy	20 1/2-21 1/2	20 1/2-21 1/2	24 -25 1/2
Fresh Average			
Held Fancy	24 -26	24 -26	27 1/2-29 1/2
Held Average			

There has been no change in the cheese market since our last report, the trade holding steady on both cured and fresh stock. Fresh makes are held with confidence although there is no snap or briskness to the demand. Country costs remain steady and supplies are not burdensome. We look for no change in the near future.

On September 4 the ten cities making daily reports had in cold storage 19,604,000 pounds of cheese compared with holdings on the same week day a year ago totaling 21,043,000 pounds. From August 28 to September 4 cold storage holdings increased 132,000 pounds whereas during the same period a year ago holdings increased 574,000 pounds.

Fancy Eggs Continue to Gain

NEARBY BROWNS			
Hennery	35-43	36-44	47-54
Gathered	25-30	27-35	36-46

Prices received for fancy eggs continue to advance slowly. It is a hard uphill fight and only the choicest are reaping the harvest, with most standing still and a few losing ground. Anything but extra fancy stock is moving slowly. Extra fancy Pacific coast whites are moving well but other classifications are slow, some tending to accumulate. The choicest Jersey eggs easily bring top quotations but there are many fancy shipments from other nearby producing sections that fail to bring better than 48c.

Eggs are laboring under unsatisfactory storage balances. On September 5 the ten cities making daily reports had on hand 5,508,000 cases of eggs which is practically 900,000 cases more than they held on the same day last year. Present prices of fresh eggs are high enough to permit the profitable withdrawal of some of the high cost early packs of fancy stock. That is why the fresh egg market is having such a hard time for it is feeling this diversion in the trade. Storage stocks in the Metropolitan district are still working down gradually but the withdrawal in the ten cities is still about twice as heavy as it was a year ago.

As the market comes to a close there is enough in the undercurrent to encourage us to expect a possible continued upward movement.

Live Fowls Selling Better

FOWLS	Sept. 12, 1930	Sept. 5, 1930	Sept. 13, 1929
Colored	26-29	23-28	31-33
Leghorn	20-23	22-24	18-23

TURKEYS	-40	35-38	40-45
DUCKS, Nearby	20-25	21-24	23-28
GESE	-16	15-16	

Live fowls sold better during the week ending September 13 although as the market came to a close prices had eased off a shade. On Wednesday colored fowls

hit a high price of 30c. This was a little extreme, however, and quotations moderated. Supplies were not heavy in fact a shortage was reported in some quarters. Freight receipts carry a heavy proportion of chickens and the receivers have been up against a hard proposition to move out except at concessions. Fowls are being used to help the chicken market; naturally the chicken market is very weak although as the week came to a close Leghorns showed a little improvement. Turkeys are showing consistent gains and ducks have been doing a shade better.

Potatoes Selling Well

Jersey and Long Island potatoes are experiencing fairly good inquiry where quality is concerned. Jerseys grading No. 1, in 150 pound sacks, have been bringing from \$3.00 to \$3.50 with Long Islands from \$3.25 to \$3.50. Long Islands in bulk have been bringing from \$3.50 to \$3.75 per 180 pounds with Maines twenty-five cents less.

Expect Light Bean Crop

Indications point to a bean crop lighter than that of a year ago according to reports of the State Department of Agriculture and Markets. Although this year's acreage is 20 per cent greater than that of a year ago, nevertheless, because of premature ripening and a light set of small pods the crop is expected to fall short of that harvested last year. Michigan also reports a light crop. As yet this lighter crop prospect has not been reflected in the New York market. Pea beans are bringing from \$8.00 to \$8.50; Red Kidneys \$12.25 to \$13.00; White Kidneys \$9.25 to \$10.00; Yellow Eyes \$7.50 to \$8.25; average Marrows \$7.75 to \$8.75; Jumbo Marrows \$9.25 to \$10.00.

Hay Firmer

Hay receipts have been liberal at Manhattan and limited at Brooklyn. The demand was active especially for the top grade causing prices to advance \$1.00 per ton. Most offerings have been in mixed carlots of Nos. 2 and 3 hay large, and some No. 1 down to poor No. 3 in small bales. Sales of small bales averaged a shade higher at Brooklyn. The market closed with a firm undertone. Rye straw in liberal receipt at \$15 to \$16.

Hay in large bales: Timothy, No. 1, \$29.00; No. 2, \$27-28; No. 3, \$25-26; Sample, \$20-21; Timothy light clover or light grass mixed, No. 1, \$27-28; No. 2, \$25-26; No. 3, \$22-24.

Pastures, Milk Production and Feed in New York

From September crop report of the New York State Department of Agriculture and Markets and the U. S. Department of Agriculture, based on the information furnished by crop reporters.

THE decline in the growing condition of pastures from 74 per cent on August 1 (the 10-year August 1 average being 82) to 51 on September 1, (the 10-year August 1 average being 80) represents the sharpest decline that has taken place in New York during this period since 1915, when September pasture conditions were first published. These conditions are especially serious at this time because they are also an indication that "after-feed" on meadows which is so generally used either for grazing or as supplemental barn feed in the fall is extremely short, and will not furnish nearly the usual amount of this excellent roughage.

Because of the dryness which prevented or retarded usual second growth, the September estimate of hay production falls slightly below that made August 1. An increased number of cattle and reduced carry-over of hay from last spring, along with the fact that many dairymen have been forced to feed hay during the late summer because of the pasture shortage, makes the dry roughage situation less favorable than in several years. Added to this is an apparently greater demand than in several years for market hay, to be shipped into states where acute drought conditions developed serious shortages of feed. The crop as now estimated amounts to 5,888,000 tons, compared with 6,653,000 tons in 1929 and 6,439,000 tons in 1928. When the carry-over is added, the comparisons of the quantities available for feed or sale from the crop of each of these seasons is as

follows: 1930: 6,447,000 tons; 1929: 7,500,000 tons; 1928: 7,621,000 tons; 5-year average 7,770,000 tons.

Silage Corn

The corn crop which started off the season with unusual vigor and even to August 1 promised exceptionally well, has suffered severely. The September 1 condition of 68 per cent compares with 75 last September, and 80, the 10-year average for this date. Even with a six per cent increase in acreage, it now seems evident that the production, taking grain, silage and fodder together, will probably be about two per cent less than last year, and 13 per cent below the average of the past five years. Some corn has been fed for emergency rations, silo filling has already commenced and even with good growing weather, only a part of the acreage could improve, while the frost hazard will increase, as the season advances.

The bright spot in the farm feed situation is the fact that the oats and barley crops are the best in years, and together now promise on an increased acreage over 70 per cent more grain than last season, when these crops were very short. Buckwheat, however, with another light crop, will probably have even less than last year's light crop. Home grown grains, however, represent only a relatively small part of New York's dairy feed requirements.

Milk Production

On September 1, milk production per cow on farms of crop reporters was at the lowest point for this date during any of the six years for which these records have been available. This situation was general over most of the state, with an especially sharp decline from last year in the central counties. It will be recalled that last season's production on August 1 was unusually low, though abnormal declines to the November low period of the year were prevented by unusually generous feeding and by exceptionally good quality of the hay crop, together with some increase in the number of fall freshening cattle. Abundant rains late in the fall, and mild weather also helped to restore pastures and were favorable for milk production.

The farm feed situation this season seems less favorable than last year and because of the depth to which production has fallen, the usual fall decline in milk production will have to be checked to an even greater degree than was the case last year, to have the same amount of milk available for November use. The situation is such that it will bear close watching.—R. L. GILLET, Agricultural Statistician.

Farm Radio Programs

READERS of American Agriculturist are interested in listening to real farm radio programs. May we suggest that you tune in on WGY at 12:00 to 12:30 p. m. eastern standard time? Every day except Saturday and Sunday you will hear a program prepared especially to interest you, including weather reports, market reports and talks.

In addition to the market reports given out during the WGY farm program, market reports are broadcast from the following stations: WEAH, at 11:45 to 12:00 eastern standard time; WJZ, 4:30 p. m. eastern standard time; and WCAB, Trenton, N. J., 11:00 a. m. eastern standard time.

These Two Sires Paid Handsome Profits

(Continued from Page 7)

fused to part with him even at a very liberal figure.

All forward-looking dairymen admit they want a well-bred sire, if they raise their cows. Increasing numbers are now recognizing the fact that a 4-year-old bull is just as well-bred as he was at one year old and that it does pay to hold fast to the sire that promises well because of the performance and quality of his near ancestors. The years pass rapidly and in a few years every bull's true value is soon measured by the actual production of his first several daughters in comparison with their dams that were fed and managed under identical conditions.—E. J. Perry.

You do not need to sacrifice **FISHER BODY** *Extra Values* in the car you buy

Certain definite and visible extra values are built into every Fisher Body car. Note them carefully, and consider their actual worth before you decide on any car.

Then remember that you do not need to sacrifice these extra values in the car you buy.

Because the extra values of Body by Fisher are available in General Motors cars in every price field—the *only* cars with Body by Fisher.

Check These Extra Values in Fisher Body Cars

✓ **Fisher Wood and Steel Construction**—This type of construction joins the qualities of hardwood with those of steel. Over scientifically braced wood framework are mounted strong steel panels. Thus the wood reinforces the steel and the steel reinforces the wood. This is the only type of body construction that provides maximum strength, resiliency, durability and quietness.

✓ **Fisher Roof Construction**—This well known type of Fisher bow and slat roof construction has been improved to meet the more exacting requirements of modern motoring for increased safety, durability and quietness. Strong steel braces at the sides and corners of the roof rails further strengthen the roof structure. Steel panels over the wood roof rails afford additional strength and greater beauty.

✓ **Fisher Interiors**—The finest and most durable fabrics obtainable are used for upholstering Fisher Bodies. Comfortable Fisher cushions with strong and resilient coil springs and the adjustable front seat provide an added degree of convenience and motoring comfort.

✓ **Clear Vision and Safety**—Clear and undistorted vision is afforded by the highest quality genuine plate glass used throughout Fisher Bodies. Fisher non-glare vision and ventilating windshield is a major safety factor, giving a wide range of clear vision through a single pane of plate glass and also reducing the annoying reflections of glare. The narrow pillar posts of unusual strength, also contribute to driving safety by eliminating the “blind” spot in the driver’s range of vision.

✓ **Many Other Fisher Features**—Such features as the Protectalok door handles; window lifts that function easily and trouble-free door locks made of the finest materials obtainable, lend additional qualities of extra value to the more attractive style, the extra durability and greater comfort, convenience and safety of every car equipped with Body by Fisher.

"Tests Show **VITALIZED RUBBER** has 2 to 3 times longer life"

Says the nationally known tire authority

Dr. K. J. Thompson

Ph.D., B.Sc.

Distinguished as a scholar, Dr. K. J. Thompson holds the following scientific degrees:

Ph.D., Leipsig, B.Sc., London and Wales, N. D.A.,—1851 Exposition Research Scholar. At present he is Director of Chemistry and Engineering for one of the leading tire manufacturers, and author of technical articles and bulletins on tire manufacture.

ONE of the recognized authorities on tire manufacture today is Dr. K. J. Thompson. International Scholar and Researcher, his achievements have played an important part in the development of modern tires. There are few men in America whose opinion carries equal weight.

He says, "Extensive flexing tests in my laboratory show conclusively that the 'Vitalizing' process employed in the manufacture of RIVERSIDE Tires gives rubber 2 to 3 times greater life. It enables it to resist ageing and makes it far tougher, stronger and more resilient. As a result we find the tire mileage in RIVERSIDE Tires greatly increased."

How rubber is vitalized

Rubber deteriorates with age, just as steel rusts. Both of these effects are caused by *oxidation*. Chemists found a way to prevent oxidation in steel—the result is *stainless steel*. Now they have found a way to retard oxidation of rubber by adding a new chemical agent, "anti-oxidant"—the result is "*vitalized rubber*."

"Anti-oxidant" keeps tires young and more elastic. Cracking and premature ageing are virtually overcome. "Sun-checking" and brittling are practically ended.

NEW UNLIMITED GUARANTEE

RIVERSIDE Tires have gone steadily forward for 19 years. Never has there been a time when their quality could be questioned. Their march of quality progress has been indicated by guarantees of 6,000—8,000—10,000—12,000—16,000 miles. This year guarantees were increased again, to 18,000—22,000—30,000 miles—the highest figures ever included in a binding tire guarantee. And still the quality improves!

They have now reached a degree of excellence where no mileage guarantee can indicate the true measure of service these tires will give. So now we demonstrate our faith in RIVERSIDES by the strongest, fairest tire guarantee ever written:

Every Riverside is guaranteed to give satisfactory service without limit as to time or mileage!

Over 30,000,000 tire miles of tests have convinced us that any customer buying RIVERSIDES will get far more than his money's worth. The new guarantee promises SATISFACTORY SERVICE — the biggest thing your tire money can buy.

“A new set of rings—
first repairs she’s
had in three years.”

WHILE we were out at Mr. Hendry's* farm in North Dakota he had his tractor hooked up to a separator. The motor sounded mighty sweet. And we spoke of it. There's a surprise for you in his reply. He said, "I've been doing road work, threshing, plowing and feed grinding with this tractor for *three years*. I'm going to put a new set of rings in her this winter; the first repairs that I have bought, and then she'll be practically as good as new. Of course, she's had nothing in her except Mobiloil."

"Then you've never really had any tractor trouble at all!" we exclaimed.

"Trouble? Yes sir! I've had just plenty of trouble. But not with this machine. You see, I had another tractor before I bought this one. In that one I used every kind of oil that came along. Well, I learned my lesson and it was an expensive one. At the end of three years that machine was a complete wreck. One might say the lesson cost me the price of a tractor."

"Yes sir! Besides cutting my repair expenses to a minimum this Mobiloil gives me extra savings by giving me more hours of running between drainings. It lasts longer in the crankcase."

What has your experience been?

Maybe you have had even better results than Mr. Hendry or maybe not quite so good. Anyway, it just goes to show what can be done when a tractor gets the proper care. And it shows that Mobiloil is perhaps the most important factor of all in keeping a tractor on the job over a number of years without unnecessary repairs.

Why, we know a farmer in Ohio who ran his tractor for *six* years before replacing the rings. The only answer is that he never used anything but Mobiloil during that time.

Now let's look to the transmission

You want to keep that tractor on the job for just as many years as possible. Careful attention to transmission lubrication will help tremendously. And still more important, an efficiently lubricated transmission helps keep the tractor working like new so that it will develop maximum power over a longer period of years.

If you will look in the instruction book which came with your tractor, you will see the important recommendation to renew the transmission oil at the end of every 500 or 600 hours. That means *at least* once every season.

When you drain the transmission case, be sure to wash it out well with kerosene. It's also a good idea to get in there with a brush and do a little scrubbing, too.

Then you are ready to put in fresh oil. Mobiloil "C" or Mobilgrease during the summer and Mobiloil "CW" during cold weather are specially made for this purpose. They will not break down under long, severe service. The engine load will be lightened and gear teeth protected from wear.

Important news concerning pressure fittings and grease cups

We have developed some new lubricants for those pressure fittings and grease cups. For instance, we have a new lubricant called Mobilgrease.

You are applying the grease gun or turning down grease cups once or twice every day. Try Mobilgrease on these pressure fittings. It creeps readily to all friction points. It does not wash out with rain. It *stays* on the job longer and lubricates better because of its unique composition. For grease cups use Mobilubricant. And to prevent water pump leaks use Voco Waterproof grease. It affords a perfect water pump packing gland

seal and will not clog the radiator.

Many of your other implements also carry pressure fittings and grease cups. Give them the care they need by making use of these new lubricants made by the manufacturers of Mobiloil.

Why does Mobiloil give such remarkable service?

In Mobiloil, ALL the essential properties of a full-duty oil are present and in correct proportion.

These properties are: **OILY CHARACTER**—provides moving parts with rich lubrication and holds down wear; **HEAT RESISTANCE**—lasts longer—keeps down oil consumption, and makes for economical use; **CARBON CONTROL**—keeps carbon deposits from piling up in your cylinders; **OXIDATION CONTROL**—keeps oil sys-

"These drums of Mobiloil with their convenient faucets give me a mighty handy season's supply of oil."

tems from clogging, and valves from sticking and gumming.

Next time you are in town, have your dealer consult his complete Mobiloil Chart, just to check up on the proper grades of Mobiloil to fit your own particular needs—for car, truck and tractor.

Also, have your dealer tell you about the economy and convenience of getting Mobiloil in 55-gallon or 30-gallon drums.

VACUUM OIL COMPANY

Makers of high-quality lubricants for all types of machinery

Make this Chart your Guide

The correct grades of Cargyle Mobiloil for engine lubrication of prominent passenger cars, motor trucks, and tractors are specified below. If your car is not listed here, see the complete Chart at your dealer's.

Follow winter recommendations when temperatures from 32°F. (Freezing) to 0°F. (Zero) prevail. Below zero use Gargoyle Mobiloil Arctic.

Mobil Oil

IT'S WISE TO CHOOSE A SIX

10,000 dealers offer you the protection of Chevrolet's new Service Policy

A new Service Policy—without question, one of the most liberal ever offered in the history of the automotive industry—has recently been adopted for the benefit of Chevrolet owners, and is now being carried out by more than 10,000 authorized Chevrolet service dealers in every section of the country.

Put into force as a signed agreement between the dealer and the purchaser, this new policy offers many advantages of special benefit to motor car owners who live on the farm.

It specifies, first of all, that every new Chevrolet car will be delivered to its owner in perfect condition—eliminating the necessity for frequent trips to the city for adjustment and inspection during the “breaking-in” period.

It provides for a free inspection and adjustment at the 500-mile mark, and free inspections every 1000 miles thereafter. It calls for replacements covered by Chevrolet's standard warranty,

The Sport Coupe, \$655, f. o. b. factory, Flint, Michigan

without a penny's cost to the owner for either parts or labor.

And it states that this replacement provision will be carried out by any Chevrolet dealer anywhere in the United States, regardless of where the car may have travelled during the period covered by the standard warranty.

Consider what it means to have a broad-gauged service policy like this to rely on. Consider its dollars-and-cents value, the protection it affords, the time it saves. And add to this the fact that only a car of *unusual quality and dependability* permits Chevrolet to offer so liberal a policy.

Before you consider any other low-priced automobile, be sure to investigate the many advantages of the Chevrolet Six. You'll find that, from every standpoint—price, comfort, safety, endurance and economy—it's an ideal choice for service on the farm.

Farm News from New York

September Report Shows Big Drop in Potato Crop

The material on which the following information is based is taken from the government crop report as of September 1. These reports for New York are compiled cooperatively by the United States Department of Agriculture and the New York State Department of Agriculture and Markets, from the information furnished by many farmer crop reporters and others closely in touch with farming representing all agricultural sections. The potato figures from the different sections are

Potato Crop Prospects at a Glance

THE United States potato crop, now forecast at 339,278,000 bushels, is 21 million less than the light crop of 1929, and 53 million bushels less than the average production from 1924 to 1928. More important than these totals is the fact that the sixteen northern states, which ordinarily produce less than they need for local use, are short over 7 million bushels, compared with last year, and 13 million bushels, compared with the average. The nineteen "surplus" late states, on which the country must depend for most of its shipments until the new southern crop begins to move next spring, have 229 million bushels, in comparison with 245 million bushels last season and the five-year average of 274 million.

weighted by the relative importance of those sections and are reinforced by special reports from many commercial growers. Forecasts of production presume that growing conditions after the date of the report will be average to the end of the season. Hence, more than usually favorable or unfavorable weather, attacks of disease, etc., may change the early estimates.

DUE to the continuation of drought condition in many northern states and their gradual spread to the eastward and northward, the potato crop suffered serious setbacks during the month of August in many of the late states from New York and Pennsylvania westward. In those areas where the vines are still green, good weather, and the proper supply of moisture, if it comes in time, can bring about considerable improvement. On the other hand, early frosts, continued dry weather or blight could give a further drop in the October forecast. The far western states, from Colorado and Idaho westward, have been well favored, and prospects for an excellent crop are good. On the other hand, the very important Aroostook County, Maine, section, which has been such a very important factor in the eastern markets in recent years, has suffered from excessive rainfall and severe attacks of late blight, which have already caused substantial losses, while the final results are yet to be determined. Under these conditions, the outlook in that area is somewhat gloomy, to say the least.

Four of the eastern states, Maine, Vermont, Pennsylvania and New York, which have at their door the greatest density of population in the country, have in sight, as now reported, 91,000,000 bushels, compared with 104,000,000 last year and 98,000,000, the five-year average. Pennsylvania, of these four states, has an acute shortage, while New York may have, if unusually serious weather conditions should prevail, or may reach average, if they are good. This and the uncertain future Maine situation are the greatest unknown quantities, although Maine's fields are mostly dead, while many of New York's are still alive.

The situation in the three important states of Michigan, Wisconsin and Minnesota is most interesting from a marketing standpoint, since present

prospects point to 59,000,000 bushels there, compared with last year's light crop of 66,000,000, and the five-year average of 92,000,000. Because these states are advantageously situated to ship east, south or west, the shortages here, if harvest verifies them, will have a marked effect on the situation.

In years of light potato crops, especially if prices are good, there is more careful harvesting, more economical use by housewives, a larger demand for small sizes, and a greater conservation all along the line. Everything now points to a more widespread distribution of the northern surplus than is usual, and it will be a particularly important fall in which to watch the October and November estimates and to study all phases of potato marketing.

As to New York, the Long Island crop, now at the end of growth and partly dug, is estimated at 7,479,000

bushels, compared with 3,696,000 bushels last year. About September 1, commercial growers from all parts of the state reported 60 percent of the vines still green, compared with 63 at the same date last year, and 71 in 1928. Dry weather had checked growth seriously in all but the northern counties, and especially in the Steuben and Erie county areas, although little or no late blight was evident, and, with the favorable greenness of the vines, considerable improvement could take place with plenty of rain. On the other hand, continued drought or an early freeze would mean disaster to many fields. The upstate crop, with these things in mind, is placed at 20,876,000 bushels, compared with the light crop of 21,144,000 bushels last season, while the total state crop of 28,355,000 bushels compares with 24,840,000 last year and the five-year average of 31,046,000 bushels.—R. L. Gillett.

Horticultural Society Surveys Fruit Crop

EACH year the New York State Department of Agriculture and Markets cooperates with the members of the New York State Horticultural Society in issuing two reports on fruit conditions in the state. The first one is issued early in the growing season, the second which we are publishing for your information, about the first of September. R. L. Gillett, Agricultural Statistician, in commenting on these reports says:

"The reports give an excellent picture of the situation and become more valuable as more years' figures become available. It has been a real pleasure to assist Secretary Roy P. McPherson in compiling this late summer report which should not, of course, be confused with the regular government crop report to be issued later." The report is as follows:

The relative situation with respect to the fruit crops has not changed materially since the July report of the Society. While there have been some changes in the relative "conditions" or percentages of a full crop, these have generally not been great, and can be explained by unusual weather conditions. The summer has been abnormally dry, with the drought conditions most acute in the western counties and the Lower Hudson Valley. Fruit crops have generally ripened unusually early, due to the periods of warm, dry weather, and quality has been excellent. On crops such as winter pears and apples, there is still time for improvement or deterioration, depending on such matters as scab, insects, drought or excessive rain, severe storms, etc.

Apples—Over a 10 year period, including 1930, the average "condition" of apples as reported by the Society has been 54.8 per cent on July 1, and 53.4 on September 1. In 1923 and 1924 and in each of the last four years, there has been a decline between July and September while in the other years there has been an increase. The crop, taking all varieties together is apparently somewhat better in western New York, and much better in the Hudson Valley than last year. Summer and fall varieties, McIntosh and Greening are much heavier than last year. On the other hand, Baldwins, the major variety with a condition of 34 are substantially below average. Ben Davis has a condition of 62 per cent.

The per cent of the crop expected to pack "Grade A" (no obsolete) is 67, com-

pared with 55 last year and 59 the ten-year average.

Few price offers were being made for winter apples at the time the reports were mailed. Nine such reports in western New York averaged \$2.49 per barrel, tree run, and 6 averaged \$3.94 for grade A, packed, per barrel. In the Hudson Valley, 19 reports averaged \$3.15 tree run, and \$3.64, packed. The wide range in prices quoted indicates that both buyers and sellers are not ready to make commitments.

Pears—In contrast to the moderate apple crop, the pear crop is excellent both as to quantity and quality. Bartletts are especially plentiful, while Seckels are excellent and Kieffers, though not so good

Apple Crop Expected by Districts

Barrels of fall and winter apples of marketing quality grown by members reporting.

	Expected 1930	Harvested 1929	Harvested 1928
Western District.....	114,355	94,437	145,322
Central District.....	19,400	12,775	17,810
Eastern District.....	4,450	5,550	4,265
Southwestern District....	1,200	1,500	1,100
Southern District.....	600	1,200	600
Southeastern District.....	88,408	53,920	68,125
New York State.....	228,413	169,382	237,222

as the others, are above average. The principal varieties, in per cent of a normal crop, are as follows:

	1930	1929	1928	1927
All Varieties	78	27	38	45
Bartletts	82	25	32	45
Seckels	72	21	44	44
Kieffers	64	30	44	44

Peaches—Peaches have developed very well in most sections. While the loss of trees in recent years has cut down the total production considerably, the load borne on those trees that are in good condition is exceptionally good, being represented by 79 per cent compared with 58 last year, 74 in 1928 and 27 in 1927.

Quinces—The average condition of 61 per cent compares with 62 last year and 55 in 1928.

Grapes—The crop promised earlier in the season has apparently been cut somewhat by the dry weather especially in western New York. Concord's promise to ripen somewhat earlier than usual, which should insure a superior sugar content.

The Expected Crop by Varieties

This table gives the more important state averages or totals from the report, with corresponding figures for earlier years, in percent of a normal or full crop as of September 1.

	All Varieties	Fall Varieties	McIntosh	Baldwin	Greening	Northern Spy
1930	57	74	67	34	68	40
1929	44	46	41	51	28	38
1928	30	64	30	36	57	38
1927	39	44	52	33	22	49
1926	73	79	40	64	76	31
1925	60	62	71	56	43	66
1924	51	67	53	31	59	39
1923	55	46	54	68	38	46

Fishkill Farms Surplus Auction Sale of Registered Holsteins

September 27, 1930

1 P. M., Daylight Saving Time

The Ladies of Wiccopee Grange will serve lunch at noon.

Cows and Bred Heifers

Fishkill Sadie Vale Colantha Inka (Ear tag 34)
A daughter of Dutchland Colantha Sir Inka. As a junior 3 year old she made a class B record of 16,926 pounds milk and 733 pounds butter. Bred March 19th to Fishkill Sir May Hengerveld DeKol.

Fishkill Triumph Inka DeKol (Ear tag 75)
As a senior 2 year old she made a class C record of 10,901 pounds milk and 491 pounds butter. Bred March 20 to Fishkill Sir May Hengerveld DeKol.

Fishkill Lady Inka Hengerveld (Ear tag 70)
At 2 years, 9 months, 29 days she made 12,521 pounds milk and 550.17 pounds butter (class C). Bred February 18 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Belle DeKol (Ear tag 99)
As a junior 2 year old she made a class C record of 11,220 pounds milk and 500.9 pounds butter. Bred June 4 to Fishkill Colantha Dichter Piebe.

Fishkill Avon Artis DeKol (Ear tag 116)
A daughter of Hengerveld Homestead DeKol 4th. Bred December 19 to King Piebe 19th.

Fishkill May Dolly DeKol (Ear tag 170)
Has just completed a semi-official test which has not been reported as yet. Bred March 3 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Hengerveld (Ear tag 198)
A daughter of Fishkill Sir May Hengerveld DeKol. Freshened August 27, 1930.

Fishkill Hero Colantha May (Ear tag 229)
A daughter of Fishkill Sir May Hengerveld DeKol. Bred Feb. 1, 1930 to King Piebe 19th.

Fishkill Hengerveld May (Ear tag 231)
Daughter of Fishkill Sir May Hengerveld DeKol. Bred March 16, to King Piebe 19th.

Fishkill Piebe Gloria (Ear tag 241)
A daughter of King Piebe 19th. Bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Colantha Belle Piebe (Ear tag 246)
A daughter of King Piebe 19th and bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Colantha Rachel Piebe (Ear tag 248)
A daughter of King Piebe 19th. Bred in May to Fishkill Colantha Dichter Piebe.

Fishkill Lilith Colantha DeKol (Ear tag 108)
A daughter of Hengerveld Homestead DeKol 4th. Bred July 5 to Fishkill Sir May Hengerveld DeKol.

Fishkill Inka Pontiac DeKol (Ear tag 115)
As a senior 2 year old made class C record of 10,252 pounds milk and 453 pounds butter. Bred in May to Fishkill Sir May Hengerveld DeKol.

Fishkill Hilda Hengerveld (Ear tag 230)
A daughter of Fishkill Sir May Hengerveld DeKol. Bred to King Piebe 19th and expected to freshen just before the sale.

Fishkill Inka Piebe (Ear tag 244)
A daughter of King Piebe 19th. Bred to Fishkill Colantha Dichter Piebe.

Bulls

Fishkill Colantha Dichter Piebe (Ear tag 258)
Born March 28, 1929. A son of the great King Piebe 19th from families famous in show ring and production records. His dam is Fishkill Dichter Colantha Inka, who made as a 4 year old a 7 day record of 30.85 lb. butter and 748.6 pounds milk, and 365 day record of 819.32 pounds butter and 19,266 pounds milk.

Ear Tag 292
Born July 9, 1930. A son of King Piebe 19th.

Ear Tag 294
Born August 6, 1930. A son of King Piebe 19th, son of Fishkill Inka Dichter DeKol (9,255 pounds milk 436 pounds butter as junior 2 year old) a full sister to a world record cow.

Ear Tag 297
Born Sept. 4, 1930. A son of Fishkill Sir May Hengerveld DeKol, and out of Fishkill Payne Colantha Inka (class C record of 16,607 pounds milk and 689 pounds butter at 3 years and 1 month, a New York State record).

Every cow guaranteed in calf at time of sale except those recently fresh. **Herd Federal Accredited.**

Dairymen's League Certificates will be accepted.

Make School Grounds Attractive

Valuable Lessons Can Be Learned in Their Development

THE state-wide movement begun this year to make rural school grounds more attractive is bearing fruit in the form of definite plans for planting and care. This crop of suggestions undoubtedly will result in more inviting surroundings, a feature generally overlooked for a long, long time. But the time has come when public buildings as well as homes need to be enhanced by the kindness of

culturist offered prizes totaling one hundred dollars in order to stimulate interest in this worthy project.

Although the contest started late in the school year, eight counties enrolled for it: they were Cattaraugus, Onondaga, Niagara, Orleans, Herkimer, Madison, Cayuga and Allegany.

Definite contest rules were laid down by the contest committee, and a score card for judging the plans was submitted as a guide to the school groups working on the plans. For one of the chief objects of the contest was to get school children interested in making their own surroundings attractive besides furnishing them with the knowledge and experience needed to carry out the plan.

The score card used by the judges is perhaps the shortest possible explanation of what the plans were intended to cover, these plans being worked out after all possible information on the subject had been obtained, either from special lectures or from books and bulletins. Here is the score card:

1. Plan
 - (a) Design of grounds.....10
 - (b) Accuracy and neatness.....5
 2. Grading
 - (a) Provide good drainage.....7
 - (b) To produce smooth useable areas.....5
 3. Playground
 - (a) Position and size.....8
 - (b) Equipment.....6
 - (c) Condition.....6
 4. Walks and drives
 - (a) Position.....6
 - (b) Condition.....6
 5. Trees
 - (a) Position.....6
 - (b) Variety.....4
 - (c) Condition.....2
 6. Shrubs
 - (a) Position.....6
 - (b) Variety.....4
 - (c) Condition.....2
 7. Lawn
 - (a) Condition.....10
 8. Upkeep and care of grounds.....7
1. The plan will be judged by the

correct layout of the grounds, consideration being given to the opportunity afforded in each individual case and the advantage taken of this opportunity. The practical design of Nos. 3, 4, 5 and 6, in this score card and the selection, position and attractiveness of Nos. 5, 6, and 7 must be taken into consideration. The neatness and accuracy in drawing the plan to scale will bear weight in the proportion stated.

2. The property should be graded to produce smooth useable areas of sufficient size to easily take care of the necessary games. The ground should slope enough for good drainage.

3. The playground on a school property is of utmost importance. The size of it should be in proportion to the number of students in the school and the equipment and play areas in accord with the age of the students.

4. The walks and drive should economically and adequately serve the local need. The sidewalk should give good and easy access to the entrances to the buildings and to the playgrounds. The drive should give good access to the fuel storage and provide sufficient space for parking.

5. The trees should be placed as suggested in the bulletin "Design and Development of School Grounds." They should be good hardy material, be kept well pruned and thrifty in growth. If the grounds are not large enough for trees this item should be eliminated.

6. The shrubs may be selected and arranged as suggested in the bulletin mentioned above and should have the same qualifications.

7. The lawn should be graded smoothly and have a good even sod.

8. The summer care will consist of mowing the lawn, keeping the weeds

out of the shrubbery beds and pruning when necessary.

The contest closed in the counties on June 30, and the sketches winning first county prizes have been submitted to the state judging committee to determine the state winners of 1st, 2nd, 3rd, and 4th prizes to be given by American Agriculturist. County prizes were arranged for by the various county committees. State prizes will be awarded.

Smart and Practical

COAT PATTERN NO. 2625 is excellent for making up an ensemble for all-day wear. Soft tweed in autumn coloring for coat and skirt with a peach-colored blouse would be ultra-smart. The princess lines and flaring skirt of the coat place it decidedly as this season's model. The coat pattern cuts in sizes 14, 16, 18, 20 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 2½ yards of 54-inch material with ¼ yard of 35-inch contrasting and 1½ yards of 5-inch fur and 2½ yards of 39-inch lining. PATTERN PRICE, 15c. The dress pattern (blouse and skirt) is NO. 2623 and is 15c also.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Fall Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

green grass, growing shrubs and perhaps trees.

Any permanent plantings require careful consideration before being set out and it was to encourage thoughtful planning that the Home Bureau Federation took the lead in the contest known as the Rural School Beautification Contest. Their committee was composed of Mrs. A. C. Pomeroy, Mrs. Henry Burden and Mrs. George Yawger. Co-operating with the Federation's committee were landscape specialists from New York State College of Agriculture, the Farm Bureau, the State Department of Education and the 4-H organization. American Agri-

Most Attractive

DRESS PATTERN NO. 2658 is cleverly slenderizing with its wrapped bodice and gently flaring skirt. In black crepe silk or navy georgette or in one of the pretty printed silks, a dress in this style would be invaluable in the wardrobe. The pattern cuts in sizes 16, 18 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 4¾ yards of 39-inch material with ½ yard of 35-inch all-over lace. PRICE, 15c.

ed at the annual meeting of the Federation in November.

But the proof of the pudding is in the eating and so it is with any good plan. In the case of beautifying school grounds, a plan is necessary in order for all to understand, but it is not enough to stop there. In some cases it may be necessary to get more room for playground, so that children will not be forced to go into the highway in search of a level spot for play. The playground serves its purpose better if a certain amount of play equipment is provided, teeters, swings, slides, etc.

A well-ordered arrangement of plantings, and a carpet of grass stimulate children to take pride and pleasure in their surroundings rather than the wish to destroy everything in sight. Furthermore, they can glean quite a lot of information about planting, fertilizing and caring for the plants which are used in the planting scheme.

In view of these facts, it is natural to expect that the project will not be considered complete until grass, shrubs, playground equipment, school gardens and what not are in their re-

(Continued on Page 18)

Perforated Quilting Patterns

Harp 251 Feather Circles 253 Peacock Fan 256

Perforated patterns are very successful when the same design is to be used a number of times. As these patterns are made on tough high grade paper they will last for many stampings if they are handled with care.

HERE IS A LIST OF SOME OF OUR PERFORATED QUILTING PATTERNS

- M205—Conventionalized Rose and Bluebell will space into a 14-inch block or can be used singly on border or corners.....25c
M250—Dove of Peace (for blocks from 11 to 14 inches square).....20c
M251—Harp Pattern (14 inches exact—Use on blocks up to 17 inches).....30c
M253—Feather Circle 10 or 14 inches (state size wanted).....20c
M254—Pineapple Design (7x9).....25c

- M255—Lace Vein Feather Right and Left patterns, each 4 by 10.....25c
M253—Feather Circle 3 or 6 inches (state size wanted).....20c
M256—Peacock Fan for borders (7 inches high).....20c
M257—Narrow Cable for 3-inch band.....20c
M258—Wide Cable for 6-inch band.....25c
M269—Conventional design 7½ in. square 25c
M633—Tulip Pattern (for 9-inch block or larger).....20c
M634—Corner and Border Pattern to match tulip square.....25c

STAMPING PASTE

We supply black stamping paste under number M206 at 25c postpaid. This box of paste is very effective to use in stamping and there is enough of it to last for many stampings.

M206—Box—25 Cents

Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., N. Y. C.

Women's Interests at the State Fair

Genesee Home Bureau Wins First With Hooked Rugs

WOMEN were everywhere at the State Fair in Syracuse. They were there in huge numbers, not alone as visitors because much of the business of the Fair was conducted by women. Furthermore, this business was not limited to the household arts formerly regarded as woman's field alone; they were everywhere, in the horse show, in the cattle barns, certainly in the commercial booths and in the group meetings of organizations which use the Fair for that purpose. Whether the growing numbers of women in Fair activities has been altogether responsible, I cannot say, but I do know that it has helped towards a greatly improved tone of the Fair itself.

Each year shows a step forward in the educational features of the Fair. Last year the Indian village took permanent form with its bark houses and growing gardens. This year it was the splendid new 4-H building for housing the boys and girls with their exhibits and activities. It is these finer, more thoughtful features of the fair's program that will continue to hold the interest of the people after the mere desire to be amused has been satisfied.

The Witter Museum

The Museum is crowded most of the time by people who want to see its collection of old farm and home tools and the fine demonstrations of old-time arts and crafts. Its Colonial Kitchen with Miss Lucile Brewer cooking delicious things on the open fire and in the brick oven, the real old log cabin filled with genuine antique furniture explained by Mrs. Elizabeth Eastman, the flax spinning, the old cooper making barrels and kegs, the aged cobbler with his shoes—it was never hard to surround themselves with an eager crowd.

It may be true that women no longer do the fine sewing their mothers did. At any rate, the so-called women's department did not have the tremendous amount of crocheted, knitted and embroidered pieces formerly seen there. But there were practically none of the over-decorated, too elaborate things which used to be considered proper Fair entries in the needlework department. It looks as if modern women are concentrating their energies elsewhere.

In the Indian Village, Indian women were busy with their bead-work, their weaving and making little novelties which commanded a ready sale from the visitors. They made a very picturesque addition to the ensemble with

their colorful costumes and interesting crafts.

Women Exhibit Flowers

In the section devoted to professional flower growers I saw several women's names and a particularly fine gladiolus exhibit, I noticed, was staged by a woman grower. Naturally, most of the amateur flower growers were women. In fact when I got into the section housing the flowers, I just wanted to camp there and absorb all the beauty from those choice displays.

The competition in table decorations was an eye-opener in many ways. For instance, the first prize table had a centerpiece of large yellow marigolds interspersed with the small dark red ones and all softened by maidenhair fern. One does not expect such a fine effect from this rather stiff and awkward flower—but an expert arranged them, I don't know whether it was a man or woman.

There were eight counties having home bureau exhibits with daily demonstrations in the booths by the county home bureau managers and the county women.

Genesee County Wins

Genesee County Home Bureau took first prize with their exhibit of home-hooked rugs which project they had developed from the artistic viewpoint of good design and from the practical aspect of having a useful article or one which could be sold to advantage.

There were several rugs displayed in the booth all of which had been made by women who made their own designs, dyed the rags to get the right colors and then hooked so as to have a neatly finished product. A home-made rug frame was on display, made by the husband of a project worker who made rugs for sale.

Ontario County Home Bureau with its charming room for an adolescent girl took second prize. If all the furniture, drapes and decorations had been bought new, they would have cost \$195.63 according to actual catalog prices. But mill-ends of voile had been dyed for curtains, osnaburg was dyed for the ruffled couch cover, an old broken down easy chair had been mended and christened with a glazed chintz slip-cover, the vanity dressing table was a shelf on wall brackets with a frilled valance to match the chair and the other furniture, a desk, straight chair, and small chest of drawers had been rustled out of the attic and given a colorful coat of paint. The total cost was \$35.01, a saving of \$160.62. The labor was not estimated as it was figured that the girl herself or her mother could do all that needed doing. The clothes closet deserves special mention because of its attractive covers for dresses, the cardboard hat standards which cost but little and the adjustable clothes rod which could be raised as the girl grew taller.

Yates County had third prize for its booth showing how to care for clothing. There were the inevitable ironing board and iron, a kit of stain removers, a clothes

press for dad and brother and another for mother and daughter.

Broome County had as its theme Beautifying Home Grounds and had quite a collection of shrubs and flowers which can be obtained either from the woods or from nurserymen.

Chenango County displayed and discussed the proper selection of clothing, a very popular subject if the crowds before the booth were any guide. Chemung County showed the right foods for health with a fine display of canned fruits and vegetables and a fresh supply of stored ones with just the right container for everything. Madison County showed how infant hygiene rules can best be observed with proper emphasis on comfortable clothing, sun baths, protection against diphtheria and regular feeding. St. Lawrence County showed a child's dining room clever in every detail. The emphasis was on a quiet place for a child to eat, chair and table of right height, dishes of suitable size and attractive appearance and all surroundings in keeping with the youthful interests. Such a corner could be arranged in almost any room.

Here's the GREATEST BATTERY EVER BUILT for Individual Electric Plants

*Gives 50% more service than any
other battery of similar size*

Not just another battery but an utterly new type—now offered for the first time to owners of farm electric plants.

It's called the Delco-Light IRONCLAD and it is different than any battery you ever saw before. First, it's heavier and more rugged. It has tremendous reserve power that you can depend on for any emergency. It lasts longer, gives better service and costs less to use. It's the same type battery that is now used on Uncle Sam's submarine boats—in mine locomotives—in industrial trucks and tractors—in fact, wherever the last word in battery service is demanded.

*Good for
4,000,000 Watt Hours!*

Think of it! That's half again as long as the life of the average battery of similar size. And here's the reason. The positive plate is

built in accordance with a revolutionary new design. Active material is placed in tiny, slotted, hard-rubber tubes so it can't break away and shed, crack or peel. The negative plates are extra heavy and armor plated to resist wear. The elements are suspended from the cover. The space beneath is entirely clear. No bridges or plate supports to catch sediment and cause short circuits.

The Battery for YOU

If you want a battery that will modernize your farm electric plant—a battery that will give you years of super-service—a battery that will last half again as long as the next best—then the Delco-Light IRONCLAD is the battery for you. Write today for illustrated literature that tells all about this marvelous battery. Mail the coupon now—before you forget.

The nearest distributors are listed below. In addition there is a Delco-Light Dealer in every community.

Domestic Electric Co., Inc.,
39 West 45th Street,
New York City, N. Y.

Henry Clayton,
600 S. Delaware Ave.,
Philadelphia, Pa.

Suburban Electric Development Co.
5624 Penn Avenue, East End,
Pittsburgh, Pa.

You can get this famous battery from any authorized Delco-Light dealer. Be sure the battery you buy has "Delco-Light IRONCLAD" on the cover of the jar, on the battery strap, on the negative plates and on the glass battery jars.

DELCO-LIGHT Ironclad Battery

These two attractive fudge aprons NO. C2741 and NO. C2742 come flat stamped on unbleached muslin for easy embroidery. As this price includes only the stamped material, you can work it up in any color scheme you prefer. Price, 25 cents each. Order from Embroidery Department, American Agriculturist, 461 Fourth Avenue, New York.

The Indian Drum—By William McHarg and Edwin Balmer

Deep ravines at places broke the shores; following the bend of the bluffs, she got into these ravines and only learned her error when she found that she was departing from the shore. She had come, in all, perhaps eight miles; and she was "playing out"; other girls, she assured herself—other girls would not have weakened like this; they would have had strength to make certain no boats were there, or at least to get help. She had seen no houses; those, she knew, stood back from the shore, high upon the bluffs, and were not easy to find; but she scaled the bluff now and looked about for lights. The country was wild and wooded, and the moonlight showed only the white stretches of the shrouding snow.

She descended to the beach again and went on; her gaze continued to search the lake, but now, wherever there was a break in the bluffs, she looked toward the shore as well. At the third of these breaks, the yellow glow of a window appeared, marking a house in a hollow between snow-shrouded hills. She turned eagerly that way; she could go only very slowly now. There was no path; at least, if there was, the snow drifts hid it. Through the drifts a thicket projected; the pines on the ravine sides overhead stood so close that only a silver tracery of the moonlight came through; beyond the pines, birch trees, stripped of their bark, stood black up to the white boughs.

Constance climbed over leafless briars and through brush and came upon a clearing perhaps fifty yards across, roughly crescent shaped, as it followed the configuration of the hills. Dead cornstalks, above the snow, showed ploughed ground; beyond that, a little, black cabin huddled in the further point of the crescent, and Constance gasped with disappointment as she saw it. She had expected a farmhouse; but this plainly was not even that. The framework was of logs or poles which had been partly boarded over; and above the boards and where they were lacking, black building paper had been nailed, secured by big tin discs. The rude, weather-beaten door was closed; smoke, however, came from a pipe stuck through the roof.

She struggled to the door and knocked upon it, and receiving no reply, she beat upon it with both fists.

"Who's here?" she cried. "Who's here?"

The door opened then a very little, and the frightened face of an Indian woman appeared in the crack. The woman evidently had expected—and feared—some arrival, and was reassured when she saw only a girl. She threw the door wider open, and bent to help unfasten Constance's snowshoes; having done that, she led her in and closed the door.

Constance looked swiftly around the single room of the cabin. There was a cot on one side; there was a table, home carpentered; there were a couple of boxes for clothing or utensils. The stove, a good range once in the house of a prosperous farmer, had been bricked up by its present owners so as to hold fire. Dried onions and yellow corn hung from the rafters; on the shelves were little birchbark canoes, woven baskets, and porcupine quill boxes of the ordinary sort made for the summer trade. Constance recognized the woman now as one who had come sometimes to the Point to sell such things, and who could speak fairly good English. The woman clearly had recognized Constance at once.

"Where is your man?" Constance had caught the woman's arm.

"They sent for him to the beach. A ship has sunk."

"Are there houses near here? You must run to one of them at once. Bring whoever you can get; or if you won't do that, tell me where to go."

The woman stared at her stolidly and moved away. "None near," she said. "Besides, you could not get somebody before some one will come."

"Who is that?"

"He is on the beach—Henry Spearman. He comes here to warm himself. It is nearly time he comes again."

"How long has he been about here?"

son it was heard most often in winter. It was very seldom heard by any one in summer; and she was of the summer people. Sounds were coming from the woods now. Were these reverberations the roll of the Drum which beat for the dead? Her voice was uncontrolled as she asked the woman:

"Is that the Drum?"

The woman shook her head. "That's the trees."

Constance's shoulders shook convulsively together. When she had thought

at the lake and then, with a sudden movement, strode on; he halted again, and now Constance got the knowledge that he was not looking; he was listening as she was. He was not merely listening; his body swayed and bent to a rhythm—he was counting something that he heard. Constance strained her ears; but she could hear no sound except those of the waters and the wind.

"Is the Drum sounding now?" she asked the woman.

"No."

Constance gazed again at the man and found his motion quite unmistakable; he was counting—if not counting something that he heard, or thought he heard, he was recounting and reviewing within himself something that he had heard before—some irregular rhythm which had become so much a part of him that it sounded now continually within his own brain; so that, instinctively, he moved in cadence to it. He stepped forward again now, and turned toward the house.

Her breath caught as she spoke to the woman. "Mr. Spearman is coming here now!"

Her impulse was to remain where she was, lest he should think she was afraid of him; but realization came to her that there might be advantage in seeing him before he knew that she was there, so she reclosed the door and drew back into the cabin.

CHAPTER XX

THE SOUNDING OF THE DRUM

NOISES of the wind and the roaring of the lake made inaudible any sound of his approach to the cabin; she heard his snowshoes, however, scrape the cabin wall as, after taking them off, he leaned them beside the door. He thrust the door open then and came in; he did not see her at first and, as he turned to force the door shut again against the wind, she watched him quietly. She understood at once why the Indian woman had been afraid of him. His face was bloodless, yellow, and swollen-looking, his eyes blood-shot, his lips strained to a thin, straight line.

He saw her now and started and, as though sight of her confused him, he looked away from the woman and then back to Constance before he seemed certain of her.

"Hello!" he said tentatively. "Hello!"

"I'm here, Henry."

"Oh; you are! You are!" He stood drawn up, swaying a little as he stared at her; whiskey was upon his breath, and it became evident in the heat of the room; but whiskey could not account for this condition she witnessed in him. Neither could it conceal that condition; some turmoil and strain within him made him immune to its effects.

She had realized on her way up here what, vaguely, that strain within him must be. Guilt—guilt of some awful sort connected him, and had connected Uncle Benny, with the *Miwaka*—the lost ship for which the Drum had beaten the roll of the dead. Now dread of revelation of that guilt had brought him here near to the Drum; he had been alone upon the beach twelve hours, the woman had said—listening, counting the beating of the Drum for another ship, fearing the survival of some one from that ship. Guilt was in his thought now—racking, tearing at him. But there was something more than that; what she had seen in him when he first caught sight of her was fear—fear of her, of Constance Sherrill.

He was fully aware, she now understood, that he had in a measure betrayed himself to her in Chicago; and he had hoped to cover up and to dissem-

(Continued on Opposite Page)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north to watch Spearman and to locate Alan. She walks along the shore of the lake until exhausted.

"Since before noon. Sit down. I will make you tea."

Constance gazed at her; the woman was plainly glad of her coming. Her relief—relief from that fear she had been feeling when she opened the door—was very evident. It was Henry, then, who had frightened her.

The Indian woman set a chair for her beside the stove, and put water in a pan to heat; she shook tea leaves from a box into a bowl and brought a cup.

"How many on that ship?"

"Altogether there were thirty-nine," Constance replied.

"Some saved?"

"Yes; a boat was picked up yesterday morning with twelve."

The woman seemed making some computation which was difficult for her.

"Seven are living then," she said.

"Seven? What have you heard? What makes you think so?"

"That is what the Drum says."

The Drum! There was a Drum then! At least there was some sound which people heard and which they called the Drum. For the woman had heard it.

The woman shifted, checking something upon her fingers, while her lips moved; she was not counting. Constance thought; she was more likely aiding herself in translating something from Indian numeration into English. "Two, it began with," she announced. "Right away it went to nine. Sixteen then—that was this morning very early. Now, all day and tonight, it has been giving twenty. That leaves seven. It is not known who they may be."

She opened the door and looked out. The roar of the water and the wind, which had come loudly, increased, and with it the wood noises. The woman was not looking about now, Constance realized; she was listening. Constance arose and went to the door too. The Drum! Blood prickled in her face and forehead; it prickled in her finger tips. The Drum was heard only, it was said, in time of severest storm; for that rea-

about the Drum—and when she had spoken of it with others who, themselves, never had heard it—they always had said that, if there were such a sound, it was trees. She herself had heard those strange wood noises, terrifying sometimes until their source was known—wailings like the cry of some one in anguish, which were caused by two crossed saplings rubbing together; thunderings, which were only some smaller trees beating against a great hollow trunk when a strong wind veered from a certain direction. But this Indian woman must know all such sounds well; and to her the Drum was something distinct from them. The woman specified that now.

"You'll know the Drum when you hear it."

Constance grew suddenly cold. For twenty lives, the woman said, the Drum had beat; that meant to her, and to Constance too now, that seven were left. Indefinite, desperate denial that all from the ferry must be dead—that denial which had been strengthened by the news that at least one boat had been adrift near Beaver—altered in Constance to conviction of a boat with seven men from the ferry, seven dying, perhaps, but not yet dead. Seven out of twenty-seven! The score were gone; the Drum had beat for them in little groups as they had died. When the Drum beat again, would it beat beyond the score?

The woman drew back and closed the door; the water was hot now, and she made the tea and poured a cup for Constance. As she drank it, Constance was listening for the Drum; the woman too was listening. Having finished the tea, Constance returned to the door and reopened it; the sounds outside were the same. A solitary figure appeared moving along the edge of the ice—the figure of a tall man, walking on snowshoes; moonlight distorted the figure, and it was muffled too in a great coat which made it unrecognizable. He halted and stood looking out

The Indian Drum

(Continued from Page 16)

ble that betrayal with her. For that reason she was the last person in the world whom he wished to find here now.

"The point is," he said heavily, "why are you here?"

"I decided to come up last night."

"Obviously." He uttered the word slowly and with care. "Unless you came in a flying machine. Who came with you?"

"No one; I came alone. I expected to find father at Petoskey; he hadn't been there, so I came on here."

"After him?"

"No; after you, Henry."

"After me?" She had increased the apprehension in him, and he considered and scrutinized her before he ventured to go on. "Because you wanted

to be up here with me, eh, Connie?"

"Of course not!"

"What's that?"

"Of course not!"

"I knew it!" he moved menacingly. She watched him quite without fear; fear was for him, she felt, not her. Often she had wished that she might have known him when he was a young man; now, she was aware that, in a way, she was having that wish. Under the surface of the man whose strength and determination she had admired, all the time had been this terror—this guilt. If Uncle Benny had carried it for a score of years, Henry had had it within him too. This had been within him all the time!

"You came up here about Ben Corvet?" he challenged.

Yes—no!"

"Which do you mean?"

"No."

"I know then. For him, then—eh. For him!"

"For Alan Conrad? Yes," she said.

"I knew it!" he repeated. "He's been the trouble between you and me all the time!"

She made no denial of that; she had begun to know during the last two days that it was so.

"So you came to find him?" Henry went on.

"Yes, Henry. Have you any news?"

"News?"

"News of the boats?"

"News!" he iterated. "News to-night! No one'll have more'n one news to-night!"

(To be Continued Next Week)

Fruit Grower

Picking and Storing Apples

THERE are a number of factors concerned in the successful storage of fruit which every fruit grower should understand. Continuous chemical and physiological changes occur in the flesh of the apple. At first, they are the processes concerned in ripening, but as soon as that is complete the processes concerned in breakdown and decay begin. High temperatures hasten both ripening and decay, while low temperatures slow down these processes. It is important to remember, however, that no temperature above actual freezing will entirely prevent either ripening or decay, and apples which are later to be sold fresh must not be frozen as the flesh breaks down and becomes discolored.

Fully Ripe Fruit Deteriorates

Fruit that has reached its maximum in soft ripe edible quality begins to deteriorate slowly but surely, even under the best of storage conditions. Its storage capacity is very low; in fact, nil if one is desirous of selling fruit of prime quality. For successfully storing, then, fruit must be picked before it is soft ripe. It must be what may be termed market or firm ripe. To avoid losses from storms, dropping and over-ripeness, growers sometimes pick their fruit too green. Apples

picked too green lack color and finish, are susceptible to scald in storage, are inclined to shrivel and lack quality. High colored apples are much less subject to scald than poorly colored fruit of the same variety. Let apples like Stayman, Rome and Paragon stay on the trees as long as they will hang. When they become "loose" on the spurs they must be picked promptly, however, otherwise a high wind may cause a severe loss from drops.

Pick and Handle Carefully

An old warning is to pick apples without bruising. Roughly picked and handled apples will not keep well. Cuts through the skin and pulled out stems allow diseases to infect the apple and start decay. Apples destined for storage should be transferred from the trees with as little delay as possible. Fruit left out in the orchard or in a warm shed for several days after picking is more likely to scald and be affected with other troubles than fruit picked and stored promptly. Fruit free from disease harvested from a well managed orchard makes the best storage record. On the other hand, fruit from a poorly sprayed orchard with a percentage affected with scab, blotch, black rot and other diseases is a liability in storage. Diseased fruit should not be harvest-

ed or stored with sound fruit. Remember that low temperature will only check development of disease.—M. A. BLAKE, (Reprinted from the New Jersey State Horticultural News).

Used Duster to Cool Apple Storage

LAST fall, the Ohio Experiment Station used a powder duster to cool an apple storage house. It is not uncommon for growers to use an electric fan to force the cool outside air into the storage house during the night and then close the ventilators during

the day, but it is claimed that this was the first time a duster was used for that purpose. The duster was used by cleaning it thoroughly and placing it outside one of the ventilating inlets so that the hose of the duster was directed through the inlet into the storage house. In this case they also directed a small amount of water into the blower in order to keep the moisture content of the storage house up to the proper degree. Inasmuch as evaporation is always a cooling process this also tended to lower the temperature inside the storage house.

Poultry Farmer

Forty-fourth Week at Storrs

IN the forty-fourth week of the Storrs contest, total production for all pens amounted to 3,562 eggs or a yield of 50.9 per cent. This is a drop of only 56 eggs as compared with the previous week and is 255 eggs more than was produced in the same week last year.

It appears at present that the total for the full year will almost exactly equal or perhaps slightly exceed last year's record of 205 eggs per hen for the entire 1,000 birds.

The table affords a comparison by months of the production per hen in the current contest and the competition of last year.

Month	1929	1930
November	15.3	16.8
December	17.5	17.4
January	18.5	17.8
February	17.5	17.9
March	20.1	21.5
April	20.6	21.2
May	21.6	20.7
June	19.0	18.0
July	17.7	17.4
August	15.8	15.4

1000 Average all varieties	50.9

Make School Grounds Attractive

(Continued from Page 1)

spective places for the world to see and admire, and, best of all, for the children to use and enjoy. This means a good pull together for the committees, the teacher, the children, the trustee and the community at large, but it is well worth the effort. It means here a little and there a little, the fundamental things coming first, such as laying out the grounds and grading the lawn. After that things could be chosen in order of their importance. This year's contest was limited to plans for landscaping the school grounds and it is only the beginning of the race towards the goal of more attractive surroundings for rural schools. Ten years from now it should be a common sight when driving over country roads past rural schools to see a grassy lawn, neat foundation plantings, some shade trees, adequate, equipped playgrounds, and, in season the little plots where children learn to garden by actually gardening. Surely this is not an impossible dream, but it will take the combined efforts of all agencies interested in education to bring it about. And it should be planned so carefully that every lick will count, with no need to undo anything because it was wrongly placed.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

“Before You Ship—”

THEODORE Cohen who, we understand was the proprietor of the Farmers' Sales Company of 535 Broadway, Schenectady, N. Y., was recently arrested on the charge of carrying on business under an assumed name. We understand that 535 Broadway is an apartment house but later letter heads of the Farmers' Sales Company gave 525 Hamilton St. as their address.

The arrest of Cohen came as a result of investigation by Chief of Police Funston after he had received complaints from farmers saying that they did not receive returns for poultry and eggs shipped to Cohen.

The American Agriculturist Service Bureau has received several similar complaints. We were successful in getting a settlement on one complaint but there are still several who have not received their money. We will do our best to see that they get paid but the circumstances do not make us very optimistic. This is just another instance showing that it is not safe to ship poultry or eggs to anyone unless you check up to be sure of their reliability, and financial standing.

“Free?”

THE old free lot scheme is still with us. The best advice we can give is as follows: If you get a notification from a real estate company that you have won a free lot, ask yourself the

following questions and be sure of your answers before you part with any money. First, is the lot so narrow that you will have to buy another lot before you can build on it? If this is the case is the combined price of the two lots more than both lots are worth? Second, if the free lot promoter asks you for money, just to pay for the cost of recording the deed and having titles to it, is the lot which you get worth this amount of money?

The numerous letters we have had from our subscribers has led us to believe that free lots are doubtful assets for anyone to own.

Our Letters Not Answered

On May 8, 1930 I sent a money order to Rupert & Sons of Geneva, N. Y. who advertise Nursery Stock. I have not received a word from them although I have written several letters asking about this order. The Postmaster at Geneva said that the money order was cashed on May 8.

WE wrote several letters to Rupert & Son but have never received a single reply from them. We followed the matter further and received some confidential information to the effect that any attempt to secure settlements from Rupert & Son is not likely to be successful. Of course, the sum is too small to warrant legal action so we are giving the facts for the information of other subscribers.

Butter by the Million Pounds

A Visit to Hiawatha's Country Where the Cow Is Queen

By E. R. EASTMAN

ALWAYS when business takes me on near and far journeys to interesting places and people, I wish all our friends who read AMERICAN AGRICULTURIST might be along. Good things are always better when shared. Maybe we

E. R. Eastman

would have to divide up the party, however, for more than 160,000 farm families might be a little awkward to handle in one group!

I am just back from a week spent in the middle west, well-named, the "granary of the world". Not being able to have you along I made mental notes of a few high spots of interest so that I might pass them on to you through these columns. This trip took me across New York, Michigan, Illinois, Wisconsin and Minnesota.

Probably the first thing that you would ask is, "What about the drought?" I would not say a word that would detract from the sympathy for the sufferings and loss of thousands of farmers because of the drought, but I am convinced after this trip that what I said earlier in the summer editorially, was right, and that is that the effects of the drought have been over-emphasized.

Conditions are very spotted. Many farmers will have little or no crops. With many others the harvests are right up to

normal. There is no question that corn has been hard hit. I did not see a good looking corn field after I left New York State, and there is no doubt that corn will be very short crop.

Talking with a good many farmers, and with those who come in contact with them, I find the general feeling is one of optimism. Clifford Gregory, Editor of "Prairie Farmer", one of the best farm papers of the central west, when talking about the drought, said, "American agriculture is always being ruined. It has been ruined for years because of surplus. Along comes the drought and wipes out some of the surplus, and now the claim is that agriculture is ruined by the drought!" I repeat, however, that this kind of sentiment is poor consolation to those farmers, and there are many of them, who really have suffered irreparable damages because of dry weather.

Those who love the fine, old dairy country of New York would feel perfectly at home in Wisconsin. With New York, Wisconsin leads the nation in the production of dairy products. It has more level land than New York, but one can stand in any one of a thousand places in Wisconsin and look out across the meadows and pastures, and not realize that he is more than 1,000 miles from our own eastern farm country. The climate, while colder than ours, is tem-

pered by the Great Lakes. The soil is excellent and a great variety of products are grown.

Milwaukee which we are apt to think of as a great booze town, is one of the prettiest, finest cities that I know with miles of great, wide streets, and parks overshadowed with our own maples and elm trees. Milwaukee and much of Wisconsin itself was settled by Germans and Norwegians, a law-abiding, thrifty, hard-working people who make the best of citizens.

A friend took me to call on the Milwaukee Milk Producers Association, a farmers' organization controlling the milk supply of the city of Milwaukee. There are 3,300 members out of about 4,000 shippers. These members were receiving for September milk \$2.40 a hundred for milk testing 3.5% butter fat, less a cartage charge of 25c a hundred. The organization is a bargaining one, and although small, is, I am told, very successful in obtaining a good price for its members' milk. The secretary, Mr. C. F. Dineen, said that milk sales in Milwaukee were about 12% less than last year, and that production was slightly higher. He stated, in answer to my question, that good grade Holstein dairy cows, freshening this fall, were now selling for about \$125 per head which is approximately \$50

Land-o-Lakes Cooperative Creamery Plant—Probably the Largest Butter Packing and Sales Cooperative in the World.

Little Recipes for Little Cooks

Now You Can Make Pie With This Simple New Recipe!

by Betty

Won't That Be Fun?

Dear Little Cooks:

School again, and I didn't get half through playing, did you? Anyway I learned a lot of cooking and new recipes to give you, nice ones that I'm sure you'll like.

This time I am going to tell you how I make pie. Maybe you know that pie is one thing that every little cook is always crazy to try and it's one our mothers just shake their heads about and say, "Sometime when you're a little older. Pie crust is too hard for a little cook."

At least mine did till she discovered a kind of pie that she said seemed just invented for little cooks. It is made of graham cracker crumbs and that is lots easier and more wholesome, too, mother says. Your mother will like this recipe, too, because it makes a brand new dessert.

Then I have a hearty supper dish that will make everybody laugh just to hear the name. It is "Little Pigs in the Potato Patch." See how many little pigs you can chase out!

With heaps of love to all my little cooks,

Betty

Graham Cracker Pie

First I get a small pie plate or maybe an old saucer ready. Then I melt the butter and crush the crackers. I do this on the bread board with a rolling pin, being careful to get them very fine. I add cinnamon and butter and mix these well with the crumbs, I put about two-thirds of the crumb mixture in the pie plate and press it down in an even layer all over the bottom and sides of the plate like a crust. I try to press it so it is quite firm and smooth.

Small Recipe

5 graham crackers
2 tablespoons melted butter
¼ teaspoon cinnamon
Filling for pie
2 tablespoons sugar
½ cup milk
Pinch salt
¼ teaspoon vanilla
1 egg yolk
½ tablespoon flour
½ tablespoon corn-starch

Large Recipe

20 graham crackers
½ cup butter, melted
1 teaspoon cinnamon
Cream filling for pie
½ cup sugar
2 cups milk
½ teaspoon salt
1 teaspoon vanilla
4 egg yolks
2 tablespoons flour
2 tablespoons corn-starch

Then for the filling, I mix the flour and corn-starch and sugar in a bowl. I heat the milk and then pour it on the sugar, flour and cornstarch. Of course, I stir it hard as I pour to keep it from getting lumpy. Then I put it back on the stove to cook till it looks clear and quite thick.

I beat the egg yolk while that is cooking and then I pour it over the egg yolk. Cook one more minute to cook the egg and then it is done, and I pour this cream filling into the graham cracker crust that I have ready.

Then take 1 egg white and beat it stiff and add 2 tablespoons of sugar and beat more. Spread this over the cream filling and sprinkle crumbs over the top and bake for 20 minutes in a slow oven.

Let this pie get very cold before serving.

I make the family-sized pie just the same way, only I take 3 egg whites for the frosting (or meringue) and after they are stiff I add 6 tablespoons of sugar.

Crustless Apple Pie

This is awfully good, I think, and most every little cook has apples to use this time of year. It can be made of fresh or canned apple sauce,

Lesson Number Twenty

The Mailman Brings Betty Many Letters from Her Friends

Betty gets many letters and greetings, especially on the various holidays, and she enjoys them all. Now and then she gets an extra big thrill when a letter comes addressed simply to "Betty, Brown County, Minn." One letter like that came all the way from a little cook in New York City —no last name and no town on the envelope, but Betty got it all right. Wouldn't that thrill you too?

but the apple sauce should be quite thick and sweet (but not very sweet).

I make the graham cracker crust just as I did for the graham cracker cream pie. I put in two-thirds of the crumbs, pressing them down as before and then I pour in the apple sauce, and over the top I put the other third of the crumbs, spreading carefully. I put this where it will get very cold and serve it with whipped cream. It certainly is good!

Almost any thick fruit sauce could be used in place of the apple sauce filling in the graham cracker crust. Apricot, peach, wild plum or cherry would all be good, mother thinks. What a lot of pies we can make now!

Lemon Pie

First I measure out the boiling water and put it in a sauce pan. Then I mix the flour and corn-starch and sugar well in a bowl. I pour the water on these and stir hard till it is all smooth. Then I put it in the pan to cook, stirring all the time till it is thick and clear. I beat the egg well and pour the thick mixture over it.

Filling

Small Recipe

½ cup boiling water
¼ cup sugar
½ tablespoon corn-starch
¾ tablespoons flour
¼ tablespoon butter
¼ lemon rind and juice
½ egg or 1 egg yolk

Large Recipe

2 cups boiling water
1 cup sugar
2 tablespoons corn-starch
3 tablespoons flour
1 tablespoon butter
1 lemon rind and juice
2 eggs

Then I put it back to cook a little more and I set it on the back of the stove till I am ready to add the grated rind of the lemon and the lemon

juice and butter. I stir these in and pour my lemon filling into a graham cracker crust made just as I did for the other graham cracker pies.

I wonder which kind you will like best?

Little Pigs in the Potato Patch

For the small recipe, wash and peel one good-sized potato, cut it into quarters and boil it in boiling water to which ¾ teaspoon of salt has been added. Boil till the potato is done or soft and then drain off the water. Mash with a potato masher, or a tablespoon if the masher seems too large for the small dish of potato.

When it is mashed all smooth and fluffy, add milk as mother does for her mashed potato. Make it just a little more moist than usual. I can't tell you just how much milk to take because I don't know just how big a potato you will take and some potatoes seem to take more than other kinds too.

When I have added the milk and beaten the potato all light again, I make a nice pile or hill of potato on a buttered glass plate or baking dish. Then into this hill of potato I stick little pork sausages. I stick them in so there is just a little end, like a pig's nose, sticking out. You will probably want two little pigs in this small potato patch. I melt butter and brush the potato with that and bake the potato and sausages for about an hour or until the sausages are done and the potato brown. Serve these very hot with some nice muffins and jam.

For the family, take as many potatoes as you think they will want and about two sausages to each potato.

Don't let any little pigs get away!

New York State Tries Low-Cost Roads

State Highway Department to Experiment with Several Types

AT the last session of the New York State Legislature the sum of \$100,000 was appropriated to be used by the State Department of Public Works for experimentation with low cost roads to be used where traffic is not heavy.

Over one-half of New York State farmers still live on dirt roads and the outcome of these experiments vitally interests every one of them. Knowing this, Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST asked the State Department of Public Works for a statement showing where they intended to conduct such experiments and the type of road to be tried out in each instance. Following is their reply:

District 1

Perry Filkin, District Engineer, Albany, N. Y.

We propose to improve the town highway located in Rensselaer County, between Valley Falls and Easton, in the town of Schaghticoke, a distance of approximately one mile.

The type of surfacing to be used is two layers of gravel, each approximately 5 inches in thickness. This material will be thoroughly rolled and consolidated, after which it will be surface treated with suitable bituminous material.

District 2

L. D. Brownell, District Engineer, Utica, N. Y.

We propose to improve for a distance of 2.4 miles the town highway in the town of Steuben, Oneida County, placing a gravel surfacing thereon which will be further treated with bituminous material of asphalt or tar.

District 3

Guy W. Pinck, District Engineer, Syracuse, N. Y.

We propose to improve two different sections of town highway in this district.

In Cayuga County, in the town of Aurelius, southwest of the City of Auburn on a section 1 1/3 miles

in length, broken stone macadam with a 4 inch bottom course and a 2 inch course mixed in place, bituminous macadam of tar, is the type of pavement planned.

In Seneca County on the town highway between Romulus and Waterloo on a section three miles in

Help for the Dirt Road Farmer

EVERYBODY in both the state and the nation is proud of the advance that has been made in recent years in building hard-surfaced, improved roads, but in spite of all this progress it is a sad fact that the majority of farmers still live on dirt roads. That is the reason why American Agriculturist gave enthusiastic support to the Pratt Bill passed by the last legislature in New York, which more than doubles state aid for the town dirt roads in hundreds of New York State towns.

Another dirt road bill of great importance was passed providing for funds to experiment in dirt road building and improvement. The State Highway Department has since been carrying on these experiments, and we take pleasure in explaining just what has been done in the article on this page. This is the first time and the only place where an account of this important work has been published.

length, we propose by contract to use the "Walker" method of construction which may be briefly described as follows.

The Walker method consists mainly of a thorough working of the natural soil, by the deep plowing of the soil and furrowing the same to the center of the road, the removal of all stone and gravel and pulverizing of the material.

Following this the surface is honed by the use of special blading machinery, the surface is then rolled with a special type of rolling device and is further honed and all depressions filled up. This honing and rolling is continued until proper type of contour of the surface is obtained, after which a surface coat-

ing of course, screened sand is applied and worked in for a wearing surface. The entire process necessitates the use of specially devised contractor's tools and equipment.

District 4

H. E. Smith, District Engineer, Rochester, N. Y.

We propose to improve one mile of town highway in Livingston County. A gravel foundation will be placed upon this highway and the surfacing or top course of the same will be mixed in place, bituminous macadam of tar.

District 5

C. R. Waters, District Engineer, Buffalo, N. Y.

We propose to construct one mile of penetration macadam type of pavement in Chautauqua County using gravel as a surfacing and top course material for the pavement.

District 6

O. J. Dempster, District Engineer, Hornell, N. Y.

We propose to construct one mile of penetration located one mile immediately north of the hamlet of Howard, in the town of Howard, Steuben County, using screened gravel as a surfacing material two courses each 5 inches in depth with a width of surfacing of 12 feet.

District 7

Roy F. Hall, District Engineer, Watertown, N. Y.

We propose to improve approximately one mile of town highway in Jefferson County, surfacing the same with crushed stone to be consolidated by traffic. Stone to be laid in two courses each course 4 inches in depth.

District 8

J. S. Bixby, District Engineer, Poughkeepsie, N. Y.

We propose to improve one mile of town highway located in the town of Stanford, Dutchess (Continued on Page 15)

What Will Your Cows Eat Next Spring?

Meet the Emergency by Sowing Rye and Vetch Now

THE very hot weather of the present summer in New York along with a general scarcity of rainfall has resulted in many failures with meadow seedings that were put out this spring in the usual manner. Many older meadows have also been so badly hurt that they probably will yield but little or nothing next year. Besides this damage to meadows, pastures in many cases have had the life burned out of them so that probably for next year, at least, they cannot be depended on to give normal yields. Although the kinds of injury mentioned are more or less general in all sections of the State, they are greatest where the drought has been most severe, and on the soils which commonly suffer most from dry conditions, especially the clays, sands and gravels. Forehanded farmers are already asking what they can do to meet these conditions and are making inquiry about things that can be done now that will help to ensure adequate livestock forage another season. This article is intended to give some a timely suggestion on this matter that may be taken advantage of at once.

Winter or hairy vetch is especially worthy of consideration, as in areas to which it is adapted it can likely be successfully planted within the next week.

For success with this plant it is necessary to choose well-drained soils where usually during the winter there is no standing water and no heaving. It is well suited to gravelly and sandy lands. In fact, one is not likely to choose a sit-

uation that is too dry for it, and he may easily choose one that is too wet for the crop to do well, or even to grow at all. Soils on which red clover and alfalfa commonly winter well will usually carry hairy vetch satisfactorily so far as the water in the soil is a factor in its successful growing.

Hairy vetch has about the same lime requirement as alsike clover. It then is a plant that will grow on rather sour soils, but some may be too acid for it to do its best. Where necessary the lime needed may be applied to the land as it is being prepared for seeding.

Inoculation Necessary

Vetch seed should be inoculated when planted on land that has not recently carried the crop or peas successfully. This is an especially important consideration and many plantings of vetch fail each year because of neglect of this detail. With vetch, artificial inoculation cultures are none too successful. It is better to use soil from fields

which have carried peas or vetch before, but where the soil is not available the cultures may be employed, it being recognized that there is more risk than when they are relied upon for alfalfa and similar plants.

Vetch commonly will respond to applications of phosphoric acid and on most soils it is the only plant-food needed. Two hundred pounds or more to the acre of the sixteen per cent grade of superphosphate will furnish the needed phosphorus. On very poor sandy lands, and on other situations where manure has not recently been used some potash may give good returns and some nitrogen may serve to carry the plants until the inoculation applied with the seed becomes active. Under such conditions a coating of farm manure together with superphosphate will furnish the needed plant-foods. If the manure cannot be used a complete fertilizer such as a 4-16-4 or a 5-20-5, applied at the rate of 200 pounds or more to the acre should furnish the crop the needed fertility.

Seeding in September

Seeding should take place as far before October first as possible. The land should be prepared as for winter wheat or rye and sowing should take place in accord with the above mentioned calendar or as soon as the conditions of the soil are such that germination will readily occur. About 30 pounds of seed are used to the acre and commonly the vetch is put out with one-bushel to one and a half bushels of rye or wheat, usually rye.

Hairy vetch and the grain crop sown with it come forward rapidly (Continued on Page 6)

Not Too Late Yet

PASTURES have been poor, the hay crop was nothing to brag about and it is probable that there will be less corn put into silos than there was a year ago. Professor Barron suggests an emergency measure which will provide some feed for the dairy herd early next spring. He points out that dry weather this summer will almost certainly hurt pastures next year.

Unfortunately, Professor Barron's story did not reach us in time to print in our September 20 issue, but we still believe there is time to take advantage of his suggestions, particularly in sections where the growing season is longest. If you anticipate that your supply of feed next spring is likely to run short, why not drop everything else for a few days and put in some vetch now?

Vol. 126 September 27, 1930 No. 13

The Milk Situation

MILK prices for October will be the same as for September milk. Judging by the demand and the supply there was no possibility of getting any better prices for farmers. There is plenty of milk in the market, and the indications are now that there will be a large supply all winter. The warm spells in September have helped keep up the demand which has a tendency to sag all the time because of the business depression. On the other hand, recent rains have improved up-state production conditions, and this together with increased prices, have encouraged dairymen to keep production up.

In talking recently with a man who has been connected with the milk business for years, he made the interesting comment that one of the chief troubles with the New York milk market situation is due to bringing in milk from dairies that have never sold their milk in fluid form before.

"Production per day, per dairy", said this man, "has not increased recently. The demand even during the present business depression would take care of all of the milk from the regular old-time fluid milk shippers, but in recent years dairymen who formerly sold their milk to cheese factories, or who separated and shipped their cream, have all been encouraged to get in a position to sell fluid milk. It is these formerly outside dairymen who create the surplus."

This may be correct. On the other hand, there have been times in the year when the production was short, that the milk from these marginal producers was needed to keep New York City from going outside of the milk shed for its supply.

One small favorable fact is that there is a slightly increased demand for grade-A milk. We are informed that with one large company this amounted to a 4% increase. Grade-B about holds its own. Most of the trouble in the market is with the wholesale milk sold in loose form. The recent so-called milk investigations have injured the market for this loose milk to a considerable extent. Incidentally they have "petered" out. If they had not been injurious in their effects on milk consumption, they would have been a joke, for just as soon as the politicians found out how the farmers up-state felt about the investigations,

the investigators began to look around for some good excuse for dropping the milk question like a hot potato.

When They Leave Home

ALMOST since we can remember, we have dreaded the early fall because it is the lonesome, homesick time after the long, happy summer vacation when the young folk go back to school and college. Not so long ago it was we who went forth every fall from the old farm home. Now the situation is reversed, and we know how father, mother, and older brother felt when we left because our own home is now lonesome, and the family circle is broken by the absence of our two boys in college.

It was but yesterday that they were babies. Every time we turn around, everything we do at home, reminds us of the Big Boys, their irritating pranks, their kindly little acts of affection, and activities both in play and work that we all did together. There are times when a too active memory is an affliction—times when we wish we were more "hard-boiled", or at least more phlegmatic, thick-skinned, and disposed to take life as it comes without thinking too much about events that cannot be helped.

Yet such experiences help to give one a better understanding of others troubles and a more sympathetic attitude toward those who travel with us through the years. For example, we said, a few days ago, to mother who has raised a large family and who now lives all alone, "Well, Mother, I'm lonesome. The boys are gone."

"I know", she answered with tears in her eyes, "but what do you think of me? Mine are all gone these many years, and two will never return."

We understand, too, just how thousands of parents all up and down this broad land are feeling right now, trying to adjust themselves to the absence of children gone away to college or business.

But, of course, none of us would have it otherwise. It is right for the children to go. The American parent believes in education and in giving the children every opportunity to make good citizens of themselves, and to lead happy, useful lives. The sad part for most of us is the fact that when the boys and girls once go they never come back to the old home except for short visits. In this respect many farmers are fortunate in having a son return to go into partnership, or in having both sons and daughters settle in nearby communities.

Anyway, it does no good to mourn over inevitable and natural events of life. We owe it to ourselves to make new adjustments, create new interests and to go marching on more determined than ever to take things as they come and wrest some happiness as we go along.

Life is a Big Book filled with many Chapters.

When Must a District Transport Its Children to High School?

THE last session of the New York State Legislature amended the school law making it obligatory, under certain circumstances, for the school districts to transport their pupils of high school age to high schools. We have explained this law once or twice in these columns, but are still getting a number of questions about it.

Just when is a district obliged to transport its children? The Department has interpreted this law in answer to this question to mean that a district is not obliged to transport children unless the distance is greater than three miles, and then only if the parents are unable to provide transportation for their own children. Many districts, however, are going further than this interpretation and are providing transportation of children to high school when the distance is less than three miles. They are not forced to do so, but it is a commendable thing to do. The Department of Education recognizes that there are two sides to the question and that the financial circumstances in some districts must be taken into consideration.

When is a parent unable to transport his own

children? The Department states that the answer to this is that if parents have conveyances, and if they have been providing transportation for high school children in the past, they should be able to continue to do so. The age of children has nothing to do with it.

Buffalo's Unfortunate Market Situation

WITHOUT question one of the principal ways to aid both farmers and consumers is to develop large farmer and terminal markets in our larger cities, but certainly no progress will ever be made if every city copies what has been done this summer in Buffalo. Two large markets are now under construction in the city of Buffalo. Each is being financed by a group of railroads. The New York Central and Pennsylvania are members of one group, and the Erie and Nickel Plate of the other. One of these new terminals is bound to fail. This will mean a loss of several million dollars, and while competition lasts between the two markets, market conditions for all concerned will be very unsatisfactory. No better example can be had of the evils of lack of cooperation than this Buffalo market situation.

The State Department of Agriculture has put a lot of time in studying the market situation in Buffalo in an effort to develop a plan that would be acceptable to everyone, and that would give all parties concerned better market facilities. An argument, chiefly among the railroads, developed as to the location of the market. Meetings of farmers were held and most of them were in favor of a change from the old location on Elk Street to a new produce terminal and farmers' market located on the Clinton-Bailey Avenue site.

It is very evident from this experience that the only way successful terminal and farmer city markets can be developed, is by the leadership of the state itself through its Department of Agriculture and Markets,—with enough state financial aid for such markets to give the state the right to dictate the kind of market that shall be built and maintained, and the place where it shall be located. Otherwise local political and competitive conditions will constantly result in situations similar to that in Buffalo.

Watch for Grange News

WE are very pleased to announce the addition of a new department to AMERICAN AGRICULTURIST in the form of regular Grange news, written by Frank J. Riley, secretary of the New York State Grange.

There is, of course, something of interest happening every minute in this largest of New York State's farm organizations, and there is no one in better position to know what is going on in the Grange world, nor better able to write it in interesting form than Secretary Riley. Watch our New York news page every week for Grange news.

Eastman's Chestnut

ALL of you who are interested in Barnyard Golf will recall D. D. Cottrell's stories every year in AMERICAN AGRICULTURIST about our horseshoe pitching contests at the Syracuse Fair. You may also remember Mr. Cottrell's interesting story in one of our issues this summer about his visit to Oberammergau to witness the famous Passion Play.

He was telling us a story the other day of a man whom he met on the boat coming back who had been seasick all the way over and all the way back, and therefore was pretty much disgusted with traveling in general and Europe in particular. Like many another returning American, the beautiful Goddess of Liberty facing out to sea looked mighty good to him. Standing by Mr. Cottrell's side when the Statue of Liberty first hove into sight, he addressed her with sentiments coming directly from his heart in the following words:

"Well, old girl, if you ever see me again you will have to turn around!"

Heating the Home

Does Your Present System Keep the House Comfortable at Low Cost?

By MRS. GRACE WATKINS HUCKETT

Household Editor, American Agriculturist

IN a climate where some artificial heat is needed for more than half the year, it is a question which comes to the front just now when the longer, cool nights make us seek the indoors. From the day when fire was accidentally produced by rubbing together two dry bits of wood until the present day when fire may be made or quenched at will, there is a long and interesting story of development.

But, strange to say, until comparatively recent years, there was little progress made in harnessing fire to serve the human race. True, there was the improvement of transferring the outdoor camp fire to the indoor fireplace but, aside from that, little had been added to the store of heating or cooking appliances. It is only since 1850 that cook stoves and heaters became common. In her early married life my own grandmother had her cook house out in the back yard so the heat generated by the open fire would not render the living rooms too hot for comfort.

But once the step was made to the manufactured stoves and heating systems progress has been rapid. One has but to study the various types on the market, feel of his pocketbook, and decide which he will have. He will need all the information he can get, for even the ordinary room heater has been so improved that it is no more like the old box stove than the modern electric refrigerator is like the tin pail suspended in the well to keep milk cool.

Moisture Is Important

A home which is healthfully heated has even, adequate, sufficiently moist heat throughout. Many things influence the degree of heat which ought to be maintained. Old people require more heat; in a room where one is very active, less heat is needed; the amount of clothing worn has much to do with temperature desired. Generally speaking, room temperature should range between 60° and 70° Fahrenheit with a humidity of not less than 30% at the higher temperature. A wet and dry bulb thermometer hung on an inside wall will keep one informed as to the moisture condition of the air in a room.

There is a feature about having a house well heated that is important. It is far more apt to be ventilated properly than one that is insufficiently heated. The plague of winter colds and similar ills is always worse when ventilation is poor or when it is impossible to maintain an even body temperature. A room excessively warm in one spot and cold in another or a house with one warm room and others cold makes it very difficult to adjust clothing properly to meet this body need for regular heat.

Comfort is usually the greatest argument and, as is the case with practically everybody, the cost is the greatest factor in deciding just how much comfort one can afford.

Here are some figures estimating the cost of various heating units varying from the one-room heater to the complete central heating system. These figures appeared in the report of the General Federation of Women's Clubs and were prepared under the direction of the Industrial Survey and Research at Washington. The prices were based upon figures from contractors in several cities using as a basis a typical two-story and basement frame house 24 X 24 ft., 6 rooms and bath, each room having two exposures.

Heating Equipment

Piped Warm Air System:
Furnace incased in galvanized iron;

asbestos and tin lined; two recirculating ducts; patent air filter; automatic humidifier; installed in accordance with standard code\$300-\$400

Hot Water System:

Round boiler; cap. 650-700 sq. ft. radiation; asbestos covered; tube radiators, expansion tank in basement.....\$500-\$744

Square boiler; jacketed and insulated; damper regulator; tube radiators \$450-\$640.

One Pipe Steam System: (less radiation required than for hot water).

Round boiler; cap. 400 sq. ft. radiation; asbestos covered; radiators and end of mains vented with vacuum valves; tube radiators\$400-\$538

Square boiler; jacketed and insulated; radiators and end of mains vented with vacuum valves; tube radiators\$375-\$500

Installation for Basementless or Smaller Homes

Warm Air Pipeless Furnace: Installed in basement...\$125-\$150.

Hot Water System:

Special square boiler in kitchen; tube radiators (for 6 rooms and bath, 2 story house)\$350-\$400

Warm Air Heaters:

Installed in living room; depending on size of heater\$35-\$154

Individual Room Heaters

Kerosene Heaters:..\$4-\$14.

Cabinet style with 2 burners; porcelain enameled, mahogany finish\$33

Electric Heaters; lamp socket type \$3-\$10.

If stoves must be used the warm air heater installed in the living room gives an even heat for a limited number of rooms. During the last few years these have been designed in far more attractive shapes and colors which contrast very favorably with the very ornate black and nickel affairs of some years back.

The new "parlor furnace" is really two stoves in one, being built along the lines of a furnace. The inner stove holds the fire and the outer stove holds an envelope of air about the inner stove. The space between the two

stoves is open at the bottom and the top contains a large register face which allows the heated air to rise, the ceiling deflecting and spreading it to all corners of the room or rooms. Most of these new heaters have large water pans in the space between the inner and outer stove and if kept filled, the air is kept properly moist. For those who must depend upon stoves, this type is best. But there is a limit to the space they can make comfortable and where more than one is used, that multiplies labor. A central system, of course, centralizes labor and fuel and is much easier to care for.

If there is no basement and a cen-

tral system is desired there are systems which operate from a boiler in the kitchen of a small house. This requires a water supply. One such system operates for houses of only one story very satisfactorily and is not very expensive to install. If there is a basement and water is a problem, then the pipeless furnaces do a lot towards making the house comfortable as well as reducing the number of fires tended. The construction of the house has much to do with the satisfactory operation of the pipeless furnace, as complete circulation of air from room to room is imperative.

The piped warm air system overcomes this difficulty and can be used in practically any house. The warm air systems heat up and cool off quickly.

(Continued on Page 14)

When Vegetable Growers Ride Together

By PAUL WORK

THE summer has been amply punctuated with tours and field days for vegetable men. Canners were invited to see the experiments at Geneva on August 18th, and on the 19th and 20th, the Vegetable Variety Field Days were held at Ithaca and Geneva. This occasion brings together forty or so of seedmen and college specialists from other states as well as this. The Empire State Potato Club tour and machinery field day on the 19th and 20th was one of the greatest farm meetings that has ever been held in this state.

The attendance at K. C. Livermore's farm at Honeoye Falls was estimated at 3500 to 4000 and a system of amplifiers was installed to make the proceedings audible to all.

New York-Long Island Tour

In spite of many conditions making it difficult for growers to leave home,

a full bus load of upstate New York growers took part in the market and farm tour which the New York State Vegetable Growers' Association conducted August 22nd and 23rd in the metropolis and on Long Island. G. E. Smith of Pennsylvania and a party of three from New Jersey joined the group. The New Yorkers included growers from Rochester, Syracuse, Utica and other points, as well as students and college specialists.

Space will permit only the briefest mention of a few high points. This tour should become a permanent feature of the association work, as there has never been a time when growers were more persistently beset with competition from countless shipping points in this and other countries. We need to know how our goods are handled in New York and how New York goods affect our markets.

Starting at 3:15 Friday morning the group visited the Pennsylvania and Erie Railroad piers and Washington Street where the wholesale houses are concentrated. They saw the methods of loading and bracing cars which insure good arrival after transcontinental shipment, and which our own growers are inclined to neglect. This point is emphasized when one sees the "recoops" or packages which have required repair at the pier. Cheap trade is eager for these goods, but the results for the shipper are disastrous.

The Contrast in Quality

The contrast among shipments in original quality, grading packing and packages is most striking as one walks up and down the sidewalk of Washington Street. The long distance shipment and some upstate lots are in attractive new containers of clear, white lumber with adequate wrapping liners and labels as needed. Most of the nearby goods appears in most forbidding form. Boston gardeners are as expert as any in the country, but when they ship to New York they are inclined to use the oldest and worst of their returnable packages. The Boston box is a good package, but they offer practically no display when they are packed vertically, and when a box is blackened and damaged, it is anything but attractive. Some New England shippers are exceptions to this rule and it makes a difference. Producers near New York use berry crates for small vegetables and these continue their trips to market as long as they survive. The New Jersey tomato crate which is still handled to a great extent on a returnable basis is open to the same objection.

The Wallabout market is one of the most interesting in this country, and in some respects would be listed among the most primitive. The layout and arrangements are just as they were decades ago. Prospects seem favorable for material improvement in conditions

(Continued on Page 6)

The Song of the Lazy Farmer

IM GLAD to see September come, the summer's been too hot, by gum, with summer so obstreperous, perhaps fall will make up to us the suffering that we've been through, at least that's what it ought to do. It may be that the weather man will treat us better if he can, perhaps he's had a change of heart and now is ready to depart from scorching weather so that we can git cooled off once more, by gee. The worst thing with the weather is we cannot do a thing, gee whiz, no matter how much we complain, dry weather will not turn to rain. It may be cold or may be hot, with all our cussing we cannot change that there weather one degree we have to let the weather be.

Of all the things that should be done I'd say the most important one is learnin' how to regulate

the weather, for as sure as fate, no matter what plans we may make to cut the acreage, or take the surplus off to far Cathay, the weather man will find a way to upset all we try to do, he'll lick us all ere we get through. With all the things that science knows our crops are still a-gettin' froze, or burned up in the summer's heat, or flooded out, or dried; our wheat will not produce the yield we plan unless we fix the weather man. If we want farm relief we must, control the weather or we'll bust!

Apples in Corrugated Boxes

TO the person who has been accustomed to selling apples in barrels it might seem rather troublesome and expensive to pack apples in corrugated boxes with corrugated board separating every apple. On the other hand, to the person who has seen apples selling in New York City for from 5c to 10c apiece from pushcarts, the idea does not seem so foolish, especially when it is realized that a large percentage of the apples sold in this manner in New York City come from the west and

corrugated boxes is interested in cost. While it is true that this method of packaging costs more money, the cost is not excessive and the rapid growth of the idea is so successful that the extra profits more than make up for the difference in cost.

It has been found that apples packed in corrugated boxes can be very successfully stored in cold storage. It is not necessary to ventilate the boxes inasmuch as the corrugated board is a very efficient insulator and when ap-

Courtesy of Paperboard Industries Association
How the apples are packed for market

naturally shut out from the market an equal amount of apples grown in New York State and other eastern sections.

As a matter of fact, the packing of apples in corrugated containers has been going on successfully for some time until now quite a few apples are sold in this way although, of course, the number is small when compared to the total amount of apples sold in New York City.

Apples, of course, are more variable in size than eggs and this item alone has brought up some problems so far as their packing is concerned. Whereas the present standard wooden box as specified by the U. S. Department of Agriculture must contain 40 pounds net, this item is not so important when selling apples in corrugated boxes because in this way they are sold by count but not by weight. At the same time, of course, it is necessary to pack the apples in such a way that they will fill the box completely and this makes it necessary to use different combinations according to the size of the apple. Growers and jobbers working in cooperation with the Paper Board Industries Association have succeeded in reducing sizes to six principal units as shown in Table A.

Naturally, everyone who has contemplated the packing of apples in

ples packed in this way are stored, they come out without "scald" which is rather prevalent with some of the varieties when stored in bushel baskets or barrels.

Corrugated boxes are successful for the cold storage of apples under normal apple storage conditions, i. e., where a temperature of from 30½ degrees to 32 degrees F is maintained with a relative humidity of 80 per cent. If the humidity rises to more than 85 per cent the moisture is absorbed by the cloth strip which covers the joint, where the box is fastened together by the boxmaker, and allows it to loosen and peel off. This necessitates the application of a new strip

Table A

Count	Size (in.)	Cell size (in.)	Arrangement
210	2 1/4	2 1/4 x 2 1/4 x 2	7x6x5 tiers deep
150	2 1/2	2 1/2 x 2 1/2 x 2 1/4	6x5x5 tiers deep
120	2 3/4	2 3/4 x 2 3/4 x 2 3/8	6x5x4 tiers deep
96	3	3 x 3 x 2 3/8	6x4x4 tiers deep
75	3 1/4	3 1/4 x 3 1/4 x 2 3/4	5x5x3 tiers deep
64	3 1/2	3 1/2 x 3 1/2 x 3	4x4x4 tiers deep

before the box of apples is shipped. However, to remedy this condition in storage houses where humidity varies too greatly, the boxmaker uses cloth tape which is treated with paraffin on its outer surface.

While we are not suggesting that any New York State growers plunge on this method of packing, we do believe that it is worth study and even a trial. Of course, apples packed in this way, cater to a select trade and command fancy prices. For this reason it may be necessary to select a little different outlet for apples packed in this way but certainly this method of selling is growing and deserves attention if any attempt is to be made to hold the eastern market for eastern fruit.

What Will Your Cows Eat Next Spring?

(Continued from Page 3)

in the spring and at an early date furnish green feed for any kind of stock. If one begins to cut early and plants both a rye-vetch and a wheat-vetch combination he may have good green feed for a period of two to three weeks previous to the time alfalfa or

red clover may be ready. Vetch sown with grains makes good hay, though if the best hay is to be made the grains should not be allowed to come to more than the heading out stage. Vetch also makes good silage and when used for this purpose may along with its companion grain crop, become somewhat more mature than when made into hay. In making such silage the important considerations are to pack well and to have the material free from external moisture but not too much dried out. The crop is also excellent for pasturage for all kinds of livestock and has the special virtue of becoming available early in the season when there is not much of anything else that may be used, and when regular pastures that have been hurt the previous season may need some time for recuperation if they are again to become as productive as possible.

Vetch is very palatable and all kinds of stock relish it. It is considerably higher in its content of digestible protein than alfalfa. Hence it is especially beneficial to growing animals, and milking cows.

With the A. A. Vegetable and Crop Grower

When Vegetable Growers Ride Together

(Continued from Page 3)

on this market with segregation of speculators, provision of water and other conveniences.

Long Island vegetable farms present a most interesting picture of the changes that have taken place in the past twenty years. At Valley Stream a number of growers are carrying on in much the same manner as two decades ago with a large number of closely planted small crops. Prominent among these are carrots, radishes, spinach, beets and others. Irrigation is usual and the return per acre is very heavy. Harold Simonson of Glen Head grows about 180 acres of vegetables, with some 75 acres of his own strain of Long Island Beauty sweet corn. His methods are less intensive than those of the Valley Stream people, but fertilizer is used in quantity and humus is maintained by means of green manure crops—rye, vetch and sweet clover. This farm dispatches a five-ton truck load every day, throughout a very long season, and much of the time two truck loads go in to Harlem market.

The party spent the night of the 22nd at the New York State School of Applied Agriculture at Farmingdale. In spite of a driving rain, the tour was only slightly hampered as it visited a number of farms on Saturday. William Koschara came to the sandy scrub-oak land of central Long Island many years ago and he has successfully built up the fertility of his soil and is especially successful with peppers and tomatoes. He grows his own early plants in coldframes and is an advocate of the blocking method. Under this plan, the plants are pricked out about four inches apart each way. Ten days before field setting, a large straightened hoe is used to cut between the rows each way, thus removing roots which have extended into the territory of neighboring plants and affording opportunity for root replacement within the immediate block.

Mr. Koschara has a novel way of controlling cutworms. The land is prepared somewhat in advance of planting time, and on hot days the soil is gone over with an Acme harrow which stirs and turns the surface. The worms are thus exposed to the hot sun and are unable to get under cover. After several treatments of this sort, the plants are set and losses are reduced to a minimum.

The Long Island Vegetable Research Farm at Riverhead was visited and the work there was explained in some detail. The farms of H. R. Talmage and Henry Meyjes were seen and the party returned to New York in time for evening trains.

WATER IN LIGHT BREEZES

The New
STAR

The New Star Windmill pumps in 8 to 10-mile breezes because it is correctly designed, equipped with Timken bearings and positively lubricated—every working part runs in oil.

We will send you FREE, our book which shows how easy and inexpensive it is to have this modern convenience. It shows how to figure and install a water system powered with the New Star, the windmill that pumps in every breeze. Let us send this valuable book without obligation. Write TODAY.

The Cattle Show at the State Fair

By E. S. SAVAGE

WE had 1500 head. That in itself was amazing, 1200 regular show cattle in the open classes and 300 head shown by the boys and girls. I have been at Syracuse each year for about 12 years and I have never seen a better show. It was well balanced in numbers of the different dairy cattle breeds with a fair representation of the beef breeds, particularly Aberdeen Angus.

An outstanding exhibit was the exhibit by Aberdeen Angus breeders. We had offered a series of prizes for Aberdeen Angus regional or district herds. Each herd was to consist of 10 animals. The Eastern Aberdeen Angus Breeders' Association districted the State of New York and the western portion of New England into Western, Central, and Eastern districts. Each district showed a herd of ten animals. The Eastern group won first, the Central group second, and the Western group third.

Beef Animals Present

These thirty polled black beef cattle made a beautiful show of their own when paraded in the Coliseum after they were judged. Interest in Aberdeen Angus cattle is increasing very rapidly. I believe New York had a greater increase in new breeders of Aberdeen Angus cattle last year than any other state, 44 new breeders in all.

We cannot take space to list all the winners in the different breeds of dairy cattle. As I look back on the Fair the Holsteins had the largest and best exhibit. The Ayrshires I would place second and the Jersey and Guernsey shows as of equal merit and numbers.

I am particularly interested in the county and district club exhibits. I wish to see the breeders of each of our breeds organize themselves into county or district clubs and then let each club get out one or more exhibits of its best cattle. The entries need not be limited to one entry from each club. Each club may have as many entries as it pleases. Thus we can have friendly rivalry among our clubs and have some fun. In this way money can be earned for the clubs and the cattle also be shown in the open classes.

The following county and district clubs showed Holsteins and won in the order named: Washington, Otsego-Herkimer, Oswego, Chenango, Onondaga, Tioga and Lewis.

In Ayrshires the clubs were placed in the following order: St. Lawrence, Otsego-Delaware, Adirondack, Finger Lakes, Central New York and Allegheny-Steuben. The Guernsey clubs showing were the Capital District, Cayuga, Columbia and Onondaga.

The Jersey Breeders had the following clubs: Albany, St. Lawrence, Delaware, Washington, Onondaga and Chenango.

The Brown Swiss Breeders were from Washington, Orleans and Monroe County Clubs.

The breeders who work together should be highly commended for their work in getting out these county herds. They learn a lot and this kind of work is improving our cattle.

COP—Why can't I take your license away for reckless driving?
"Ha, ha! I haven't any license."
—JUDGE.

"Milk Production Steps Up 600 lbs. Each Month"

Says Uncle Charlie

Harry Lahur credits B-B Feed for increased income

HARRY LAHUR, well-known dairyman of Fair Haven, Vt., has found that B-B feeds have a remarkable effect upon profits. He writes: "A few weeks ago I began feeding B-B Dairy Ration to ten cows. Almost immediately I got 20 pounds more milk a day . . . and that increase has been maintained. Six hundred pounds per month extra goes a long way." Any dairyman will agree with that.

No Question About Profits Here

After a year's test of Bull Brand, H. C. Black, Onondaga, N. Y., has this to say: "My 22 cows produced \$8184.50 for the year. The cost for B-B was \$1910.05. I experienced ab-

solutely no udder trouble and the cows finished the year in as fine physical condition as the most exacting dairyman could wish."

"I never have produced as much milk as I have since using B-B exclusively," says C. M. Probst of Parksburg, Pa. "The second day on this feed I shipped more milk and they are keeping it up." As Mr. Probst's letter indicates, the results of B-B feeding are apparent immediately.

How's This for a Fair Offer

I want you to give Bull Brand a trial because I know that once you've checked results you'll never use anything else. All I ask is that you go to your local Bull Brand dealer and get enough B-B to feed one or two cows according to directions for a 30-day period. Then watch the milk flow increase.

And if Bull Brand doesn't prove to be more productive *per dollar of feed cost*—hand the empty bags back to the dealer. He'll pay you back, without question, every cent you paid for the feed. If by any chance your dealer hasn't stocked Bull Brand yet, write to me direct.

MARITIME MILLING CO.
Buffalo, N. Y.

Another Record with B-B Feed

Velma Dale Rag Apple, owned by McLaury Bros, Portland, N. Y. produced 7,698 pounds of milk during 84 days, an average of 91.6 pounds daily. She was fed on B-B Hi-Test Dairy Feed.

24%

Reviewing the Latest Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.95	1.75
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for Sept. 1929 was \$3.37 for 3.5% milk and Sheffield's \$3.17 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Butter Works Upward

CREAMERY SALTED	Sept. 19, 1930	Sept. 12, 1930	Sept. 20, 1929
Higher than extra	41 1/4-41 3/4	40 1/2-41	47 1/2-48
Extra (92 sc.)	40 3/4	40	47
84-91 score	34 1/2-40 1/4	34	39 1/4-40 1/2-46 1/2
Lower Grades	32 1/2-34	32	33 1/2-39

Active trading in fancy butter has carried the market upward with a steady and firm undertone. The supply of fancy fresh goods has been considerably short of the actual needs of the trade. On some days it has been necessary to piece out current requirements of fancy fresh butter. The situation is tense. As the week comes to a close a very conservative undertone prevails. Operators are anxious to avoid a too rapid increase in values lest the situation be strained.

At the end of the second week in September the reduction in holdings con-

tinued to increase. On September 12 the four cities were reported at 63,911,394 pounds, whereas a year ago on the same day the same cities reported 68,989,835 pounds. From September 5 to September 12 holdings in the four cities were reduced 939,080 pounds, whereas the reduction during the same period a year ago was only 135,739 pounds. At the rate we are going there seems no earthly reason why butter prices should not advance. A lot is said of the industrial situation being the cause of reduced laying. Reports from the trade show that more butter is being used than ever. It appears that the depression is being unduly emphasized as an excuse to depress butter prices.

On September holdings of butter in the United States were as follows:
Sept. 1, 1930143,096,000 lbs.
Sept. 1, 1929.....168,952,000 lbs.

Shortage Sept. 1, 1930... 25,876,000 lbs.
The five year average on September 1 was 147,076,000 lbs.

Cheese Holds Steady

STATE FLATS	Sept. 19, 1930	Sept. 12, 1930	Sept. 21, 1929
Fresh Fancy	20 1/2-21 1/2	20 1/2-21 1/2	25
Fresh Average			26
Held Fancy	24	26	27 1/2-29 1/2
Held Average			

The cheese market holds steady and the undertone at the close is very firm. Western markets have turned firmer and the local operators are in most cases holding for the outside quotations on all lines. The West is not offering any concessions as the week comes to a close, which gives enough strength to that undertone to lead us to expect the possibility of an upward trend.

Storage holdings in the ten cities making daily reports on September 11 totaled 19,592,000 pounds as compared with holdings on the same day a year ago totaling 21,036,000 pounds. The out of storage movement from September 4 to September 11 amounted to only 12,000 pounds whereas during the same period last year 13,000 pounds came out.

Egg Market Badly Unsettled

NEARBY WHITE	Sept. 19, 1930	Sept. 12, 1930	Sept. 20, 1929
Hennery			
Selected Extras	42-50	43-51	58-64
Average Extras	37-41	37-42	52-57

Pullets	25-27	28-32	33-40
Pewees	20-23	20-26	23-30

NEARBY BROWNS	Sept. 19, 1930	Sept. 12, 1930	Sept. 20, 1929
Hennery	33-41	35-43	49-57
Gathered	29-32	25-30	36 1/2-48

The egg market is having a hard time these days. Combinations of unsatisfactory factors have operated to the detriment of the market. Light withdrawals from the warehouses in the four principal cities, liberal receipts, unsatisfactory weather are among the factors responsible for the situation. Some of the large chain stores have swung over to storage eggs throwing a lot of the current production on the open market. Quality of eggs has been running much better of late resulting in a surplus of fancy eggs. The Pacific Coast has been offering medium grade eggs at concessions and there have been a lot of high quality nearbys unsold. As the week came to a close the weather had improved, turning slightly cooler which had a steadying effect on the market.

Friday's posted figures in New York were almost twice what they were a year ago, and a number of cars of high cost, fresh mixed colors have been taken off the market here in the hope of some reaction later. That has relieved the present situation to some extent, but it does not look very good for any near future improvement. There are too many eggs. On September 1, 1930 we had 1,828,000 cases of eggs more than we had at the same time a year ago.

Fowls Plentiful; Chickens Scarce

FOWLS	Sept. 9, 1930	Sept. 12, 1930	Sept. 20, 1929
Colored	25-30	26-29	28-33
Leghorn	17-22	20-23	22-23
CHICKENS			
Colored	23-33	20-28	25-33
Leghorn	22-24	21-23	22-25

BROILERS	Sept. 9, 1930	Sept. 12, 1930	Sept. 20, 1929
Colored			
Leghorn			
OLD ROOSTERS	-15	15-16	35-37
CAPONS			
TURKEYS	25-30	-40	20-21
DUCKS, Nearby	19-26	20-25	40-45
GESE	-16	-16	23-28

Fowls arriving by express appear to be a little top heavy as the market comes to a close, although sentiment appeared

to be for a maintenance of values. Very few Leghorns brought top prices and most of them sold under 21c. On the other hand, chickens have been scarce and values have turned upward. Turkeys have eased off a little while Long Island ducks are on the upward trend.

Potato Market Draggy

The potato market closed quite draggy. Receipts have been liberal, but there has been no snap to the trade. However, prices have not changed. Long Islands in 150 pound sacks still bring from \$3 to \$3.35 while Jerseys in the same size package bring \$2.75 to \$3.25, and Maines bring \$2.50 to \$3. The quality of Maine potatoes of late has shown up to be a little more irregular. Bulk goods per 180 pounds from Long Island have been bringing \$3.50 to \$3.75, while for Maines the prices are \$3. to \$3.35.

Judging from what has happened in the past, potato prices will go still higher. Growers will now await with much interest, the October report which may show further decreases in the Maine crop due to blight and in the western states due to dry weather.

Hay Prices Unchanged

Hay prices show no material change. Straight timothy No. 1 brings from \$28 to \$29 with other grades ranging downward. Mixtures generally bring \$1 to \$2 less. We look for high hay prices this year, but as it always is when prices are good, the man who needs the money has no hay to sell. That is the hard part of it.

Fruits and Vegetables

The apple market has been extremely dull and weak on barrels and baskets, except for really fancy stock. Most of the better marks are going into storage and poor offerings are a drag on the market. Most varieties range from 50c to \$1.25 per bushel with the exception of McIntosh which range from 75c to \$2.

Pears and peaches are selling better. Grapes have been meeting a slow outlet, with most of the Concord ranges from 35c to 45c per basket and a few selected lots up to 50c.

Cabbage has been in slow demand and weak, State in bulk being quoted at from \$15 to \$17.

Tomatoes are in good demand for fancy quality stock. Ordinary lines show no improvement.

Cauliflower is no more than fair. Some Catskill stock has sold for \$2.50 although this is extreme, most sales ranging from \$1.50 to \$2. Long Island stock is gradually showing better quality.

The celery market is weak, prices ranging from 75c to \$1.50 for a large crate.

Farm News from New York

The Latest Information About Crop Conditions

LAST week we gave you the latest information on the condition of the potato and apple crops as well as the situation concerning the size of the hay and corn crops for feeding dairy cattle. This week we are reporting to you, figures on other important crops in the New York milk shed as given in the September 1 crop report recently released by the Federal Department of

Hogs—The U. S. Department of Agriculture reports a probable reduction of between four and six per cent in hogs for slaughter during the next twelve months, both because of smaller numbers and lighter weight. The average of hog prices for 1930-31 marketing year is expected to be higher than for the year ending September 30, but this will be accompanied by

parent in the quality of the exhibits. Good showmanship and originality were combined to make it one of the best shows in years. Cortland-Onondaga counties captured first prize for the Farm Bureau with an attractive exhibit on the production of alfalfa. Sullivan-Ulster were second with a poultry show. Genesee County won first prize for the Home Bureau with a demonstration on Home Craft. Ontario was second with Home Furnishing. Yates took third with an exhibit on the care of clothing.

The awards were made on three points—attractiveness, quality of material exhibited, and educational features. The awards were closely contested. So well did each county carry out the purpose of the exhibit that it will be difficult to surpass in the following years, the record they have made this year.

—By DONALD D. EASTMAN.

New York County Notes

Cattaraugus County—The severe drought still continues with a light shower occasionally in some sections, but not enough to bring any relief. Threshing is about done, many fields of buckwheat not cut as no grain filled and straw too short to reap due to dry weather since sowing. What corn there is is being put into the silos, but many will go empty as the corn crop shriveled and stopped growing weeks ago. There is a small yield of potatoes as the vines withered before growth was realized.

Four hundred and sixteen took the sixth degree at a special meeting of the State Grange held in the county on September 11. F. J. Freestone, State Master, reported it was the largest class thus far in their special session trip through the state. Louis J. Taber, National Master,

vested 300 bushels of onions from one-half acre of muck land at Elba. The profits were clear, the seed, land and machinery were donated and the Veterans did the work. The proceeds will go for a drum corp of the American Legion. Granger & Company of Buffalo have bought the Roberts Brothers Flour Mill at Batavia.—MRS. R. E. G.

Long Island—The first prize of \$50. for largest certified yield per acre of Green Mountain potatoes went at the Suffolk County Fair to Conklin Brothers of Bridgehampton who grew 444 bushels per acre. They also captured the sweepstakes cup for having the heaviest certified yield of any kind in Suffolk County. Carl Young of Riverhead, won the first prize of \$50. for having the largest yield of Cobblers. He had 416 bushels per acre. Second prizes of \$25. went to Harry T. Fahy of Bridgehampton, for next largest yield of Cobblers, 403 bushels per acre, and to J. C. and J. H. Corwith of Watermill, for next largest on Green Mountain yield, 442 bushels per acre. Last year the Corwiths took first place at Nassau County Fair with a yield of 358 bushels per acre.

H. J. Simonson of Glen Head, won first prize of \$50. for the heaviest yield of Green Mountains this year at the Nassau County Fair. County Agent W. G. Been reports that potatoes this year are of average size, but that total yield is somewhat less than average. The cauliflower crop has been cut 50 per cent by the drought, more unless rains come soon.

A. A.-WGY Farm News Now Broadcast Wednesdays

BEGINNING September 28, radio Station WGY will make some changes in the farm program which is broadcast

Prize winners in the state spelling contest recently held at the New York State Fair pictured with Dr. J. Cayce Morrison, Assistant Commissioner of Elementary Education, who conducted the contest. Left to right: Jane Nichols, Hallock, Suffolk County, first prize; Philip Malone, Monroe County, third prize.

Agriculture and the New York State Department of Agriculture and Markets.

Field Beans—In New York State the yield of beans per acre is forecast at 9.3 bushels, compared with 12.5 bushels last year. The acreage this year is heavier than it was last and if the yield had been up to normal the crop would have been much heavier than usual. The New York State crop is estimated to be 1,116,000 bushels as compared with 1,250,000 bushels last year and a five-year average of 1,358,000 bushels.

Michigan's crop is forecast at 4,998,000 bushels, as compared with 5,691,000 bushels last year and a five-year average of 6,508,000 bushels. In spite of smaller crops in both these states, the U. S. crop is forecast at 19,458,000 bushels as compared with 19,693,000 bushels last year and a five-year average of 17,323,000 bushels.

Buckwheat—The New York State buckwheat crop is now forecast to yield 13.8 bushels per acre. This would mean a total crop of 2,926,000 bushels as compared with about 3,168,000 bushels last year. The U. S. crop is estimated at 8,459,000 bushels, compared with 11,505,000 bushels a year ago and a five-year average of 13,786,000 bushels. It looks as though some of us will have to go without our buckwheat cakes this winter.

Poultry—New York farmers report the same number of hens per farm as were reported last year, which number is slightly above the 1928 figure. They report one less egg per day per 100 hens than they reported a year ago.

relatively higher feed prices. Looking ahead, the Department says:

"It would seem that hog producers in areas which have fairly abundant supplies of feed might well increase the number of sows to be bred to farrow next spring, even though feed prices in relation to hog prices during the next year are relatively unfavorable. In areas where feed supplies are scarce and prices high, hog producers, before sacrificing their breeding herds, should consider that hog prices a year from this winter may be high enough to recompense even high cost production next year and that prices of breeding stock at that time may be high."

Farm and Home Bureaus Inaugurate New Plan at 1930 State Fair

AT a meeting of farm and home bureau leaders early this year, it was decided to demonstrate a new type of exhibit at the State Fair. Improved productive and marketing methods advocated by the Farm and Home Bureau were featured instead of the usual agricultural produce.

Cooperation of County Agents replaced the former competition. A team represented by two counties prepared each booth for the Farm Bureau. Cortland-Onondaga, Sullivan-Ulster, Madison-Orange, and Wayne-Orleans, arranged the Farm Bureau show. St. Lawrence, Madison, Chemung, Yates, Chenango, Genesee, Broome and Ontario sponsored the Home Bureau exhibits.

The success of the new plan was ap-

First prize County herd at the Regional Jersey Show, New York State Fair, Syracuse, September 1-6; shown by the Capital District Jersey Cattle Club.

C. H. Jennings, East Durham, H. M. Pockman, East Schodack and Ira G. Payne, East Schodack are the owners of the animals comprising the herd, which includes Mourier's Oxford Victor 310374 the junior champion bull of the show.

gave a short address on "Marketing."—M.M.S.

Genesee County—We are having fine weather for bean harvesting. Beans will be of very good quality even if the crop is short. Many farmers report less than half a crop. Grain yields are very heavy and of the finest quality. Oats are bringing 30c per bushel; barley about 60c and wheat 80c. Eggs are 32c a dozen; dairy butter, 35c to 40c a pound.

The fourteen members of the Genesee Voiture No. 1033 Forty over Eight, har-

between 12:15 and 1:00 eastern standard time. Most of our readers are familiar with these programs and listen to them regularly. In general, this hour brings to you weather reports, produce reports and usually a short talk on something of interest either to the farm or home.

The feature, "Editor Ed Looks At Life" will be given Mondays each week at 12:45 eastern standard time. The farm news furnished to WGY by AMERICAN AGRICULTURIST will be given at 12:35 Wednesday.

The Cortland-Onondaga booth at the State Fair. Read the story on this page about the exhibit.

is the wake-up breakfast — the wake-up lunch!

Gorgeously good for little folks — and big folks, too!

So easily digested, it releases quick new energy to the body.

The Wake-up Food!

Entertaining the Class

The Same Idea Might as Well Be Employed by Non-School Folks

"HAPPY Days are Here Again!" And they are indeed happy days when high school and college are in full swing, with their old friendships renewed and new ones made. Class parties are of course in order, and the progressive dinner is again in high favor, and why not, with the air sharp and cool for hiking from one home to another, or if distances are longer, automobiles are so easily available?

A Biographical Banquet

was announced by a sophomore group, and had a truly "highbrow" sound to their mystified guests. The explanation was forthcoming, when it was found that the banquet was served at five different houses, each representing a period of life.

Infancy of course, came first, and

something substantial, the very name implied that, so a couple of women who frankly admitted to "forty plus" passed pie and cheese, while the phonograph entertained with tunes of a couple of decades ago.

Old Age of course, comes to all, and so appeared at the finale of the Biography Banquet, offering coffee, old-fashioned mints and a quaint old dish

ous occasions, long to be remembered when school days were over.

—ELSIE DUNCAN YALE.

With Cooky Cutters

SOMETHING to take to the twin Snieces when I was going visiting it was a bit of a puzzle, for the small ladies had plenty of toys. But I found some bits of gayly colored material in my piece bag, and with the aid of cooky cutters, cut out bean bags of various shapes. Then I wound an embroidery hoop with colored muslin, making a small loop. Behold a bean-bag game which proved highly entertaining, for the hoop was hung on the bough of a tree, and the beanbags tossed through it.

Incidentally, the children have used cooky cutters as patterns for drawing animals, with very good success.—A. B. S.

READY-MADE BABY BUNTING NO. B5410 comes in pink or blue Bunny cloth with tinted white "elephant" patches ready to applique on. The original model was too cunning with the ears button-holed around the edges and fastened only at the end, so they could flap. Price, each \$2.00, ribbon for binding not included. Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

of fruit, while a delightful soprano voice rendered the old-time songs which are always young.

A History Hike

A group of freshmen wished to follow in the progressive way with something "the same but different", and issued invitations for a "History Hike", which sounded even more "highbrow" to the recipients of the cards. This time it was a banquet representing different periods of American History.

Charming Puritan maids welcomed the guests at the first home, and bade them be seated at rough wooden tables, illuminated by candles in tin candlesticks. Bowls of steaming corn chowder were served and were indeed appreciated on a chilly evening. (Oyster stew or fish chowder could have been substituted).

The next home suggested Revolutionary Days, for Martha Washington and a bevy of her friends in quaint costumes, offered most delectable chicken pie. This was served, of course, by candle light, but this time the candle sticks were of glass or silver, implying more prosperous days.

On went the History Hikers to "Before the War" and enjoyed fruit ices and Lady Baltimore cake served by pretty southern girls in white with wreaths of artificial roses in their hair. The tables were lovely with red paper roses, and the candles gave a soft and flattering light.

The late Nineties set forth pie and cheese, appreciated by those whose appetites were sharpened by the hike, and the ladies of this period were, of course, garbed in trim shirtwaists, long skirts, and hair dressed in huge pompadours.

Modern Times ended the History Hike with coffee in electric percolators, and novelties in candy and wafers. A radio furnished sprightly music, and dancing soon began.

A Farm Breakfast

The Junior girls, wishing to show appreciation of the hospitalities given them by the boys of the class, issued an invitation to a Farm Breakfast. This, as might be inferred, was by no means a "reducing breakfast." Long tables were set out with coffee cakes, crullers, pie and jam, sausages and hot cakes were passed, with coffee and real cream. Girls in gingham gowns served, and a group from the glee club rendered "The Old Oaken Bucket" and "Old Gray Bonnet."

So the class parties were bright, joy-

Smart Schoolgirl Dress

2703

DRESS PATTERN NO. 2703 has a very tailored air whose jauntyness is most becoming to the young girl of school age, 8, 10, 12 and 14 years. In every way it is stylish and practical. Wool jersey, lightweight tweed, rayon novelties, wool repp and the heavier cottons are admirable for this frock. Size 8 requires 2½ yards of 35-inch material with ½ yard of 39-inch contrasting and 2¼ yards of binding. PRICE, 15c.

the "infant" guests were seated at low tables with Mother Goose table covers. So called "bread and milk" was offered by trim nursemaids, and these viands proved to be clam bouillon, topped with whipped cream, and supplemented by animal crackers. A toy balloon was tied to each chair and bobbed merrily. A phonograph contributed nursery tunes, and the nursemaids did not hesitate to give admonitions as to conduct.

Childhood was next, and the "children" sat down to creamed chicken on biscuits, carrots, and a side dish of spinach, "so good for you." At the conclusion, whoever had not finished the allotted amount of spinach was fined a penny.

Youth suggested "Salad Days" and gay paper flowers lent loveliness to the pretty tables, where dainty salads were set forth by charming young waitresses. The music of ukeleles encouraged the guests to sing college songs.

Of course Middle Age called for

Graceful and Slimming

2706

FROCK PATTERN NO. 2706 with its softly becoming jabot collar and slimming lines is a favorite with everybody and especially those who have figures above the normal. Dark colors in canton crepe or transparent velvet with white jabot would be lovely as well as practical. The pattern cuts in sizes 36, 38, 40, 42, 44, 46, and 48 inches bust measure. Size 36 requires 3¾ yards of 39-inch material with ¾ yards of 14-inch all-over lace and ½ yard of 39-inch light contrasting. PRICE, 15c.

Money for School

The Old Farm Served This Lad Unexpectedly

A FEW weeks ago a farm boy in Orange County who goes back to college this fall for his sophomore year, decided to try his luck at selling some of the surplus garden stuff. There actually was a surplus, mind you, in spite of the long drought and that in a garden planted solely for the home consumption of a family of five.

Over the hill, four miles away was a large summer resort. The old family touring car had just been turned into

a regular business of selling home-grown garden stuff at the summer resort.—D. C. H., New York.

Tested Recipes

Cranberry Catsup

Put one quart of cranberries, two cupfuls water and two cupfuls vinegar in stewing pan. Put a few kernels of all-spice, cloves, a little stick cinnamon and a bit of mace in muslin bag and drop in pan. Simmer until fruit is soft, press through colander, add two cupfuls brown sugar, cook ten minutes, put in bottles and seal.—L. M. T.

Cranberry-Quince Jelly

To one quart cranberries add one cupful quince preserve or three quinces put through meat grinder. Cook with just enough water to keep from burning for fifteen minutes, then add two cupfuls of water and one-half cupful sugar and cook until cranberries are soft. Mash thoroughly, pour into jelly bag and let drain for two hours, squeezing lightly. Boil juice twenty minutes, add an equal bulk of hot sugar, cook five minutes and set aside to jell. The amount of sugar needed will depend upon whether fresh quinces or quince preserve is used.—L. M. T.

Quick Jellied Cranberries

Cranberry jelly or sauce adds the "snap" that many winter foods lack. The tart taste and bright color give the variety that the hearty dishes need. Quick jellied cranberry is made by running a quart of washed cranberries through a food chopper, then combine with 1 cup of water. Boil quickly for six minutes, add 2 cups of sugar, boil for 3 minutes and pour into molds.

Tree of Life in Crewel Embroidery

WALL hanging number M564 is stamped on a 22-inch width of heavy pure linen, measures one yard long. Yarn assortment number M565 in 12 colors, shades of blue, rose, bronze, green, taupe, voile, yellow and gold two dozen 10-yard skeins enough to complete the hanging.

In the matter of stitchery it is impossible to go wrong. With wools,

stitches half an inch long or even longer lie flat, so the work goes rapidly. A well marked color chart and instruction sheet accompany each order. This is a project well worth doing.

M564—Design Stamped on Linen, at \$1.30.

M565—Wool to Embroider Hanging \$2.40.

Order from Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

Little Girl's Frock

BLOOMER FROCK NO. 2678 is smart and practical for the small girl and is not difficult to make. Cotton broadcloth, pongee, gingham or wool jersey would make up attractively in this design which cuts in sizes 2, 4 and 6 years. Size 4 requires 1½ yards of 35-inch material with ¾ yard of 35-inch contrasting and 2 yards of binding. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the Fall Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

a good-looking truck and since he wanted to earn more money towards college expenses, what more direct way was there than to sell the surplus that would otherwise go to waste in the garden?

The afternoon before making a trip, he washed carrots and beets, put in a barrel of potatoes and picked apples and pears. The next morning he got up early and gathered corn, tomatoes and cucumbers and was off between nine and ten.

At some of the places where the lady of the house said she did not want anything for she had all she needed on hand, his usual reply was "Just come out and look at the things I gathered from the garden only an hour ago" and when the lady came and saw, the color and freshness of the vegetables generally conquered.

It took him about four hours to sell out his load each time.

To date this farm boy has made five trips and in those five trips made without any previous experience at selling anything except chickens and eggs around home, he cleared eighty-eight dollars.

Now he is thinking about what he might take in next summer, if he laid his plans with the intention of making

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

YOU DON'T HAVE TO PAMPER FELS-NAPTHA

WASH just as you like. Fels-Naptha works excellently in tub or machine. It's fine for soaking or boiling. It does a splendid job in hot, lukewarm or even cool water. Yes indeed, any and every way you use it, Fels-Naptha gives you extra help.

With good reason, too. For Fels-Naptha isn't "just soap." It is good golden soap combined with plenty of dirt-loosening naptha. You can smell the naptha! So here are two safe, active cleaners instead of one—two cleaners that work together under all conditions, loosening stubborn dirt and washing it away without hard rubbing.

Next washday, take advantage of this extra help. See how much quicker and easier it makes your washing! How sweet and clean it gets your clothes! Notice, too, how gentle Fels-Naptha is to the hands. That's because it works

so quickly that you don't have them in water so long.

Try this extra help for household cleaning too. Get Fels-Naptha at your grocer's today—and discover this bargain in value. A bargain that brings you not more soap, but more help. Extra help that saves you!

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-9-27 Fels & Company, Philadelphia, Pa.

The Indian Drum—By William McHarg and Edwin Balmer

From his slow, heavy utterance, a timbre of terrible satisfaction betrayed itself; his eyes widened a little as he saw it strike Constance, then his lids narrowed again. He had not meant to say it that way; yet, for an instant, satisfaction to him had become inseparable from the saying, before that was followed by fright—the fright of examination of just what he had said or of what she had made of it.

"He'll be found!" she defied him.

"Be found?"

"Some are dead," she admitted, "but not all. Twenty are dead; but seven are not!"

She looked for confirmation to the Indian woman, who nodded: "Yes." He moved his head to face the woman, but his eyes, unmoving, remained fixed on Constance.

"Seven?" he echoed. "You say seven are not! How do you know?"

"The Drum has been beating for twenty, but not for more!" Constance said. Thirty hours before, when she had told Henry of the Drum, she had done it without belief herself, without, looking for belief in him. But now, whether or not she yet believed or simply clung to the superstition for its shred of hope, it gave her a weapon to terrify him; for he believed—believed with all the unreasoning horror of his superstition and the terror of long-borne and hidden guilt.

"The Drum, Henry!" she repeated. "The Drum you've been listening to all day upon the beach—the Indian Drum that sounded for the dead of the *Miwaka*; sounded, one by one, for all who died! But it didn't sound for him! It's been sounding again, you know; but, again, it doesn't sound for him, Henry, not for him!"

"The *Miwaka*! What do you mean by that? What's that go to do with this?" His swollen face was thrust forward at her; there was threat against her in his tense muscles and his bloodshot eyes.

She did not shrink back from him, or move; and now he was not waiting for her answer. Something—a sound—had caught him about. Once it echoed, low in its reverberation but penetrating and quite distinct. It came, so far as direction could be assigned to it, from the trees toward the shore; but it was like no forest sound. Distinct too was it from any noise of the lake. It was like a Drum! Yet, when the echo had gone, it was a sensation easy to deny—a hallucination, that was all. But now, low and distinct it came again; and, as before, Constance saw it catch Henry and hold him. His lips moved, but he did not speak; he was counting. "Two," she saw his lips form.

The Indian woman passed them and opened the door, and now the sound, louder and more distinct, came again.

"The Drum!" she whispered, without looking about. "You hear? Three, I've heard. Now four! It will beat twenty; then we will know if more are dead!"

The door blew from the woman's hand, and snow, swept up from the drifts of the slope, swirled into the room; the draft blew the flame of the lamp in a smoky streak up the glass chimney and snuffed it out. The moonlight painted a rectangle on the floor; the moonlight gave a green, shimmering world without. Hurried spots of cloud shuttered away the moon for moments, casting shadows which swept raggedly up the slope from the shore. The woman seized the door and, tugging it about against the gale, she slammed it shut. She did not try at once to relight the lamp.

The sound of the Drum was continuing, the beats a few seconds apart. The opening of the door outside had

seemed to Constance to make the beats come louder and more distinct; but the closing of the door did not muffle them again. "Twelve", Constance counted to herself. The beats had seemed to be quite measured and regular at first; but now Constance knew that this was only roughly true; they beat rather in rhythm than at regular intervals. Two came close together and there was a longer wait before the next; then three sounded before the measure—a

"What are you going to do?" he demanded.

"I'm going out."

He moved between her and the door. "Not alone, you're not!" His heavy voice had a deep tone of menace in it; he seemed to consider and decide something about her. "There's a farm house about a mile back; I'm going to take you over there and leave you with those people."

"I will not go there!"

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north to watch Spearman and to locate Alan. She walks along the shore of the lake until exhausted. Twelve are rescued, the Drum beats for twenty that are lost, leaving seven unaccounted for.

wild, leaping rhythm. She recalled having heard that the strangeness of Indian music to civilized ears was its time; the drums beat and rattles sounded in a different time from the song which they accompanied; there were even, in some dances, three different times contending for supremacy. Now this seemed reproduced in the strange, irregular sounding of the Drum; she could not count with certainty those beats. "Twenty—twenty-one—twenty-two!" Constance caught breath and waited for the next beat; the time of the interval between the measures of the rhythm passed, and still only the whistle of the wind and the undertone of watersounded. The Drum had beaten its roll and, for the moment, was done.

"Now it begins again," the woman whispered. "Always it waits and then it begins over."

Constance let go her breath; the next beat then would not mean another death. Twenty-two, had been her count, as nearly as she could count at all; the reckoning agreed with what the woman had heard. Two had died, then, since the Drum last had beat, when its roll was twenty. Two more than before; that meant five were left! Yet Constance, while she was appreciating this, strained forward, staring at Henry; she could not be certain, in the flickering shadows of the cabin, of what she was seeing in him; still less, in the sudden stoppage of heart and breathing that it brought, could she find coherent answer to its meaning. But still it turned her weak, then spurred her with a vague and terrible impulse.

The Indian woman lifted the lamp chimney waveringly and scratched a match and, with unsteady hands, lighted the wick; Constance caught up her woolen hood from the table and put it on. Her action seemed to call Henry to himself.

He swore. "I'll carry you then!"

She shrank back from him as he lurched toward her with hands outstretched to seize her; he followed her, and she avoided him again; if his guilt and terror had given her mental ascendancy over him, his physical strength could still force her to his will and, realizing the impossibility of evading him or overcoming him, she stopped.

"Not that!" she cried. "Don't touch me!"

"Come with me then!" he commanded; and he went to the door and laid his snowshoes on the snow and stepped into them, stooping and tightening the straps; he stood by while she put on hers. He did not attempt again to put hands upon her as they moved away from the little cabin toward the woods back of the clearing; but went ahead, breaking the trail for her with his snowshoes. He moved forward slowly; he could travel, if he had wished, three feet to every two that she could cover, but he seemed not wishing for speed but rather for delay. They reached the trees; the hemlock and pine, black and swaying, shifted their shadows on the moonlit snow; bare maples and beeches, bent by the gale, creaked and cracked; now the hemlock was heavier. The wind, which wailed among the branches of the maples, hissed loudly in the needles of the hemlocks; snow, swept from the slopes and whirled and drove about them, and she sucked it in with her breath. All through the wood were noises; a moaning came from a dark copse of pine and hemlock to their right, rose and died away; a wail followed—a whining, whimpering wail—so like the crying of a child that it startled her. Shadows seemed to detach themselves, as the trees swayed, to tumble from the boughs and scurry over the snow; they hid, as one looked at them, then darted on and hid behind the tree trunks.

Henry was barely moving; now he slowed still more. A deep, dull reson-

ance was booming above the wood; it boomed again and ran into a rhythm. No longer was it above; at least it was not only above; it was all about them—here, there, to right and to left, before, behind—the booming of the Drum. Doom was the substance of that sound of the Drum beating the roll of the dead. Could there be abiding in the wood a consciousness which counted that roll? Constance fought the mad feeling that it brought. The sound must have some natural cause, she repeated to herself—waves washing in some strange conformation of the ice caves on the shore, wind reverberating within some great hollow tree trunk as within the pipe of an organ. But Henry was not denying the Drum!

He had stopped in front of her, half turned her way; his body swayed and bent to the booming of the Drum, as his swollen lips counted its soundings. She could see him plainly in the moonlight, yet she drew nearer to him as she followed his count. "Twenty-one," he counted—"Twenty-two!" The Drum was still going on. "Twenty-four—twenty-five—twenty-six!" Would he count another?

He did not; and her pulses, which had halted, leaped with relief; and through her comprehension rushed. It was thus she had seen him counting in the cabin, but so vaguely that she had not been certain of it, but only able to suspect. Then the Drum had stopped short of twenty-six, but he had not stopped counting because of that; he had made the sounds twenty-six, when she and the woman had made them twenty-two; now he had reckoned them twenty-six, though the Drum, as she separated the sound from other noises, still went on!

He moved on again, descending the steep side of a little ravine, and she followed. One of his snowshoes caught in a protruding root and, instead of slowing to free it with care, he pulled it violently out, and she heard the dry, seasoned wood crack. He looked down, swore; saw that the wood was not broken through and went on; but as he reached the bottom of the slope, she leaped downward from a little height behind him and crashed down upon his trailing snowshoe just behind the heel. The rending snap of the wood came beneath her feet. Had she broken through his shoe or snapped her own? She sprang back, as he cried out and swung in an attempt to grasp her; he lunged to follow her, and she ran a few steps away and stopped. At his next step, his foot entangled in the mesh of the broken snowshoe, and he stooped, cursing, to strip it off and hurl it from him; then he tore off the one from the other foot, and threw it away, and lurched after her again; but now he sank above his knees and floundered in the snow. She stood for a moment while the half-mad, half-drunken figure struggled toward her along the side of the ravine; then she ran to where the tree trunks hid her from him, but where she could look out from the shadow and see him. He gained the top of the slope and turned in the direction she had gone; assured then, apparently, that she had fled in fear of him, he started back more swiftly toward the beach. She followed, keeping out of his sight among the trees.

To twenty-six, he had counted—to twenty-six, each time! That told that he knew one was living among those who had been upon the ferry! The Drum—it was not easy to count with exactness those wild, irregularly leaping sounds; one might make of them almost what one wished—or feared! And if, in his terror here, Henry made the count twenty-six, it was because he knew—he knew that one was living! What one? It could only be one of two to dismay him so; there had been only two on the ferry whose rescue he had

(Continued on Page 13)

The Indian Drum

(Continued from Page 12)

feared; only two who, living, he would have let lie upon this beach which he had chosen and set aside for his patrol, while he waited for him to die!

She forced herself on, unsparingly, as she saw Henry gain the shore and as, believing himself alone, he hurried northward. She went with him, paralleling his course among the trees. On the wind-swept ridges of the ice, where there was little snow, he could travel

for long stretches faster than she; she struggled to keep even with him, her lungs seared by the cold air as she gasped for breath. But she could not rest; she could not let herself be exhausted. Merciless minute after minute she raced him thus—A dark shape—a figure lay stretched upon the ice ahead! Beyond and still farther out, something which seemed the fragments of a lifeboat tossed up and down where the waves thundered and gleamed at the edge of the floe.

Henry's pace quickened; hers quickened desperately too. She left the shelter of the trees and scrambled down the steep pitch of the bluff, shouting, crying aloud. Henry turned about and saw her; he halted, and she passed him with a rush and got between him and the form upon the ice, before she turned and faced him.

Defeat—defeat of whatever frightful purpose he had had—was his now that she was there to witness what he might do; and in his realization of that, he burst out in oaths against her—He advanced; she stood, confronting—he swayed slightly in his walk and swung past her and away; he went past those things on the beach and kept on along the ice hummocks toward the north.

She ran to the huddled figure of the man in mackinaw and cap; his face was hidden partly by the position in which he lay and partly by the drifting snow; but, before she swept the snow away and turned him to her, she knew that he was Alan.

HANDY ANDY Says "Here's How"

To Make Cinder Concrete

By Ray Inman

clean, hard, cinders, can be used as a base for concrete floors.

WHAT! NO CINDERS? YOU CAN GET THEM EASY ENOUGH. HERE'S HOW:

TAKE FAMILY TO NEAREST RAILROAD STATION AND BUY ROUND TRIP TICKETS TO SOMEPLACE OR OTHER.

SEE THAT EACH MEMBER OF FAMILY SITS BY A WINDOW (EVEN HAVE THEM HANG OUT THE WINDOW, IF POSSIBLE.)

UPON RETURN HOME HAVE FAMILY GATHER AROUND AND SHAKE OUT POCKETS, SHOES, EYES, EARS, ETC., ETC.

YOU WILL FIND YOU HAVE ENOUGH CINDERS FOR SEVERAL FLOORS, A BASEMENT OR TWO AND A WALK.

THEY SHOULD BE USED HOWEVER, ONLY ON FLOORS THAT ARE TO CARRY MODERATE LOADS. GARAGES, BASEMENTS, BARNS, ETC.

BUT WE'VE USED CINDERS IN THE GARAGE WHERE THE AUTOMOBILE GOES, AND IN THE BARN WHERE HORSES'N' WAGONS GOES—WHY NOT ON THE BACK PORCH?

they are light to haul and handle, hold more air, and are less liable to absorb dampness from the subsoil.

COMPLETE INFORMATION ON CINDER CONCRETE CAN BE OBTAINED FROM PORTLAND CEMENT ASSN., CHICAGO, ILL.

CINDERS MAY ALSO BE USED:

① TO STUFF OLD SOFAS AND CHAIRS; ② TO REPLACE THE PILTS IN CHERRY PIE;

ANYHOW, IT'S BETTER'N THEM OLD SPRINGS. I LIKE CINDERS IN MY PIE. THEY CRUNCH SO PLEASANTLY.

③ TO PAD FINE RUGS & CARPETS; ④ TO KEEP FOOT FROM SLIDING AROUND IN SHOE.

Fishkill Farms Surplus Auction Sale of Registered Holsteins

September 27, 1930

1 P. M., Daylight Saving Time

Fishkill Farms are located one mile south of Wiccopee, which is situated on State Highway No. 52, running from Fishkill eastward to Stormville and Pawling. Fishkill Farms are four miles east of Fishkill and the Albany Post Road; eleven miles east of Beacon; twenty miles southeast of Poughkeepsie; twenty-two miles west of Pawling and sixty-five miles north of New York City.

Butter by the Million Pounds

(Continued from Page 1)

less than has prevailed in recent years. Eastern dairymen will be interested to know that their greatest cream competitor in our eastern markets is Wisconsin. In 1929 Wisconsin shipped out of that state a total of 82,158,046 lbs. of cream valued at \$16,577,927. Much of this came into eastern cities.

When traveling around America one can easily understand the European's idea that New York and Chicago are only a stone's throw apart. This is a country of great distances. One thinks, for example, of Minneapolis and St. Paul, twin cities in the Northwest, as being only a few miles from Chicago. As a matter of fact, they are hundreds of miles apart, a long ride on a sleeper from Chicago. This Northwest country, sometimes called "Land of the Lakes", is beautiful, sometimes level, sometimes rolling, and much of it dotted with pretty little lakes. It was this country, you will remember, that Longfellow made famous with his poem, "Hiawatha", and in one of the parks of Minneapolis are the beautiful "Falls of Minnehaha".

*"In the land of the Dakotahs,
Where the Falls of Minnehaha
Flash and gleam among the oak trees,
Laugh and leap into the valley."*

The Northwest is all a comparatively new country as history measures time, and there are yet living in this section old men and women who can remember the pioneer days and the time when it was necessary to keep a wary eye out for hostile Indians when working in the fields.

St. Paul, Minnesota, also has a cooperative milk association known as The Twin City Milk Producers Association. This organization controls the milk sold in Minneapolis and St. Paul, and while it is comparatively small, it is said to be one of the most effective and efficient cooperatives in America. The organization has had a stormy history. Some of the officers were at one time thrown into jail for their determined efforts to get higher prices for farmers' milk.

Through the courtesy of my friend, Dan Wallace, Editor of *The Farmer* of St. Paul, another excellent Standard Farm Paper, it was my privilege to spend an afternoon in the greatest butter cooperative in the world, the Land-o-Lakes Creameries. Every milk producer, in fact every farmer, will be interested in a brief statement of what this organization has been able to accomplish. When it started only six years ago, there were several hundred independent cooperative butter manufacturers located chiefly in Minnesota and extending over into Wisconsin. Many of these creameries were manufacturing a rather poor quality of butter. Few of the creameries had an efficient sales organization.

Then in 1924 they all were federated or joined into this Land-o-Lakes organization. A large central plant was

built in the Twin Cities. (See picture). Each creamery ships the butter in tubs to this large central packing plant where it is tested for quality and where hundreds of girls are employed to pack the butter in pound packages, each pound containing four separately wrapped quarters.

The central organization has sales offices in most of the markets in America, and in the short time it has been organized, it has been able greatly to increase the price of butter for its members through raising the quality of the product, and through better sales methods.

The Land-o-Lakes organization is a sizeable business. It has 470 local creameries all joined into the central organization. Last year it sold 94 million pounds of butter for approximately \$50,000,000. There are about 90,000 farmer members. It regulates its sales, putting butter into different markets when there are no gluts and when the demand is good. No butter is sold under the brand name, that is, the Land-o-Lakes name, unless it scores 93 or better. When the organization began in 1924 only 24% of the creameries were able to meet this high grade. Today, more than 70% meet the test—another demonstration that one of the great objects of cooperative organization is to build up the quality and grade of its products and thus secure better prices. The organization maintains strong three year contracts with its members, but there is a release or cancellation period once each year so that any dissatisfied member can get out.

The Land-o-Lakes organization also collects and sells eggs for its farmer members and expects to do with eggs what it has already done with butter, that is, build up the quality and the pack, making it easier to get better prices.

Minnesota is another one of the western states that ships cream into eastern markets, and the Land-o-Lakes cooperative ships some of this cream. I was somewhat amused in conversation with the courteous president, Mr. Brant, about the cream situation. As you know, AMERICAN AGRICULTUR-

IST believes in keeping these eastern markets for eastern producers. We have done what we could to secure legislation which will help keep western cream out. I mentioned the subject to Mr. Brant. It seems the very day I was there he had received a telegram from the president of the Interstate Cooperative Milk Producers Association which sells its members' milk in Philadelphia. This man wired Mr. Brant that if Land-o-Lakes creameries did not stop shipping cream into the Philadelphia market, an appeal would be taken up with the Federal Farm Board at Washington. Mr. Brant was very much excited about the subject. He claimed that his organization shipped only the highest quality cream and a market belonged to the organization that could get it with a high quality product. I do not know what all of the facts are about Land-o-Lakes cream in these markets, but I do know that it is not right to allow any cream or milk to be sold here that is produced under regulations that are much easier than are required of our eastern producers.

It is good to see different parts of the country and to study how farmers and other folk in other sections carry on their business, but I am always glad when I am on the train headed back to York State. On this trip I was much interested one day in sitting at luncheon with a Chicago business man on one side of me, and a man on the other who had been born and bred on the prairies.

"It is hard", said the Chicago man, "for me to understand how people can stand it to live in the country. It is so lonesome that it drives me frantic to stay away from the city even for one night, and it is so quiet that I can't even sleep."

"That is strange", said the man who had been born on the prairie. "To me the city is the most lonesome place in the world, and the wide stretches of prairie the most friendly and comfortable."

"I like neither", said I. "Give me the hills and valleys of the East."

Heating the Home

(Continued from Page 5)

If the water pan in the furnace is kept filled, the warmed air is automatically supplied with moisture; furthermore, it is fresh air from the outside which is drawn through the inlet, over the hot fire and delivered upstairs. However, a steady fire of even heat is necessary in order to keep the rooms at the same temperature. And, if the fireman forgets himself and fails to follow directions when he shakes down the fire, the lady housekeeper finds ashes where they were never meant to be. Insulation of all heating pipes by wrapping with asbestos will help to conserve the heat, no matter what system is used.

The steam or hot water systems come at the top of the list in expense but also in satisfaction. My personal preference is for hot water because as long as there is fire in the heater there is circulation of water in the radiators and for hours after the fire is out the water remains warm. This means that in a country house when fires are banked at night, there is still some heat, whereas with the steam system the water must boil in the heater before heat is radiated from the pipes above. Vacuum valves help to retain heat in steam radiators. Where temperatures drop very low, the steam heat has advantages over the hot water, as steam is naturally hotter than hot water. With either system, if freezing is very hard and a pipe or radiator does not have as much circulation as it should have, ice has been known to form with resulting breakage, leakage and loss of temper. As for the boiler itself many give preference to the square type rather than the round.

Now as for fuel, Mr. Furnace-Stoker has many to choose from. If he has more wood than he knows what to do with, that can be made to serve but

it requires constant stoking. If soft coal is plentiful and cheap, that too can be used, but should have special furnace attachment to prevent gas collecting or excessive smoke. Hard coal is favored as being cleaner and holding fire better. The new oil burning furnaces with automatic regulator give the stoker almost nothing to do, as a trip feed regulates the flow of oil according to the temperature of the rooms above. The comfort of any heating system will depend a lot upon the way it is operated. The new models have done away as much as possible with the guesswork, but intelligent stoking helps to get the maximum heat from the fuel used. And just as is true with any machinery occasional overhauling will make it operate more satisfactorily.

Any system is more appreciated if some auxiliary heat is available. In spring and fall cool mornings and evenings require some heat but not enough to start the furnace. A fireplace in the living-room, an oil heater for the bath-room or electric heaters in any small room help to take off the chill. With a living-room fireplace and a central heating system, we have the best of the old and the best of the new. But whether the house be small or large, there is some way of making it comfortable.

If you are considering the installation of a heating system, any of the companies selling such apparatus have engineers who can estimate for you the complete needs. Room size and shape should be given, also the number of windows.

One way of preventing blowouts is to paint tire rims with aluminum paint. This coating will prevent the formation of rust which acts like sandpaper on the inner tube.

Will This Bring Better Roads ?

A month ago a young fellow called at our house, in fact all the houses in this section, telling about a survey that was going to be made to help us farmers get better roads. He said he needed all the farmers signatures to get the deal through and that it would not cost us anything. We signed our names in an ordinary account book where all the other farmers in the section had signed theirs. After we had signed he gave us

or may not have intended to intentionally misrepresent but we have found as a general rule that persons who are selling honest merchandise in order to pay their way or to work their way through college, do not resort to sob stories and are perfectly willing to let the merit of the goods sell them.

Too often companies brow-beat our subscribers into paying money in cases of this sort. Too often a subscriber settles rather than to run the chance of legal action. We have all sorts of admiration for those who refuse to pay under such conditions. It would be interesting to say the least to see what success this concern would have in bringing legal action to collect the money. Judging from what has happened in similar cases in the past, we very much doubt whether legal action will be taken.

Readers Appreciate Settlements

RECEIVED your letter concerning my claim. I received a Post Office check for the full account \$16.54 a few days ago. Am sorry that I did not write you at once. I thank you very much for your help as I do not believe I would have had any luck alone.—L. R. P.

I have recently received check for \$12.80 covering return due me on account of cancelled order, and about which I wrote you.

I very much appreciate your help in straightening the matter out, feeling sure I would never have received said check were it not for your efforts.

a guarantee certificate which said on it "The New Official Loose Leaf Paved Road and Commercial Survey." The certificate told everything that would be in these survey books and at the bottom said "not to exceed \$6.90" with the man's name representing the company. Our signatures are not on this piece of paper. Now he is delivering this survey book and trying to collect the \$6.90 from us, telling a sob story to the effect that he has no home and is earning his way through college, that he is an ex-service man who has been gassed twice and shell-shocked. A number of our neighbors have refused to accept this book and we would like your advice in the matter.

WE, of course, do not know what our subscribers signed but it seems to us evident that they did not intend to sign any order or contract obligating them to pay \$6.90. The agent may

Leaving the Customer Satisfied

WE have just received a letter which pleases us greatly. The letter reads:

"Since you have written me, Mr. — has been here to see about the claim we had against him. I feel satisfied as to the quality chicks he handles after having talked with him and I think he means to do business on the square. I want to thank you very kindly for your assistance in this matter as I understand your services are not bought or hired."

This subscriber wrote us complaining about the quality of some chicks purchased from one of our advertisers. Both the advertiser and the subscriber were positive they were right and finally the advertiser agreed to call upon the subscriber and talk with her personally. Evidently this heart to heart talk was just what was needed because our subscriber feels satisfied as to the quality of the chickens and the advertiser evidently felt that something was wrong in this particular order inasmuch as he agreed to make some adjustment with our subscriber. We are just giving an account of

this happening for our subscribers to point out the length to which advertisers sometimes go in order to leave a satisfied customer.

Cohen Fined Fifty Dollars

IN the September 20 issue we mentioned the arrest of Theodore Cohen, proprietor of the Farmers Sales Co. of Schenectady, N. Y. We have just learned that on September 2, Cohen was fined \$50 by Judge Charles C. Fryer of Schenectady. So far as we know, however, he is still doing business.

Chief of Police, William H. Funston, states that he is still receiving letters from people to the effect that Cohen owes them money. He, however, points out that the Police Department is not a collection agency and it might be well to warn our readers to this effect. Mr. Funston is, of course, absolutely right in this statement and we appreciate what he has already done to protect our subscribers. As a matter of fact Chief Funston has helped to collect money for some subscribers but naturally feels that he cannot go on indefinitely doing this work which is outside of his department. We trust that most of our subscribers have heeded our continual warnings to investigate before you ship and therefore have escaped loss.

Picture Enlarging Agents Still Active

WE continue to get a heavy correspondence from subscribers who have been approached by agents of some picture enlarging concern. Sometimes they sign the contract and wish our help in getting out of their trouble but in a large number of cases they merely tell us that they did not succumb to the arguments of the agent because they had already read something we had to say in American Agriculturist. One subscriber tells us that an agent reported that American Agriculturist Service Bureau was always printing things which were not so!

Naturally, we do not object to any subscriber doing business with any firm so long as he wishes to do so. However, the large number of letters we receive indicates that many of our subscribers are persuaded to give the agent a picture through rather questionable methods and when the final portrait is received they are far from satisfied with the results. To the best of our knowledge, the lucky envelope scheme does not mean a thing because everyone is lucky and gets the so-called reduction. Another common practice to which we object very strongly is the custom of delivering the picture in a frame at which time our subscriber learns that the frame is not covered by the original order but that an extra sum of money must be paid in order to get the frame.

New York State Tries Low-Cost Roads

(Continued from Page 3)

County. On this section it is proposed to construct a gravel surface which is to be placed on a foundation course of stone. The foundation course is to vary between 8 and 12 inches in depth and the gravel surfacing is to be approximately 4 inches in depth.

District 9

J. W. Holler, District Engineer,
Binghamton, N. Y.

We propose to improve approximately one mile of town highway in the town of Union, Broome County, constructing a 9 inch foundation course with a surfacing of "mixed in place macadam", using stone chips and bituminous material in the surface to produce a non-skid effect.

On all of the above sections on which we are carrying on these experimental pavements the grading and drainage have all been taken care of prior to the starting of our experimental paving operations.

We propose to complete all the projects above mentioned by October 15, 1930. Accurate cost data is being kept in order to determine which is the most practical and economical type to standardize on.

Service Bureau Claims Settled During August 1930

NEW YORK	
Clarence C. Wood, Burke, N. Y.	\$76.25
(Pay for maple sugar)
